... HERE THEY COME ...

THOSE FABULOUS ROCKEFELLER BROTHERS

# HOW MUCH MONEY DO THE ROCKEFELLERS HAVE?

...THE ROCKEFELLERS ARE RICHER THAN ANYONE HAS EVER BEEN BEFORE (AND THEY ARE GETTING RICHER ALL THE TIME)... AND THEIR POWER IS ENORMOUSLY GREATER THAN THEIR WEALTH... THEY HAVE CREATED AN EMPIRE AROUND THEMSELVES WHICH IS LARGER AND MORE COMPLEX THAN ALEXANDER THE GREAT COULD HAVE DREAMED OF... MILLIONS OF PEOPLE WORK UNDER THE ROCKEFELLERS AND THEIR EMPIRE HAS SPREAD TO EVERY CORNER OF THE "FREE WORLD"... THE EMPIRE INCLUDES THE WORLD'S LARGEST BANKS AND INDUSTRIAL CORPORATIONS AND ITS POWERFUL ARMS GRIP DEEP INTO THE FEDERAL GOVERNMENT... THE EMPIRE, WHICH ONCE CENTERED ON THE STANDARD OIL TRUST, HAS NOW MULTIPLIED AND DIVERSIFIED INTO A MAMMOTH CONGLOMERATE OF NEARLY EVERYTHING IMAGINABLE...

IL, COMPUTERS, STEEL, CHEMICALS, SUGAR, COPPER, MARGARINE, RADAR, NAPALM, NICKEL, TIN, PEANUT BUTTER, DYE, TOYS, "CULTURAL CENTERS", KLEENEX, KOTEX, GAS AND ELECTRIC UTILITIES, INSECTICIDES, CHORUS GIRL GROUPS, LEAD, OFFICE EQUIPMENT, COTTON, PAPER, GOLD, BANKING, PET FOOD, RAILROADS, CHURCHES, SUPERMARKETS, CREDIT CARDS, DIESEL ENGINES, THE URBAN LEAGUE, T.V. NETWORKS, THE BOYSCOUTS, BASEBALL, URBAN RENEWAL, MOLYBDENUM, SILVER, INSURANCE, CORN PRODUCTS, FARM IMPLEMENTS, SOLVENTS, SYNTHETIC RUBBER, CEMENT, ELEVATORS, BOMBS, ZINC, COMMERCIAL AIRLINES, PANTYHOSE, RECORDING, GLASS, CLOTHES, CHICKENS, AIRPLANES, PETRO-CHEMICALS, SHOE POLISH, LOBBIES, PIGS (BOTH KINDS), SODA POP, LAW FIRMS, LOANS, URANIUM, THE 4H CLUB, REFRIGERATORS, SKYSCRAPERS, LUMBER, THE WORLD BANK, T.V. & RADIO STATIONS, THE STATE DEPARTMENT, NEWSPAPERS AND MAGAZINES, INVESTMENT BANKS, MUSICAL INSTRUMENTS, THE UNITED NEGRO COLLEGE FUND, MILK, ELECTRONIC EQUIPMENT, PUBLISHING COMPANIES, FOUNDATIONS, MEASURING INSTRUMENTS, ANIMAL FEED, GLUE, SOCIAL CLUBS, UNIVERSITIES, FERTILIZERS, ELECTRIC RAZORS, AEROSPACE EQUIPMENT, DEPARTMENT STORES, N.A.T.O., TRUSTS, PLANTATIONS, PHOSPHATE, SULPHUR, LIBRARIES, PRESIDENTS, COCONUTS, THE BOYS CLUB, PLASTIC BAGS, COAL, MANSIONS, RADIOS, FOOD, NATURAL GAS PIPELINES, WATER SOFTENERS, COFFEE, POISONS, TRAVELERS CHECKS, ARTWORK, POLLUTION CONTROL EQUIPMENT, PLATINUM, MOVIES, TANK CARS, PHOTOGRAPHIC EQUIPMENT, THE URBAN COALITION, AND A WHOLE LOT MORE...

...and a few others...

... at one of David Rockefeller's very expensive, very exclusive, 6,000 person parties:

...EACH OF THESE FAMILIES HAS AN EMPIRE OF ITS OWN (ON A SMALLER SCALE) ACCOUNTING FOR THE REST OF AMERICA'S HUGE CORPORATIONS... AND ALL THE CORPORATIONS AND FAMILIES AND EMPIRES ARE INTERLOCKED, AND INTERCONNECTED AND INTERMARRIED... AND THEY'RE NOT EXACTLY ENEMIES WITH THE ROCKEFELLERS...

...ARE YOU KIDDING? WE'RE BLOOD RELATIVES OF MOST OF THEM!

AND NOW  
JUST TO  
FILL YOU  
IN...

# A SHORT HISTORY OF THE ROCKEFELLERS

6

JOHN D.  
ROCKEFELLER I  
1839-1937

... THE FOUNDER OF THE ROCKEFELLER FORTUNE  
WAS JOHN DAVIDSON ... HE ONCE SAID:

" I LEARNED THE PRINCIPLES AND  
PRACTICES OF BUSINESS FROM MY FATHER "

... HIS FATHER MADE MOST OF HIS MONEY  
SELLING:

THE RENOWNED  
DR. WILLIAM ROCKEFELLER'S  
CANCER CURE

... FOLLOWING IN HIS FATHER'S FOOTSTEPS JOHN  
BECAME RICH VERY QUICKLY... OF COURSE HE WORKED HARD  
FOR HIS MONEY... HIS ONLY INTEREST OTHER THAN HIS  
BUSINESS WAS HIS CHURCH... HE WORSHIPPED \$500 BILLS...  
WHEN JOHN BROWN WAS EXECUTED J.D. WAS THE ONLY  
ONE IN CLEVELAND WHO DID NOT CLOSE HIS SHOP IN  
RESPECT FOR HIM... HE WAS CALM, COOL AND  
COLLECTING...

... THEN IN 1870  
OIL WAS  
STRUCK:

... I THINK I'LL START THE

## Standard Oil Company

... STANDARD OIL STARTED OUT  
AS THE LARGEST REFINER  
IN CLEVELAND AND IT  
JUST SORT OF

GREW...

AND

GREW...

AND

GREW...

... THEN J.D. DECIDED:

" FOR THE SAKE OF  
THE ECONOMY WE MUST  
CONCENTRATE THE OIL  
BUSINESS "

... J.D. CREATED A GAME THAT  
SOON BECAME POPULAR:

## MONOPOLY!

... HE BEGAN KNOCKING OUT  
HIS COMPETITORS... HE USED  
EVERY DIRTY NASTY TRICK HIS  
GENIUS COULD THINK UP... AND  
SOON HE HAD CREATED THE...  
STANDARD OIL TRUST!

... AND, OF COURSE,  
HE BECAME THE  
RICHEST MAN  
IN THE  
WORLD...

... AND HE BECAME THE MOST HATED MAN IN THE WORLD...

... PAY UP OR I'LL TAKE YOUR DAUGHTER! ... HEE HEE!

... HE EVEN STARRERD IN ALL OF THE VAUDEVILLE MELODRAMAS... (AS THE VICIOUS LAND LORD VILLAIN)

... THEN CAME THE ANTI-TRUST LAWS WHICH SHATTERED THE STANDARD OIL TRUST INTO A MILLION PIECES AND EVERYBODY WAS HAPPY -

- EVEN J.D. J.D. WAS HAPPY BECAUSE HE STILL CONTROLLED ALL OF THESE COMPANIES - BUT NOBODY KNEW!

which would you rather have - one huge company or 32 big ones?

JOHN DIDN'T WANT TO DIE... HE BUILT HOSPITALS IN ALL OF HIS HOUSES... HE GOT PRETTY OLD BUT HE FINALLY DIED, AT 99, DESPITE SUCKING AT THE BREAST OF ONE OF THE MANY YOUNG MOTHERS HE HIRED TO FEED HIM...

I'M J.D. ROCKEFELLER - WHY SHOULD I HAVE TO DIE?

HIS SON J.D. II DIDN'T DO MUCH. HIS FRIENDS CALLED HIM A "MILKSOP" WHICH MIGHT HAVE MEANT HE WASN'T QUITE AS VICIOUS A PIG AS HIS FATHER...

... BUT HE PROVED HE WAS A TRUE ROCKEFELLER AT...

MILKSOP?

JOHN DAVIDSON ROCKEFELLER II  
1874 - 1960

## LUDLOW, COLORADO APRIL 20, 1914

... J.D. II ("JUNIOR") OWNED SEVERAL COAL AND IRON MINES IN THE COLORADO ROCKIES... HE PAID THE MINERS LESS THAN \$700 A YEAR AND FORCED THEM TO LIVE IN COMPANY HOUSES AND SHOP AT THE COMPANY STORE... THE CAMPS WERE PATROLLED BY ARMED GUARDS AND INFILTRATED BY COMPANY SPIES... IN 1913 9,000 MINERS WENT ON STRIKE... THEY DEMANDED UNION RIGHTS, MORE MONEY, BETTER CONDITIONS, AN END TO THE PRISON CAMP-TYPE SYSTEM AND TO TALK TO JUNIOR... JUNIOR REFUSED TO TALK TO "CONTENTED WORKERS" AND INSTEAD HE BROUGHT IN TEXAS & WEST VIRGINIA GUNMEN, THE COLORADO STATE MILITIA, THE NATIONAL GUARD AND THE CAVALRY TO PROTECT HIS MINES...

... THEN ROCKEFELLER'S ARMY ATTACKED... THEY CHARGED THROUGH THE MINERS TENT CAMPS IN ARMORED CARS RAKING THEM WITH MACHINE GUN FIRE AND THEY BURNT ONE CAMP TO THE GROUND... DOZENS OF MEN, WOMEN & CHILDREN WERE SHOT OR BURNED TO DEATH...

... THAT DECEMBER THE COLD, STARVING MINERS WHO SURVIVED GAVE IN TO JOHN D. ROCKEFELLER II...

... THEN TWO YEARS LATER THE NATIONAL GUARD SHOT TO DEATH THREE STRIKING STANDARD OIL WORKERS IN NEW JERSEY...

...THEN  
CAME  
THE  
3RD  
GENERA-  
TION!

OH BOY! FIVE BOYS AND  
ONLY ONE GIRL! LET'S  
SEE NOW ... YOU'LL GET THE  
BANK ... YOU TWO WILL BE  
GOVERNORS...AND YOU WILL  
GET THE ROCKEFELLER  
FOUNDATION...AND YOU WILL  
BE IN CHARGE OF ALL  
THE MONEY...AND...  
OH YEAH...YOU ABBY-  
YOU WILL MARRY A  
RICH MAN.

...AND  
ALL  
THE  
TIME  
THEY  
GOT...

& RICHER...

& RICHER...

RICHER.

AND

HERE THEY ARE TODAY!

... THE MOST FAMOUS OF THE ROCKEFELLER FIVE, NELSON, WAS NAMED AFTER HIS GRANDFATHER (THE SENATOR) AND HE WAS RAISED AND GROOMED TO BE A POLITICIAN...

... NELSON WENT TO DARTMOUTH COLLEGE, WHERE DESPITE HIS POOR GRADES HE WAS VOTED:  
**"MOST LIKELY TO SUCCEED"**

... NELSON'S FIRST IMPORTANT DECISION WAS TO HIRE DIEGO RIVERA (THE FAMED MEXICAN MURAL PAINTER) TO PAINT THE GREAT MURAL FOR ROCKEFELLER CENTER...

... I PAINTED A PICTURE OF LENIN AND A GIRL WITH V.D. ... (SYMBOLIZING LIFE UNDER CAPITALISM) ...

... HEAVENS NO! NOT ON MY WALL! DESTROY IT!

... SAID YOUNG NELSON...

... LATER THAT ELECTION:

"ART IS ONE OF THE AREAS WHERE THERE IS STILL ABSOLUTE FREEDOM"

... NELSON WENT ON TO TAKE MANY HIGH POSITIONS IN THE STATE DEPARTMENT... HE BECAME THE FIRST CO-ORDINATOR OF INTER-AMERICAN AFFAIRS, THEN HE BECAME UNDER-SECRETARY OF STATE AND A SPECIAL ADVISOR TO THE PRESIDENT... HE BECAME A MEMBER OF THE TWO MOST POWERFUL GROUPS IN THE FEDERAL GOVERNMENT... THE NATIONAL SECURITY COUNCIL AND THE PRESIDENT'S CABINET...

THAT'S MY SON!

**VICE PRESIDENT NELSON ROCKEFELLER\*1908-**

... THEN IN 1958 NELSON RAN FOR GOVERNOR OF NEW YORK AGAINST AVERELL HARRIMAN... HARRIMAN IS ONE OF THE RICHEST PEOPLE IN AMERICA...

... BUT NO MATCH FOR ROCKY!

ROCKEFELLER "SERVED" AS GOVERNOR FOR NEARLY 15 YEARS...

... AFTER THE ELECTION, A WELL KNOWN FOREIGN PRESIDENT, VISITING THE ROCKEFELLER MANSION, SAID

"THE U.S. IS THE ONLY COUNTRY THAT WOULD ASK THE PEOPLE TO CHOOSE BETWEEN A MILLIONAIRE AND A BILLIONAIRE"

"YES... IT'S A GREAT COUNTRY... IT COULD ONLY HAPPEN HERE!"

... REPLIED ROCKY...

... HOW DOES ROCKY GET ELECTED YEAR AFTER YEAR?

IT AIN'T EASY!

... THE ROCKEFELLERS HAVE SPENT MORE MONEY KEEPING NELSON ROCKEFELLER IN OFFICE THAN HAS EVER BEEN SPENT ON ANY OTHER GOVERNOR

... IT HAS COST THEM A FULL 27 MILLION DOLLARS SINCE 1962...

IT COST THEM OVER \$7 MILLION FOR THE 1970 CAMPAIGN ALONE... (MORE THAN 10 TIMES WHAT HIS OPPONENT HAD TO SPEND...)

# Rocky's Record

... SINCE HE ENTERED THE POLITICAL RING NELSON HAS COMPILED ONE OF THE MOST AMAZING AND CONTROVERSIAL RECORDS OF ANY POLITICIAN...

... WELL HE DIDN'T TAKE ANY BRIBES!

... DURING HIS FIRST TERM ROCKY SPENT MOST OF HIS TIME RUNNING FOR PRESIDENT AND CONVINCING PEOPLE TO BUILD BOMBSHELTERS... AFTER FAILING TO GET EVERYONE TO BUILD THEMSELVES BOMBSHELTERS ROCKY TOOK \$8 1/2 MILLION IN TAXES AND BUILT ONE NEAR HIS CAPITOL IN ALBANY... AT LEAST HE WAS GOING TO BE SAFE!

PAY UP!

... AFTER RUNNING ON AN ANTI-TAX PLATFORM THE FIRST THING ROCKY DID AS GOVERNOR WAS INVENT A NEW TAX

WHICH EXCLUSIVELY HIT ONLY THE 300,000 POOREST FAMILIES IN N.Y...

THEN, AFTER AGAIN PROMISING NOT TO RAISE TAXES HE WAS RE-ELECTED AND RAISED THE SALES TAX (WHICH AGAIN HITS THE POOR THE HARDEST) AND IMMEDIATELY SET UP A COMPLICATED SALES TAX DODGE FOR HIMSELF CALLED "GREENROCK FARMS"... MEANWHILE ROCKY HAS BRAGGED THAT HE HAS CUT NEW YORK'S CORPORATE TAX SHARE IN HALF AND HE HAS SEVERELY LIMITED THE TAX RATES FOR THE VERY RICH (SUCH AS OUR FAVORITE GOVERNOR...)... IN OTHER AREAS ROCKY HAS VOTED AGAINST A RAISE IN THE MINIMUM WAGE AND HE WAS THE ONE MAINLY RESPONSIBLE FOR CUTTING NEW YORK'S WELFARE PAYMENTS...

... ROCKY, THE NATIONAL LEADER OF THE CRUSADE TO KEEP OIL BURNING CARS, HAS BROKEN ALL RECORDS FOR ROAD-BUILDING IN NEW YORK STATE... ONE OF HIS MORE CONTROVERSIAL ROADS IS A \$250 MILLION, 6 LANE EXPRESSWAY TO HIS MANSION...

YOUR HIGHWAY TAXES AT WORK!

## the infamous ALBANY MALL

... EVER SINCE NELSON WAS A LITTLE KID HE'S WANTED TO BUILD HIMSELF A PALACE... HE WANTED TO BUILD THE BIGGEST, MOST BEAUTIFUL, MOST EXPENSIVE PALACE IN THE WORLD... AND THAT'S EXACTLY WHAT HE'S BUILT AS HIS STATE CAPITOL IN NEW YORK... IMAGINING HIMSELF AS LOUIS XIV DESIGNING VERSAILLES, OR AN EGYPTIAN PHAROAH BUILDING A GREAT PYRAMID ROCKY HAS ORDERED THE MOST MASSIVE BUILDING PROJECT IN WESTERN HISTORY... A 100 ACRE MARBLE SCULPTURE... AFTER DESTROYING A HUGE SECTION OF ALBANY'S BLACK COMMUNITY AND DISPLACING 9,000 PEOPLE ROCKY BEGAN BUILDING HIS DREAM IN THE EARLY 1960'S... HE ESTIMATED THE COST AT \$250 MILLION... SO FAR ROCKY'S ERECTOR SET HAS COST NEW YORKERS OVER A BILLION DOLLARS AND IT'S STILL NOT FINISHED...

MEANWHILE, ARE THE ROCKEFELLERS PAYING ANY TAXES? NO! THEY HAVE A WHOLE CROP OF TRICKY LAWYERS FIGURING OUT TRICKY WAYS FOR THEM TO SAVE BILLIONS IN TAXES... THEY HAVE CONGRESSMEN AND GOVERNORS BUSY PUSHING LOOPHOLES IN TAX LAWS... AFTER PASSING THEIR BILLIONS DOWN THROUGH SEVERAL GENERATIONS, THEY HAVE PAID ONLY \$16 MILLION IN INHERITANCE TAXES! BUT THE ROCKEFELLER OIL COMPANIES EVEN DO BETTER THAN THEY DO... OIL COMPANIES GET TO DEDUCT 22% OF THEIR TAXES FOR A DEPLETION ALLOWANCE, AND THIS COMBINED WITH OTHER LOOPHOLES ALLOWS THE OIL COMPANIES TO PAY A TOKEN 5 OR 10% IN TAXES ON HUNDREDS OF MILLIONS OF DOLLARS PROFIT.

... LAST YEAR NELSON, IN THE TRADITION OF RONALD REAGAN AND SPIRO AGNEW, PAID NO FEDERAL TAXES AT ALL...

I JUST DIDN'T HAVE ENOUGH MONEY TO PAY BOTH STATE AND FEDERAL TAXES!

A SMALL COMPUTING ERROR!

IN FACT, IT WAS DISCOVERED, THAT OVER THE LAST FIVE YEARS HE HASN'T PAID A MILLION DOLLARS IN TAXES...

# LAW & ORDER

... DURING ROCKY'S REIGN OVER THE STATE OF NEW YORK HE ORDERED A NEW SET OF LAW AND ORDER LAWS... NOW NEW YORK HAS "STOP AND FRISK" (ALLOWING A POLICEMAN TO ARBITRARILY STOP AND SEARCH ANYONE ON THE STREET) "NO KNOCK" (ALLOWING A POLICEMAN TO ENTER YOUR HOUSE WITHOUT KNOCKING) AND "NO SOCK" (MAKING IT A FELONY TO RESIST ARREST) LAWS... HIS NEW DRUG LAWS HAVE PUT 150 DRUG OFFENDERS UP FOR LIFE... ABOUT THE ONLY "LIBERAL" OF ROCKY'S CRIME LAWS ARE HIS VERY LIBERAL BUGGING LAWS...

OF COURSE ROCKY'S DREAM HAS ALWAYS BEEN TO BE PRESIDENT. HE RAN FOR PRESIDENT IN 1964, 1968, AND 1972 BUT ALL THREE TIMES HE COULDN'T PULL IT OFF. SO AFTER FAILING TO GET ELECTED TO THE WHITE HOUSE HE TOOK THE EASY WAY IN...

IN DECEMBER 1973, TWO MONTHS AFTER SPIRO AGNEW RESIGNED, ROCKY RESIGNED AS GOVERNOR OF NEW YORK.

HE LEFT HIS STATE IN THE HANDS OF ONE OF HIS MOST TRUSTED FRIENDS, MALCOLM WILSON...

TAKE GOOD CARE OF IT FOR ME!

... MEANWHILE IN WASHINGTON THE WHEELS OF JUSTICE WERE TURNING AND NIXON WAS DEPOSED. THE REPUBLICAN PARTY ARISTOCRACY, LED BY THE ROCKEFELLER BROTHERS, PICKED GERALD FORD AS THEIR NEW MAN... AND THEN FORD PICKED - SURPRISE - SURPRISE - NELSON ROCKEFELLER AS VICE PRESIDENT...

SOME SENATORS WERE CONCERNED ABOUT ROCKY'S PRACTICE OF HELPING OUT PUBLIC SERVANTS IN TIMES OF NEED.

IT SEEMS THAT MANY NEW YORK STATE OFFICIALS WERE INDEBTED TO ROCKY FOR GRAND SUMS OF MONEY, WHICH HE MADE A HABIT OF GIVING TO THEM AFTER THEY RETIRED, IF HE WAS SATISFIED BY THEIR PERFORMANCE...

NONE OF THESE ALLEGATIONS ARE TRUE, ARE THEY, HONORABLE MR. ROCKEFELLER, SIR?

... NEVERTHELESS, CONGRESS DID IT'S UNQUESTIONING DUTY AND CONFIRMED THE RICHEST MAN EVER TO HOLD PUBLIC OFFICE TO THE HIGH OFFICE OF VICE PRESIDENT...

ROCKY WILL NOT BE AN ORDINARY VICE PRESIDENT... HE WILL CERTAINLY STRETCH THE VICE PRESIDENCY TO TAKE ON POWERS NO VICE PRESIDENT EVER HAS BEFORE...

"I DON'T THINK I'M CUT OUT TO BE A NUMBER TWO TYPE OF GUY"

CONGRESS HAD JUST BOUGHT A VERY EXPENSIVE NEW MANSION FOR THE VICE PRESIDENT, BUT IT WASN'T GOOD ENOUGH FOR ROCKY.

"I HAD ALREADY BOUGHT ONE OF THE FINEST MANSIONS AROUND THE CAPITOL, JUST IN CASE I NEEDED IT SOMEDAY!"

... AND NOW AMERICA'S FIRST ABSOLUTELY UNELECTED PAIR OF AUTO-CRATS TAKE THE WHEEL...

MORE ABOUT THE ROCKEFELLER'S AND THEIR GOVERNMENT STARTING ON PAGE 34

LOOK! IT'S ROCKY AND BULLWINKLE!

The Herald of Ford

• WINTHROP ROCKEFELLER.  
1912 - 1973

... WINTHROP DIED ON FEBRUARY  
23<sup>RD</sup> 1973

WINTHROP STARTED OUT STRANGELY - CONSIDERING HIS FAMILY BACKGROUND:

FOR ONETHING IN WWII:

... WHICH IS A THING ROCKEFELLERS JUST DON'T DO...

WHEN HE RETURNED: AS A LIEUTENANT COLONEL OF COURSE!

I DECIDED TO BECOME A COMMON OILWORKER!

WELL, NOT EXACTLY A "COMMON" OILWORKER.

HE HAD CONSTANT BODY-GUARDS!

FOR SOME REASON THE OTHER OIL- WORKERS DON'T LIKE ME!

AND THEN HE MOVED ON UP TO BECOME AN EXECUTIVE ON MOBIL OIL...

ANY COMMON OILWORKER CAN DO THAT. WITH HARD WORK AND PATIENCE!

... MEANWHILE, WINTHROP'S BROTHERS WERE ALL USING PART OF THEIR NAME TO IDENTIFY SOME OF THEIR POSSESSIONS:

VEN-ROCK INC.!

ROCK RESORTS!

GREEN-ROCK FARMS!

THE ROCKETTES! A CHAIR'S GIRL GROUP.

... WINTHROP'S LITTLE 45,000 ACRE RANCH GOES THROUGH ARKANSAS AND WAY INTO OKLAHOMA... IT'S ONE OF THE PRINCIPAL BULL-BREEDERS IN THE WORLD... I SHOULD KNOW... I'M KEMMONS WILSON, VENDING MACHINE KING, CHM. OF HOLIDAY INNS AND DIRECTOR OF WINROCK FARMS...

... SO WINTHROP DECIDED TO MAKE **LITTLE ROCK** (ARKANSAS) HIS TOWN...

... AND HE STARTED A LITTLE RANCH WHICH HE CALLED "WINROCK FARMS"

... BUT THEN IN 1970... ALL THE KINGS HORSES, AND ALL THE KINGS MEN, COULDN'T GET "WINNIE" ELECTED AGAIN...

HE "SERVED" AS GOVERNOR OF ARKANSAS FOR 2 TERMS...

THEN IN 1962 "WINNIE" PROVED THAT EVEN A STRANGE ROCKEFELLER COULD GET ELECTED GOVERNOR...

HE HAD TRIED SO HARD TO MAKE IT AS A ROCKEFELLER...

... THAT HE DIDN'T SPEAK TO ANYONE FOR 3 DAYS...

HE WAS SO UPSET...

"WINNIE" WAS UPSET BY A DEMOCRATIC NOBODY...

OOPS!

HE LOST!

JOHN IS THE VERY SLICK HEAD  
OF THE ROCKEFELLER FOUNDATION

HE SITS ON 36  
DIFFERENT BOARDS  
AND COMMITTEES,  
ROUNDING OUT  
THE ROCKEFELLER  
EMPIRE AND HE  
BELONGS TO THE  
TOP NEW YORK CLUBS.

SUCKHEAD?

...AND  
OFCOURSE  
I'M A  
LIBERAL  
TOO!

QUITE A  
DIGNIFIED  
MAN!

JOHN DAVID  
ROCKEFELLER III  
1906 -

HE HOLDS THE FOLLOWING DECORATIONS:  
ORDER OF THE AUSPACIOUS STAR OF CHINA (TAIWAN)  
ORDER OF THE BRITISH EMPIRE, GRAND CORDON OF  
THE SACRED TREASURE OF JAPAN, GRAND CORDON OF  
THE STAR OF ETHIOPIA, MOST EXALTED ORDER OF  
THE WHITE ELEPHANT OF THAILAND AND COMMANDER  
OF THE ORDRE DES MILLIONS D'ELEPHANTS ET DU  
PARASOL BLANC...

LAURANCE S. ROCKEFELLER  
1910 -

LAURANCE'S  
HOBBY IS MAKING  
MONEY

AND THERE  
ISN'T ANYONE  
QUITE SO  
GOOD AT IT AS  
ME!

OFCOURSE HE HAD  
A LITTLE TO START  
OUT WITH...

HE JUST LOVES  
TO PLAY  
AROUND WITH  
NEW KINDS OF  
LITTLE CORPORATIONS  
THAT MAKE ALL  
SORTS OF  
NEW SCIENTIFIC  
GADGETS (RADAR,  
HYDROGEN BOMBS ETC.)

HI-TECHNOLOGY

HE IS ALSO  
RESPONSIBLE  
FOR ALOT OF THE  
UGLY HOTELS IN  
HAWAII AND THE  
CARIBBEAN...

ROCK/RESORTS

HE'S IN CHARGE OF THE  
ROCKEFELLER MONEY  
AND CHAIRMAN OF  
"ROCKEFELLER BROS.  
INC." THEIR HOLDING  
COMPANY...

I'M ALSO A  
HOTEL BUILDING,  
BOMB MAKING, OIL  
BURNING, ROCKEFELLER  
CONSER-  
VATIONIST!

WHY DO WE  
ALWAYS GET  
THOSE KIND  
ON OUR  
SIDE!

DOZZZ...

MINE!

**CHAIRMAN  
DAVID ROCKEFELLER  
1915 -**

DAVID ROCKEFELLER IS THE MOST  
POWERFUL  
MAN IN  
THE  
WORLD...

...FROM HIS OFFICE HIGH IN  
THE CHASE MANHATTAN BUILDING  
DAVID RULES THE MOST POWERFUL  
BANK IN THE WORLD... THROUGH  
IT HE DOMINATES AMERICAN  
BUSINESS AND EVENTUALLY  
THE WORLD...

"LET'S NOT  
QUIBBLE OVER  
PENNIES... JUST  
GET THE JOB  
DONE..."

"MR. ROCKEFELLER,  
SIR, WE UNDER  
ESTIMATED THE COST  
BY 53 THOUSAND  
AND I'M TRYING  
TO MAKE UP THE  
DIFFERENCE"

"MR. ROCKEFELLER"

"...YOU GOTTA  
WATCH OUT FOR  
HIM! HE'S THE  
ONE THAT COLLECTS  
BEETLES!"

FASCIST  
COLLECTOR!

HE IS EVEN MORE POWERFUL THAN HIS  
BROTHER, THE VICE PRESIDENT, BECAUSE  
WHILE NELSON WATCHES OVER THE  
GOVERNMENT, DAVID OVERSEES THE  
MOST IMPORTANT PART OF THE ROCKEFELLER  
EMPIRE - THE BANKS AND CORPORATIONS...

## BESIDES RULING THE WORLD'S MOST POWERFUL BANK...

...DAVID ROCKEFELLER IS CHAIRMAN OF THE BOARD OF  
WASHINGTON'S MOST POWERFUL LOBBY - THE COUNCIL ON  
FOREIGN RELATIONS... HE IS ALSO PRESIDENT OF THE  
BOARD OF OVERSEERS OF HARVARD U., CHAIRMAN OF  
ROCKEFELLER U., CHAIRMAN OF THE MUSEUM OF MODERN ART,  
CHAIRMAN & FOUNDER OF THE DOWNTOWN LOWER MANHATTAN  
ASSOC., CHAIRMAN & FOUNDER THE COUNCIL FOR LATIN AMERICA,  
PAST CHAIRMAN & FOUNDER OF THE CENTER FOR INTER-AMERICAN  
RELATIONS, CHAIRMAN & FOUNDER BUSINESS COMMITTEE FOR  
THE ARTS... PAST CHAIRMAN & FOUNDER EXECUTIVE PEACE CORPS.  
PRESIDENT SEATZANTIK FUND, DIRECTOR OF KENNEDY LIBRARY,  
ROCKEFELLER CENTER, EMBARCADERO PLAZA, L'ENFANT PLAZA,  
MORNINGSIDE HEIGHTS, URBAN COALITION, CARNEGIE ENDOW-  
MENT FOR INTL. PEACE, ROCKEFELLER BROS. FUND,  
U. OF CHICAGO AND FAR TOO MANY MORE TO LIST... HE HAS  
ALSO BEEN ON LITERALLY SCORES OF GOVERNMENT COMMITTEES  
AND HE BELONGS TO THE MOST EXCLUSIVE N.Y. CLUBS:  
HARVARD, KNIKKERBOCKER, LINKS, UNIVERSITY & CENTER...

...DAVID'S POWER WAS  
OUTLINED  
BY A FELLOW BANKER  
FROM DELAWARE A FEW  
YEARS AGO:

"I DON'T THINK  
DICK NIXON TELLS  
DAVID ROCKEFELLER  
WHAT TO DO... IT'S  
THE OTHER WAY  
AROUND"

"...WELL  
WHO DO YOU  
THINK SHOULD  
BE ON TOP - HUH?  
DAVID'S A VERY  
DEDICATED, SERIOUS  
AND INTELLIGENT MAN...  
AND HE'S GOT A PHD  
IN ECONOMICS... HE'S  
AN EXPERT AT  
HIS JOB!"

TEN  
BILLION  
DOLLARS?!

MOST OF US,  
WHO STRUGGLE  
TO SURVIVE,  
CAN'T VERY WELL  
IMAGINE HOW  
MUCH MONEY  
THE ROCKEFELLERS  
HAVE...

I'VE  
GOT  
\$10!

... THE ROCKEFELLER  
FORTUNE IS BEYOND  
THE STRUGGLE  
FOR SURVIVAL,  
IT IS EVEN BEYOND  
LUXURY... THEIR FORTUNE  
IS BEYOND THE  
REALITY OF LIVING...

"I HAVE A LOT AND I DON'T  
FEEL GUILTY ABOUT IT!  
\$100,000 TO ME IS  
LIKE \$10  
TO OTHER  
PEOPLE!"

THE ROCKEFELLER  
BILLIONS ARE IN  
CORPORATE STOCK, AND  
TO THEM THEIR MONEY  
MEANS POWER.

THEIR POWER  
LIES IN THE  
CORPORATIONS  
THAT THEY  
CONTROL...

# JUST LOOK AT OUR FANTASTIC COLLECTION OF CORPORATIONS!

... ON THE NEXT PAGE YOU SEE THE  
33 HUGE BILLION DOLLAR  
CORPORATIONS THAT THE  
ROCKEFELLERS  
CONTROL

THESE CORPORATIONS ARE THE BASIC ECONOMIC SYSTEM IN  
AMERICA, WHERE THE REAL POWER LIES. AMONG THEM ARE  
AMERICA'S LARGEST BANKS, UTILITIES, AIRLINES, INSURANCE  
COMPANIES AND SEVEN OF THE TOP TWENTY INDUSTRIAL GIANTS  
WHICH DOMINATE AMERICA'S ECONOMY...

THE ROCKEFELLERS DO NOT OWN THESE BILLION  
DOLLAR CORPORATIONS. THEY PROBABLY OWN LESS  
THAN 5% OF THE STOCK OF MOST OF THESE  
CORPORATIONS (BILLIONS OF DOLLARS, NEVERTHELESS).  
THIS IS ENOUGH STOCK TO CONTROL THESE CORPORATIONS  
BECAUSE THE ROCKEFELLERS HAVE ALSO CENTRALIZED  
THEIR CONTROL THROUGH THEIR BANKS  
INSURANCE COMPANIES, AND LAW FIRMS...

## HOW DID I DECIDE WHICH CORPORATIONS THE ROCKEFELLERS CONTROL? IT WASN'T EASY!

THE ROCKEFELLERS ARE THE KIND OF PEOPLE WHO DON'T LIST  
THEIR PHONE NUMBER - FORGET THEIR STOCKHOLDINGS...  
BUT I READ SOME BOOKS, CHECKED OUT CORPORATE BOARD OF  
DIRECTORS, PAGED THROUGH LONG GOVERNMENT REPORTS  
AND COMPILED VOLUMES OF  
RESEARCH AND CAME UP WITH  
THE MIGHTY CORPORATIONS  
LISTED ON THE NEXT PAGES...

... THE ROCKEFELLERS ARE THE HEAD OF A HUGE  
INTEREST GROUP... A FINANCIAL AND INDUSTRIAL  
TRUST... CLUSTERED AROUND THEM ARE A GROUP  
OF SUPER RICH ALLIED FAMILIES AND AN ELITE  
CROP OF EXECUTIVES AND TECHNICIANS... TOGETHER  
THEY RULE THESE MONSTROUS CORPORATIONS - EACH  
ONE A NATION IN ITSELF  
RULING OVER ITS OWN  
TERRITORY, A  
POPULATION OF  
EMPLOYEES AND A  
BILLION DOLLAR ESTATE...  
... THESE CORPORATIONS  
BUY AND SELL AND  
FINANCE EACH OTHER  
AND ARE INTRICATELY  
INTERCONNECTED...

... BUT THESE ARE ONLY THE INNER GROUP OF  
ROCKEFELLER CORPORATIONS... THE ROCKEFELLERS  
HAVE CONNECTIONS WITH EVERY MAJOR CORPORATION  
IN AMERICA... AND THEIR INCREDIBLE WEIGHT  
AND POWER CAN BE FELT BY BUSINESSMEN  
EVERYWHERE...

# ROCKEFELLER EMPIRE

Standard Oil Company

...LOOK AT  
ALL THESE HUGE  
BILLION-DOLLAR  
ROCKEFELLER  
CORPORATIONS!  
wow!

**IBM**

**CBS** 

**Mobil**

Atlantic Richfield Company

**BORDEN**

Metropolitan Life

**ALLIED**  
CHEMICAL...

KIMBERLY-CLARK

**AT**

BANK

**THE EQUITABLE**

**EPC**  
international

**AMERICAN EXPRESS**  
**EASTERN**

**Edison**

THE CHASE MANHATTAN BANK

Consolidated  
Natural Gas

THE BANK  
OF NEW YORK

**Chemical  
Bank**

...BANKS CONTROL  
AMERICA AND THE  
ROCKEFELLER'S  
CONTROL THE  
BANKS:

**CHASE  
MANHATTAN  
BANK**

THE CHASE MANHATTAN BANK IS  
THE ROCKEFELLER'S PERSONAL  
\$37 BILLION DOLLAR BANK.  
ALTHOUGH IT'S ONLY THE  
THIRD LARGEST, IT'S THE  
MOST POWERFUL BANK  
IN THE WORLD...

THE CHEMICAL BANK, THE  
OTHER ROCKEFELLER  
SUPER BANK, IS WORTH  
\$18 BILLION DOLLARS  
AND RANKS NUMBER  
7 AMONG AMERICA'S  
HUGE BANKS...

**CHEMICAL  
BANK  
N.Y. TRUST CO.**

"THE BANK  
HAS DEALINGS  
IN  
EVERYTHING!"

...SAYS  
DAVID  
ROCKEFELLER

...BANKS ARE THE MOST POWERFUL OF  
ALL CORPORATIONS, AND THE ROCKEFELLERS  
HAVE TWO OF THE MOST POWERFUL  
BANKS. THESE TWO BANKS PERMEATE  
THE ENTIRE CORPORATE STRUCTURE  
AND THEY EACH HAVE THEIR OWN  
SPHERE OF CORPORATIONS UNDER  
THEIR WINGS. THROUGH THEIR  
BILLIONS OF DOLLARS OF CORPORATE  
STOCK, AND THEIR CORPORATE LOANS  
AND FINANCING THE ROCKEFELLERS  
CENTRAIZE CONTROL OVER THEIR  
CORPORATE EMPIRE...

...THE ROCKEFELLERS ALSO CONTROL TWO OTHER  
NEW YORK BANKS:

THE **BANK OF NEW YORK** WORTH \$4 BILLION  
THE **SEAMEN'S BANK** WORTH \$1 BILLION

ALL IN ALL  
THE ROCKEFELLERS  
CONTROL **60%**  
OF NEW YORK'S  
BANKING AND  
**20%** OF  
AMERICA'S

...AND THE ROCKEFELLERS  
ALSO HAVE THE  
LARGEST BANK OF  
ITS KIND...

**AMERICAN  
EXPRESS**  
WORTH \$6 BILLION

## UTILITIES

AMERICAN TELEPHONE  
AND TELEGRAPH IS  
THE LARGEST  
CORPORATION IN THE  
WORLD... IT'S WORTH  
\$67 BILLION  
DOLLARS AND MORE  
THAN 700,000  
PEOPLE WORK FOR IT.  
IT'S ONE OF THE MOST  
COMPLETE MONOPOLIES ANYWHERE...

BUT BEST OF  
ALL - IT'S  
MINE!

...THE ROCKEFELLER'S ALSO CONTROL THE  
NATION'S LARGEST GAS & ELECTRIC UTILITY  
WORTH NEARLY \$6 BILLION DOLLARS

**CON EDISON**

...AND NEW YORK STATE'S OTHER UTILITY  
Consolidated Natural Gas  
WORTH \$1.5 BILLION

## # INSURANCE #

IN THE 1930'S THE ROCKEFELLERS DECIDED IT  
WAS TIME FOR THEM TO GET INTO THE INSURANCE  
BUSINESS - SO THEY BOUGHT TWO INSURANCE  
COMPANIES. THESE TWO ARE THE SECOND  
AND THIRD LARGEST INSURANCE COMPANIES  
IN AMERICA AND TOGETHER THEY DO 25%  
OF ALL LIFE INSURANCE BUSINESS. THESE  
INSURANCE COMPANIES ARE ALSO IMPORTANT TO  
THE ROCKEFELLERS BECAUSE THEY USE ALL THE MONEY  
IN THEM TO FINANCE THEIR INDUSTRIAL CORPORATIONS

**METROPOLITAN LIFE** \$32 BILLION

**THE EQUITABLE** \$17 BILLION

...AND NOW WE'VE COME TO  
THE HEART AND UFLINE  
OF THE ROCKEFELLER  
EMPIRE...

# THE GREAT OIL DYNASTY

18

...THE OIL INDUSTRY IS, FAR AND AWAY, THE LARGEST AND MOST IMPORTANT INDUSTRY IN THE WORLD. AND ITS POWER AND INFLUENCE IS EVEN GREATER BECAUSE EVERY FACTORY, EVERY CITY, EVERY COUNTRY, YES NEARLY **EVERYBODY NEEDS OIL**. OIL IS THE PRIMARY COMMODITY OF INTERNATIONAL TRADE. IT IS THE MOST IMPORTANT INGREDIENT IN TECHNOLOGY. THIS COUNTRY'S AND EVERY OTHER COUNTRY'S WEALTH AND LIFESTYLE ARE DETERMINED BY OIL. THE ECONOMY OF EVERY COUNTRY IN THE WORLD RESTS WITH THE OIL INDUSTRY.

THEY CAN'T BUY ME!

... AND THE OIL INDUSTRY IS QUICKLY BUYING UP COAL COMPANIES, URANIUM MINES, NATURAL GAS SUPPLIES, ALL ALL OTHER ENERGY SOURCES, IN HOPES OF **MONOPOLIZING ALL ENERGY!**

COUGH, COUGH, HACK

... AND, OF COURSE **OIL**, AND ITS EXHAUST, IS THE GREATEST AND MOST DANGEROUS OF ALL THE CHEMICALS THAT POLLUTE THE EARTH...

...AND HALF OF THE OIL INDUSTRY IS IN THE HANDS OF THE FAMILY...

**ROCKEFELLER RUNS ON OIL!**

...AND THE REST OF THE WORLD RUNS ON THE ROCKEFELLERS OIL. THE ROCKEFELLER EMPIRE BEGAN THROUGH MONOPOLIZING OIL, AND TODAY THE ROCKEFELLER'S \$59 BILLION DOLLAR STANDARD OIL TRUST STILL RIDES ON TOP. THE STANDARD OIL TRUST IS ALIVE AND SUCKING IN EVERY COUNTRY IN THE "FREE WORLD" AND IT REFINES MORE THAN HALF OF THE OIL SOLD IN THE UNITED STATES. LIKE GALLO WINE AND THE C.I.A. THE STANDARD OIL TRUST GOES BY MANY NAMES. BUT YOU CAN TELL IT'S A ROCKEFELLER OIL COMPANY IF IT HAS A RED, WHITE AND BLUE SIGN:

ALL THESE OIL COMPANIES BELONG TO THE ROCKEFELLERS!

THE OIL AND AUTOMOBILE INDUSTRIES, THE TWO LARGEST INDUSTRIES IN THE WORLD, HAVE WORKED TOGETHER TO AUTOMOBILIZE AMERICA. THE GIANT PAIR PAVED THE WAY FOR THOUSANDS OF MILES OF FREEWAYS AND THEY HELP PLAN URBAN AND SUBURBAN AREAS SO THAT PEOPLE HAVE TO DRIVE MILES TO WORK, SHOP, PLAY OR DO ANYTHING. THEY HAVE WORKED TO DERAIL EFFECTIVE MASS TRANSPORTATION. THEY HAVE MADE ALMOST EVERYBODY DEPENDENT ON DRIVING THEIR OIL BURNING AUTOMOBILES. THE EFFECT IS ANTI-HUMAN AUTOMOBILE CENTERED CITIES AND DANGEROUSLY FOUL AIR...

...WHEN THE COUNTRY IS DEPENDENT ON OIL, AND THE ROCKEFELLERS CONTROL MOST OF THE OIL, WE'RE ALL IN TROUBLE. AND WHEN THE ROCKEFELLERS TEAM UP WITH TEXACO, GULF AND SHELL WHO CONTROL MOST OF THE REST OF THE OIL, THEY'VE GOT US IN A STRANGLE HOLD. WE FOUND THAT OUT DURING THE...

# ENERGY CRISIS

"OIL SUPPLY REMAINS IN POTENTIAL SURPLUS RELATIVE TO MARKET"

... WHILE WE WERE SITTING IN COLD HOMES AND WAITING IN GAS LINES, MORE OIL WAS BEING DRILLED THAN EVER BEFORE, BUT IT WAS WAITING IN STORAGE TANKS BECAUSE THE OIL COMPANIES CUT THE USE OF THEIR REFINERIES TO 85% AND REFUSED TO INCREASE THEIR REFINERY PRODUCTION SPECIFICALLY TO PRODUCE A CRISIS. WHY WOULD THE MASTERS OF THE COUNTRY'S FUEL WANT TO KEEP IT AWAY FROM US?

UNLESS PROFIT LEVELS ARE SUCH THAT THE OIL INDUSTRY IS CONFIDENT ITS INVESTMENTS WILL BEAR FRUIT, THE SUPPLY OF OIL WILL NOT BE FORTHCOMING..."

...THE ENERGY CRISIS DID BEAR FRUIT FOR THE OIL INDUSTRY, BY REFUSING TO SELL OIL TO THEM THE OIL GIANTS DROVE THOUSANDS OF INDEPENDENT GASOLINE DEALERS OUT OF BUSINESS, MAKING GASOLINE DISTRIBUTION MORE OF A MONOPOLY THAN EVER BEFORE, THREATENING NO MORE OIL THEY PRESSURED CONGRESS TO ALLOW HAZARDOUS OFFSHORE OIL DRILLING

AND THE ALASKA PIPELINE WHICH PEOPLE CONCERNED ABOUT THE ENVIRONMENT HAD FOUGHT LONG AND HARD AGAINST. THEY ALSO SQUEEZED \$10 BILLION DOLLARS IN RESEARCH SUBSIDIES OUT OF THE FEDERAL GOVERNMENT. BUT THE MAIN EFFECT THAT WE CAN SEE IS THAT THE PRICE OF GASOLINE HAS NEARLY DOUBLED AND THE ROCKEFELLER'S OIL COMPANY'S PROFITS FOR 1973 INCREASED BY MORE THAN 50% IN ONE YEAR AND THE PRICES AND PROFITS ARE STILL GOING UP...

... BUT WHILE PRICES AND PROFITS ARE GOING UP, EVERYTHING ELSE IS FALLING DOWN. PEOPLE ARE BEING LAID OFF, STAPLES AND NECESSITIES ARE BECOMING SCARCE, SURVIVING IS BECOMING HARDER...

... BLINDED BY POWER AND PROFIT, THE ROCKEFELLERS AND THE BUSINESS ELITE ARE DRAGGING ALL OF US INTO A DEPRESSION...

...THE ENERGY CRISIS, INFLATION, HUNGER AND UNEMPLOYMENT ARE NOT TEMPORARY PHASES. ... THEY SHOW THAT THE ROCKEFELLERS HAVE STARTED TO TIGHTEN THE SCREWS...

## THE OIL, CHEMICAL & ATOMIC WORKERS UNION SAYS:

"INCREASED OIL PRICES WERE RESPONSIBLE, DIRECTLY OR INDIRECTLY FOR ALMOST HALF OF LAST YEARS INCREASED COST OF LIVING...OIL INDUSTRY PROFITS ARE UP 146% SINCE 1972...OUR REAL WAGES HAVEN'T GONE UP-THEY'VE GONE DOWN...THE OIL INDUSTRY HAS REAPED WINDFALL PROFITS WHILE PURSUING POLICIES THAT CAN ONLY BE CALLED IRRESPONSIBLE AND CONTRARY TO THE NATIONAL INTEREST. WE CAN'T LET THE OIL INDUSTRY GET AWAY WITH BLAMING WORKERS AND CONSUMERS FOR THE NATION'S ILLS. WHEN WE RECOGNIZE WHAT'S REALLY BEHIND OUR ENERGY AND INFLATION PROBLEMS, WE CAN BEGIN TO DO SOMETHING ABOUT THEM. BUT IF WE ALLOW THE CORPORATIONS TO CONTINUE PLAYING OFF ONE SEGMENT OF THE PUBLIC AGAINST ANOTHER, WE'LL NEVER GET TO THE REAL ROOT OF THE PROBLEM"

MEANWHILE  
AROUND  
THE  
WORLD:

...FOR YEARS STANDARD OIL AND ITS FRIENDS HAVE BEEN PUMPING BILLIONS OF BARRELS OF OIL OUT OF UNDER-DEVELOPED THIRD WORLD NATIONS, REAPING HUGE PROFITS AND LEAVING LITTLE BUT OIL SPILLS FOR THE PEOPLE OF THOSE NATIONS

AND IN MOST OF THE OIL PRODUCING NATIONS THE MONEY WE GET FOR OUR OIL GOES RIGHT INTO THE POCKETS OF THE SHEIKS, SHAHS, KINGS, GENERALS, OIL TYCOONS AND BUSINESSMEN. EVEN WITH CRUDE OIL PRICES GOING UP WE'RE STILL POOR — THE BENEFACTORS ARE THE RULERS OF OUR COUNTRIES...

ME AND THE BOYS HAVE OUR SQUABBLES... BUT BASICALLY WE'RE IN IT FOR THE SAME REASONS...

... AND THE SHEIKS, SHAHS, KINGS, GENERALS, AND OIL BUSINESSMEN SPEND THEIR OIL MONEY ON BUILDING MIGHTY ARMIES TO PROTECT THE OIL FIELDS. FOR WHOM DO THEY BUY THEIR ARMIES FROM? FROM THE

PENTAGON, OF COURSE.

ALONG WITH U.S. PARAMILITARY CORPORATIONS AND ALL AMERICAN CORPORATIONS THAT BUILD TANKS, PLANES WARSHIPS AND GUNS... THE OIL MONEY FEEDS RIGHT BACK INTO...

# THE MILITARY INDUSTRIAL ROCKEFELLER COMPLEX

HOW THE ROCKEFELLERS MAKE BILLIONS, STOP CREEPING COMMUNISM, PROTECT THEIR FOREIGN INTERESTS AND SERVE THEIR COUNTRY ALL AT THE SAME TIME:

...THE ROCKEFELLERS ARE A VERY PATRIOTIC FAMILY... THAT IS WHY, ALTHOUGH THEY USUALLY DON'T FIGHT IN AMERICA'S WARS, WHEN THEIR COUNTRY IS IN NEED AND DUTY CALLS THEY ARE THERE... WITH MISSILES, SUBMARINES, RADAR, BAND AIDS, TIRES, BOMBS AND OTHER EXPENSIVE AND DEADLY ITEMS TO SELL TO THE PENTAGON.... EACH YEAR THE

ROCKEFELLER CORPORATIONS RAKE IN BILLIONS FROM THIS LUCRATIVE FIELD...

...HERE ARE SOME OF THE ROCKEFELLER'S CORPORATIONS THAT RANK AMONG AMERICA'S TOP 100 WAR PROFITEERS:

...JOHN HOPKINS UNIVERSITY...

AEROSPACE CORPORATION

MASSACHUSETTS INSTITUTE OF TECHNOLOGY MIT AT&T

Standard Oil Company OF INDIANA

STANDARD OIL OF CALIFORNIA

THIOKOL CHEMICAL

Automation Industries

... IN VIETNAM AS IBM'S ELECTRIC BATTLEFIELD CONSTANTLY SIGNALLED PLANES POWERED BY THIOKOL TO DROP AUTOMATION INDUSTRIES BOMBS AND CHEVRON HERBICIDES. TANKS POWERED BY STANDARD OIL POUNDED AWAY ON THE GROUND AND PAN AM FLEW AMERICAN SOLDIERS IN AND OUT OF THE BESIEGED COUNTRY...

... FAR AWAY FROM THE ROAR OF BOMBS FALLING AND EXPLODING INTO FLAMES YOU COULD HEAR DAVID ROCKEFELLER SAYING:

HE ALSO SAID:

"IT'S A SACRIFICE WE HAVE TO MAKE FOR DEMOCRACY..."

"I EXPECT THAT AMERICAN OIL COMPANIES WILL INVEST OVER THIRTYSEVEN BILLION DOLLARS IN SOUTH EAST ASIA DURING THE 1970's"

BUT HE SPOKE TOO SOON!

HERE ARE SOME MORE OF THE ROCKEFELLER'S  
MULTI-BILLION DOLLAR CORPORATIONS:

**PanAm**

THE IMPERIAL AIRLINES...

\$ 1.6 BILLION

**EASTERN**

"THE WINGS OF MAN"  
AND 5TH LARGEST  
AIRLINE...

\$ 1.4 BILLION...

**CBS**

...THE T.V. NETWORK  
THAT IS REALLY A  
HUGE INDUSTRIAL  
CORPORATION...

\$ 1.5 BILLION...

**AWACONDA**

...THE LARGEST  
COPPER COMPANY...

\$ 1.6 BILLION

**KIMBERLY-CLARK** \$ 1 BILLION

...MAKERS OF KLEENEX AND KOTEX

**IBM**

THE  
COMPUTER  
TRUST

\$ 12 BILLION...

**ALLIED  
CHEMICALS**

THE 6TH LARGEST CHEMICAL CO.  
\$ 1.6 BILLION

**FOOD**

**BORDEN**

**Domino**

AMSTAR SUGAR,  
#1 IN SUGAR,  
\$ 400 MILLION

#1 IN MILK!

\$ 1.4 BILLION

BOTH BORDEN AND  
CPC ARE HUGE  
CHEMICAL COMPANIES  
TOO - WHICH MAY  
SAY SOMETHING  
ABOUT THEIR  
FOOD!

**CPC**

INTERNATIONAL

#1 IN CORN!

ALIAS: MAZOLA, KARO,  
NUCOA, ARGO, SKIPPY  
PEANUTBUTTER AND  
MORE... \$ 1.4 BILLION

AS YOU MAY HAVE  
ALREADY GUESSED, WE  
NOT ONLY HAVE A NEAR  
MONOPOLY IN OIL... WE  
ALSO DOMINATE THESE  
HUGE INDUSTRIES:

**BANKING,  
COMPUTERS,  
INSURANCE AND  
TELEPHONES!**

ONLY IF THEY  
CONTROL...

ONE  
FAMILY  
CAN'T  
HAVE  
MONOPOLIES  
IN  
ALL  
THESE  
INDUSTRIES?  
CAN THEY?

**280  
BILLION**

... WORTH  
OF  
CORPORATIONS

\$ 280  
BILLION  
DOLLARS!  
LET'S  
SEE...  
THAT  
MEANS...

...THE  
ROCKEFELLERS  
CONTROL  
**20%**  
OF  
ALL U.S.  
INDUSTRY!

... AND  
THEY CONTROL  
**20%**  
OF ALL  
U.S.  
BANKING!

AND  
NEARLY  
**FOUR**  
MILLION  
PEOPLE  
WORK UNDER  
THE  
ROCKEFELLER  
FAMILY!

... BUT WE  
CONTROL ALOT MORE  
THAN  
CORPORATIONS...

**JUST TO MAKE  
SURE AMERICA  
IS GOING IN THE  
"RIGHT & PROPER"  
DIRECTION  
THEY CONTROL  
"THE HALLMARKS  
OF SOCIETY"**

# CHURCHES UNIVERSITIES

THE ROCKEFELLERS ARE NOT RELIGIOUSLY BIASED:

- ...THE ROCKEFELLERS HELP FINANCE (AND THEIR FRIENDS RUN):
- UNION THEOLOGICAL SEMINARY
- RIVERSIDE CHURCH
- INTER-CHURCH CENTER (WHICH HOUSES THE BOARDS OF MANY OF THE IMPORTANT PROTESTANT CHURCHES)
- ST. JOHN'S CATHEDRAL
- JEWISH THEOLOGICAL SEMINARY
- CORPUS CHRISTI CHURCH
- ST. LUKE'S CHURCH
- ... in New York...

... IT'S NOT THAT THEY ARE ESPECIALLY INTELLECTUALLY INCLINED (ALTHOUGH ALL THE ROCKEFELLERS WENT TO VERY ELITE SCHOOLS) BUT THE ROCKEFELLERS ARE VERY INTERESTED IN UNIVERSITIES... WHERE ELSE WOULD THEY GET PEOPLE LIKE HENRY KISSINGER, RALPH BUNCHE, WALT ROSTOW AND GRAYSON KIRK? WHO ELSE WOULD DESIGN THEIR ATOM BOMBS AND TRAIN THEIR TECHNICIANS?

THE ROCKEFELLERS AND THE FORDS PAY FOR UNIVERSITY RESEARCH (AND DECIDE WHAT IS RESEARCHED)... ROCKEFELLER MONEY BUILT THE UNIVERSITY OF CHICAGO AND THEY FINANCE MOST OF THE IVY LEAGUE UNIVERSITIES... THE ROCKEFELLERS ARE THE MAIN CONTRIBUTORS TO THE UNIVERSITIES BELOW AND THEREFORE THE ROCKEFELLERS

HERE ARE A FEW OF THE UNIVERSITIES THE ROCKEFELLERS HELP FINANCE

AND THEIR FRIENDS FORM THE BOARDS OF TRUSTEES WHICH RUN THESE UNIVERSITIES...

## "CULTURAL CENTERS"

... AND, OF COURSE, THE ROCKEFELLERS LIKE TO STAY CULTURED... THEY BUILT (OR HELPED BUILD) N.Y. PUBLIC LIBRARY, RADIO CITY MUSIC HALL, THE WHITNEY MUSEUM, THE KENNEDY CENTER, THE MUSEUM OF MODERN ART, THE METROPOLITAN MUSEUM, LINCOLN CENTER, THE METROPOLITAN OPERA, THE BROOKLYN MUSEUM ETC... AND THEY HAVE ONE OF THE LARGEST PRIVATE ART COLLECTIONS ANYWHERE...

... AND JUST FOR GOOD MEASURE THE ROCKEFELLERS ARE HEAVIES IN THE YMCA, THE YWCA, THE BOY'S CLUB, THE 4-H CLUB, THE BOY SCOUTS AND THE GIRL SCOUTS...

WE MUST RAISE OUR YOUTH IN THE PROPER WAY!

(NOT TO MENTION U.S.O., THE AMERICAN CANCER SOCIETY, AND MANY NEW YORK HOSPITALS...)

# WHO OWNS NEW YORK

... AND HAVE YOU EVER WONDERED ...

YOU GUESSED IT!

THE ROCKEFELLERS DON'T GO HALFWAY IN NEW YORK: THEY INFLUENCE ITS' BANKS, ITS' MUSEUMS, ITS' LIBRARIES, ITS' CHURCHES, ITS' ZOO, ITS' UNIVERSITIES, ITS' STORES, ITS' BRIDGES, ITS' BUSES ITS' SUBWAYS, ITS' TUNNELS, ITS' LOBBIES, ITS' PORT, ITS' CLUBS, ITS' "CULTURAL CENTERS", ITS' UTILITIES, ITS' AIRPORTS...  
...THEY'VE EVEN GOT AN INTEREST IN NEW YORK'S BASEBALL TEAMS-- THE YANKEES AND THE METS AND THEY ALSO OWN ROCKEFELLER CENTER. (A COLLECTION OF 23 SKYSCRAPERS IN MID-MANHATTAN) THE WORLD'S MOST VALUABLE PRIVATE REAL ESTATE DEVELOPMENT...

WELL IT'S THEIR HOME AFTERALL!

24

... BUT THAT'S ONLY THE START OF THE ROCKEFELLERS' VAST REAL ESTATE

EMPIRE IN NEW YORK CITY... DAVID BUILT THE LARGEST BANK BUILDING IN THE WORLD TO HOUSE CHASE MANHATTAN AND THE PAN AM BUILDING USED TO BE THE LARGEST OFFICE BUILDING IN THE WORLD... THAT WAS UNTIL DAVID ROCKEFELLER AND HIS DOWNTOWN LOWER MANHATTAN ASSOCIATION PLANNED THE WORLD TRADE CENTER... DAVID PUT HIS PLANS INTO ACTION BY HAVING THE ROCKEFELLER RELATED PORT OF NEW YORK AUTHORITY (WHICH OWNS ALL OF NEW YORK'S BRIDGES, SUBWAYS AND AIRPORTS ETC.) BUILD HIS MONUMENT TO U.S. IMPERIALISM... AND NOW NEW YORK IS BLESSED WITH THE TWO TALLEST, UGliest SKYSCRAPERS IN THE WORLD... NOT FAR BEHIND, URIS BUILDING CORPORATION WHICH THE ROCKEFELLERS BUILT INTO THE LARGEST CONSTRUCTION COMPANY IN NEW YORK JUST COMPLETED THE WORLD'S SECOND LARGEST SKYSKAPER (OUT DISTANCING PAN AM) AND IT OWNS OVER 30 HUGE SKYSCRAPERS IN NEW YORK CITY... AND NOW WE HAVE COME TO THE ROCKEFELLERS' FAMED COLUMBIA UNIVERSITY WHICH OWNS MORE THAN 1/2 BILLION \$ OF REAL ESTATE AND IS GOBBLING UP MORE EVERY DAY... IT OWNS THE LAND UNDER ROCKEFELLER CENTER, THE WORLD TRADE CENTER AND THE SPERRY RAND AND CITIBANK BUILDINGS THAT URIS BUILT, AND IS MOVING INTO HARLEM-- HEADING THE ERASE HARLEM MOVEMENT IS DAVID ROCKEFELLER WHO IS REPLACING SWUMS WITH MIDDLE CLASS APARTMENT COMPLEXES AND MOVING THE BLACKS OUT OF THE ROCKEFELLER OWNED, CULTURALLY RICH "MORNINGSIDE HEIGHTS"

... PUT THAT ONE OVER THERE AND TAKE THAT ONE OUT... AND YOU CAN MOVE THIS ONE IN THE CORNER AND PUT THE BIG ONE...

... IN ALL, THE ROCKEFELLERS, N.Y. TELEPHONE, CON EDISON, THEIR BANKS AND INSURANCE COMPANIES, THE ROCKEFELLER RELATED REAL ESTATE COMPANIES, AND ALL THEIR CORPORATIONS AND INSTITUTIONS OWN 9 BILLION DOLLARS WORTH OF MANHATTAN... OR... 1/4 OF ALL REAL ESTATE ON THE ISLAND...

"YOU'RE ALWAYS FOOLING AROUND WITH DOWNTOWN DAVID, WHY DON'T YOU LEAVE THE POOR PLACE ALONE!"

SAYS PEGGY ROCKEFELLER, DAVID'S WIFE...

... AND ON AND ON THEY GO... TO SAN FRANCISCO, WASHINGTON, CHICAGO, BOSTON...

.. AND PROBABLY YOUR HOME TOWN!

EMBARKADO PLAZA!

SAN FRANCISCO CHICAGO BOSTON WASHINGTON

...RIGHT NOW THE ROCKEFELLERS ARE STARTING TO BUILD COMPANY TOWNS AGAIN... IN THE 1950's JOHN D. ROCKEFELLER BUILT ROWS OF APARTMENT COMPLEXES FOR STANDARD OIL WORKERS IN NEW JERSEY... THEN STANDARD OIL STARTED BUILDING SHOPPING CENTERS AND OFFICE COMPLEXES... NOW IT'S STARTING TO EXPLORE BUILDING WHOLE NEW CITIES... WHEN IT'S FINISHED 700,000 PEOPLE WILL LIVE IN MOBIL OIL'S "MEI FOO NEW VILLAGE" NEXT TO ITS REFINERY IN HONG KONG... AND STANDARD OIL IS STARTING TO BUILD NEW CITIES OUTSIDE OF HOUSTON AND LOS ANGELES... DAVID ROCKEFELLER PLANS TO FILL 2,000 ACRES OF BAY SOUTH OF SAN FRANCISCO TO BUILD THOUSANDS OF NEW TICKY TACKIES. HE JUST FINISHED BUILDING COLUMBIA MARYLAND (POPULATION 100,000) A MODEL CITY. FOR MORE TO COME. THEY BUILD A FACTORY, A SHOPPING CENTER, SOME SCHOOLS, A POLICE STATION AND ROWS AND ROWS OF TICKY TACKY HOUSES AND THEY'VE GOT **STANDARD OIL CITY!** FREEWAYS, INDUSTRIAL TRACTS, COMPANY TOWNS AND SUBURBAN DEVELOPMENTS ARE THE ROCKEFELLERS NEW WAY FOR AMERICA...

...NOTHIN'S TOO GOOD FOR MY WORKERS!

LOOKS LIKE A HUGE LUDLOW TO ME!

## THE MEDIA

YOU HAVE SPLIT-ENDS

...BUT IS ALL THIS ENOUGH FOR THE ROCKEFELLERS?

NO!

...THEY WANT TO CONTROL WHAT YOU HEAR, WHAT YOU SEE AND WHAT YOU READ... THE WANT TO CONTROL YOUR MIND!

"HIS MASTER'S VOICE"

I'M A FIRM BELIEVER IN FREEDOM OF THE PRESS!

SURE YOU ARE, AS LONG AS YOU OWN IT!

THE ROCKEFELLERS AND THEIR FRIENDS CONTROL CBS, RCA OWNS NBC, AND ABC IS CONTROLLED BY SOME OTHER RICH NEW YORK FAMILIES...

THIS IS YOUR CBS RADIO NETWORK STATION

...THE ROCKEFELLERS HAVE ALOT OF MAGAZINES, PUBLISHING AND RECORDING COMPANIES TOO!

...THE LIST OF ROCKEFELLER INFLUENCED NEWSPAPERS STARTS WITH THE "NEW YORK TIMES" AND CIRCLES THE COUNTRY... OF COURSE THE ROCKEFELLERS DON'T CONTROL ALL OF THE NEWSPAPERS... THE HEARSTS, THE KNIGHTS AND THE COWLES HAVE SOME TOO...

...MEANWHILE AT THE MOVIES...

THE ROCKEFELLERS PRESENT: COLUMBIA PICTURES

"...AND THAT'S THE WAY IT IS, WEDNESDAY, NOVEMBER 19th 1974..."

... IN 1969 NELSON ROCKEFELLER WENT ON AN  
OFFICIAL "FACT FINDING" TOUR OF LATIN AMERICA...  
THIS IS WHAT HAPPENED:

- CUBA
- DOMINICAN REPUBLIC: OIL REFINERY BLOWN UP...
- HONDURAS: RIOTING, 1 PERSON KILLED...
- COSTA RICA: LARGE STUDENT DEMONSTRATIONS...
- VENEZUELA: VISIT CANCELLED BY GOVERNMENT, STREET FIGHTING WITH ROCKS AND PISTOLS...
- PANAMA: NATIONAL GUARD CALLED TO STOP DEMONSTRATIONS...
- COLOMBIA: 20,000 MAN SPECIAL SECURITY FORCE CALLED TO STOP HEAVY RIOTING...
- ECUADOR: 10 PEOPLE KILLED BY POLICE, ROCKY'S CAR ALMOST OVERTURNED...
- BOLIVIA: ROCKY'S VISIT CUT TO THREE HOURS IN THE AIRPORT BECAUSE OF RIOTING...
- CHILE: VISIT CANCELLED BY GOVERNMENT BECAUSE OF STRIKES AND DEMONSTRATIONS...
- BRAZIL: THOUSANDS OF "POTENTIAL DEMSTRATORS" JAILED... PEACEFUL VISIT...
- PARAGUAY: DEMONSTRATIONS DESPITE ATTEMPTS TO ELIMINATE THEM BEFORE ROCKY'S VISIT...
- URUGUAY: G.M. PLANT BURNED TO THE GROUND...
- ARGENTINA: NINE ROCKEFELLER OWNED SUPERMARKETS BOMBED OR BURNED... NATION WIDE GENERAL STRIKE... 1 DEMONSTRATOR KILLED...

"NO COUNTRY CAN PROTECT ITS INTERNAL SECURITY ALL BY ITSELF"\*

AND WE'LL BE GLAD TO PROTECT IT FOR THEM!

\* ONE OF THE MANY FACTS IT'S AMAZING - THE KIND OF FACTS HE FINDS... FOUND...

... BUT ROCKY'S NOT DISCOURAGED ...  
... HE'S BUSY BUILDING MORE AMERICAN-STYLE HOTELS, SUPERMARKETS AND UNIVERSITIES ALL OVER THE WORLD... AND HE'S MAKING SURE EVERY TOWN HAS ITS OWN CHASE MANHATTAN BANK BRANCH... HE BACKS LATIN AMERICA'S BIGGEST MAGAZINES "VISION" AND THE "ESSO TIMES" ALONG WITH POST TOASTIES, HAIRSPRAY AND THE "CREOLE CULTURE" ...  
... ROCKY HAS A DREAM... HE WANTS TO MAKE THE WHOLE WORLD A SUBURB OF NEW YORK...

... THIS IS YOUR VOICE OF AMERICA STATION...

... I'D LIKE TO GIVE THE WORLD A COKE...

... PUT YOUR TRUST IN US!

BEAUTIFY YOUR HAIR!

... THE SIGNIFICANT STIMULUS OF THE BASIC RELATIVISM THAT CAUSES THE VARIABLE MAGNITUDE OF PHENOMENA...

GET A TEE-VEE!

... and all the fine ROCKEFELLER corporations have gone out into the rest of the world to pick while the pickin's good!

THE GRASS IS ALWAYS GREENER...

... THE STANDARD OIL TRUST IS THE LARGEST IN AMERICA... BUT IT'S ALSO THE LARGEST CORPORATION IN IRAN, VENEZUALA, ARABIA, INDONESIA AND COLOMBIA AND IT OPERATES IN EVERY COUNTRY IN THE "FREE WORLD"...

... AND THE ROCKEFELLER'S BANKS GET AROUND TOO!

... MEANWHILE ANACONDA COPPER AND ARMO STEEL ARE A' DIGGING, PAN AM FLIES WHERE OTHERS DON'T, IBM AND BORDEN HAVE PLANTS AROUND THE WORLD AND CPC ISN'T CALLED INTERNATIONAL FOR NOTHING...

... ALL IN ALL THE ROCKEFELLERS CONTROL MORE THAN 1/2 OF U.S. PRIVATE INVESTMENT IN AFRICA, ASIA AND LATIN AMERICA, WHERE LABOR IS CHEAP, RESOURCES PLENTIFUL, AND PROFITS HIGHER THAN ANYWHERE...

... THE ROCKEFELLERS LIKE TO CALL THEIR GIANT CORPORATIONS THAT DOMINATE THE WORLD "MULTINATIONAL" OTHERS HAVE DIFFERENT WORDS FOR THEM:

IMPERIALISMO!

--THE ROCKEFELLERS HAVE PLANTATIONS EVERYWHERE... A SHEEP AND CATTLE RANCH IN AUSTRALIA, RICE AND COFFEE PLANTATIONS IN VENEZUELA, HALF A DOZEN PLANTATION RESORTS IN THE CARIBBEAN AND HAWAII, A HUGE COFFEE PLANTATION IN ECUADOR, RICE, CORN, CATTLE, COFFEE AND HOG PLANTATIONS IN BRAZIL, COCONUT PLANTATIONS IN THAILAND, A HUGE RANCH IN VENEZUELA, POULTRY OPERATIONS AROUND THE WORLD, A COFFEE PLANTATION IN EL SALVADOR, A SUGAR PLANTATION IN PERU, A HUGE CATTLE RANCH IN ARKANSAS AND MANY OTHERS... MOST FARMERS LEARN TO RESPECT THE LAND THEY TILL... NOT THE ROCKEFELLERS. THEIR COFFEE PLANTATIONS GO MARCHING THROUGH THE SOUTH AMERICAN JUNGLES DESTROYING EVERYTHING IN THEIR PATH... THEY LEAVE BEHIND HUNDREDS OF ACRES OF BARREN LAND THAT MAY NEVER RECOVER... RUINED BY EXTREME OVERUSE AND TONS OF "PETROFERTILIZERS" AND INSECTICIDES (MADE BY STANDARD OIL)... BUT THEY DON'T CARE -- THE LAND IS CHEAP AND THE COFFEE PROFITABLE...

"STANDARD OIL STOCK PRICES REFLECT POLITICAL CONDITIONS THROUGHOUT THE WORLD..."

...SAYS MOODY'S INVESTMENT MANUAL...

...HOW BET YOUR SWEET BUCK WE'RE INTERESTED IN POLITICAL CONDITIONS THROUGHOUT THE WORLD!

...TO RULE MORE EFFICIENTLY THE ROCKEFELLERS HAVE DIVIDED THE WORLD AMONG THEMSELVES... NELSON IS AN EXPERT ON LATIN AMERICA (AND SPEAKS FLUENT SPANISH)... JOHN TAKES CARE OF THE FAR EAST... LAURANCE WATCHES OVER AFRICA AND THE CARIBBEAN AND DAVID PRESIDES OVER THE WHOLE EMPIRE...

... AND NELSON ROCKEFELLER AND GANG BUILT THE UNITED NATIONS TOO... PART OF THE ORIGINAL PLAN WAS TO HOUSE THE U.N. CLOSE TO HOME — AT THE ROCKEFELLER'S POCAHONTIC ESTATE... WHEN THAT DIDN'T WORK OUT THE ROCKEFELLERS PERSONALLY BOUGHT SOME LAND IN DOWNTOWN MANHATTAN AND HAD THEIR PERSONAL ARCHITECT DESIGN THE SLEEK NEW UNITED NATIONS HEADQUARTERS... AND NELSON ROCKEFELLER, RALPH BUNCHE, JOHN FOSTER DULLES AND FRIENDS LED THE FIRST U.S. DELEGATION...

...I'D LIKE TO TEACH THE WORLD TO SING IN PERFECT HARMONY...

...AND IN PERFECT ENGLISH, OF COURSE!

... ONE FINE DAY AS DAVID

ROCKEFELLER WAS SEEING THE SIGHTS OF MALAYSIA:

"WHAT DO YOU THINK OF BEAUTIFUL AND ANCIENT MALAYSIA, MR. ROCKEFELLER, SIR?"

"IT'S SURPRISING THAT SUCH A SMALL COUNTRY SHOULD HAVE SUCH A FANTASTIC FOREIGN EXCHANGE RATE!"

... THE ROCKEFELLERS LIKE TO HELP THEIR FRIENDS... THEY HAVE SET UP DOZENS OF AGENCIES (MOST OF THEM FINANCED BY GENEROUS TAXPAYERS) TO AID FRIENDLY FOREIGN COUNTRIES...

THIS AID CONSISTS MOSTLY OF BUILDING ROADS TO BANANA PLANTATIONS, FINANCING DIAMOND MINES AND THE LIKE... WHAT'S LEFT SIFTS THROUGH THE HANDS OF THE FOREIGN COUNTRIES RULING ELITE - SILKEN CRUMBS TO KEEP THEM CONTENT... BETTER KNOWN AS "FOOD FOR PEACE"

... WHEN WE HELP OUR FRIENDS... OUR FRIENDS HELP US... RIGHT EMPEROR?

... THE PEOPLE AROUND THE WORLD DON'T GIVE THE ROCKEFELLERS A VERY WARM WELCOME... BUT THEY ARE HONORED GUESTS IN IMPERIAL PALACES EVERYWHERE THEY'RE CONTINUALLY TOURING THEIR EMPIRE THEY ARE SURE TO VISIT THE LOCAL PRESIDENT OR KING TO TALK OVER THEIR PROBLEMS... AND WHENEVER FOREIGN RULERS COME TO AMERICA THEY MAKE SURE TO VISIT A ROCKEFELLER...

... A JEALOUS NEW YORK BANKER SAYS:

"DAVID ALWAYS GOT SOME DAMN EMPEROR OR SHAM OVER THERE!"

THIS WEEK'S LACKEYS ARE:

**THE LLERAS COUSINS!**

ALBERTO LLERAS CAMARGO

CARLOS LLERAS RESTREPO

... A MEMBER OF ONE OF LATIN AMERICA'S OLDEST, RICHEST AND MOST PRESTIGIOUS FAMILIES, ALBERTO LLERAS MARRIED THE DAUGHTER OF A FORMER CHILEAN PRESIDENT & SETTLED DOWN TO BECOME EDITOR OF THE LARGEST NEWSPAPERS IN CHILE, ARGENTINA & COLOMBIA... THEN HE TWICE BECAME PRESIDENT OF COLOMBIA... WELL KNOWN FOR HIS FRIENDSHIP WITH STANDARD OIL AND THE STATE DEPARTMENT ALBERTO IS NOW A TRUSTEE OF THE ROCKEFELLER FOUNDATION AND HEAD OF VISION MAGAZINE (THE TIME OF LATIN AMERICA)...

... IN 1966 ALBERTO'S COUSIN, CARLOS LLERAS, BECAME PRESIDENT OF COLOMBIA... A LIBERAL TECHNICRAT, CARLOS IS NO STRANGER TO ROCKEFELLER IDEALS EITHER... SETTING A NEW TRADITION CARLOS MOVED RIGHT OVER FROM THE PRESIDENCY OF CELENSE CORPORATION'S COLOMBIAN SUBSIDIARY TO THE PRESIDENCY OF COLOMBIA (LLERAS'S SUCCESSOR AS PRESIDENT WAS ALSO PRESIDENT OF CELENSE COLOMBIA)... CARLOS LOOKED VERY GOOD TO DAVID ROCKEFELLER, WHO SAID, AFTER PRaising HIS FRIENDLY "DEMOCRATIC" REGIME, "WHEN I GET BACK TO THE U.S. I WILL TELL THE FINANCIAL SECTOR OF COLOMBIA'S GREAT PROGRESS & STABILITY"...

THIS WEEK'S LACKEY AWARD GOES TO THE FANTASTIC LLERAS COUSINS FOR THEIR DEDICATED WORK ON THE NEW TRANS-OCEANIC CANAL... THE CANAL, DAVID ROCKEFELLER'S NEWEST PROJECT FOR COLOMBIA, WILL OPEN UP VAST OIL AND MINERAL RESERVES TO IMPATIENT AMERICAN CORPORATIONS... THE LLERAS COUSINS COULD NOT BE REACHED TO ACCEPT THE LACKEY AWARD BUT A REPRESENTATIVE IN BERKELEY ACCEPTED IT WITH "GREAT HONOR"...

... YEAH, WE'VE GOT ALOT OF FRIENDS... BUT THEN EVERYONCE IN A WHILE WE GET THESE UPPITY GOVERNMENTS... VERY UNCO-OPERATIVE... THEY START TAKING THEIR LAND, AND THEIR OIL AWAY FROM US... AND-GULP- THEY START TALKING ABOUT KICKING US OUT! SHIVER...

... WE TRY TO CONVINCE THEM TO LISTEN TO REASON...

...BUT THERE ARE HARD-CORE INCORRIGIBLES...

... AND IF ALL ELSE FAILS... WELL...

... YOU MEAN INCORRUPTIBLES!

WHAT'S THE C.I.A. FOR ANYWAY!

...WHAT THE C.I.A. IS FOR ANYWAY:

...THE CENTRAL INTELLIGENCE AGENCY IS THE MOST SECRET AND THE MOST POWERFUL PART OF THE FEDERAL GOVERNMENT... IT HAS OVER 200,000 EMPLOYEES AND SPENDS BILLIONS OF DOLLARS A YEAR... WHAT DOES IT DO?

...THE CIA MAKES PLOTS...

...BUGS OFFICES...

...FINDS OUT ABOUT RUSSIAN MISSILES...

...IMPORTS HEROIN...

...FINANCES RESEARCH...

...WATCHES PEOPLE...

...AND ASSASSINATES PEOPLE...

...BUT ITS MOST IMPORTANT JOB IS TO CLEAN UP UN-FRIENDLY GOVERNMENTS...

# ... HERE ARE A FEW MAJOR OPERATIONS:

## IRAN 1953

... IT WAS A REAL JAMES BOND OPERATION...

QUOTE FROM A CIA AGENT AFTER THE COUP IN IRAN...

TEDDY ROOSEVELT'S GRANDSON (WHO LATER BECAME A TOP EXECUTIVE ON GULF OIL) LED THIS CIA-RUN COUP WHICH TOOK CARE OF PREMIER MOHAMMED MOSSADEGH, AFTER STANDARD OIL BECAME WORRIED WHEN HE BEGAN NATIONALIZING OIL COMPANIES... THEY REPLACED HIM WITH A FORMER NAZI AND IRAN HAS BEEN FASCIST EVER SINCE... AND RIGHT AFTER THE COUP STANDARD OIL AND FRIENDS WERE GIVEN IRAN'S VAST OIL RESERVES...

"WE'VE DONE SOME GOOD THINGS... IN THE ECONOMY AND OVERSEAS TOO - IRAN AND GUATEMALA..."

... A QUOTE FROM ME EISENHOWER...

WHAT ABOUT THAT JOKER ABOUT IRAN? OH - HE'S O.K. HE'S ONE OF OUR BOYS!

... A REPORTED CONVERSATION BETWEEN A REPORTER AND A CIA AGENT

... WHICH BRINGS US TO:

## GUATEMALA 1954

... A NATIONALIST PRESIDENT WAS THREATENING STANDARD OIL AND UNITED FRUIT! UNLIKE MOST YANQUIS THEY WENT HOME... BUT THEY DIDN'T GIVE UP... SOON ALLEN DULLES, A STANDARD OIL LAWYER, AND THE C.I.A. WERE BACK AND THEY GOT RID OF THE PINKO AND REPLACED HIM WITH A FASCIST GENERAL AND EVEN THREW IN SOME NEW OIL LAWS FOR GUATEMALA IN THE BARGAIN... AND NOW STANDARD OIL AND THE BIG BANANA ARE BACK AND EVERYONE IS HAPPY - EXCEPT THE GUATEMALANS...

... THERE WAS A TIME WHEN WE HAD A VERY DESPERATE SITUATION IN CENTRAL AMERICA AND WE HAD TO GET RID OF A COMMUNIST GOVERNMENT"

... ANOTHER QUOTE FROM IKE...

... AND GUATEMALA WAS ONLY TOO HAPPY TO LET THE C.I.A. TRAMP IN THAT COUNTRY FOR THE ...

## BAY OF PIGS INVASION 1961

... AN UNSUCCESSFUL ATTEMPT BY THE C.I.A. TO RECAPTURE CUBA ...

... AT THAT MOMENT... IN AFRICA:

## the CONGO 1961

... IN 1960 NELSON ROCKEFELLER SUGGESTED HAVING ANOTHER KOREAN TYPE WAR TO "FREE" THE CONGO FROM COMMUNIST CLUTCHES... WHY WAS THE GOVERNOR OF NEW YORK SO WORRIED ABOUT WHAT WAS HAPPENING IN THAT JUST INDEPENDANT AFRICAN NATION?... WELL, THE INDEPENDENCE LEADER, PATRICE LUMUMBA, NATIONALIZED FOREIGN CORPORATIONS, KICKED OUT THE WHITE U.N. TROOPS AND WAS SCARING THE ROCKEFELLERS WHO WERE ALL SET TO MOVE IN... SO WITHOUT WASTING MUCH TIME THE C.I.A. MOVED IN, CAPTURED LUMUMBA, AND BEAT, TORTURED AND KILLED HIM... THE MAN THEY PICKED TO REPLACE HIM, JOSEPH MOBUTU, HAD FOUGHT IN THE BELGIAN ARMY AND WORKED FOR A FRENCH NEWSPAPER... (A TRUE PATRIOT!)... HE IMMEDIATELY BEGAN TO MASSACRE THOUSANDS OF HIS OPPONENTS...

"I AM THE PRESIDENT!"

... SAID MOBUTU...

... SAID NIXON ...

... THE CONGO IS A GOOD INVESTMENT"

"THAT'S THE SPIRIT" SAID DAVID ROCKEFELLER AS HE LED THE FIRST EXPEDITION OF AMERICAN BUSINESSMEN TO THE CONGO TO EXPLORE THE "INVESTMENT CLIMATE" ... THEN THE ROCKEFELLERS MOVED IN FULL FORCE WITH ALL THEIR MAJOR BANKS... PAN AM TOOK OVER THE LOCAL AIRLINE AND BUILT SEVERAL HOTELS... AT&T BUILT A SUBSIDIARY, ESSO LOOKED FOR OIL AND STANDARD OF INDIANA WENT INTO COPPER... THEY ALSO INVESTED IN THE COUNTRY PERSONALLY, BUYING HUGE INTERESTS IN THE CONGO'S COPPER COMPANY, TEXTILES, PINEAPPLES AND AIR CRAFT & AUTO MANUFACTURING...

"I AM NOT AFRAID OF AMERICAN IMPERIALISM! ... MY COUNTRY OFFERS YOU IMMENSE PHYSICAL RESOURCES & GOOD QUALITY WORKERS AT LOW WAGES WITH NO STRIKES... AND I WILL NOT TAMPER WITH FOREIGN ASSETS... WHAT MORE COULD ONE WANT?"

... ASKED THE NEW DICTATOR ...

# INDONESIA 1965

"INDONESIA IS THE BEST THING THAT'S HAPPENED TO UNCLE SAM SINCE WORLD WAR II!"

... A WORLD BANK OFFICIAL ...

# BRAZIL 1964

... THE COMMUNIST THREAT HIT BRAZIL IN THE EARLY 1960'S ... IT ALSO HIT ITT WHICH HAD ITS TELEPHONES NATIONALIZED AND THREATENED OTHER U.S. CORPORATIONS ... SO THE C.I.A. WORKED QUICKLY AND PLANNED A MILITARY COUP IN 1964 ... BRAZIL BECAME KNOWN AROUND THE WORLD AS ONE OF THE MOST FASCIST COUNTRIES, AND IT WAS FAMED FOR TORTURE AND BEST OF ALL IT WAS VERY FRIENDLY TO U.S. BUSINESS ...

THAT'S THE CIA DISGUISED AS THE COMMUNIST THREAT ...

"THE CHANGES IN THE GOVERNMENT SINCE 1966 HAVE LED TO A NEW ATTITUDE TOWARD FOREIGN CAPITAL. GENTLEMEN, INDONESIA IS A GOLDMINE OF NATURAL RESOURCES AND WE HAVE A LARGE SUPPLY OF CHEAP LABOR WHICH WE CAN OFFER YOU. OUR UNIVERSITIES PRODUCE A LARGE NUMBER OF EDUCATED PERSONNEL WHO WILL SERVE NEW CORPORATIONS WITH PLEASURE ... INDONESIA IS WAITING FOR YOUR INITIATIVE"

"INDONESIA IS THE GREATEST PRIZE IN SOUTH EAST ASIA..."

... AND TRICKY DICKY EXPLAINS HIS BATTLE STRATEGY:

# SOUTH AFRICA

... MANY ROCKEFELLER CORPORATIONS HAVE OPERATIONS IN SOUTH AFRICA AND THE ROCKELLERS HAVE A LARGE PERSONAL INTEREST IN THE DIAMOND MINES THERE ... SOUTH AFRICA WAS DAVID'S FAVORITE AFRICAN NATION WHEN HE OPENED UP CHASE MANHATTAN'S FIRST AFRICAN BRANCH THERE ... "NEXT WE'LL GO ON TO RHODESIA" SAID AN AIDE - SINCE THEN CHASE AND FIRST NATIONAL CITY BANK HAVE BECOME FAMOUS FOR FINANCING THE WHITE DICTATORSHIP THERE AND THE GHANIAN TIMES HAS CHARGED THAT THE ROCKEFELLERS ARE ARMING THE SOUTH AFRICAN FASCISTS AND THE PORTUGUESE COLONIALISTS ... THE GHANIAN TIMES AND GHANA'S INDEPENDENCE LEADER, NKRUMAH WERE SOON OVERTHROWN ...

# WHO RUNS THE CIA?

... THE J. EDGAR HOOVER OF THE C.I.A. WAS THE LATE ALAN DULLES, A TOP ROCKEFELLER LAWYER ... AFTER HIM CAME JOHN MCCONE FROM STANDARD OIL OF CALIFORNIA ... THE ROCKEFELLERS HAVE ALWAYS HAD A STRONG INFLUENCE IN THE C.I.A. WHICH IS ONE OF THE MOST "LIBERAL" PARTS OF THE GOVERNMENT ...

# GREECE 1947-1967

...AS A RESULT OF THESE TWO C.I.A. LED COUPS COMMUNISM HAS BEEN CONTAINED, THE PEOPLE OF GREECE HAVE A FASCIST GOVERNMENT, AND STANDARD OIL HAS A HUGE OIL REFINERY.

# CAMBODIA 1970

...PRINCE SIHANOUK, AN ANTI-AMERICAN, WAS NOT CO-OPERATING AT ALL WITH THE AMERICAN SEIGE OF SOUTH VIETNAM - SO THE C.I.A. OVERTHREW HIM AND THE FRIENDLY (AND SICK) LOU NOU TOOK HIS PLACE...

# BOLIVIA 1971

...THE C.I.A., AFTER KILLING CHE, STAGED AROUND TO GET RID OF THE NEW NATIONALIST ANTI-AMERICAN GOVERNMENT... THE NEW C.I.A. INFESTED GOVERNMENT IS RISING FAST IN THE WORLD OF FACISM - FAMED FOR ITS TORTURE, KILLINGS, AND MONSTROUS JUNGLE PRISONS...

# CHILE 1973

...ON SEPTEMBER 11, 1973 THE CHILEAN MILITARY CRUSHED THE DEMOCRATICALLY ELECTED GOVERNMENT OF CHILE AND MURDERED SOCIALIST PRESIDENT SALVADOR ALLENDE... IT WAS THE BLOODIEST MILITARY COUP IN MODERN HISTORY - TO TAKE THE COUNTRY THE MILITARY BOMBED AND SHOT WITH ARTILLERY THE PRESIDENTIAL PALACE, ALLENDE'S HOME, NEWSPAPERS AND RADIO STATIONS, APARTMENT BUILDING "SNIPER NESTS" AND FACTORIES IN SANTIAGO AND VALPARAISO... BY EARLY 1975, ABOUT

30,000 PEOPLE HAVE BEEN KILLED. BUT RESISTANCE TO THE MILITARY IS STILL STRONG... THERE IS CIVIL WAR IN CHILE

AND THERE WILL BE UNTIL CHILE IS RETURNED TO ITS PEOPLE...

"I will fight to the end if it costs me my life"

# Why Bloody Chile?

WHEN ALLENDE WAS ELECTED PRESIDENT IN 1970 SOCIALIST CHILE THREATENED THE UNITED STATES AND AMERICAN CORPORATIONS... ALLENDE TOOK OVER THE ROCKEFELLER'S ANACONDA COPPER MINES (THE LARGEST IN THE WORLD) AND WAS DOING ALL HE COULD TO SET UP A SOCIALIST DEMOCRACY RIGHT UNDER ROCKY'S NOSE... IT ET AND THE C.I.A. HAD BEEN TRYING TO GET RID OF ALLENDE EVER SINCE HIS ELECTION... FINALLY THEY KILLED HIM... THE COUP WAS DIRECTED BY THE C.I.A. AND U.S. MILITARY ADVISORS... IT IS THE LATEST AND MOST INCREDIBLE OF THIS SERIES OF AMERICAN LED FASCIST COUPS, THAT ARE BECOMING MORE AND MORE COMMON IN THE THIRD WORLD EVERY YEAR...

...then for the tougher jobs theres always the MARINES:

STANDARD OIL

...FROM THE WALLS OF MONTEZUMA TO THE SHORES OF TRIPOLI... WE WILL FIGHT OUR COUNTRY'S BATTLES ON THE LAND, BY AIR OR SEA! WE WILL FIGHT FOR FREEDOM & JUSTICE AND TO KEEP OUR HONOR CLEAN! AND TO PROVE THAT WE ARE PROUD TO BE THE UNITED STATES MARINES! WE WILL...

...BUT IF YOU THINK WE'VE HAD A HAND IN ALL THESE FASCIST GOVERNMENTS - YOU AIN'T SEEN NOTHING YET...

THERE ARE 1 1/2 MILLION AMERICAN SOLDIERS IN FOREIGN COUNTRIES WATCHING OVER THE WORLD (AND ANOTHER 2 MILLION ARMED AND WAITING AT HOME)

IN RECENT YEARS THEY'VE MARCHED IN VIETNAM, LAOS, CHINA, JORDAN, HAITI, IRAQ, THE DOMINICAN REPUBLIC, CAMBODIA, DETROIT, LEBANON, GUATEMALA, SYRIA, INDONESIA, NICARAGUA, THAILAND, THE CONGO, MALAYSIA, YEMEN, PANAMA ETC....

YOU HAVE ONE VOTE.  
EACH OF THE ROCKEFELLERS  
HAVE ONE VOTE. BUT AS YOU  
HAVE PROBABLY ALREADY  
GUESSED THE ROCKEFELLERS  
HAVE FAR MORE POLITICAL  
POWER THAN YOU DO...

THE MOST POLITICALLY POWERFUL  
MEMBER OF THE ROCKEFELLER DYNASTY  
IS NOT...

THE VICE-  
PRESIDENT  
OF THE  
UNITED STATES...

NELSON

OR THE FORMER  
GOVERNOR OF  
ARKANSAS...

WINTHROP

IT COULDN'T  
BE HIM-  
HE'S  
DEAD!

...OR THE SECRETARY OF  
STATE OF WEST VIRGINIA  
WHO EXPECTS TO BE  
PRESIDENT...

A COMMON  
EXPECTATION  
AMONG US  
ROCKEFELLERS!

JOHN DAVID  
ROCKEFELLER IV

...THE MOST  
POWERFUL  
MEMBER OF THE  
ROCKEFELLER  
FAMILY IS THE  
ONE WHO CALLS  
HIMSELF...

"THE  
NON-  
POLITICAL  
ROCKEFELLER"

DAVID

DAVID ROCKEFELLER IS CHAIRMAN  
OF CHASE MANHATTAN BANK.  
HE'S DEFINITELY  
ONE OF THE  
RICHEST MEN IN  
THE WORLD...  
BUT HIS MOST  
POLITICALLY POWERFUL  
POSITION IS IN...

# THE COUNCIL ON FOREIGN RELATIONS

THE C.F.R. IS BUSINESSMEN, ECONOMISTS, POLITICIANS, MILLIONAIRES, BILLIONAIRES, ATOMIC SCIENTISTS, GOVERNORS, THE C.I.A., THE F.B.I., THE JOINT CHIEFS OF STAFF, RENOWNED LIBERALS, NEWSPAPER PUBLISHERS, ROCKEFELLER FOUNDATION OFFICIALS, CORPORATION EXECUTIVES, SENATORS, BANKERS, PRESIDENTS, TOP LEVEL GOVERNMENT OFFICIALS AND OTHER SUCH PEOPLE ALL PUT TOGETHER... THE C.F.R. IS THE 1,400 MOST POWERFUL WHITE MEN IN AMERICA (ALONG WITH A TOKEN HANDFUL OF WOMEN AND BLACK PEOPLE)... THE PURPOSE OF THE COUNCIL ON FOREIGN RELATIONS IS TO STAFF THE FEDERAL GOVERNMENT AND PLAN FOREIGN POLICY...

COME IN...  
JOHN  
GENERAL...

CFR  
MEETING  
ROOM  
PRIVATE  
WOMEN,  
ALIENS AND  
NON-MEMBERS  
KEEP OUT

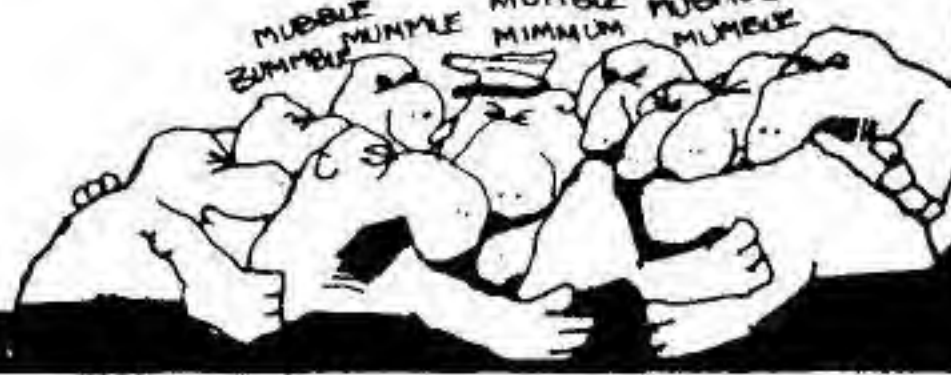

IT IS PROBABLY THE MOST POWERFUL POLITICAL ORGANIZATION IN THE WORLD... THE INVISIBLE GOVERNMENT... EVER SINCE WORLD WAR TWO THE COUNCIL ON FOREIGN RELATIONS HAS BEEN PLANNING THE WORLD'S FUTURE - ECONOMICALLY, POLITICALLY, MILITARILY AND COMPLETELY... SHOWING HIS RANK IN SOCIETY, DAVID ROCKEFELLER IS CHAIRMAN OF THE BOARD... AND THE ROCKEFELLER FAMILY ORIGINALLY SET UP THE C.F.R., THEIR FOUNDATIONS FUND IT, AND THE ROCKEFELLER BROTHERS AND THEIR CRONIES RULE IT...

C.F.R. MEMBERS  
PLANNING THE WORLD'S  
FUTURE

I NEVER  
HEARD ABOUT  
THAT IN MY  
HISTORY  
BOOK!

MUMBLE MUMBLE MUMBLE MUMBLE  
MUMBLE MUMBLE MUMBLE MUMBLE

**JOHN McCLOY**  
(PAST CHAIRMAN OF  
BOTH THE CHASE  
MANHATTAN BANK  
AND THE C.F.R.,  
AS WELL AS A  
GOVERNMENT  
OFFICIAL) SAID  
WHILE IN WASHINGTON:  
"WHENEVER WE  
NEEDED A MAN WE  
THUMBED THROUGH  
THE COUNCIL ROLLS  
AND PUT THROUGH  
A CALL TO  
NEW YORK"

**HELLO, DAVID...**  
COULD YOU SEND  
OVER A NEW  
TREASURY SECRETARY  
AND A FEW MEN  
FOR THE STATE DEPT.?

...HERE IS  
A SHORT  
STORY  
OF THE  
UNHAPPY  
DEMISE  
OF ONE OF  
THE MORE  
FAMOUS OF  
THE  
COUNCIL MEMBERS →

BESIDES TRICKY, KENNEDY  
AND EISENHOWER WERE BOTH  
MEMBERS OF THE CLUB...  
INFACIT, THREE OUT  
OF FOUR TOP  
LEVEL  
GOVERNMENT  
OFFICIALS BELONG  
TO THIS EXCLUSIVE  
ORGANIZATION, ALONG  
WITH UNCOUNTED  
NUMBERS OF SENATORS,  
REPRESENTATIVES  
AND  
GOVERNORS...

AMAZING  
COINCIDENCE!

... OUR NEW VICE PRESIDENT TELLS THE  
MORAL OF THE STORY:

... ASK NOT WHAT  
STANDARD OIL CAN  
DO FOR YOU,  
BUT WHAT YOU CAN  
DO FOR STANDARD  
OIL!

# ...WHERE DO SECRETARIES OF STATE COME FROM?

... WELL, EISENHOWER'S SECRETARY OF STATE JOHN FOSTER DULLES, WAS A TOP ROCKEFELLER LAWYER & PRESIDENT OF THE ROCKEFELLER FOUNDATION... WHEN DULLES DIED CHRISTIAN HERTER WHO MARRIED INTO THE STANDARD OIL GANG (HIS SON IS A V.P. ON MOBIL) BECAME SECRETARY OF STATE... NEXT CAME DEAN RUSK ANOTHER PRESIDENT OF THE ROCKEFELLER FOUNDATION... THEN WHEN IT WAS NIXON'S TURN TO PICK A SECRETARY OF STATE HE TURNED TO THE REGULAR PLACE AND ASKED GEORGE HARRAR, PRESIDENT OF THE ROCKEFELLER FOUNDATION... BUT HARRAR DECLINED SO NIXON PICKED AN OLD FRIEND, WILLIAM P. ROGERS... HOWEVER ROGERS KNEW NOTHING ABOUT FOREIGN AFFAIRS SO HENRY KISSINGER MOVED IN TO TAKE CARE OF THE JOB (SEE BELOW).

... AS FOR THE REST OF THE CABINET... ATTORNEY GENERALS GENERALLY COME FROM KEY WALL STREET LAW FIRMS AND THE LAST TWO SECRETARIES OF AGRICULTURE WERE SENT DIRECTLY TO WASHINGTON FROM FAIRBANKS (FOR 5 WHEAT CEX BOX TOPS AND 50¢)... TWO OF THE LAST FOUR TREASURY SECRETARIES ARE DIRECTORS OF CHASE MANHATTAN AND NIXON'S WAS CHAIRMAN OF CHICAGO'S LARGEST BANK... AVIATION OFFICIALS BECOME CHAIRMAN OF THE BOARD OF PAN AM AND THE DEFENSE DEPARTMENT RELIES ON PEOPLE FROM THE WAR INDUSTRY... SUCH AS FRANK PACE OF GENERAL DYNAMICS, CYRUS VANCE OF IBM, WILLIAM BURDEN OF LOCKHEED, DAVID PACKARD OF HEWLETT-PACKARD, THOMAS GATES OF GENERAL ELECTRIC & R. GILPATRICK OF FAIRCHILD...

## UNITED STATES OF AMERICA, INC. BOARD OF DIRECTORS

### the adventures of DR. HENRY KISSINGER

... MOST FOLKS DON'T KNOW IT, BUT HENRY KISSINGER, WORLD TRAVELER, ORIGINATED IN THE PRESTIGIOUS ROCKEFELLER STABLES TOO. THE ROCKEFELLERS DISCOVERED HENRY KISSINGER AT HARVARD AND GAVE HIM A JOB AT THE ROCKEFELLER BROTHERS FUND. SINCE THEN HE'S WORKED FOR THE COUNCIL ON FOREIGN RELATIONS, THE ROCKEFELLER FOUNDATION, HARVARD UNIVERSITY AND VARIOUS OTHER FAMILY PROJECTS. RECOGNIZING A HIGHLY IMPERIALIST MIND, NELSON ROCKEFELLER HIRED HENRY AS HIS PERSONAL FOREIGN AFFAIRS ADVISOR FOR MANY YEARS. BUT THEN DUTY CALLED AND HENRY WENT TO WASHINGTON TO SUPERVISE AMERICAN FOREIGN AFFAIRS AND DEFEND THE ROCKEFELLERS PROPERTY AND OIL AROUND THE WORLD. HENRY WAS CONSIDERING RETURNING TO NEW YORK TO BECOME (NO KIDDING) PRESIDENT OF THE ROCKEFELLER FOUNDATION, BUT HE DECIDED TO STAY ON AS SECRETARY OF STATE WHEN HE HEARD THAT HIS BOSS WAS MOVING INTO TOWN TO BECOME VICE-PRESIDENT.

WHEN HENRY LEFT FOR WASHINGTON I GAVE HIM A NOMINAL GIFT OF \$50,000 "IN APPRECIATION FOR 15 YEARS OF DEDICATED SERVICE" ... IT'S THE THOUGHT THAT COUNTS...

38 ...and change presto he turned into:

## SUPER LIBERAL

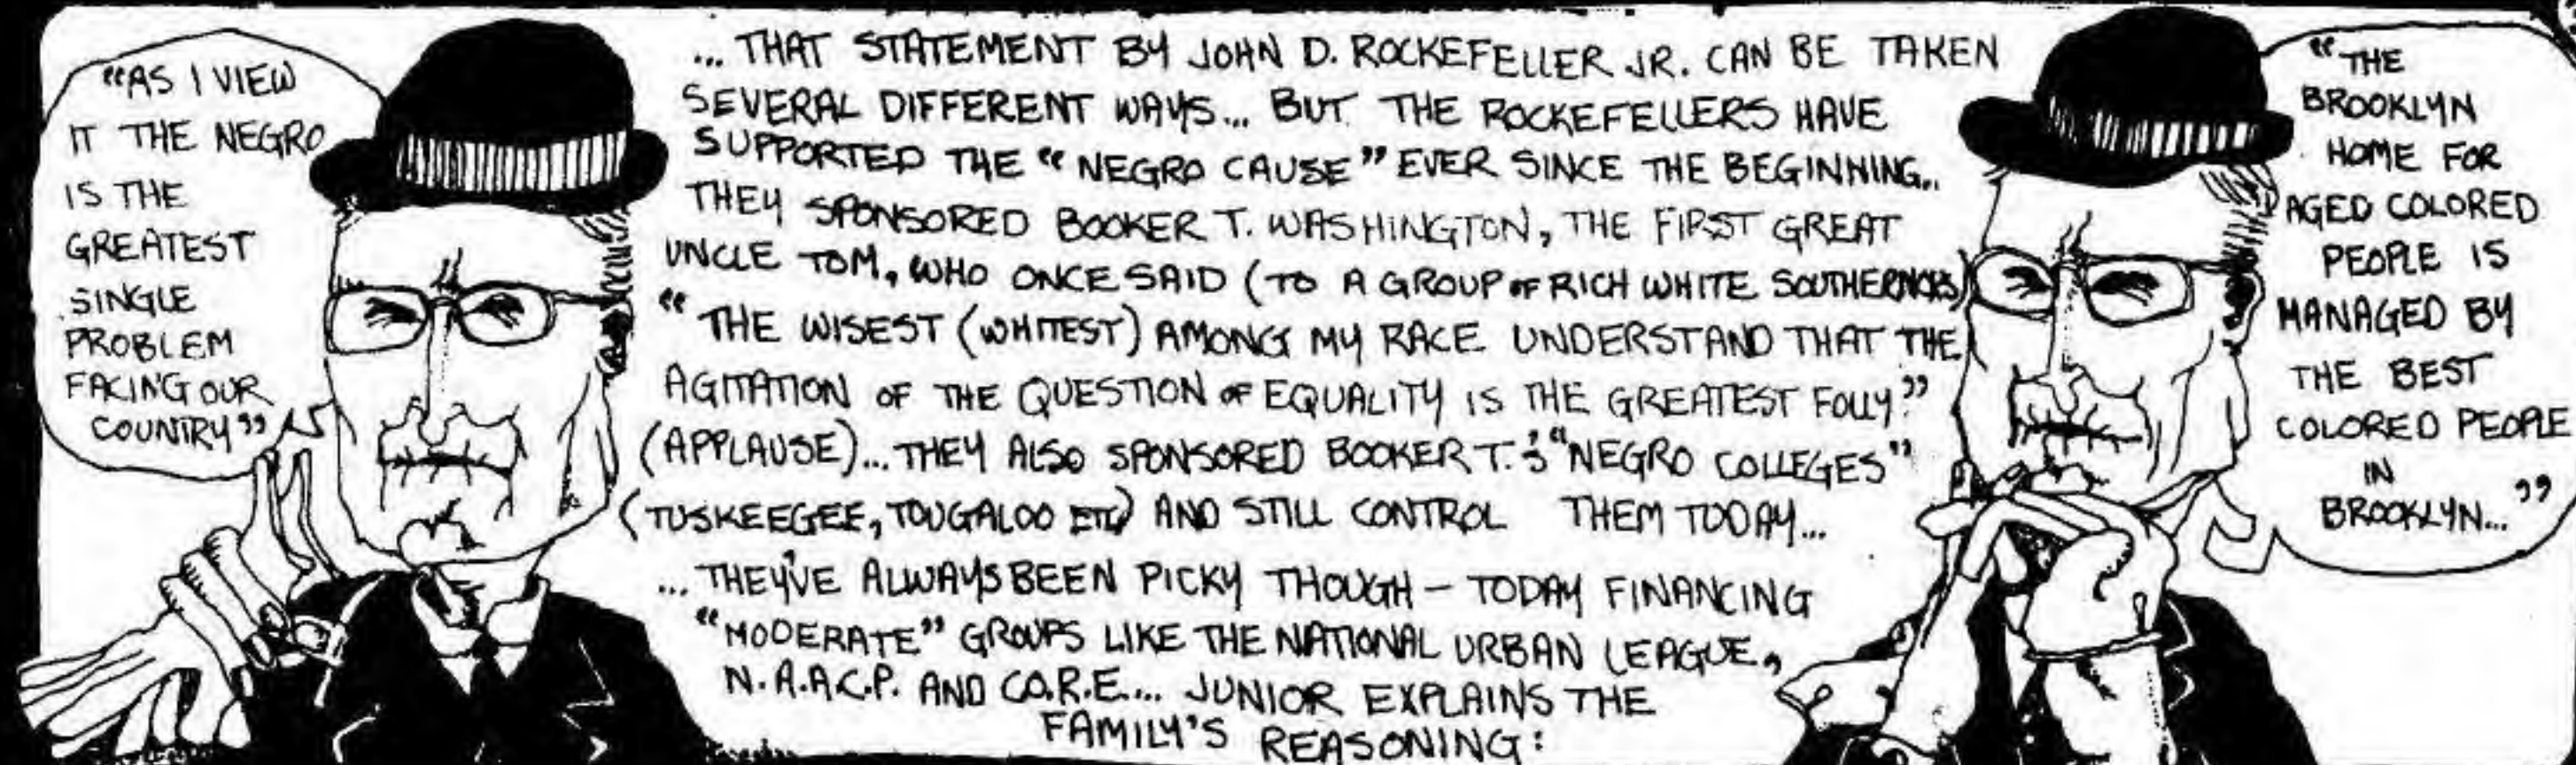

## POPULATION CONTROL

# LIBERAL RACISM

... WHAT'S WRONG WITH BLACKS AND PUERTO RICANS? DAVID ROCKEFELLER COMPLAINS:

"THEY'VE MANAGED TO GET HIGH SCHOOL DIPLOMAS WITH ONLY FIFTH GRADE READING ABILITY. THEY HAVE ONLY THE VAGUEST NOTION OF WHAT CONSTITUTES PUNCTUATION AND PROPER ATTIRE... AND THEY SUFFER FROM AN ALMOST TOTAL LACK OF MOTIVATION"

... AFTER THE RIOTS IN DETROIT, HARLEM, NEWARK, WATT'S AND DOZENS OF OTHER CITIES SCARED THE HELL OUT OF THE ROCKEFELLERS, CHASE MANHATTAN BANK STARTED SIFTING MONEY INTO THE GHETTO... AS IT PROUDLY ADVERTISED IN THE NATION'S MAGAZINES THE BANK HAD A GREAT IDEA - BLACK CAPITALISM! THE IDEA CAME FROM OUR FRIEND AT CHASE MANHATTAN, DAVID YOU-KNOW-WHO, THE LEADING ADVOCATE OF "UNEMPLOYMENT, WHO INSISTS THAT BLACK PEOPLE MUST "PULL THEMSELVES UP BY THEIR OWN BOOTSTRAPS"

SOME OF OUR BEST FRIENDS ARE NEGROES!

**RALPH BUNCHE**  
OF THE UNITED NATIONS  
DIED IN 1971...

"MOST AMERICANS KNEW RALPH BY TOWERING REPUTATION... I KNEW HIM AS A FRIEND... WE WORKED TOGETHER IN THE STATE DEPT. IN THE VERY FOUNDING OF THE UNITED NATIONS... WE HAVE LABORED FOR INTERNATIONAL OBJECTIVES WE HAVE SHARED"

... ONE OF THE ROCKEFELLER'S FRIENDS (AND A TRUSTEE OF THE ROCKEFELLER FOUNDATION) WHO THEY INSISTED ON CALLING THE NATION'S LEADING NEGRO CITIZEN, WAS RALPH BUNCHE RALPH ROSE IN THE O.S.S. (THE C.I.A. OF WORLD WAR II) TO BECOME THAT AGENCY'S TOP STRATEGIST FOR AFRICA... THEN HE AND NELSON ROCKEFELLER GOT TOGETHER AND PLANNED THE UNITED NATIONS AND HE BECAME ITS MOST POWERFUL MEMBER...

**WHITNEY YOUNG** (OF THE URBAN LEAGUE)  
LEARNED HIS TRADE IN THE ARMY:

"THE BLACK SOLDIERS WERE KILLING SO MANY WHITE OFFICERS THAT THEY WERE AFRAID TO COME OUT OF THEIR TENTS... SO THE OFFICERS SAT DOWN WITH ME TO TRY TO STRAIGHTEN THINGS OUT... AND THE MEN SAID I WAS UNCLE TOMMIN'... THAT WAS THE BEGINNING OF MY WORK IN THAT FIELD..."

... AFTER THE WAR WHITNEY WORKED HIS WAY UP TO BECOME DEAN OF ATLANTA UNIVERSITY, ONE OF THE ROCKEFELLER'S SOUTHERN BLACK COLLEGES...

... BUT WHITNEY'S BIG CHANCE DIDN'T COME UNTIL LINDSLEY KIMBALL, A SCOUT FOR WORTHY CAUSES FOR THE ROCKEFELLER FAMILY HAPPENED TO NOTICE HIM AT AN URBAN LEAGUE ANNUAL MEETING...

"I WAS IMPRESSED BY HIS LOGICAL & SENSIBLE ADDRESS SO I SENT FOR WHITNEY... LESTER GRANGER, WHO HAD HEADED THE LEAGUE FOR YEARS, WAS ABOUT TO RETIRE AND WE WERE LOOKING FOR A REPLACEMENT... WHITNEY SAID HE WAS INTERESTED... WE DECIDED TO SEND HIM TO HARVARD FOR A YEAR TO THINK & STUDY & GET TO KNOW PEOPLE AND THE ROCKEFELLER FOUNDATION ARRANGED A FELLOWSHIP..."

... THE ROCKEFELLERS WERE SO IMPRESSED WITH THEIR NEW MAN THAT THEY DECIDED TO MAKE THE NATIONAL URBAN LEAGUE A BIG DEAL THING... AND THEY PUMPED LOADS OF MONEY INTO IT... THE ROCKEFELLERS PROVIDE MOST OF THE MONEY FOR THE URBAN LEAGUE AND WINTHROP HAS BEEN A TRUSTEE SINCE IT'S TOTTERY INFANCY... THE ROCKEFELLERS BUILT UP WHITNEY YOUNG TO BE ONE OF THE MOST FAMOUS CIVIL RIGHTS LEADERS IN THE COUNTRY, RANKING WITH ROY WILKINS AND THE ROCKEFELLER FINANCED N.A.A.C.P... WHITNEY HAD NEVER BEEN ARRESTED, HIS FRIENDS WERE WHITE MILLIONAIRES, AND HE LIVED IN PLUSH NEW ROCHELLE...

NOW THERE'S A RESPONSIBLE NEGRO!

SO WHITNEY RELAXED AT THE ROCKEFELLER RESORT IN THE ITALIAN ALPS, ENJOYED HIS 25<sup>TH</sup> WEDDING ANNIVERSARY WITH THEM AND THEY BECAME GOOD FRIENDS... AND THEN THE ROCKEFELLERS AWARDED HIM WITH THE HIGH DISTINCTION THEY GIVE ONLY TO ESPECIALLY TRUSTED FRIENDS... AND WHITNEY BECAME A TRUSTEE OF THE ROCKEFELLER FOUNDATION...

... WHITNEY DIED IN NIGERIA WHILE SWIMMING WITH ED MUSKIE, RAMSEY CLARK, AND TOM WYMAN OF POLAROID, ON A FORD FOUNDATION TRIP TO AFRICA (WHITNEY HAD BECOME GOOD FRIENDS WITH HENRY FORD II TOO)... HIS FUNERAL WAS HELD IN RIVERSIDE CHURCH (THE ROCKEFELLER BUILT CHURCH IN MANHATTAN)... NO LESS THAN TWELVE ROCKEFELLERS WERE AT HIS FUNERAL... AND DAVID ROCKEFELLER COMMENDED HIM FOR HIS "DEDICATED SERVICE"

... AFTER WHITNEY DIED THE ROCKEFELLERS SLIPPED ANOTHER LONG TIME SERVANT VERNON JORDON, HEAD OF THE ROCKEFELLER OWNED UNITED NEGRO COLLEGE FUND, INTO WHITNEY'S PLACE, AS EXECUTIVE DIRECTOR OF THE NATIONAL URBAN LEAGUE...

... AND, OFCOURSE, THE ROCKEFELLERS ARE AGAINST POLLUTION...

WHO ISN'T?

I HATE POLLUTION!  
I THINK IT'S JUST AWFUL...  
I'M VERY CONCERNED ABOUT  
OUR ENVIRONMENT TOO!  
PEOPLE CAUSE POLLUTION...  
WE ALL MUST DO OUR LITTLE  
BIT TO SAVE OUR ENVIRONMENT!  
... I DO MY LITTLE BIT - ONE OF MY CARS,  
A \$30,000 SILVER GRAY DAIMLER,  
RUNS ON PROPANE INSTEAD OF STANDARD  
OIL... I EVEN WROTE A BOOK ON  
ECOLOGY... IT IS CALLED "OUR  
ENVIRONMENT CAN BE SAVED"

... WHILE LAURANCE CAUS HIMSELF AMERICA'S LEADING CONSERVATIONIST AND NELSON SAYS HE HAS STRIVED TO CLEAN UP NEW YORK, THEIR FACTORIES, MINES, UTILITIES, AND REFINERIES CONTINUE TO BE THE MAIN FACTOR IN THE DESTRUCTION OF THE ENVIRONMENT. THE OIL INDUSTRY, WHICH THE ROCKEFELLERS MANIPULATE, LEAVES MILLIONS OF TONS OF OIL SPILLED ACROSS THE OCEANS AND BEACHES AND OIL EXHAUST IS THE MOST OVERWHELMING OF ALL THE POISONS IN THE AIR. AND, OFCOURSE, THE ROCKEFELLERS ARE WORKING TO KEEP THE COUNTRY DEPENDENT ON BURNING THEIR OIL AND BLACKENING THE SKIES...

JOHN DAVID ROCKEFELLER III SAYS:

"WE MUST  
SUSTAIN  
THE YOUTH  
REVOLUTION"

...HE SAID THIS  
IN HIS NEW  
BOOK ABOUT  
"THE NEW  
REVOLUTION IN  
AMERICA"

HOW  
LIBERAL!

STOP POLLUTION!

WE'LL EVEN  
INSTITIONALIZE...

...THE  
REVOLUTION!

...AND  
THEN IN  
1964 I  
JOINED THE  
COMMITTEE  
TO AID THE  
POOR...

... AND THOSE AMAZING  
ROCKEFELLER BROTHERS ARE  
NOT ONLY HEARTWARMINGLY  
LIBERAL... THEY'RE NICE TOO!  
THEY ARE JUST OUT TO HELP  
THE WORLD WITH THEIR BILLIONS...  
DOING GOOD DEEDS FOR THE  
POOR AND NEEDY CITY...

... AND IF  
ANYONE DOUBTS  
THAT THEY CAN  
JUST  
REMEMBER...

# THE ROCKEFELLER FOUNDATION

... THE MOST  
WONDERFUL  
THING THAT EVER  
WAS, BECAUSE OF  
ALL THE  
WONDERFUL  
THINGS THAT  
IT DOES...

... BESIDES BEING A BREEDING GROUND FOR SECRETARIES  
OF STATE, THE ROCKEFELLER FOUNDATION SERVES MANY PURPOSES  
FOR THE FAMILY ... IN THEIR FOUNDATIONS THEY STORE TWO  
BILLION DOLLARS IN CORPORATE STOCK, TAX FREE ... AND THEY CAN  
ALSO PAY UNIVERSITIES TO DO RESEARCH FOR THEM, INFLUENCE  
CHURCH ORGANIZATIONS AND CULTURAL CENTERS, CO-OPT (BRIBE)  
IMPORTANT PEOPLE, FUND THE STERILIZING OF POOR PEOPLE  
AND OTHER FAMILY PROJECTS - AND IMPROVE THEIR PUBLIC

... SEE! THE ROCKEFELLERS  
ARE JUST WONDERFUL...  
AREN'T THEY?

IMAGE AT THE SAME  
TIME!

... and not  
only that -  
we're

**HUMBLE**

too!

# ATTICA

NEW YORK SEPTEMBER 1971

42

... IN ATTICA STATE PRISON, LIVING CAGED, WITH NO RIGHTS OR RESPECT, ON SEPTEMBER 9, 1971 TWO THOUSAND BLACK, WHITE AND PUERTO RICAN PRISONERS REBELLED. THEY CAPTURED THIRTY GUARDS AND TOOK CONTROL OF PART OF THE PRISON. THEY DEMANDED THAT THE RACIST PRISON WARDEN AND GUARDS BE FIRED, AN END TO THE INHUMAN LIVING CONDITIONS, RECONSTRUCTION OF ATTICA UNDER THE SUPERVISION OF THE PRISONERS AND TOTAL AMNESTY. THEY DEMANDED TO SEE GOVERNOR NELSON ROCKEFELLER. ROCKEFELLER REFUSED TO TALK TO PRISONERS. HE ISSUED AN ULTIMATUM TO GIVE UP HIS PRISON AND HIS GUARDS. THEY REFUSED...

ROCKEFELLER  
HAD  
HAD  
ENOUGH...

... ROCKEFELLER'S ARMY MOVED IN WITH  
SHOTGUNS, CARBINES, M-16's, SNIPERS,  
HELICOPTERS, AND TEARGAS...  
THEY KILLED FORTY FOUR PEOPLE  
INCLUDING TEN OF THE HOSTAGES...  
IT WAS THE BLOODIEST MASSACRE  
IN THE UNITED STATES SINCE THE  
INDIAN MASSACRES...

"WE NOT ONLY HAD TO  
CONSIDER THE LIVES  
AT STAKE...  
BUT THE LAW,  
THE VERY  
FABRIC OF  
OUR SOCIETY WAS  
IN QUESTION"

"YOU DID A  
GREAT JOB,  
NELSON"

"HE'S A VERY  
COURAGEOUS  
MAN"

... SAID NIXON  
AND AGNEW...  
... NOW THE  
ATTICA  
BROTHERS ARE  
ON TRIAL AND  
NELSON  
ROCKEFELLER  
IS VICE  
PRESIDENT.

## ...MEANWHILE IN ARKANSAS...

(WINTHROP'S STATE) THINGS WERE GOING JUST FINE... TORTURE, INCLUDING ELECTRONIC, AND BEATING OF PRISONERS WAS A ROUTINE THING... A PART OF EVERY PRISONERS DAILY LIFE... PRISON LABOR WAS HIRED OUT CHEAP TO LOCAL PLANTATIONS (WINROCK FARMS?) ... PRISONERS DISAPPEARED EVERY DAY... FINALLY AN OFFICIAL DECIDED TO REFORM THE PRISONS... HE STARTED TO FIND THE DISAPPEARING PRISONERS — BURIED IN THE GROUND... HE BECAME A REAL THREAT TO THE LOCAL PLANTATIONS, THE SADISTIC GUARDS AND WINTHROP ROCKEFELLER... AND SO OF COURSE GOVERNOR WINTHROP FIRED HIM... AND NOW...

...EVERYTHING IS  
JUST FINE  
AGAIN...

REMEMBER  
LUDLOW!

...AND  
REMEMBER  
ATTICA!

...AND  
ALSO  
REMEMBER

...THE ROCKEFELLERS DON'T KILL  
PEOPLE WITH THEIR OWN HANDS... THEY ARE  
PROBABLY VERY NON-VIOLENT PEOPLE... THE  
ROCKEFELLERS ONLY ORDER THE WARS... THEY  
ONLY RUN THE CORPORATIONS THAT MAKE THE  
BOMBS... THEY ONLY INSTALL THE DICTATORS  
THAT TORTURE THE PEOPLE...

THE ROCKEFELLERS PROBABLY DON'T LITTER...  
THEY ONLY RUN STANDARD OIL SO IT MAKES  
A PROFIT... AND THAT INVOLVES POISONING  
THE AIR, SPILLING OIL ACROSS THE OCEANS,  
DESTROYING HOMES, DISPLACING ESKIMOS,  
AND KILLING PEOPLE...

MANY LATIN AMERICANS GET PAID LESS THAN  
75 ¢ A DAY BY AMERICAN CORPORATIONS...  
EVERY PERSON THAT STARVES IN LATIN AMERICA  
DIES BECAUSE OF AND FOR THE SYSTEM THAT  
THE ROCKEFELLERS RUN, UPHOLD AND IN THE  
END PROFIT FROM... THE ROCKEFELLERS  
ARE PROBABLY RESPONSIBLE FOR MORE  
MISERY AND DEATH THAN ANYONE ELSE  
IN HISTORY AND THEY DON'T EVEN  
HAVE TO WASH  
THE BLOOD  
OFF THEIR  
HANDS...

...MEANWHILE, IN CENTRAL SAIGON, THE LOCAL CHASE MANHATTAN BANK BRANCH IS UNDER HEAVY ATTACK BY THE FORCES OF NATIONAL LIBERATION... THE BANK WHICH IS BUILT LIKE A FORT WITH WINDOWLESS WALLS OF GRANITE AND SANDSTONE TO WITHSTAND MORTAR ATTACKS, IS HOLDING ON AS LONG AS IT CAN BUT ITS SOLDIERS ARE HIGH AND THEIR MORAL IS LOW...

...AND SAIGON ISN'T GOING TO BE BLESSED BY A BRANCH OF CHASE MANHATTAN BANK MUCH LONGER...

...MEANWHILE ON NELSON'S HUGE COFFEE PLANTATION IN ECUADOR TWO OF ROCKY'S CRONES WERE KIDNAPPED DURING A LABOR DISPUTE...

...AND IN THE MIDDLE EAST, STANDARD OIL OFFICIALS ARE BECOMING "INCREASINGLY DISTURBED" BY THE BOMBINGS OF THEIR PIPELINES BY ARAB GUERRILLAS...

...IT JUST SHOWS THE TOTAL LACK OF RESPECT THESE PEASANTS HAVE FOR PRIVATE PROPERTY!

...EVEN CHASE MANHATTAN'S SIXTY STORY SKYSCRAPER IN NEW YORK ISN'T SAFE FROM ATTACK!

I THOUGHT WE HAD A MONOPOLY ON BOMBS!

THERE IS A MONSTER THAT THE ROCKEFELLERS RIDE. IT LIVES ON THE BLOOD AND THE SWEAT OF THE PEOPLE...

...PEOPLE ARE STANDING UP AND FIGHTING BACK IN MANY PLACES ON MANY LEVELS WE HAVE SUFFERED MANY SETBACKS BUT WE WILL WIN...

...BECAUSE LIFE BELONGS TO THE PEOPLE AND ONLY DEATH BELONGS TO THE MONSTER.

IN MOZAMBIQUE WE FINALLY WON OUR LIBERATION AFTER TEN YEARS OF WAR WITH THE PORTUGUESE. NOW WE ARE REBUILDING OUR COUNTRY, FOR OURSELVES, NOT FOR PORTUGAL, OR AMERICA, OR THE ROCKEFELLERS. OUR BROTHERS AND SISTERS IN THE REST OF SOUTHERN AFRICA ARE STILL STRUGGLING. OUR SISTERS AND BROTHERS AROUND THE WORLD ARE STILL STRUGGLING. IT TAKES CONSTANT, DETERMINED AND ORGANIZED STRUGGLE TO SLOWLY EXPOSE, ISOLATE, WEAKEN AND FINALLY DEFEAT THE MONSTER. AND WIN OUR FREEDOM.

# RESOURCES

45

this list of resources is not meant to footnote where i got every fact, quote and date. i'm not going to try to do that. the purpose of this list is to show you some of the sources i have used and lead you on the trail to finding similar information:

## the FAMILY BIOGRAPHIES:

**DAVID** \* WILLIAM HOFFMAN · LYLE STUART · 1971

a great liberal muckraking biography emphasizing david's power but including the story of the whole family...

**ROCKEFELLER POWER** \* MYER KUTZ · SIMON & SCHUSTER 1974

a critical biography mostly concentrating on foundations, museums, building projects and south america. not very complete or organized...

**ROCKEFELLER FOLLIES** \* WILLIAM RODGERS · STEIN & DAY · 1966

a great muckraking account of nelson's rise to political fame with many stories...

the **ROCKEFELLER BILLIONS** \* JULES ABELS \*

a regular, informational biography of the FAMILY, not very radical  
\* there are also a great many pro-rockefeller "house biographies", at least ten, which include alot of usefull, original information. all in the spirit of defending the family name. i won't list them but they probably stock every public library in the country.

## the C.I.A. and its adventures:

**THE INVISIBLE GOVERNMENT** \* DAVID WIFE & THOMAS ROSS · RANDOM HOUSE

1964 \* an account of the C.I.A.'s major accomplishment before this date.

**CULT of INTELLIGENCE** \* MARKS & MARCHETTI \* 1974 \*

the scandalous tale that was censored by the C.I.A.

**INSIDE the COMPANY: C.I.A. DIARY** \* PHILIP AGEE \* 1975 \* PENGUIN

an amazing day to day account by a former C.I.A. agent... not available in the U.S.A. (legal problems) write to penguin: 41 steakard rd. west markham ontario, canada...

## OIL and the ENERGY CRISIS:

**THE LAST PLAY: STRUGGLE TO MONOPOLIZE the WORLD'S ENERGY**

JAMES RIDGEWAY \* DUTTON PRESS \* 1974

short text with alot of raw information in the back about the oil trust and how it is trying to "monopolize the world's energy resources"

**THE CASE of THE PEOPLE vs. 'STANDARD OIL** 1972

ALAN MILLER \* PACIFIC COUNSELING SERVICE

short clear pamphlet outlining the ugliness of standard oil

**THE ENERGY CRISIS & THE REAL CRISIS BEHIND IT**

DAVE PUGH, MITCH ZIMMERMAN, GAR SMITH · 1974

a similar pamphlet, post energy crisis...

both pamphlets are available from UNITED FRONT PRESS

box 40099 S.F. calif. 94140 for .75 & each-

**THE ENERGY CRISIS** \* 1974 \* MONTHLY REVIEW PRESS ... and...

the **POLITICAL ECONOMY of INTL. OIL and UNDERDEVELOPED COUNTRIES**

1969 BEACON PRESS \* both books by MICHAEL TANZIER  
two academic but readable, clear books that explain the relationship between the oil monopolies and the oil producing and importing nations...

\* ofcourse there are many other good books, not to mention bad books about the oil industry. many of which i have not read...

## the CORPORATE EMPIRE:

**THE RICH AND THE SUPER RICH \***

FERDINAND LUNDBERG · LYLE STUART · 1968

a colossal classic. long, detailed, conglomorate of rich families and their corporations...

ferdinand also wrote **AMERICA'S 60 FAMILIES** which is worth reading, even though it's archaic (1930's) if you want to get background on who controls what...

# Introduction

Dear Reader:

The super rich in America enjoy power and prerogatives un-imaginable to most of us. Who can conceive of owning a private empire that includes 100 homes, 2,500 servants, untold thousands of luxuries, and untold millions of dollars? America has a royal family of finance that has known such riches for generations. It is, of course, the Rockefellers.

But if the Rockefellers were content with their wealth, if their riches had satisfied their desires, this book would not have been written. And I would not be urging you to read it. Money alone is not enough to quench the thirst and lusts of the super-rich. Instead, many of them use their vast wealth, and the influence such riches give them, to achieve even more power. Power of a magnitude never dreamed of

by the tyrants and despots of earlier ages. Power on a world wide scale. Power over people, not just products.

The Rockefeller File is not fiction. It is a compact, powerful and frightening presentation of what may be the most important story of our lifetime, the drive of the Rockefellers and their allies to create a one-world government, combining super-capitalism and Communism under the same tent, all under their control.

For more than one hundred years, since the days when John D. Rockefeller Sr. used every devious strategy he could devise to create a gigantic oil monopoly, enough books have been written about the Rockefellers to fill a library. I have read many of them. And to my knowledge, not one has dared reveal the most vital part of the Rockefeller story: that the Rockefellers and their allies have, for at least fifty years, been carefully following a plan to use their economic power to gain political control of first America, and then the rest of the world.

Do I mean conspiracy? Yes, I do.

I am convinced there is such a plot, international in scope, generations old in planning, and incredibly evil in intent. You will find the truth-often surprising, sometimes unpleasant, always vital-in the pages that follow. Gary Allen has done a masterful job of combining the hundreds of scattered facts and hidden clues of the Rockefeller puzzle until one unmistakable pattern emerges.

The picture that is revealed when *The Rockefeller File* is finally opened may shock you. In this book, you will learn why the Rockefellers follow the policies they do, what their goals are, where they intend to take America ... and why it is essential they be stopped.

I urge you to read The Rockefeller File and to encourage your friends to do the same.

November 1975  
LAWRENCE P. Mc DONALD  
Member of Congress

# Chapter One

## The Multi-Billion Dollar Myth

*“If you're thinking of colossal economic power, it doesn't exist. We have investments, but not control.”*

-Nelson Rockefeller

At his Vice Presidential confirmation hearings, Nelson A. Rockefeller was as solemn and serious as P. T. Barnum swearing his freak show denizens were the real Mc Coy when he told the assembled solons:

*I hope that the myth or misconception about the extent of the family's control over the economy of this country will be totally brought out and exposed and dissipated ...There is not this network of control which is popularly conceived.*

The Senators could not have been more polite. Nobody guffawed. The transcript does not indicate that they even tittered. After all, fools seldom get elected to the Senate these days. Nelson and David, as leaders of the Rockefeller Clan, are the nation's undisputed economic kings. No politician with enough savvy to be elected dog catcher laughs at a king.

Guessing the magnitude of the Rockefeller financial empire has been a favorite indoor sport since the turn of the century. In a front-page story on September 29, 1916, the *New York Times* reported that family patriarch John D. Rockefeller's oil holdings alone were worth **\$500 million**, and that he was America's first billionaire. Eight hours after the story appeared his oil shares had increased in value by a tidy **\$8 million**. Not a bad return for a single day's labor, even for a Rockefeller.

*The Brothers Rockefeller, inheritors of a colossal fortune, are using their massive wealth, power, and prestige to create what they call the "New World Order." Shown above (from left to right) are David, Chairman of the Board of both the Council on Foreign Relations and the Chase Manhattan Bank; Winthrop (now deceased); John D. an advocate of people control; Nelson, the "political" Rockefeller; and Laurance. After years of planning and campaigning, a brilliant coup d'etat has finally installed Nelson in the White House, without the risk of an election.*

About this period, however, the picture of the family's growing financial might becomes more murky. The Rockefellers began hiding their wealth from the public and the tax collector **-in trusts and foundations**. As reported in the Washington Post:

For two generations, the great fortune passed down by John D. has been fractionated and made more complex by increasing layers of trusts and closely held companies, where no public reports are required, none volunteered, and all inquiries politely rebuffed.

The Rockefellers invented a scheme, used by the super rich today, whereby the more money you appear to give away, the richer and more powerful you become. Through the help of captive politicians, guided by some bright boys in the family law offices, legislation was written and passed which would protect the Rockefellers and other elite super-rich from the repressive taxation they have foisted on everyone else.

The key to this system is giving up ownership but retaining control. For example, most people don't believe they really own something unless they retain title to it in their own name. The Rockefellers know this is a big mistake. Often it is better to have your assets owned by a trust or a foundation-which you control-than to have them in your own name.

For example, when Judge Kenesaw Mountain Landis ordered Standard Oil broken up back in 1911, sly old John D. simply created some new foundations and gave his stock to them. The net effect was the same as if you took your wallet out of your right-hand pocket and put it in the left. In this case, however, Rockefeller not only managed to avoid income taxes, but also escaped the probate, estate and inheritance taxes which have ravaged the wealth of those not in the know.

So three generations of Rockefellers have been - giving away millions of dollars - giving much of it to themselves. For example, if a Rockefeller gives a million dollars worth of stock in the Titanic Oil Corporation to the Dogood Foundation, which the family controls, he is not really out one million bucks. All he has done is transfer title of the securities to an alter ego. Of course, the foundation may then give away some of the money, or, more likely, donate some of the stock's future earnings to some allegedly worthwhile cause. But, as the few investigations by Congress into this devious field have shown, in the case of the Rockefellers such bequests somehow end up increasing the Rockefeller financial or political power.

The upshot is that, through the past six decades, the public has had no way 'even to estimate Rockefeller wealth, let alone accurately measure the family's power and influence. But we can make some logical extrapolations from the few facts that are available. We know that through the magic of compound interest (as they say down at your friendly savings and loan branch), one dollar invested at the modest rate of five % per annum will double in thirteen years. This means that if the Rockefellers were earning only five % per year (a return they would find laughable), that modest \$1 billion fortune in 1916 would have grown to over billion today.

The late Stewart Alsop, a reporter who had excellent sources in the Eastern Liberal Establishment (a euphemism for the financial, political, academic and media Mafia controlled by the Rockefellers), used to scoff at the usually "accepted " Fortune magazine estimate of the family's fortune at between \$1 and \$2 billion.

"It would not be at all surprising " Alsop concluded in his book: "Nixon and Rockefeller (published in 1960),"if all the Rockefeller family assets -all the Rockefeller - controlled money as well as the Rockefeller "owned money came to something like 10 billion dollars.

If Alsop is correct, the Rockefeller holdings would now be a rather comfortable nest egg of some \$25 billion.

In view of the fact that the past fifteen years have produced much economic growth (as well, as much inflation), it could well be that \$25 billion is a reasonable, even a conservative figure.

Of course the family has never admitted being worth even a sizable fraction of this amount. When originally queried by the Senate Committee, good old' Nelson estimated his personal fortune at a paltry \$33 million. After some very mild prodding by the Committee, this modest estimate was increased by 660 %.

The Vice Presidential hopeful eventually admitted to being worth a more respectable \$218 million-a sum, incidentally, that is greater than the *combined* wealth of all 37 Presidents in this country's history.

So great was public suspicion of the Rockefeller wealth that the family's financial adviser, J. Richardson Dilworth, was invited to testify before the House judiciary Committee. Dilworth became the Rockefeller family's key money manipulator in 1958. Prior to joining the Rockefellers he had been a partner in Kuhn, Loeb & Co., perhaps the most politically powerful international banking firm in the world. Kuhn, Loeb was, and still may be, a satellite of the immensely rich and powerful Rothschild family of Europe. Historically, the Kuhn, Loeb name has been synonymous with financial success and political intrigue, dating back to participation through senior partner Jacob Schiff in bankrolling the Bolshevik revolution in Russia.\* (see None dare call it conspiracy)

In the past, the Rockefellers have both competed with and cooperated with the Rothschilds. Dilworth's

leaving Kuhn, Loeb & Co. to take control of the Rockefeller family purse strings was considered significant by students of the international financial and political machinations of the super-rich.

Dilworth maintains an office designated as Rockefeller Family and Associates, occupying three entire floors at 30 Rockefeller Plaza. Rockefeller Family and Associates is not a legal entity or corporation; it is simply a name to describe the organization which coordinates and manages the investments of the 84 descendants of John D. Rockefeller, Jr.

With the well-oiled assurance of a successful mortician the urbane, sophisticated Dilworth laid to rest the committee's concern over the family's financial muscle. He used five charts, crammed with statistics, to dispel the notion that the family exercises inordinate power over the nation's economy. Rocky's critics found it difficult to dispute Dilworth's bewildering collection of figures; at times they could hardly keep up with them. The whole performance was as confusing as an Eisenhower press conference, and probably as deliberate. As one observer commented:

*.... the talk of convertible stocks, coupons and fiduciary obligations and the fact the vast holdings of The Rockefeller Foundation and other family-collected funds were not included in Dilworth's presentation left most members little more enlightened than they had been.*

According to Dilworth, the 84 living Rockefellers are worth a mere \$1,033,988,000. (Presumably he rounded off the figures to the nearest thousand dollars.) The bulk of the assets disclosed by Dilworth were held in two trusts, one established by John D. Jr. in 1934 for his children and one set up in 1952 for his grandchildren.

But according to many sources, the Rockefellers have as many as 200 trusts and foundations, and it is possible they have hundreds, even thousands more. Why bother with so many? For one very simple reason: So that assets can be moved, merged, and manipulated so smoothly and so quickly that the public-and just as important, the tax experts from the Treasury Department-have no way of knowing just how much money is where.

Suppose you had three buckets, one empty, two filled with water. Is there any way you could pour water from one bucket to another so quickly an observer could not tell how much water you had?

But suppose, instead, you had five thousand buckets. And a hundred persons to help pour. And you were allowed to keep all but a few buckets and a few pourers hidden behind a high wall. Would your chances be better to keep your -liquid assets - secret? So it is with the Rockefellers. All trusts are not equal. Only a handful of attorneys in the country know how to establish the type of trusts the Rockefellers have. These specialized trusts are most emphatically not the sort your friendly local solicitor can create for you. They not only can eliminate probate, cut inheritance taxes, and reduce income taxes; unlike corporations, they can achieve almost total privacy. Theoretically, trustees can, within the privacy of their directors' meetings, create more and more trusts ad infinitum. With a little effort, taxes disappear. With more effort, even the value of the holdings can be completely hidden.

This explains why the Rockefellers use so many trusts. The fact is that we really don't know how many trusts the family has established. It may be thousands, or tens of thousands. Remember Nelson's explanation for the embarrassing fact that he did not pay any income tax in 1970-his trust fund managers had done a lot of shifting of investments in 1969. You can bet they moved their assets to accomplish this!

In testifying before the Judiciary Committee, Dilworth did not discuss the family's holdings by

individuals, but presented them as a single package. Dilworth said he had received "unanimous permission" from the Rockefeller family to make public the total figures of their holdings. "This in itself has been a unique experience, since it runs so completely against the grain of what we in the office consider to be one of our major responsibilities- the preservation of the separate identity and highly personal treatment of each account," he said. "Like other Americans, they value highly their right of personal privacy."

More importantly, the privacy within the trusts can conceal whatever assets the Rockefellers decided not to make public. If the family had chosen to open up the minutes of its trustees' meetings to Congressional investigators, we might have some idea of the true financial status of the family. No such suggestion was even whispered. We really have only the Rockefellers' word for the amount of wealth they control, and they obviously have a vested interest in minimizing its size.

How about assets hidden in foreign countries? Are there Swiss bank accounts? Rocky says no, but he could be telling the literal truth, yet have foreign accounts held by trusts or other nominees, or securities "in street name (that is, in the name of a brokerage firm such as Merrill Lynch). Or assets can be held in a custodial account of a bank, such as (for example) Chase Manhattan.

All that we know for sure is the first time Rocky was asked about his wealth he swore it was a paltry \$33 million; later he admitted the figure was six (6) times higher. **A slight miscalculation which anyone might make.**

We are supposed to swallow the propaganda that the Rockefellers are merely middle-class millionaires, not even in the, same financial ball park as Howard Hughes or those Texas wheeler-dealers. But, "Hideout Howard" and the Dallas money crowd are relative Johnny-Come-Latelys to the world of high finance. The Rockefellers have been refining oil for over a century and running banks for 75 -years. Although it cannot be proven because the evidence is hidden, few sophisticates swallow Dilworth's \$1 billion figure-which does not even include any personal residential property, jewelry or other personal belongings; nor does it include Nelson's art collection, which he has valued (conservatively, we must assume) at \$35 million.

Nor are the Rockefeller homesteads your basic tract bungalows. The main homes of the clan are located at Pocantico Hills in New York. Established 45 years ago by old John D., the land alone was worth \$50 million in 1930. Their value today defies estimate. When opened to the press for the first time in 1959, at the time of the marriage of Nelson's son Steven, the estate, with its 70 miles of private roads, was said to be 4,180 acres in size. Earlier reports claimed 7,500 acres. In 1929 there were 75 buildings occupied by the Rockefellers and their attendants; over 100 families lived on the estate. One addition has been a \$4.5 million underground archives to store family records. One wag has described the palatial Pocantico Hills as the kind of place God would have built if he had had the money.

No expense was spared by the family to remove minor blemishes on their pastoral paradise.

The senior Rockefeller gave the New York Central Railroad \$700,000 to move its tracks, and \$1.5 million to a small college to shove off.

Among the other chateaux owned by Nelson is the enormous Monte Sacro Ranch in Venezuela, his coffee plantation in Ecuador (the one where Juan Valdez waits for the perfect day to pick the beans), his several farms in Brazil, his 32-room Fifth Avenue duplex in New York City, the mansion in Washington, D. C., the little hideaway at Seal Harbor, Maine, etc., etc., etc.\*

In addition, at last count the Rockefellers owned seven huge ranches. Earlier this year 1975, Nelson bought 18,000 empty Texas acres for -outdoor recreation.

It is doubtful if any of the Rockefeller women will ever have to spend the night at the YWCA. The four of them have about 100 residences to choose from, including John D. III's spacious Beekman Place apartment in Manhattan, Laurance's sumptuous resorts in Hawaii and Puerto Rico, Nelson's Venezuela Finca, (large enough to swallow the entire city of New York), and David's Caribbean home.

Needless to say, it takes an army of underlings to operate these elegant pads. There are 500 full-time domestics, gardeners, guards and chauffeurs at Pocantico Hills alone, 45 at the family's Seal Harbor, Maine, retreat, and 15 in Nelson's Fifth Avenue apartment. All told, it has been estimated the Rockefeller women have at their beck and call about 2,500 servants.

Because the Rockefellers are forever on the wing-in their private jet fleets-each residence is permanently staffed, and nightly the sheets are turned down. One never knows when the boss might pop in.

Of the corporate holdings described by Dilworth, the largest, of course, is Exxon, the new name for Standard Oil of New Jersey, one of the companies formed when John D. Rockefeller, Sr. was ordered to de-monopolize the Standard Oil Company. The stock directly owned by the family (not counting that held by such family controlled entities as banks and foundations ) amounts to \$156,7 millions. Number two on Dilworth's list is Rockefeller mere \$98 million. Anyone who accepts this estimate of the Center's worth is probably negotiating to swap his life time savings for sole proprietorship in the Brooklyn Bridge. The Los Angeles Times observed on September 30, 1974 :

\* The Congressional hearings revealed that two houses in Washington "ostensibly owned by a Rockefeller attorney" actually belong to Nelson.

Nobody but the stockholders (the four surviving Rockefeller brothers-Nelson, John D.III, David and Laurance - their sister, Abby, and the heirs of their brother Winthrop, who died in 1973, and a handful of Wall Street bankers) know its true value, but the educated guess of New York's real estate crowd is that Rockefeller Center, land and buildings, is worth \$1 billion.

Next in line in the family portfolio is \$85-million worth of stock in Standard of California, followed by \$72.6 million worth of IBM. Companies in which the family holds \$10 million or more in stock include Chase Manhattan Bank, Mobil Oil Corp., Eastman Kodak, General Electric, Texas Instruments, and Minnesota Mining and Manufacturing. Altogether the Rockefellers own a significant portion of some 50 major American companies.

So extensive are the family's holdings in securities that the Dilworth operation spreads over three entire floors at Rockefeller Center, and requires 154 full-time employees to manage the security portfolios. Working under Dilworth's supervision are fifteen top financial experts, who also double and triple in brass by serving on the boards of directors of nearly 100 corporations with combined assets of some \$70 billion.

When testifying before the judiciary Committee, Dilworth's main objective was to fortify Nelson's statement that his family's reputed financial power was a - myth - concocted by evildoers. "If you're thinking of colossal economic power, it doesn't exist. We have investments, but not control," claimed Rocky.

"It should be stressed that both the family members and their investment advisers are totally uninterested

in controlling anything," parroted Dilworth. "The family members are simply investors. The aim and hope of the advisers is over time to achieve a reasonable total return for our clients. "So seriously was the whole performance taken that not even a wink could be, detected in the hearing room, much less a discreet nudge under the table.

Dilworth maintained that members of the family do not coordinate their investments. Their sharply differing views on investments, social and environmental policies, Dilworth claimed, have prevented them from ever voting their stock in unison. "There is no grand design or overall pattern," the Rockefeller hireling assured the committee.

Dilworth went on to say that the last time the family interfered in the management of a company was in 1928 when John D. Sr. and Jr. forced Standard Oil Company (Indiana) to remove a chief executive. Such intervention now, purred Dilworth, is -totally foreign to this family. In the 17 years I've been on this job, I've never seen this family try to push people around."

The Wall Street Journal sprang to the defense of the family on September 25, 1974:

*... "while Mr. Rockefeller is a bit modest about his economic clout, it is true that there are no individuals left in this society who are wealthy enough to alone substantially influence economic events. The wealth accumulated by John D. and the other tycoons of his era is diffused through a vast economy, controlled by foundations, trusts and the managers of large broadly based corporations.*

*Power is diffused along with it"*

In April 1958, when it was reported that J. Richardson Dilworth, the man with the most snobbish "sounding name since Junius Pierpont Morgan or Jackie Gleason's immortal Reginald van Gleason, was appointed to his present position, the *New York Times* explained that the organization "manages and supervises" the Rockefeller family investments. The phrase "manages and supervises" suggests a coordinated effort at directing family finances. If the Rockefellers were not interested in maximizing their economic leverage, it would seem logical that each would pursue his own interests separately and retain his or her own battery of experts.

Dilworth makes it sound as if the family has widely divergent views on social, economic and political questions. Yet we have not been able to find a single significant occasion when the four sons and daughter of John D. Rockefeller, Jr. differed.\*

And is it not curious that no member of the Judiciary Committee chose to grill Mr. Dilworth about the alleged disagreements which prevent the family from acting in financial unison? The *New Yorker* of January 16, 1965, tells us that the brothers and sister Abby "get together two or three times a year to discuss matters of interest to all of them." The purpose of the conferences is to "collide and coalesce," as one of their senior advisers described it.

Charles B. Smith, a top Dilworth, lieutenant, was a bit more forthright than his boss: "Our goal, like everybody else's, is to make wads and wads of money for the Rockefeller family." The Rockefeller family likes money. But, once you have achieved the ultimate of opulence in your standard of living (and the Rockefellers reached that plateau decades ago), making money for its own sake becomes a fairly academic exercise.

Most people relax after they have reached the point of economic comfort and security. But, for some individuals, the ultimate ego trip has been the pursuit of power. In bygone days the rare individual with

a manic desire for power seized a throne, or led conquering armies. Now that is all passé. Today, more worlds are conquered in board rooms than on battle fields. And, as we shall see, what happens on battle fields is often the result of decisions made in board rooms.

All of us can name plenty of tyrants and despots from the past. Genghis Khan, Alexander the Great, Napoleon, Hitler, Stalin - these men brought misery and death to millions of people in the course of realizing their own perverted ambitions. But because the overwhelming majority of people do not possess such a psychotic thirst for power, they find it all but impossible to recognize its presence in others.

\* One subject on which the family is unanimous is furthering Nelson's political ambitions; the Rockefellers have contributed a staggering \$25 million to various campaigns promoting Nelson for the Presidency.

Most Americans just want to provide decent lives and comfortable futures for themselves and their families. They are willing to work hard to achieve the necessities of life and even many luxuries. But they could no more conceive of scheming, -plotting and conniving to become economic commissars or kings than they would be interested in abandoning civilization for life as headhunters along the Amazon.

It is Mr. Average American and his family, however, who pay the price for the megalomania of the empire builders. Especially since our domestic would-be tyrants learned long ago that a political-economic conspiracy can become far more powerful than a criminal one-and is far, far safer for the participants.

Whether or not such megalomania is carried by genes we do not know. What can be shown is that it has existed for at least three generations in the Rockefeller family. Despite the protests of the Rockefellers and their hirelings that they are totally uninterested in controlling anything, a survey of the evidence will reveal an all-consuming passion for control over everything and everybody.

The House of Rockefeller is not just a wealthy and successful family. Instead, it is an Empire. No other family has deliberately sought control over so many institutions which affect every facet of American life. Whether it is government, business, energy, banking, the media, religion or education, at the apex of the power structure you will find Rockefeller money and Rockefeller front men and agents. Such total persuasiveness, influencing every important aspect of American life, cannot be happenstance.

# Chapter Two

## The Saintly Sinner

*“Competition is a sin.”*

-John D. Rockefeller

Enough books have been written to fill a fair-sized library, detailing the incredible story of how Daddy

Oilbucks started Standard Oil and built the Rockefeller fortune. Some of them even tell the truth! We will tiptoe through these shady tulips only long enough to understand the traits and tactics of the Rockefeller founding father, so we may recognize them as they bloom again in modern clan members.

Everything about the Rockefellers seems to be controversial, even their family background. One story goes that the family descends from French Protestants, who changed their name from Roquefeuille to Rockefeller when they were driven from France into Germany. However, a genealogy compiled by the distinguished scholar, Dr. Malcolm Stern, entitled *Americans of Jewish Descent*, convincingly established the claims of many American Jews that the Rockefeller clan originally was one of their own.\*

\* Birmingham, Stephen, *The Grandees: America's Sephardic Elite*, Harper & Row, N.Y., 1971, p. 3.

The controversy about the Rockefeller antecedents is probably not important. But it does highlight an accomplishment more difficult than threading a needle after six martinis (and one that is reported about as often).

The family controls oil holdings worth hundreds of millions in Arab lands, yet Nelson has remained the darling of organized Jewry in New York City. Without such support he could never have been elected Governor of New York State four times. Just how the family manages this bit of wizardry boggles the mind.

William Rockefeller, the father of John D., first became involved in the petroleum business when he peddled the oily stuff at \$2.5 a pint as a cure for warts, snake bite, cancer and impotency. The wandering medicine man called himself "Doctor," even though he couldn't have entered medical school with a search warrant. In addition to being a quack, "Doc" Bill was a bigamist, horse thief and child molester. The good "Doctor" avoided prosecution in New York for raping a 15-year old girl by hightailing it for Cleveland. Once there, he deserted his wife and six children to marry a 20-year old. (At least when Nelson abandoned his wife of 31 years to marry Happy Fitler Murphy, he did not abandon his children. She abandoned hers.)

Although no one ever nominated him for the father-of-the-year award, the "Doc" did take the time to instruct his children in his own unique business ethics. Author William Hoffman reports: "The thing the children most remembered about their father was the delight he took in getting the better of them in business deals. He would con them out of something they considered important, then lecture them on the necessity of always being alert."

The family's friendly biographer, Professor Allan Nevins, quotes "Old Bill" as boasting to a crony:

*I cheat my boys every chance I get. want to make 'em sharp. I trade with the boys and skin 'em and I just beat em every time I can. I want to make 'em sharp.*

**He did.**

The sharpest of the "Doc's" progeny was John D. Any psychiatrist worth a couch would trade several neuroses to have had a chance to learn what made him tick. He was full of more contradictions and paradoxes than a Charlie Chan flick. The main feature of his Jekyll-Hyde personality is that he was straighter than an arrow in his private life and deeply (some say fanatically) religious. At the same time he was totally and utterly ruthless in his grasping for money and power. Many of the old boy's victims were sure that his religion was a pretense, an act. But actually there is no evidence that his claims to

piety were deliberately faked.

Unlike his father, John D. was a nose-to-the-grindstone type who, before he was out of his teens, was a shrewd and successful commission broker in Cleveland. In 1859, his partners sent him over to Titusville, Pennsylvania to see if there was as much financial potential in the gushing black liquid as was rumored. Young Rockefeller liked what he saw. He decided that of the three phases of the burgeoning oil industry-production, transportation and refining-the last promised the greatest profits.

John D. returned to Cleveland and launched what became the mighty Standard Oil Company. From the start of his business career, one thing that Rockefeller hated more than sin was competition. For John D the only efficient way to run anything was by a monopoly. Provided, of course, that the most qualified, most capable, and most deserving person-meaning himself-ran it.

When John D. founded Standard Oil, it was just one of the 27 other refineries in the Cleveland area, and by no means the biggest. But the ambitious businessman-who once declared that -competition is a sin"-soon devised a plan to take on or destroy his competitors. The simplicity. Audacity, and ruthlessness of his scheme is breathtaking.

He bribed and coerced the railroads serving the oil producing region (the Pennsylvania, Erie, and New York Central), to give him a kickback, or rebate, not only on his own shipments, but also on every barrel his competitors sent by rail. The more they shipped, the more he made!

Rockefeller's rebate formula enabled him to reduce his own prices and drive the other oil refiners out of business *using their own money!*

Within a year, his competitors had capitulated.

Lewis Corey, in his book ***The House of Morgan***, comments on the ploys that provided the coups *de grace* to Rockefeller's competitors:

... the battle of competition was waged by means of intrigues, discriminatory railroad rates, business blackmail and expropriating competitors' property ....

In spite of public condemnation, Standard Oil persisted in extorting discriminatory rates from railroads, afterward secured by John D. Rockefeller becoming a power himself in the railroads, particularly New York Central, Erie and Pennsylvania. Rate discrimination was general and infuriated small businessmen to revolt ...

John D. did not get his bag of tricks from his daily reading of Matthew, Mark, Luke and John. The rebate game was powerful, but it was only one of his cunning schemes. In the early days, "lucky-competitors were offered cash or stock in Standard Oil, in return for selling their firms to Rockefeller at the rock-bottom prices he offered. The smart ones took stock. Later, things got rougher. Matthew Josephson describes in *The Robber Barons* what happened to one stubbornly independent company:

.... where the Standard Oil could not carry on its expansion by peaceful means, it was ready with violence; its faithful servants knew even how to apply the modern weapon of dynamite. In Buffalo, the Vacuum Oil Co., one of the "dummy-creatures of the Standard Oil system. became disturbed one day by the advent of a vigorous competitor who built a sizable refinery and located it favorably upon the waterfront. The offices of Vacuum conducted at first a furtive campaign of intimidation. Then emboldened or more desperate, they approached the chief mechanic of the enemy refinery, holding

whispered conferences with him in a rowboat on Lake Erie.

He was asked to "do something." He was urged to "go back to Buffalo and construct the machinery so it would bust up ... or smash up, to fix the pipes and stills so they cannot make a good oil ... And then if you would give them a little scare, they not knowing anything about the business. You know how . . . - In return the foreman would have a life annuity which he might enjoy in another part of the country. So in due time a small explosion took place in the independent plant.

Ferdinand Lundberg, in his study *The Rich and Super-Rich*, has observed:

*"As the history of Standard Oil by any author, pro or con, clearly shows, Rockefeller was of a deeply conspiratorial, scheming nature, always planning years ahead with a clarity of vision that went far beyond anything any of his associates had to offer."*

John D. specialized in operating through others, just as the family does today. He hired agents everywhere; among competitors', politicians and in the media. He found plenty of people who could be bought. "The ability to deal with people is as purchasable a commodity as sugar or coffee .... I pay more for that ability' than for any under the sun the Standard Oil founder once admitted. Rockefeller's industrial espionage system was by far the most elaborate, most sophisticated and most successful that had ever been established. William Manchester tells us in *Rockefeller Family Portrait*:

The trouble with fighting John D. was that you never knew where he was. He ran his company as though it were a branch of the CIA. All important messages were in code-Baltimore was "Droplet," Philadelphia "Drugget", refiners were "Douters," the Standard itself "Doxy." Shadowy men came and went by his front door, shadowy companies used his back door as a mailing address. For a long time the public didn't realize how powerful he was because he kept insisting he was battling firms that he secretly owned outright. His real rivals were forever discovering that their most trusted officers were in his pocket.

## **The tentacles of the octopus were everywhere.**

One Cleveland oil refiner made a last ditch effort to save his company from a Rockefeller takeover by going to Peru for oil. He found it had all been bought by a company which was a subsidiary of a corporation owned by the Anglo-American Company of England-which belonged to Standard. Soon, his firm was just another satellite in the Rockefeller oil empire.

It was not for nothing that newly impoverished former competitors referred to the Standard Oil biggie as John D. Reckafellow. A lot of bitter, broken men would have liked to have had a piece of that Rock.

In later years the Wizard of Oil tried to disguise his piratical business operations with the protective coloration, of his religious practices.-" God gave me my money," he piously proclaimed. Many wryly mused that if true, God had a very strange code of ethics.

By 1890, Standard was refining 90 % of all crude oil in the United States and its worldwide operations were expanding rapidly. Many have been led to believe that the federal government finally broke up Standard's near monopoly. The truth is that when oil was discovered in, Louisiana, Oklahoma and California, Standard Oil, big as it was, was unable to seize complete control of the mushrooming oil business. In the big oil boom that followed, too many small producers and refiners prospered for John D. to bribe, blackmail, or bomb all of them. In a sense, it was God, - not Uncle Sam, who blocked John D.'s Monopolistic plans.

# Chapter Three

## The Family That Preys Together

*``Nelson Rockefeller becomes Vice President or events make him President someday, he will bump into his family's wealth on practically every major public issue. . ."*

-Thomas O'Toole  
Washington Post

Although international banking is probably the Rockefellers' most important business, Standard Oil remains the keystone in the arch of the Rockefeller Empire. The family is still better known to the public for its oil properties than for its bank shares.

Petroleum is now the single most important commodity in world trade. It supplies the fuel, of course, for almost every motor vehicle in the world, it powers most electric generating plants, and it is the most vital raw material for the manufacturing of plastics, chemicals and drugs. All of this has brought huge benefits to the Rockefellers. As *Time* magazine reported in its, issue of February 18, 1974:

*For 111 years, the business that has been variously known as the Standard Oil Trust, Standard Oil Co. (New Jersey), Esso and now Exxon has survived wars, expropriations, brutalizing competition, muckraking attacks and even dismemberment by the US Supreme Court (in 1911). It has not only survived but has also grown-from a refinery in Cleveland to a global behemoth that sells petroleum in more than 100 countries through some 300 subsidiaries and affiliates that make up a -United Nations of oil." Not only grown but also prospered-so much so that last month it reported the largest annual profit ever earned by any industrial company: \$2.4 billion after taxes.*

The explosive growth of Exxon, the tiger of the oil industry, is revealed in the following UPI release fifteen months after the *Time* article:

Fortune magazine has just issued its list of the nation's 500 biggest corporations, and never in the 20 years that it has tracked their performance have the rankings been so changed. The reason, the May issue of the magazine reports, is oil.

Fortune's new list of the biggest publicly held industrial corporations for 1974 introduces a new No. 1: the Exxon Corporation. It displaced the General Motors Corporation, which had been America's biggest industrial company for 40 years. Exxon was No. 2 in 1973.

Propelled by soaring prices for oil, Exxon's sales-the gauge by which Fortune determines size-surged from \$25.7 billion in 1973 to \$35.8 billion last year.

To get some idea of the mammoth size of Exxon, consider the following: If Exxon were shorn of all its foreign operations, it would still be the ninth or tenth largest industry in the United States. Yet it gets

only 16% of its oil production and 32% of its sales from this country. If Exxon merely transported oil, it would be the world's biggest shipping firm. It has 155 tankers of its own and varying numbers under charter at sea. It is a substantial international banker, holding fortunes in marks, yen, francs, pounds and dollars all over the world. And on and on it goes.

In order to determine actual Rockefeller family control over Exxon and the other offshoots of the original Standard Oil Trust (Mobil, Standard of Indiana, Standard of California, Chevron, Sohio, Phillips 66, Marathon, et al) we must gather all of the pieces of the puzzle we can find and carefully fit them together. In his testimony before Congress, Dilworth revealed that the Rockefeller family has approximately \$324,600,000 worth of oil stock. This represents an average of about 2 % in each of the four giant oil companies. But, in 1966, testimony before the Patman Committee indicated that the nine Rockefeller family foundations also controlled an average of about 3 % in the Standard Oil Trust descendants. This known total of 5% would give the Rockefellers effective working control over the four giant corporations:

In addition, there are shares held in trust by the Rockefeller banks, insurance companies, universities and other groups whose boards of directors and trustees are interlocked with the Rockefellers.

And yet, incredibly, oil is not even the Rockefellers' biggest business. That honor is reserved for international banking. The Rockefeller family banks are the First National City Bank and the Chase Manhattan Bank. The Chase Manhattan is the third largest banking establishment in the world; and while only number three, it is by far the most influential.

The largest bank in the world is Bank of America in California, inventor of the bank credit card, Bank Americard, which now has 39 million cardholders worldwide. Bank of America became a giant through branch banking in California, where it has over 1,000 offices. Until recently, however, when it linked its overseas operations with the Rothschilds of Europe, the Bank of America lacked international horsepower. Now it too has joined the internationalists' crusade for World Government.

Chase Manhattan was created by the union of the Rockefeller-owned Chase Bank with the Kuhn, Loeb controlled Manhattan Bank. The marriage has been a huge success for both families; in 1971 Chase Manhattan claimed \$36 billion in assets. This is impressive enough, but the New York Times has pointed out that it is not the whole story: "... a major portion of their [Chase Manhattan's] business carried on through affiliated banks overseas is not consolidated on the balance sheet."

*Time* also emphasizes the immense power of the Chase Manhattan, noting that "The Chase has 28 foreign branches of its own, but more important, it has a globe encircling string of 50,000 correspondent banking offices." Fifty thousand correspondent banks around the world! if each correspondent bank were worth only a paltry \$10 million, it would give Chase potential world wide clout of five hundred billion dollars ! Such a figure is simply incomprehensible. Unfortunately, it is probably, conservative estimate of Chase's power and influence.

Such financial clout would give the Rockefellers the ability to create an international monetary crisis over, night. Could it be that it is they who have been yo-yoing the price of gold, dollars and foreign currencies during the past few years-creating panics for most investors, but profits for themselves?

Every time an international monetary storm blows up hundreds of millions of dollars flow into European banks' When the storm subsides, those who were "in the know": at the beginning have made enormous sums of money, That the Rockefellers have been very profitably involved through the Chase Manhattan Bank and its overseas facilities, seems more than reasonable.

By almost any standard, Chase Manhattan has become virtually a sovereign state. Except it has more money, than most. It even employs a full-time envoy to the United Nations.

As just one illuminating statistic, during 1973 Chase board chairman David Rockefeller met with 27 heads of state, including the rulers of Russia and Red China, plus scores of lesser dignitaries. Not even Henry Kissinger, he of the - shuttle diplomacy - and much- publicized state dinners, can match Rockefeller's influence with the men at the top.

Chase Manhattan's annual reports contain much information detailing the worldwide expansion of the bank. It has gone international on the grand scale. And it shows no signs of slowing down. In fact, Chase Manhattan is the undisputed world heavyweight champion when it comes to international banking.

During the Senate hearing on Nelson's confirmation, he claimed, "I do not own any shares in the Chase Manhattan Bank." However, he neglected to mention that his family owns 623,000 shares, or 2.54 % of the Chase Manhattan stock. And he also conveniently overlooked the fact that the Rockefeller Brothers Fund owns another 148 000 Chase shares and Rockefeller University holds 81,296.

Myer Kutz tells us in the *New York Times* of April 28, 1974: "The Rockefellers and Rockefeller institutions own a major, essentially controlling interest, estimated at more than 4%, in The Chase Manhattan Bank.-

The Chase Annual *Report* for 1974 reports that the total assets of The Chase Manhattan Corporation stood at **\$42,532,003,302**. That's over forty-two billion dollars. From this, reports Chase, they had a net income of \$180,801,382 for the year 1974 That's over \$180 million profit in just one year-or \$3.5 million in profit a week-of which the. Rockefeller family pockets over four %, or roughly 7.2 million dollars. That's not bad, considering Chase is mainly a device for holding and boosting many of the family's other financial interests.

Once again we must note that actual ownership by the family in Chase Manhattan may be much greater than is admitted. Professor James Knowles in his highly detailed study, " The Rockefeller Financial Group" states:

It is impossible to establish conclusively that the wealthy families represented on the boards of the banks in the Rockefeller Group own a controlling share of the stock. The ownership of large banks is a carefully guarded secret. Even when banks are required to disclose their largest stockholders, as was the case in the 1962 Patman investigation of chain banking, they have used what are called "street names" in referring to stockholding in trust.

These "street names- are wholly fictitious and bear no resemblance to the actual beneficiary or trustees. In the case of Chase Manhattan Bank, for example, its reported twenty largest stockholders in 1962 included fifteen "street names," (e.g., Dudd & Co., Don & Co., Atwell & Co.) .... \*

If fifteen of the twenty largest blocs of stocks are held in fictitious names designed to hide the identities of the real owners, it is impossible to doubt that some, if not most, of the actual owners are part of the Rockefeller Empire.

\* Knowles, James, "The Rockefeller Financial Group,- MSS Modular Publications, NY, 1973, p. 8.

When the few facts that are available to the public are considered-that the Rockefellers control by far the largest amount of stock in Chase Manhattan, that other families closely connected with the Standard Oil

fortune from its beginning also own substantial blocks of stock, that the board of directors of Chase Manhattan reads like a who's who of Rockefeller lieutenants, and that David Rockefeller is chairman of the board of the bank-no one can dispute Rockefeller control of the Chase Manhattan Bank.

But Chase Manhattan is not the only mega-bank in the Rockefeller financial empire. The first bank with which the Rockefeller family became directly involved was the National City Bank of New York, which actually ranks number two in the international standings. Its former president, James Stillman, became a close associate of John D.'s brother, William, who was at the time managing the huge Standard Oil Trust. William Rockefeller tilted the Standard Oil banking business in Stillman's direction and thus National City became the largest bank in New York City. The financial marriage was cemented by the marriage of two of William Rockefeller's sons to two of Stillman's daughters.

Until his retirement in 1967, James Stillman Rockefeller, a product of the Stillman-Rockefeller merger, was chairman of the board of First National City Bank. Previously, James had strengthened the Rockefeller family and financial ties by marrying Nancy Carnegie of the fabulously wealthy Carnegie family.

City Bank has enjoyed such phenomenal growth that it now surpasses the mighty Chase in total assets. While it does not have the prestige or political muscle of the Chase, it really matters very little since both are Rockefeller family banks.

Yet a third large New York bank in the Rockefeller orbit is the Chemical Bank, which is controlled by the Harkness family. Edward Harkness was one of John D.'s closest business associates in the Standard Oil Trust, and as late as 1939 the Harkness family was the largest non Rockefeller owner of Standard Oil stock.

Closely related to the Rockebanks are the gigantic insurance companies, with their investment funds worth hundreds of millions of dollars. Life insurance companies play a critical role in financing because they are the principal suppliers of long-term credit, whereas banks are mainly involved with short-term and medium-term credit. In turn the solvency (or bankruptcy) of other corporations is often dependent on their ability to obtain loans from the Rockefeller-controlled financial giants.

The Rockefeller Group of banks is heavily interlocked with the board of directors of three of the four biggest life insurance companies: Metropolitan Life, Equitable Life and New York Life. The total assets of these three insurance giants amounted to over \$113 billion in 1969. According to Professor Knowles, the Rockefeller Group controlled banks account for about 25 % of all the assets of the fifty largest commercial banks in the country and for about 30 % of, all the assets of the fifty largest life insurance companies.

Buddy, can you spare a dime?

The Rockefeller family control over these banks and insurance companies gives them **leverage** over the economy that goes far beyond their direct ownership.

There are several ways in which the Rockefeller Clan controls vast segments of the economy. The first is through the stockholding of the families in the group. Five % ownership of a widely-held public corporation, according to a 1974 report by the Senate Banking Committee, is considered tantamount to control, especially if your name is Rockefeller. But if we consider only those firms where the Rockefellers own twice that much stock, or have five % of the stock plus two or more top level management positions, we can put the following companies in the column controlled by the

Rockefellers. (The 1975 asset-size rating by Fortune magazine is indicated in parenthesis.)

Exxon (1), Mobil Oil (5), Standard of California (6), Standard of Indiana (13), International Harvester (26),

Inland Steel (78), Marathon Oil (60), Quaker Oats (163), Wheeling-Pittsburgh Steel (194), Freeport Sulphur, and International Basic Economy Corporation.

Another means by which the Rockefeller Group has potential influence or control over major segments of the economy is through the trust departments of the Rockebanks. Nearly a decade ago, the assets of commercial bank trust departments were \$253 billion, almost \$100 billion more than those of all mutual savings banks and savings and loan companies. Usually a commercial bank trust department exercises sole voting rights over the stock it holds. But anyone who believes this is the case for the enormously large trusts established for the Rockefeller family probably also hopes to find a real diamond in the bottom of his Cracker Jacks box.

While Dilworth was bending over backwards trying to convince the assembled Senators at the hearings that the family never, but never, interferes with management, Fortune magazine has reported that the Rockebanks often throw their weight into proxy battles, and the very knowledgeable Professor Knowles adds, "No company is secure from possible domination by bank trust departments.-

In 1967, the Rockebanks had a total of \$35 billion in trust department assets -nearly 14 % of the national total! These included \$22.5 billion in stocks. Knowles notes:

Obviously, such stockholdings, most of which are either under the direct control of the families whose representatives sit on the boards of these [Rockefeller] banks or are indirectly under their control through voting rights exercised by the bank trust departments, provide a basis for the effective control of a large share of the American economy.

Chase's trust department, with the bank's companion investment management corporation, controls the single largest block of stock in 21 major American corporations. This means that United Air Lines, Northwest Airlines, Long Island Lighting, Atlantic Richfield Oil, National Air lines and 16 other multimillion dollar firms are also under the Rockefeller thumb. The Los Angeles Times reports:

Control of the bank and of its trust department has the effect of multiplying the family's economic leverage. Every major bank in New York holds millions of shares in trust for other owners-most of whom give the banks the power to vote the shares and, thus influence corporate management.

Corporations which are probably under the control of the Rockefellers~ through financial institutions, trust departments or foundation ownership of stock, include the following (with the 1975 Fortune rating in parenthesis):

IBM (9), Mobil (5), Texaco (4), IT & T (10), Westinghouse (19), Boeing (39), International Paper (56), Minnesota Mining & Manufacturing (59), Sperry Rand (70), Xerox (41), National Cash Register (97), National Steel (64), American Home Products (92), Pfizer (130), Avon (159), and Merck (152).

But wait, there's more! Still wonder if the Rockefellers have amassed a dangerous amount of power? Consider that just the transportation companies under Rockefeller influence (with 1975 Fortune ranking for transportation corporations noted in parenthesis) are as follows:

Perm Central (T3), TWA (T1), Eastern Airlines (T8), United Airlines (T2), National Airlines (T26), Delta (T13), Braniff (T19), Northwest Airlines (T18), and Consolidated Freightways (T17).

Other major corporations in which the Rockefellers have significant influence, either director indirect, but not enough to prove working control, are:

AT & T (U1), Motorola (149), Safeway (R-2), Honeywell (68), General Foods (58), Hewlett-Packard (225), and Burlington Industries (86).

Yet another manner in which the Rockefellers can exert significant control over corporations is through loans.

More and more in recent years companies have had to finance modernization and expansion through bank borrowing. Old John D., biographer Allan Nevins tells us, 11 never allowed any finance capitalist to obtain large shares- of his properties. While Big Daddy did not want to be eaten by the Wall Street loan sharks, he didn't mind becoming one. Roughly 80 % of Chase's loan portfolio, the U.S.'s largest, represents major nationwide corporations. Bank of America, the nation's largest, specializes in making installment loans to millions of individual customers. The Rockefeller banks make fewer loans, but they make them to the giants of industry. According to Professor Knowles, the Rockefeller Group's position in the capital market is even greater than its share of banking and insurance assets would indicate. When a bank makes a large loan to a company, it is in a position to demand that it have a voice in the decision-making machinery of that company. Often this comes in the form of having somebody appointed to the borrower's board of directors.

This relates to yet another method for economic control, interlocking directorates. An interlocking directorate exists between two companies when a member of the board of directors of one company also sits on the board of directors of the other company. This was theoretically outlawed by Section 8 of the Clayton Act, which says that no person shall be a director at one time in any two or more competing companies. This law is enforced almost as strictly as the one against jaywalking in New York City. Tracing all of the interlocks among the Rockefeller Group's representatives on various boards of directors is a challenge that would reduce an Einstein to a babbling idiot. Just a few of the major corporations not previously mentioned that have interlocking-directorate ties with the Rockefeller Groups include:

Allied (Chemical) (8,5), Anaconda Copper (118), DuPont (17), Monsanto (43), Olin Mathison (161), Borden (47), National Distillers (185), Shell (14), Gulf (7), Union Oil (34), Dow (27), Celanese (101), Pittsburgh Plate Glass (113), Cities Service (61), Stauffer Chemical (233), Continental Oil (16), Union Carbide (22), American Cyanamid (107), American Motors (93), Bendix (77), Chrysler (11), S. Kresge (R5), and R. H. Macy, C.I.T. Financial (F9), S. (R27).

In case you were not able to keep a running total of the firms enmeshed in the various strands of the Rockefeller web, let us summarize the known results: 37 of the nation's top 100 industrials, 9 of the top 20 transportation firms, the nation's number one utility, 3 of the 4 largest insurance companies, plus scores of smaller companies engaged in manufacturing, distribution, retail sales, loans, or investments, are controlled by the Rockefellers.

Staggering, isn't it? Put it all together and it does not spell MOTHER. It spells POWER.

"The power of the family fortune is beyond measure," the Washington Post has reported. And this time the paper was telling the truth. "[It is] a nexus of ownership and leverage that is greater than the sum of

its parts. "But, say Rocky, it's all a myth! Sure, Rocky. And Raquel Welch is skinny, and Mark Spitz can't swim.,

One or two Doubting Thomases have even wondered about whether it might be a conflict of interest to merge all of this monetary muscle with the political power of the Vice Presidency, and potentially the Presidency.

Wealth should not be an obstacle to high office, of course, providing that government stays out of business and business stays out of government. But, it is obvious that business and government have been getting closer and cozier for many decades. Today it is virtually impossible to tell who is seducing whom. Those on the ideological Left call it Corporate Fascism and those on the right call it State Socialism. Both are correct.

The point is that the Rockefeller family interests are so closely intertwined with matters of public policy, both foreign and domestic, that virtually every major governmental decision in some way affects the Rockefeller Empire. As Thomas O'Toole observes in the Washington Post (a paper that strongly supported Rocky's confirmation as Vice President):

If Nelson Rockefeller becomes Vice President or events make him President someday, he will bump into his family's wealth on practically every major public issue....

" Taxes, the environment, government regulation of business, prices, interest rates, overseas diplomacy, war and peace - Rockefeller interests are enhanced or hurt by government policy-making in practically every major area of American life....

.... As Vice President or President, he couldn't very well disqualify himself every time a policy decision potentially affected Chase Manhattan Bank. He would be out of work if he did. Even if Rockefeller took a vow of poverty, this empire would remain intact, still dominated by his family.

But the Rockefeller wealth goes beyond this conflict - of - interest question.

What would a middle-level bureaucrat do, for instance, if he knew he was regulating the President's family fortune? Would a senator or congressman be able to resist the combined might of the White House and Wall Street's second-largest bank, not to mention all the corporations which do business there?

Rocky buried the entire issue, as far as Congress was concerned, when he asked: "Am I the kind of man who would use his wealth improperly in public office?" He knew that the question would satisfy the politicians on Capitol Hill, many of whom have received campaign donations from the Rockefeller Empire. Not one member of the judiciary Committee had the nerve to answer his rhetorical question with the resounding -Yes!- it so richly deserved.

As we shall see, the Rockefeller family wants more money and more power. It will use its private fortune, its public position, and anything else it can to acquire it. The senior Rockefeller was a master Machiavellian who began by scheming against local competitors and wound up scheming with cartelists for economic control of: the world. His heirs make his ploys look like the friendly bargaining of a Saturday afternoon garage sale.

# Chapter Four

## Profit x Philanthropy = Power

*“Philanthropy is the essential element in the making of Rockefeller power. It gives the Rockefellers a priceless reputation as public benefactors which the public values so highly that power over public affairs is placed in the Rockefellers' hands. Philanthropy generates more power than wealth alone can provide.”*

-Myer Kutz  
*Rockefeller Power*

The foundation ploy was one of the cleverest moves shrewd old John D. ever made-and he was responsible for some lusus. By the turn of the century the tactics he had used to create the Standard Oil monopoly made his name synonymous with ruthless exploitation. He was known as John D. Reckafellow, with a worse reputation than Scrooge. He may have been the most hated man in America.

In order to scrub up his image (and possibly assuage his alleged conscience), John D. hired Ivy Lee, the nation's most prestigious ad man of the day. Lee suggested that the aging gentleman offset his skinflint image by starting to give away money. Scrooge was to be turned into an instant Santa Claus. To begin with, Lee (the original Madison Avenue truth-twister) had Mr. Standard Oily carry around a pocketful of dimes which he would strew before deliriously happy and grateful kiddies whenever he made one of his infrequent public appearances. Cynics observed that St. John ripped off money by the millions and doled it back a dime at a time.

Well, not quite. He had an even more Machiavellian scheme in mind. He would "give-money away to foundations under his control and then have those foundations spend the money in ways which brought even more Power and profits to the Rockefeller Empire. The money "given away " would be bread cast upon the waters. But bread that almost always had a hook in it. John D. Jr. was to refer to this as the - principle of scientific giving.

The original Rockefeller foundation was established in 1901 and was called The Rockefeller Institute for Medical Research. It was set up as part of Lee's PR program to clean up the Rockefeller image. Doubtless the Rockefeller money has done much good in the field of public health and scientific research-although there are some who will give you a heated argument even here.\*

\*Those who believe that Rockefeller even in the health field is phony, point out the fact that Rockefeller monies have been used to degrade natural prevention of sickness and disease through vitamins and health foods and promote the use of drugs. Drugs are manufactured mainly from coal tar derivatives and, besides being in the oil business, the family has for decades been heavily invested in the giant drug manufacturing concerns.

For more information on Rockefeller control of medicine, see G. Edward Griffin's *World Without Cancer*,

By 1910, state after state was approving the 16th Amendment, which provided for a graduated income tax, John D. read the handwriting on the Congressional wall and, using his -deeply conspiratorial nature," began making plans to avoid the consequences of the tax by hiding his wealth in the Rockefeller Foundation.

One quite naturally assumes that the graduated income tax, the second plank of the Communist Manifesto, would be opposed by the wealthy. The fact is that many of the wealthiest Americans supported it. At first the taxes were to be very small, and some of the superrich may have promoted them out of altruism. But others backed the scheme because they already had a plan for permanently avoiding both the income-tax and the subsequent inheritance tax. John D. had figured out how to turn the lemon of the graduated income tax into lemonade for the House of Rockefeller. It is the most classic case of what accountants call "pretax planning" on record.

Chapter XVI, Part II of a two-volume set.

The best way for the Rockefeller-Morgan Insiders to eliminate growing competition was to impose a progressive income tax on their competitors while making sure the law contained built-in escape hatches for **themselves**. Actually, very few of the proponents of the graduated income tax realized they were playing into the hands of those they were seeking to control. As Ferdinand Lundberg notes in *The Rich And The Super rich*:

What it [the income tax] became, finally, was a siphon gradually inserted into the pocketbooks of the general public. Imposed to popular huzzahs as a class tax, the income tax was gradually turned into a mass tax in a jujitsu turnaround ....

The Insiders' principal mouthpiece in the Senate during this period was Nelson Aldrich of Rhode Island, the maternal grandfather of Nelson Aldrich Rockefeller. Lundberg says that "when Aldrich spoke, newsmen understood that although the words were his, the dramatic line was surely approved by 'Big John' [D. Rockefeller] . . . - In earlier years Aldrich had denounced the income tax as -communist and socialistic,- but in 1909 he pulled a dramatic and stunning reversal. The American Biographical-Dictionary comments:

just when the opposition had become formidable he (Aldrich) took the wind out of its sails by bringing forward, with the support of the President (Taft) a proposed amendment to the Constitution empowering Congress to lay income taxes.

The escape hatch was ready. By the time the Amendment had been approved by the states, the Rockefeller Foundation was in full operation. The careful orchestration of both parts of the campaign represents one of the most successful financial coups in history. The money the Rockefellers have made by it is incalculable.

By exempting themselves from the burden they forced on their competitors, the Rockefellers were able to operate in a world of near laissez-faire capitalism while foisting the weight of more and more socialism on their competitors. It is the equivalent of a sprinter forcing every other runner in a race to carry a sixteen-pound shot.

Backing the graduated income tax had another timely advantage for old John. It was about the same time that Judge Kenesaw Landis was ordering the breakup of the Standard Oil monopoly. Wily John D. was able to kill several flying feathered creatures with a single hard object. He not only avoided taxes by creating four great tax exempt foundations; he used them as repositories for his -divested- interests in the

various Standard Oil entities. In the switch, Rockefeller had made his assets non-taxable so that they might be passed down through generations without being ravaged by the estate and gift taxes which everyone else had to pay. As Lundberg observed, old John D. planned ahead.

Each year the Rockefellers can dump up to half their incomes into their pet foundations and deduct the "donations" from their income tax. Nelson admitted at the confirmation hearings: " . . the foundation pays no capital gains tax and no income tax so those funds can continue to multiply. They not only can, they do.

Having the foundations as a tax-free piggy bank is only one of the advantages they provide the family. As *Business Week* has observed: -"The real motive behind most private foundations is keeping control of wealth. "In the foundation world, where - not for profit- really means not-for- taxation,- one exchanges ownership for control.

The Rockefellers have further advantages with their foundations. They can buy, sell or hold real estate, stocks and other securities. Congressman Wright Patman, chairman of the House Banking Committee, has charged that the Rockefellers and other foundations act in concert, using their enormous portfolios to perform maneuvers which used to be known indelicately as -rigging the market.-

So powerful have the major foundations become that the Patman Committee concluded: "Unquestionably, the economic life of our Nation has become so intertwined with foundations that unless something is done about it they will hold a dominant position in every phase of American life."

Since this report was issued by the Patman Committee in the early 1950s, absolutely nothing has been done about the power of the Rockefeller-controlled foundations - except to assist them to become even more powerful. And as this knowledgeable study warned over twenty years ago, these foundations now do hold " adominant position in every phase of American life", as we shall see.

It is the Rockefeller family which sits comfortably astride this foundation colossus. Collectively, the Rockefeller foundations have in excess of \$1.5 billion in assets but they also have interlocking control over the other most powerful foundations, the Carnegie Group and the giant Ford Foundation.

When you hear of "Carnegie Foundation" think Rockefeller. For many years the five Carnegie foundations have been mere appendages of the Rockefeller octopus. The chief operators of the Carnegie foundations have for decades been members of the Rockefeller coordinating committee, the Council on Foreign Relations, the glue which holds the Rockefeller Establishment together. (The Council on Foreign Relations, or CFR, is the subject of the next chapter.) In addition, two of the six men on the Carnegie Corporation's finance committee are also directors of Rockefeller financial institutions.

The baby giant of the foundation world is the \$3 billion-in-assets Ford Foundation. From 1953 to 1965, John J. Mc Cloy was chairman of the Ford Foundation, during most of which time he was also chairman of the Chase Manhattan Bank. Mc Cloy was succeeded by another Rockefeller minion, Eugene Black, a director of Chase Manhattan and former head of the World Bank. Currently running the show at the Ford Foundation is Mc George Bundy, formerly on the payroll of the Rockefellers' Council on Foreign Relations. As with the Carnegie foundations, most of the trustees of the Ford Foundation are members of the Rockefellers' Council on Foreign Relations.

It is not too hard to see how, as the Patman Committee has charged, these foundations can collude to act as a single entity.

The terrible part of this business is that the economic fraud permitted the Rockefellers through their foundations- though maddening to the middle-class taxpayers who are aware of it-is the least malignant part of the foundation picture. It is the political and social impact of these foundations which is devastating. So serious is the matter, in fact, that even the irascible Congressman. Patman has not dared venture into such affairs, knowing that the trail is littered with the bleached bones of, imprudent Congressional investigators who sought to reveal how the Rockefellers are using the foundations in their grab for complete domination of the United States,

The first of the Congressional Committees to attempt such an investigation was the Cox Committee, created in 1952 under the leadership of Congressman Eugene E.Cox, a Democrat from Georgia. Warren Weaver notes in U. S, Philanthropic Foundations that the official purpose of this Committee was to determine which -foundations and organizations are using their resources for purposes other than the purposes for which they were established, and especially to determine which such foundations and organizations are using their resources for un-American and subversive activities or for purposes not in the interest or tradition of the United States."

"Liberal" Democrats in control of Congress first delayed the appropriation of funds for the Cox Committee, then gave it only six months to conclude an investigation that would properly require several years.

Cox hoped to expose foundation fraud and the subversives, behind it; but, as Dwight Mac Donald has pointed out, " the strategy misfired, because the Democratic leaders, who were still in control of the House, boxed the impeccably Americanistic chairman with less dedicated colleagues." It was all-out war-with billions involved.

The first battle ended with a serious casualty Congressman Cox fell gravely ill during the investigation and died.

Without his leadership, the Committee Report became a whitewash.

One member of that Committee refused to be a party to the Cover up. He was Congressman Carroll Reece of Tennessee, a former Chairman of the Republican National Committee and one of Robert Taft's campaign managers. Reece promptly demanded a new investigation.

The Rockefeller Establishment was frantic that its sacred cows might be butchered. "The Washington Post, closely tied to the Rockefellers, never before known for its sense of public frugality, screamed that the Reece probe was "wholly unnecessary and was stupidly wasteful of public funds.-"

The heat was on. So much so that when in a speech on the floor of Congress Mr. Reece referred to a "conspiracy," his use of the term brought down on his head an **avalanche** of anger and ridicule from virtually the entire Establishment Press. At the same time, the foundations unleashed an enormous barrage of vilification against the probe.

While the Press was shouting "- Mc Carthyism, Rockefeller elements in the Republican Party were working behind the scenes to kill the investigation. As Rene Wormser, counsel for the Reece Committee, noted in *Human Events* for July 5, 1969:

A Republican President [Eisenhower, who had the full support of the Rockefellers in his fight against Robert Taft] sat in the White House. The House of Representatives and all its committees were Republican controlled. Mr. Reece was a distinguished and important Republican .... Yet, when a

committee of five members was appointed to conduct the foundation investigation, Mr. Reece found that, of the four others appointed with him, three had been selected from among members of the House who had voted against the investigation.

The key agent in Rockefeller efforts to break up the investigation was Congressman Wayne Hays of Ohio, a member of the Committee. During the inquiry, two tennis-shoe types decided to play Agatha Christie and began trailing Hays. They discovered that he went to the same Washington hotel for a closed luncheon on a specific day each week. Dressing as cleaning women, the ladies investigated and established that Hays was reporting to representatives of several major foundations. René Wormser comments in *Human Events* on the Hays' tactics,

Mr. Hays showed himself exceptionally adept at disruption. For example, in one session of 185 minutes, he resorted to constant interruption 246 times. He refused to obey rules of the committee. He insulted and vilified witnesses, counsel to the committee and committee members themselves. His intransigence finally caused a termination of the hearings.

The brazen Congressman Hays even explained the purpose of his conduct to Counsel Wormser. Mr. Wormser noted in his book, *Foundations: Their Power and Influence*: "... Mr. Hays told us one day that "the White House" had been in touch with him and asked him if he would cooperate to kill the committee."

Because of limited time, staff, and money, the Reece Committee was forced to concentrate its investigation on various Rockefeller and Carnegie foundations, and on the huge Ford Foundation.

The Committee found that one of the first areas into which John D. invested his money was education. Daddy Oilbucks put his assistant, Fred Gates, in charge of his General Education Board. Gates tipped the Rockefeller philosophy on education in the Board's Occasional Paper No.1;

In our dreams we have limitless resources and the people yield themselves with perfect docility to our molding hands. The present educational conventions fade from our minds, and unhampered by tradition, we work our own good will upon a grateful and responsive rural folk.

Later, the General Education Board expanded horizons to take into its "molding hands" the city folk as well. To this end the Rockefeller and Carnegie foundations, which often had interlocking directorates and many times acted in unison, began in the early Thirties to back John Dewey and his Marxist educationalists with enormous amounts of money.

*As René Wormser observes:*

Research and experimental stations were established at selected universities, notably Columbia, Stanford, and Chicago. Here some of the worst mischief in recent education was born. In these Rockefeller-and-Carnegie established vineyards worked many of the principal characters in the story of the suborning of American education. Here foundations nurtured some of the most ardent academic advocates of upsetting the American system and supplanting it with a Socialist state....

The Carnegie and Rockefeller foundations had jumped into the financing of education and the social sciences with both Left feet. For example, the foundations (principally Carnegie and Rockefeller) stimulated two-thirds of the total endowment funding of all institutions of higher learning in America during the first third of this century. During this period the Carnegie-Rockefeller complex supplied 20 % of the total income of colleges and universities and became in fact, if not in name, a sort of U.S.

Ministry of Education. The result was a sharp Socialist-Fascist turn. As Rene Wormser, Counsel for the Reece Committee, reports:

A very powerful complex of foundations and allied organizations has developed over the years to exercise a high degree of control over education. Part of this complex, and ultimately responsible for it, are the Rockefeller and Carnegie groups of foundations.

These foundations were, by way of grants amounting to hundreds of millions of dollars, responsible for the nationwide acceptance of avowed socialist John Dewey's theories of progressive education and permissiveness -the products of which have been marching on our college campuses for the past two decades.

Traditionalist teachers, who had been strongly resisting Deweyism, were swamped by education propagandists backed with a flood of Rockefeller-Carnegie dollars. At the same time the National Education Association, the country's chief education lobby, was also financed largely by the Rockfellers and Carnegie foundations.

It, too, threw its considerable weight behind the Dewey philosophies. As an NEA report maintained in 1934:

A dying laissez-faire must be completely destroyed and all of us, including the "owners," must be subjected to a large degree of social control.

Since America's public school system was decentralized, the foundations had concentrated on influencing schools of education (particularly Columbia, the spawning ground for Deweyism), and on financing the writing of textbooks which were subsequently adopted nationwide. These foundation-produced textbooks were so heavily slanted in favor of socialism that Wormser concluded:"- It is difficult to believe that the Rockefeller Foundation and the National Education Association could have supported these textbooks. But the fact is that Rockefeller financed them and the N.E.A. promoted them very widely.-

Little wonder that Reece Committee Counsel Wormser says evidence compiled during and after the Reece investigation of foundations:

leads one to the conclusion that there was, indeed something in the nature of an actual conspiracy among certain leading educators in the United States to bring about socialism through the use of our school systems...

Congressman Cox had denounced these foundations for precisely these reasons. He named in particular the Rockefeller Foundation, -whose funds have been used to finance individuals and organizations whose business it has been to get communism into the private and public schools of the country, to talk down America and play up Russia....

It goes without saying that, by controlling the textbooks, the progressivists gained an open sesame to the minds of millions of students in the government schools. As John T. Flynn observed, it wasn't necessary to poison every glass of water coming out of every tap in a given community. It was necessary only to drop one cup of poison into the reservoir.

So successful was this conspiracy that by June of 1955, the Progressive Education Association which had been founded by John Dewey officially disbanded. Dr. H. Gordon Hullfish, the Association's

president, explained:

Founded in 1919 the PEA was a protest movement against traditional education, based in large part up on the philosophy of John Dewey. One reason for PEA's end is that many of the practices. It has advocated have been adopted by the nation's schools.

This progressive education is Rockefeller education. After all, they planned for it, they promoted it, and they paid for it!

Those who control education will over a period of several generations control a nation. The Rockefellers have for five or six decades been a controlling influence in the direction of American education.

While education is a powerful tool for controlling the thinking and outlook of people, it is not the only means.

Religion is also an important mold of public opinion.

For many years the Rockefeller Dynasty has bankrolled the Union Theological Seminary of New York, which has done so much to turn the clergy towards state socialism fascism, and to destroy the tenets of traditional Christianity. The highly influential seminary is known for turning out " Christian-Communists.

The family's chief religious philanthropy for a number of years was the notorious Federal Council of Churches, which was pronounced by US Naval Intelligence in 1936 as one of the most dangerous, subversive organizations in the country. According to Naval Intelligence:

It is a large radical -pacifist- organization, and probably represents 20,000,000 Protestants in the United States. However, its leadership consists of a small group which dictates its policies. It is always extremely active in any matters against national defense.

In its many official pronouncements, the Federal Council attacked free enterprise, capitalism and the American way of life, and boldly advocated Socialism. In an official report in 1932,the Federal Council stated:

" The Christian ideal calls for hearty support of a planned economic system.... It demands that cooperation shall replace competition as a fundamental method."

At a full meeting in Indianapolis in December,1932, the Federal Council adopted unanimously this Socialist creed: "-The churches should stand for social planning and control of the credit and monetary system and the economic processes.

The following year,1933,the Council officially declared: "The Christian conscience can be satisfied with nothing less than the complete substitution of motives of mutual helpfulness and good will for the motive of private gain."

The Federal Council was so flagrantly a mouthpiece for the gospel according to St. Stalin that it was forced to change its name. It became the National Council of Churches which today claims to represent some forty million Protestants. While less prone to praising the Soviets as openly as its predecessor, the NCC has repeatedly been denounced by fundamentalist Christian organizations for its slavish adherence to promoting radical socialism and its lovey-dovey attitude toward Moscow. Today, after forty years of

assiduous anti Americanism and the promotion of totalitarian government at home and abroad, the NCC still enjoys the largesse of the Family Rockefeller. Its past president J. Irwin Miller is a perennial Rockefeller front man and a trustee of the Ford Foundation.\*

\*The NCC has donated hundreds of thousands of dollars to buy arms for revolutionary Communist groups in Africa. These arms are used by the Communists to slay Christians, while thousands of American clergymen look the other way. If this is not murder by proxy, what is it?

Through its multiple foundations the Rockefeller family invested its money where it would have the most influence and do the family the most good. And by far the chief beneficiaries of its -charities- have been the Rockefellers.

The question that is racing through the mind of most readers at this point undoubtedly is why the Rockefellers, considered the world's foremost capitalists, have spent hundreds of millions of dollars financing their alleged enemies, the socialists.

One would assume that, since the Rockefellers are thought of as capitalists, they would have used their fortune to foster the philosophy of individual liberty. But, just the opposite is true. We have been unable to find a single project in the history of the Rockefeller foundations which promotes free enterprise. Indeed, except in the fields of health and science (and some of these grants are highly questionable) almost all of the Rockefeller grants have been used directly or indirectly to promote economic and social collectivism, i.e., Socialism-Fascism.

Reasonable men ask what could Motivate the Rockefellers to finance collectivist efforts which seem so totally at odds with their own interests. They forget that John D. Rockefeller was a Machiavellian who boasted that he hated competition. Whenever he could, Rockefeller used the government to promote his own interests and to hinder his competitors. Monopoly capitalism is impossible unless you have a government with the power to strangle would-be competitors.

The easiest way to control or eliminate competitors is not to best them in the marketplace, but to use the power of government to exclude them from the marketplace. If you wish to control commerce, banking, transportation, and natural resources on a national level, you must control the federal government. If you and your clique wish to establish worldwide monopolies, you must control a World Government.

The Rockefellers are not humanitarians; they are power-seeking Machiavellians. They are using their phony philanthropy as a guise for seizing power on a magnitude that would make old John D. Sr. proud.

## Chapter Five

### Yes, Virginia, There is an Establishment

*“The Rockefellers are the epitome of the nation's permanent Establishment: governments change, economics fluctuate, foreign alliances shift - the Rockefellers prevail.”*

-Walter Cronkite  
CBS Reports

In previous chapters we have seen that the Rockefellers exercise tremendous leverage over business, banking, and the economy. In the last chapter we showed how the family has used that money to set themselves up in the charity business, and then used their influence through their giveaways to guide education, religion, and the media-and therefore public opinion-along the proper course. Proper for the Rockefellers, that is

The perfect situation, from the Rockefellers' point of view, is to combine their economic muscle and their political oomph so that one hand washes the other. They have mastered to a frightening degree the art of using economic power to build political power which enhances economic power even further, and so on, *ad infinitum*.

We have seen that the Rockefellers have spent generations developing an economic consortium that is the sleekest, smoothest, and most powerful combine on earth. The incredibly powerful political complex the Rockefellers have put together makes their economic activities look like the naive simplicity of a backwoods general store, and consists of organizations which are thoroughly interlocked with and financed by the House of Rockefeller.

Nelson Rockefeller, the unelected Vice President of the United States, is a leader in the campaign to submerge American sovereignty in a World Superstate. Long-time internationalist Alan Cranston (right) is also an avid promoter of World Government, 'in violation of his oath of office as a US Senator.

At the center of Insider power, influence, and planning in the United States is the pervasive Council on Foreign Relations. Headquartered in the Harold Pratt House on 68th Street in New York City, its members have dominated the last seven Administrations and have complete control of the Ford Administration now. The CFR was created by the Rockefellers and their allies to be the focus of their drive for a "New World Order". While we hate to use the terribly trite cliché about the many arms of the octopus being controlled by the same brain, we apologetically must include it because it is simply the most apt analogy.

Some of these organizations, although they are very influential in government, are virtually unknown to the average citizen. Others you may hear cited by the media as a source for an important opinion or - inside information, about some national or international event. What you definitely are not told is that you are hearing the voice of Rockefeller under dozens of different guises from the family's loyal army of ventriloquists.

Collectively, this group of individuals and organizations is known as the Eastern Liberal Establishment; the key figures in it are often referred to as *Insiders*.

The keystone of the entire Establishment arch is the Council on Foreign Relations (CFR). The leadership of the CFR is the equivalent to the brain of the octopus. David Rockefeller is chairman of the board of the CFR. It is impossible to comprehend fully the interlock of Rockefeller power without being aware of the all-pervasive influence of the Council. So important is this organization that we will devote the rest of this chapter to it. And throughout the rest of this book we shall designate its members by putting CFR in parentheses after their names.

The Council on Foreign Relations, headquartered in New York City, is composed of an elite of approximately 1600 of the nation's Establishment *Insiders* in the fields of high finance, academics, politics, commerce, the foundations, and the mass media. The names of many of its members are household words; others, equally important, are less familiar. (For example, you may not recognize the name Harold Geneen. But when you hear he is chairman of the board of directors of IT & T, you can be assured he is a very big wheel indeed.)

Although the membership of the CFR is a veritable "Who's Who" in big business and the media, probably only one person in a thousand is familiar with the organization itself and even fewer are aware of its real purposes.

During its first fifty years of existence, the CFR was almost never mentioned by any of the moguls of the mass media. And when you realize that the membership of the CFR includes top executives from the New York Times, the Washington Post, the Los Angeles Times, the Knight newspaper chain, NBC, CBS, Time, Life, Fortune, Business Week, US News & World Report, and many others, you can be sure that such anonymity is not accidental; it is deliberate.

For fifty years the CFR operated like the Invisible Man in the novel by H.G. Wells. In 1962, Dan Smoot's pioneering study, *The Invisible Government*, was successfully smothered by the paper curtain. Although its results were visible everywhere, the CFR seemed not to exist.

Then in 1972, two separate exposures of the Limousine Liberals of the CFR were published: ***None Dare Call It Conspiracy*** by this author, and ***The Naked Capitalist*** by Professor W. Cleon Skousen, former assistant to J. Edgar Hoover. Although both books were completely ignored by the Establishment's captive book review organs, both became nationwide bestsellers because of widespread interest in them at the grass roots level.

The fact that George Wallace was planning to seize upon the Council and its power, as an election-year issue in his third party candidacy for President, also contributed to the partial lifting of the cloak of secrecy which has surrounded the CFR. Obviously anticipating even more attention to the Council, two very similar articles on the CFR appeared in the *New York Times* and *New York* magazine. The strategy was to admit that the Council on Foreign Relations has long acted as the unelected super government of the United States, but to maintain that it was always motivated by altruism, idealism, and selfless devotion to the public good. Moreover, the articles claimed, the CFR has, at least momentarily, withdrawn to the sidelines. Still, as John Franklin Campbell admitted in his magazine article:

Practically every lawyer, banker, professor, general, journalist and bureaucrat who has had any influence on the foreign policy of the last six Presidents—from Franklin Roosevelt to Richard Nixon—has spent some time in the Harold Pratt House, a four-story mansion on the corner of Park Avenue and 68th Street, donated 26 years ago by Mr. Pratt's widow [an heir to the Standard Oil fortune] to the Council on Foreign Relations, Inc....

If you can walk - or be carried - into the Pratt House, it usually means that you are a partner in an investment bank or law firm—with occasional assignments in government. You believe in foreign aid, NATO, and a bipartisan foreign policy. You've been pretty much running things in this country for the last 25 years, and you know it. [Emphasis added]

Establishment apologist Anthony Lukas, writing in the New York Times magazine, also admitted that the Insiders of the Council have been responsible for our disastrous foreign policy over the past twenty-five years:

From 1945 well into the sixties, Council members were in the forefront of America's globalist activism: the United Nations organizational meeting in San Francisco (John McCloy, Hamilton Fish Armstrong, Joseph Johnson, Thomas Finletter and many others),\* as ambassadors to the world body (Edward Stettinius, Henry Cabot Lodge, James Wadsworth and all but three others); the US occupation in Germany (Lucius Clay as military governor, McCloy again and James Conant as High Commissioners); NATO (Finletter again, Harlan Cleveland, Charles Spofford as US delegates).

For the last three decades, American foreign policy has remained largely in the hands of men - the overwhelming majority of them Council members-whose world perspective was formed in World War II and in the economic reconstruction's and military security programs that followed.... The Council was their way of staying in touch with the levels of power ....

One of the "many other" CFR members active in the founding of the UN, whom Mr. Lukas did not mention, was the notorious traitor, perjurer, and Soviet agent, Alger Hiss, who actually served as Secretary General of the San Francisco meeting.

Prior to this time the number of stories about the CFR appearing in the mass media could be counted on the fingers of one hand. One of these early articles appeared in **Harper's magazine in July 1958, and it is revealing to look at it now** because its author, "Liberal" columnist Joseph Kraft, was himself a member of the CFR, and he was obviously directing his message to potential members of the Establishment's exclusive circle. Describing the influence of the CFR, Kraft said:

It has been the seat of ... basic government decisions, has set the context for many more, and has repeatedly served as a recruiting ground for ranking officials.

It is worth noting that Kraft called his article "School for Statesmen" -an admission that the members of the Council learn a "line-of strategy to be pursued in Washington".

Indeed, the CFR has served as a virtual employment agency for the federal government, under both Democrat and Republican administrations. In his New York Times magazine article, Anthony Lukas observed:. . . everyone knows how fraternity brothers can help other brothers climb the ladder of life. If you want to make foreign policy, there's no better fraternity to belong to than the Council..." This - fraternity- of Insiders has been so successful that its members have virtually dominated every administration in Washington since the days of Franklin Delano Roosevelt.

CFR members occupied the major policy-making positions, especially in the field of foreign relations, under Roosevelt, Truman, Eisenhower, Kennedy, Johnson, and Nixon; and they are just as powerful today, under the Administration of Gerald Ford.

As Joseph Kraft phrased it: " the Council plays a special part in helping to bridge the gap between the two parties, affording unofficially a measure of continuity when the guard changes in Washington."

George Wallace made famous the slogan that there is not a dime's worth of difference between the Democrat and Republican parties. Many observers have noted that while the two parties use different rhetoric and aim their spiels at differing segments of the population, it seems to make little difference who actually wins the election. The reason for this is that while grass roots. Democrats and Republicans generally have greatly differing views on the economy, political policies, and federal activities, as you climb the sides of the political pyramid the two parties become more and more alike. The reason their dime's worth of difference is that instead of having two distinctly different groups called Democrats and Republicans, we actually have Rockedems and Rockepubs.

Every four years the Americans have the privilege of choosing between the Rockefeller candidate and the Rockefeller standard bearer. In 1952 and 1956, CFR Adlai Stevenson challenged CFR Eisenhower. In 1960, it was CFR Nixon vs. CFR Kennedy. In 1964, the conservative wing of the COP stunned the Establishment by nominating its candidate over Nelson Rockefeller. At which point Rockefeller and the CFR wing proceeded to picture Barry Goldwater as a dangerous radical who would abolish Social Security, drop atom bombs on Hanoi, and in general be a reincarnation of the Fascist dictator Mussolini. The CFR Rockefeller drew up the indictment, the Rockefeller prosecuted the case, and Goldwater went down to ignominious defeat-without ever understanding how he had been sandbagged by the leaders of his own party.

Having disposed of the challenge to the Establishment in 1964, the CFR was firmly back in the saddle in 1968. That year CFR Nixon was "pitted-against CFR Humphrey. The 1972"-contest " featured CFR Nixon vs. CFR McGovern. The Rockefellers were sure to win no matter which candidate emerged victorious.

In recent years, Establishment apologists would have you believe that the CFR was thrust into the cold by Richard Nixon (one such article was even titled "-The Death Rattle of the Eastern Establishment-). Such protestations are about as sincere as Br'er Rabbit begging not to be thrown into the briar patch.

The truth is that Nixon was completely under the thumb of the CFR, and served his masters faithfully-until they abandoned him to open the White House doors for Nelson Rockefeller as an *unelected* Vice President. At the beginning of his Administration, Nixon placed at least 115 CFR members in key positions in the Executive Branch an all-time high for any President. The vast majority of these men are still around today, running the Ford Administration.

Perhaps the most important and certainly the most prominent of all these Establishment *Insiders* is Henry Kissinger.

No man alive could more effectively represent the Council on Foreign Relations than Herr Kissinger, who for all practical purposes has emerged as the Assistant President of the United States. Kissinger was a Rockefeller man, serving on the staff of the CFR, when he received his appointment to the Nixon Administration.

Kissinger has long recognized how much he owes to the Council on Foreign Relations. In the preface to his book *The Necessity For Choice*, published in 1961, he said:

Five years ago, the Council on Foreign Relations gave me my first opportunity to work systematically on problems of foreign relations. My relations with it have remained close and my admiration for it has, if anything, increased.

Consider: In 1956, Kissinger was an obscure German immigrant who was a mere professor at Harvard University. In less than twenty years, he has become so powerful that he survives the dismissal of his ostensible boss, and apparently tells presidents, prime ministers, and other potentates what to say and do. What is the source of his remarkable authority?

Professor Kissinger's public commitments were in nearly every case the opposite of those expressed by Richard Nixon in his successful bid for the Presidency. But, after the rah-rah of the campaign was over, the CFR boys were brought in to run the show-and Henry Kissinger was Numero Uno.

Richard Nixon's own membership in the Council on Foreign Relations became an issue in 1962, during

his contest with Joe Shell in California for the Republican gubernatorial nomination. After that, Mr. Nixon arranged with the Council for his name not to appear on public releases as a member. The CFR admits that it is sometimes necessary for its members to appear to have left the Council. On page 42 of the Council's 1952 Report, for example, we read:

*Members of the Council are sometimes obliged, by their acceptance of government posts in Washington and else where, to curtail or suspend for a time their participation in Council activities.*

Was Richard Nixon a secret member of the CFR throughout his Presidency? The Reece Congressional Committee discovered during its investigation of foundations that there are a number of secret members of the Council, including industrialist Cyrus Eaton and Senator William Fulbright. Our guess is that Richard Nixon was among them.

Consider, after all, Mr. Nixon's CFR foreign policy - a subject in which he has certainly earned his scarlet "A". Disarmament without inspections, increased "trade-on credit with the Communists, abandonment of our anti Communist allies, détente with the Soviet Union and Red China, are all programs of the CFR. Every one of these policies contradicts the Republican Party Platform of 1968. But, once in the White House, Mr. Nixon ignored the Republican Platform on which he was elected and proceeded to follow the dictates of the Council on Foreign Relations.

What are the Rockefellers attempting to accomplish with their CFR?

For the first time we now have an actual member of the CFR who is willing to testify against the organization. He is Admiral **Chester Ward**, US Navy (Ret.), who as a hotshot youngish Admiral had become Judge Advocate General of the Navy. As a "man on the rise" he was invited to become a member of the -prestigious- CFR. The Establishment obviously assumed that Admiral Ward, like so many hundreds before him, would succumb to the flattery of being invited into the inner sanctums of the Establishment, and that through subtle appeals to personal ambition would quickly fall in line. The *Insiders* badly underestimated the toughness and stern character of Admiral Ward. He soon became a vocal opponent of the organization. And while the Rockefellers were not so gauche as to remove him from the rolls of the organo longer invited to attend the private the private luncheons and briefing sessions. The Admiral states:

The Objective of the influential majority of members of CFR has not changed since its founding in 1922, more than 50 years ago. In the 50th anniversary issue of Foreign Affairs [the official quarterly publication of the CFR], the first and leading article was written by CFR member Kingman Brewster, Jr., entitled -Reflections on Our National Purpose." He did not back away from defining it: our national purpose should be to abolish our nationality. Indeed, he pulled out all the emotional stops in a hardsell for global government. He described our "Vietnam-seared generation" as being "far from America Firsters" an expression meant as a patronizing sop to our young people. In the entire CFR lexicon, there is no term of revulsion carrying a meaning so deep as -America First.-

While CFR members are not robots and may disagree on many minor matters, according to the Admiral, this "lust to surrender" our independence is common to most of them:

Although, from the inside, CFR is certainly not the monolith that some members and most non members consider it, this lust to surrender the sovereignty and independence of the United States is pervasive throughout most of the membership, and particularly in the leadership of the several divergent cliques ....

If the Rockefeller family's CFR has a "passion to surrender- US sovereignty to whom are we supposed to surrender? Admiral Ward answers that the goal is the

"submergence of US sovereignty and national independence into an all-powerful one-world government." And, according to the Admiral, about 95 % of the 1,600 members of the CFR are aware that this is the real purpose of the Council-and support that goal!

For centuries, naive idealists have dreamed of a "parliament of man" that would put an end to poverty, ignorance and disease. "Modern one-worlders have added pollution and over-population to the list of evils World Government would cure. The allure of a world super state to such starry-eyed dreamers is obvious.

But what is the appeal of a World Government to such canny rationalists as the Rockefellers and others of the international super-rich? You might think that such a World Government would threaten their financial power and therefore would be the last thing on earth they would support. The answer is obvious - they expect the coming World Government to be under their control!

You will remember that John D. Rockefeller Sr. ,who proclaimed that "**competition is a sin,**" used every devious trick he could devise to create a national oil monopoly. His strategy was as ruthless as it was effective: Get control of your competitors, and then keep control of them.

Old John D. quickly learned that political power was essential to protect and advance his economic clout, so he went into the politics business. Once he controlled the purse strings of enough captive Congressmen, he could get them to pull strings to benefit Standard Oil and the family's other business interests. In other words. he sought national control to protect his national monopoly.

Today, however, the Rockefeller interests are not just nationwide, they are worldwide. Both Exxon and Chase Manhattan Bank do business in more than one hundred countries. The majority of these countries are found in what is euphemistically called the "third world". Many of these are former colonies of Western nations who owe their so-called independence to the Rockefellers and the CFR. Now they are ruled, for the most part, by tin-pot dictators who have no more understanding of the realities of economics than Elizabeth Taylor does of the sanctity of a convent. And there is always the chance that one of these new "people's republics- will forget who owns them.

An even greater danger to the internationalists of the CFR, however, is the fear that enough Americans will finally understand what they are doing and, in the age-old tradition of an angry electorate, "throw the rascals out" Faced with the possibility that any one of a hundred mininations might suddenly thumb its nose at you; or even worse, that the citizens of your own country might get wise to the game plan and give you the heave-ho, what do you do?

The answer has been obvious to the Rockefellers for more than fifty years: you create a one-world government which you will control, and you have that government rule all the others.

This has been the game plan for at least the past 54 years-ever since Daddy Oilbucks himself donated money to build the League of Nations headquarters in Geneva. Unfortunately for his own ambitions, there were still enough un-bought Senators and un-controlled newspapers in the United States to thwart his plans. His countrymen escaped the noose he and his comrades had prepared for them by refusing to join the budding World Government.

But the conspirators learned their lesson and did not make the same mistake again. They went to work at

once, first, by creating the Council on Foreign Relations, and then by using it to soften up the US for the next World Government they would propose.\*

\*For more details about this whole plot, read **None Dare Call It Conspiracy** by this author.

The *Insiders* cloak their grasp for world political power in many idealistic cloches, and hide their true intentions behind a number of code phrases.

The current favorite seems to be "**New World Order**.-"

The expression is as old as the diabolical scheme of a secret society of the Eighteenth Century called the Illuminati, for *a novus ordo seclorum* -in fact, "new world order" is merely a translation of the Illuminati's avowed goal. (see **ONE US DOLLAR BILL** )

By 1945, the Rockefellers were ready. Grandson Nelson was one of the 74 CFR members at the founding meeting of the United Nations in San Francisco. Later, Nelson and his brothers donated the land for the United Nations complex along the East River in New York-possibly because they did not want the new headquarters of their World Government to be more than a short taxi-ride away from their penthouses.

Such a "New World Order" most emphatically does not mean an impotent debating society to the CFR. It means an international regime that controls the world's armies, the world's weapons, its courts, its tax collectors, its schools, its governments and everything else. In succeeding chapters we will see exactly how the Rockefellers intend to nurture their embryonic structure until it has all of these powers, and more. For the moment, take our word that the " New World Order" these international wheeler-dealers have in mind would not be a republic, bound down by the chains of a constitution (as Jefferson phrased it), working to increase freedom for all of us, where the rights of every citizen are protected from a tyrannical Big Brother.

The "New World Order" the Rockefellers are planning will be a world dictatorship. Conservatives will call it Socialism or Communism, Liberals will call it Fascism. The label makes little difference; it will be the Gulag Archipelago on a worldwide basis.

Of course, proponents of such a World Government disguise their intentions behind all kinds of double talk. For example. Senator Alan Cranston of California (for many years the president of the Rockefeller-interlocked United World Federalists), defended his proposal for a world super-state with these words:

(World Government) Proposition 64 does not propose that we give up a shred of sovereignty. Plainly it proposes a means by which we can gain the ability to exercise our presently impotent sovereignty in the vital area of war prevention. It proposes that we create a limited world government and deposit our sovereignty there ....

Let us repeat that. Senator Cranston says we won't give up a shred of sovereignty- if we -create a limited world government and deposit our sovereignty there.-

Lewis Carroll couldn't have said it better. George Orwell didn't even try; he called it "newspeak."

But while Senator Cranston and many of his colleagues play the string section in the orchestration for World Government, other CFR members trumpet other parts in this carefully rehearsed symphony. Nelson Rockefeller, for example, as an -altruistic millionaire," sounds the melody line for international

taxation. In his book *The Future of Federalism*, first published in 1962 and then reprinted when he was nominated for the Vice Presidency, Nelson stated: "...I think the answer is some free-world super-national political being with the power to tax. . . ." Ask yourself this question: Does Nelson Rockefeller want to tax his wealth to aid the world's poor? If so, why doesn't he eliminate those expensive bureaucratic middlemen, and simply give his money to the downtrodden masses now ? Is it possible that he is trying to become richer-wads and wads richer, as the family representative put it - by dividing your wealth with himself?

During the confirmation hearings over his nomination as the nation's second unelected Vice President, a few courageous Congressmen, such as Representative John Ashbrook and Senator Jesse Helms, asked how it would be possible for Nelson to uphold an oath to protect and defend the Constitution of the United States when he was already on record as supporting a World Government that would scrap our national charter. Such inquiries, however, were ignored by both Rockefeller and the national media. You would think that the issue of the survival of the United States might rate a line or two in your local Daily Bugle. But instead, all of the space was given to a planned farce about whether or not Rocky financed a derogatory book about a political opponent. That's like launching a newspaper crusade accusing Jack the Ripper of throwing gum wrappers in the gutter and ignoring his penchant for slitting throats!

In *The Future of Federalism*, Noble Nels proclaimed:

No nation today can defend its freedom, or fulfill the needs and aspirations of its own people, from within its own borders or through its own resources alone .... And so the nation-state, standing alone, threatens, in many ways, to seem as anachronistic as the Greek city-states eventually became in ancient times.

Get it? The man who could not be elected to the White House, but managed to arrange an entrance there anyway, says that a free and independent United States is now anachronistic.

Webster's defines "anachronism" as something from a former age that is incongruous in the present.

Every effective World Government proponent learns early in the game some rhetorical tricks, such as calling black white. Nelson Rockefeller is no exception. In the same book, he suggests:

The federal idea, which our Founding Fathers applied in their historic act of political creation in the eighteenth century, can be applied in this twentieth century in the larger context of the world of free nations - if we will but match our forefathers in courage and vision.

Even Nelson Rockefeller knows that the American Revolution was a protest against exactly the sort of centralized power that he himself now advocates. The British Empire was the World Government of its day. Our forefathers did not want to be inter-dependent; they wanted to be independent. And they were willing to pay the price for their independence in the same coin that free men must always be willing to pay-blood and gold.

During the early 1950's, Nelson Rockefeller encouraged the wide distribution of a photograph of himself. It showed him holding a globe in his hands, and staring pensively into the future. Many people are convinced that the symbolism involved was not accidental.

# Chapter Six

## The Rockefeller Mediocracy

*“Equally important is CFR's influence in the mass media .... They control or own major newspapers, magazines, radio and television networks ...”*

-Admiral Chester Ward  
(CFR and USN, Retired)

The Rockefellers, as we have seen, have never been ones to leave public opinion to chance. That is why they have invested their charitable monies so judiciously in education and religion. It would be naive to think that the family would not exert every possible subtle and unsubtle influence over the nation's mass media.

In Chapter One we described how the Rockefellers use leverage to maximize the power of their investments in industry and finance. They follow the same principle when they buy influence over education. They do not pour money into local school board races; they put their bucks into the schools that train the teachers and they finance the writing of textbooks. Now that every public school is at the mercy of the Department of Health, Education and Welfare (which Nelson Rockefeller created and ran under Eisenhower), the family couldn't care less who controls the local school board. In the field of religion, the money goes to key seminaries where ministers are trained and to the National Council of Churches which claims to represent forty million Protestants.

The Rockefellers grab, with all the gusto they've got, at the apex of whatever instrumentality they wish to control. The influence of the Council on Foreign Relations in the federal government is concentrated in the Executive Branch. That is where the action is-at the top. And so it is with Rockefeller control of the media. They are not interested in controlling the *Burnt Mattress Weekly Blat*; they go for the leaders in the field. In the old days, John D. sent his agents out to bribe editors and to buy up small papers, but that is very inefficient and antiquated in the electronic age. Now, the local papers are dependent on wire services and syndicated columnists to fill their news and editorial pages.

The Rockefellers have made sure that the real movers and shakers in the field of mass communications have been initiated into their CFR lodge. Admiral Ward informs us:

Equally important is CFR's influence in the mass media. Out of its 1,551 members, 60 were listed in official CFR reports as engaged in "journalism." An additional 61 were listed in -communications management," a highly descriptive title, because CFR members do indeed "manage" mass communications media, especially the influential segments. They control or own major newspapers, magazines, radio and television networks, and they control the most powerful companies in the book publishing business.

Few would argue the fact that the *New York Times* is the most influential newspaper in the U.S. "A significance of the *Times*," Times man James Reston has written, "is its multiplier effect. What appears in the *Times* automatically appears later in other places.

Concerning this multiplier effect, Alice Widener, columnist for *Barron's*, notes:

It is a fact that most editors and newsmen on the staffs of Life, Look, Time, Newsweek, etc., and most editors, reporters, and commentators at NBC, CBS, and ABC take their news and editorial cues from the New York Times. . Technically, it is a great newspaper; but it reports much of the news in conformity with its editorial policies.

The late Arthur Hays Sulzberger, chairman of the board of the *New York Times*, was a member of the CFR, and today there are at least 11 people in high positions with the *Times* who are CFR members. Sulzberger's son-in-law Orvil E. Dryfoos (CFR) succeeded him as publisher. The current publisher is Arthur Ochs "Punch" Sulzberger (CFR).

Other CFR members at the *Times* are: Harding Bancroft, Executive Vice President. James Reston, Vice President and columnist; A. M. Rosenthal, managing editor; Seymour Topping, assistant managing editor; Max Frankel, Sunday editor; Harrison Salisbury, associate editor; C. L. Sulzberger, columnist; and David Halberstam, columnist.

The *Times* is infamous for its anti-anti-Communism and its support of socialist-fascist legislation. Its treatment of Stalin as a kindly liberal running a Russian branch of the ACLU should have made it a laughing stock, but didn't. Neither did the *Times* 'Herbert L. Matthews' (CFR) treatment of "Dr. Castro" as the George Washington of Cuba. Matthews swore repeatedly that Castro was anything but a Communist. Later, jokers commented that Castro could honestly say, "I got my job through the *New York Times*."

Needless to say, the support Nelson Rockefeller has received in his political career from the normally Democrat Times has been nearly total.

Running a close second to the *New York Times* in the prestige race is the *Washington Post*. Every Senator and Congressman, regardless of his party or political persuasion, has the Post on his desk each morning. Like the *Times*, the Post is read by the people who count when it comes to running the country. The Post's owner and publisher Katharine Graham is a member of the CFR, as are other top editors and management personnel. For years the Post has been referred to as "the uptown Daily Worker." The only time the Post has ever opposed "big government" is when it has been used to investigate Communism. When this has happened, the people at the Post frantically start waving the Constitution and babbling about "freedom of speech" - something they regularly suppress when it involves opposition to fascism-socialism or the Rockefellers.

One of the most influential members of the Post's staff is the incredibly talented truth-twister, cartoonist Herbert L. Block. Herblock's cartoons are syndicated daily in hundreds of papers. (And for every person, who reads the editorial page, there are probably a hundred who look at the lead cartoon.)

The *Los Angeles Times* is the West Coast's most important newspaper. Formerly staunchly conservative, the paper made a sharp Left turn fifteen if teen years ago and while it still retains its COP standing for protective coloring, it has become an organ for Establishment socialism. The *Times* is connected to the Rockefellers' CFR through board chairman Franklin Murphy and the fact that it owns a wire service in conjunction with the ultra-Liberal *Washington Post*. In addition, the *Los Angeles Times* owns the important *Newsday* on Long Island.

Other major newspapers with CFR interlocks are: the *Arkansas Gazette*, *Des Moines Register & Tribune*, Gannett Co. (publisher of newspapers in 40 cities from New York to Hawaii), *The Houston Post*, *Minneapolis Star & Tribune*, *The Denver Post* and *Louisville Courier*. \*

Equally important has been CFR influence within the wire services. For many years Arthur Sulzberger was a director of the Associated Press while today Katharine Graham and John Cowles, Jr. are on the board. In addition, the *New York Times* has its own news service as does the *Washington Post-Los Angeles Times*. Every daily newspaper in the country uses one or more of these wire services for news and editorials.

Today it might be argued that television has superseded the newspaper as the primary creator of public opinion. Naturally, the Rockefellers have reached for control of the tube. William S. Paley, chairman of the board of CBS, is a CFR member as well as a trustee of the Ford Foundation. CBS has over 200 TV and 255 radio affiliates nationwide. CBS's president, Arthur Taylor, and Michael O'Neill of CBS publications are both members of the CFR. The former president of CBS was Dr. Frank Stanton (CFR), who is also a trustee of the Rockefeller Foundation and Carnegie Institution. CBS directors who are CFR members include Roswell Gilpatrick, Courtney Brown, Henry Schacht, and William Burden. CBS (sometimes referred to as the Conspiracy Brainwashing System) newsmen who are CFR members include Charles C. Collingwood, Richard C. Hottelet, Marvin Kalb, Larry LeSueur, and Daniel Schorr.\*

\* There are more than thirty Committees on Foreign Relations in major US cities which the CFR says are -affiliated- with the Council. Members of these local CFR Committees staff scores of other newspapers and radio television stations.

The National Broadcasting Company is a subsidiary of the Radio Corporation of America. Until his recent retirement, the head of RCA-NBC was long-time CFR member David Sarnoff. Like CBS's Paley, Sarnoff was born in Russia. Under him, RCA was a major financial contributor to the CFR. Sarnoff spent much of his time promoting -foreign aid." Succeeding David Sarnoff at RCA is son Robert, a director of the Advertising Council, a spinoff of the CFR.

NBC newsmen John Chancellor and Irving R. Levine are CFR members, as are directors Thornton Bradshaw and John Petty.

The American Broadcasting Company is the Tag-Along Tooloo of the Big Three networks. It has 153 TV stations and specializes in escapist entertainment. It generally leaves the -documentary- propaganda to the Big Two. Its news audience amounts to only 7 million, while the other networks divide up the remaining 35 million news watchers. It does not have the CFR ties that CBS- and NBC do, but Chase Manhattan Bank controls 6.7 % of its stock-enough to give it a controlling interest. Chase, through its trust department, controls 14 % of CBS and 4.5 % of RCA. Instead of three competing television networks called NBC, CBS, and ABC, what we really have is the Rockefeller Broadcasting Company, the Rockefeller Broadcasting System, and the Rockefeller Broadcasting Consortium.

\* Certainly no one was very surprised that CBS carried an almost unprecedented 2-hour propaganda show on "The Rockefellers- during prime viewing time on Friday, December 28, 1973. CBS used its star, Walter Cronkite, to narrate this spectacle, which was so sugary it must have sent thousands of diabetics scrambling for their insulin. Cronkite closed by saying that if any family had to have as much money and power as the Rockefellers, it was a good thing it was the Rockefellers! For a political candidate to buy that kind of television time would cost an astronomical sum. But Rocky has-friends. It didn't cost him a nickel.

Although the advent of television has somewhat diminished the influence of the slick magazines upon mass opinion, their importance is still significant. Until its demise (caused by advertisers switching to television), the nation's second-leading magazine in circulation was *Look*, with 7,750,000 copies distributed per issue. *Look* was owned by Cowles Communications, headed by Gardner and John

Cowles. Both Cowles brothers are members of the Council on Foreign Relations.

The Cowles publishing empire encompasses *Harper's* a list of trade journals, a string of newspapers and television stations, and Harper & Row. Managing the operation for the Cowles family is Cass Canfield of the CFR and World Federalists. John Cowles is married to Canfield's daughter.

John Cowles runs the *Minneapolis Tribune* and *Des Moines Register*. He is a trustee of the Rockefeller-interlocked Carnegie Endowment for International Peace and of the Ford Foundation, and he is a member of the National Policy Board of American Assembly - a front created by Averell Harriman, the Ford and Rockefeller Foundations, and the CFR to run propaganda seminars for leaders in American business, labor, communications, and the academy. He is on the Advisory Council of the US Committee for the US and the ultra-Leftist National Committee for an Effective Congress, which operates a "be kind to the Communists- lobby in Washington.

According to the American Legion's *Firing Line* of August 15, 1954, John Cowles joined twenty-three others signing telegrams to US Senators -asking support of measures which would stifle all Congressional investigations of Communism."Little wonder, Brother John is very serious about merging America into a World Government with the Communists. The following is from a U.P.I. dispatch of June 7, 1959:

John Cowles, publisher of " The Minneapolis Star and Tribune " said today that the traditional American concept of national sovereignty is obsolete...

Gardner Cowles, chairman of the board of Cowles Communications, works hard to keep up with the Leftist activities of his brother. Besides being a member of the CFR, he is also a member of the Atlantic Union Committee.

Running *Look* magazine for the Cowles boys was William Atwood (CFR), who once wrote that we could "thank our lucky stars that Castro is not a Communist.-

What Americans can thank their lucky stars about is that *Look*, which published more smears against anti Communists than any other publication outside the official Communist Press, went broke.

After nearly four decades as a leading opinion maker in America, *Life* bit the same dust as *Look* and for the same reason, despite a whopping circulation of 8.5 million. *Life's* corporate brother, *Time*, the leading news weekly, with a circulation of 4.2 million (as compared to *Newsweek's* 2.5 million and U. S. *News & World Report's* 1.8) is healthy, as are Time Inc.'s *Sports Illustrated* and *Fortune*.

The Time corporation recently bought its first newspaper, the *Newark Evening News*, for \$34 million, and later purchased thirty-two more in the Chicago suburbs. It also owns Little, Brown & Company, an Establishment book publisher; 300,000 shares of Metro-Goldwyn Mayer; 600,000 acres of timberland; and, is part owner of media in South America, West Germany, Hong Kong, and Australia. In addition to all this, Time Inc. owns some thirty television stations in America, giving this mammoth conglomerate a voice in every form of mass media newspapers, magazines, movies, television, book publishing, and even teaching machines.

The builder of this empire was the late Henry Luce (CFR), whose impact on American thinking has been enormous. As Theodore White (CFR) has noted, " He revolutionized the thinking of American readers." Luce started his rise to publishing glory with loans from CFR Establishmentarians Thomas Lamont and Dwight Morrow (like Lamont, a J. P. Morgan partner), Harvey Firestone, E. Roland Harriman, and

various members of the Harkness family (Standard Oil fortune). Their influence became especially apparent when he started his business magazine, *Fortune*, in the middle of the depression. As John Kobler writes in *The First Tycoon*:

"It is a bemusing paradox that *Fortune*, the magazine of business, questioned the efficiency of the free-enterprise system and even took on a faint socialist tinge. Some of its editors and contributors stood far to the left...."

Apparently that is what Luce's Rockefeller connected financial angels wanted. And, although he later seemed to oppose F.D.R., Henry Luce cheered his accomplishments: " I didn't vote for F.D.R. but it was all right with me that he won. He accomplished a lot of necessary social reform.-"

Jeanne Harmon, a former *Life* staff writer, tells in *Such Is Life* how tolerant Luce was of the Communist cell openly working at Time-Life. Mrs. Harmon relates how headlines were suddenly altered to convey meanings never intended, and how she and her fellow reporters were subjected to pressures to ignore some stories and push others. She also reveals that Whittaker Chambers was not welcomed back to Time-Life after he had testified against Alger Hiss (CFR).

Henry Luce was at one time actually considered an anti Communist. Yet he always bitterly opposed anyone like Robert Taft , General Douglas MacArthur, or Barry Goldwater, whom he thought might actually do something about Communist subversion in the United States. Luce's bogus anti-Communism was used to promote his World Government crusades. He was a member of the CFR and the Atlantic Union. Henry Luce was also a strong supporter of the United Nations, even after Alger Hiss's role in its establishment was revealed.

### ***The Rockefeller Mediocracy***

In the late Fifties, Henry Luce switched from the "World Government to oppose Communism- line to the - peaceful co-existence and World Government with Communism- line, and *Life* went back to glorifying the Soviet Union as it had done during World War II. In 1966 , Luce took a group of 43 US businessmen behind the Iron Curtain to promote aid and trade with the enemy.

The chairman at Time Inc.is Andrew Heiskell (CFR), who is married to a *New York Times* heiress. Editor-in-chief of all Time Inc. publications is Hedley

Donovan, a Rhodes Scholar, former reporter for the Limousine Leftist *Washington Post*, and a member of the CFR. Other CFR - Establishmentarians in the Time Inc. hierarchy are vice chairman Roy Larsen and directors John Gardner and Sol Linowitz.

The CFR members of Time Inc. also include James Linen, chairman of *Time's* executive committee; vice presidents Otto Fuerbringer and Barry Zorthian and directors Frank Pace, Jr. and Rawleigh Warner. So closely is Time Inc. now linked with the Rockefellers that the two jointly own a helicopter.

Rapidly closing the circulation gap with *Time* is *News week*.

*Newsweek* is owned by the *Washington Post*.

Chairman of the board Frederick Beebe is a member of the CFR as was the late owner, Katharine Graham's son Phillip. Retired editor Malcolm Muir is a CFR member, as are current editors Osborn Elliot and Robert Christopher, and vice president Nicholas Katzenbach. Other CFR men at *Newsweek*

are editorial page editor Philip Geyelin, columnist Stewart Alsop, contributing editor Carl Spaatz, Atlanta Bureau chief William Anderson, and directors Katharine Graham and Kermit Lansner.

Other magazines in the CFR orbit are *Business Week*, *Atlantic Monthly*, *McCalls*, *World Review* (formerly *Saturday Review of Literature*) and *Scientific American*

\* One of the most curious publications to join the list of **CFR** interlocked journals is the ostensibly conservative magazine *National Review*. Although *National Review* has in the past claimed to be an opponent of the Eastern Liberal Establishment, it has never called attention to the conspiratorial activities of the Rockefeller Dynasty - and, in fact, has bitterly ridiculed anyone who suggested that there were any conspiratorial wolves mixed in with the Liberal sheep. Many well-informed conservatives were puzzled by *National Review's* refusal to consider the possibility that most of the liberal "mistakes" - the magazine decried - were actually carefully planned and deliberate acts; their bewilderment is bound to increase when they learn that editor-in-chief William F. Buckley, Jr., who has boasted of his personal friendship and warm admiration for such important Insiders as Henry Kissinger, and who enthusiastically endorsed Nelson Rockefeller for Secretary of Defense, is himself a member of the Council on Foreign Relations.

Book publishers with representatives on the CFR include :

MacMillan, Random House, Simon & Schuster, McCraw-Hill, Harper Brothers, IBM Publishing and Printing, Xerox Corp., Yale University Press and Harper & Row. Many of these specialize in publishing textbooks.

The Book of the Month Club's chairman Axel Rosin is a member of the CFR.

Given this kind of power over the media, it is hardly surprising that the Rockefeller family generally gets the powder puff treatment from the media. The interlocking CFR web woven by the Rockefellers explains why Nelson received such unanimous hosannas from the media during his hearings for the Vice Presidency. Though a few individual reporters were mildly critical of some facets of Nelson's career, the managers of the major papers and magazines positively drooled over themselves at the prospect of Sir Nelson the Fair being a heartbeat away from the Presidency. This is not exactly the tone used on Barry Goldwater in 1964. The one-eyed press is a Rockefeller-con trolled Cyclops.

There is yet another power the Dynasty has over the mass media. The average newspaper depends on advertising for from two-thirds to three-fourths of its revenues. Ike Mc Anally, for four decades a reporter with the *New York Daily News*, comments in *Counter attack*:

The most persistent influence upon the editorial policies of metropolitan newspapers today is the large advertiser. In many instances these advertisers are department stores. Some of these make open and contemptuous demands upon the front offices of newspapers to support the left wing. Others relay " suggestions. "

... Newspapers have surrendered unconditionally to left wing front office pressures, real and imaginary....

... They realize that if they write a story which might draw unfavorable reaction from, for instance, a department store, the city editor is apt to throw their copy back at them.... It is inevitable that with front offices swinging over, individual newsmen have more elastic principles.

Here's how it works. Every one of the major department store chains

" R. H. Macy & Company, Federated Department Stores, Gimbel Brothers, Sears, Roebuck & Company, J. C. Penney Company, The May Department Stores Company, Interstate Department Stores, and Allied Stores Corporation- has on its board of directors at least one officer who is a member of the Council on Foreign Relations and/or a partner in the CFR interlocked international banking firms such as Kuhn, Loeb; Lazard Freres; Lehman Brothers; Dillon, Read & Company; or Coldman Sachs.

Department stores, of course, are not the only buyers of advertising space. Oil companies are also biggies. So are banks. As are the myriad of corporations listed in the early part of this book as under Rockefeller family domination. Establishment adventurers will, of course, permit a paper to take a moderately conservative stand, but it is taboo to discuss the Rockefeller Establishment and its links with the International Communist Conspiracy.

With all of this membership in America's key mass media, it can hardly be an accident that few people know about the Council on Foreign Relations. If the Rockefellers wanted publicity for the CFR you can bet there would be feature spreads in *Time* and *Newsweek* plus a " 60 Minute- CBS Special narrated by Walter Cronkite. If you check *The Readers Guide to Periodical*

Literature at your local library, you will find but a single listing on the CFR in over 50 years. And that in the relatively obscure *Atlantic Monthly*. A check of newspaper files shows that only two feature articles on this incredibly powerful organization have appeared, one in the *Christian Science Monitor* and one in the *New York Times*. As we said before, such anonymity can hardly be accidental.

The involvement of the Rockefellers with the media has multi-multi implications. One is that the Rockefeller gang's plans for monopolistic World Government are never, but never, discussed in the machines of mass misinformation. The media decides what the issues will be in the country. They can turn on the poverty issue or turn it off. The same holds true for population explosion, pollution, peace, **détente**, or whatever. We have in this country what columnist Kevin Phillips has termed a mediacracy.

The mediacracy can take a man like Ralph Nader and make him an instant folk hero. Or they can take an enemy of the Rockefellers and create the image that he is a cretin, a buffoon, a bigot, or a dangerous paranoid.

The use of psychology and propaganda, or if you will, brainwashing, is not a Communist invention. It was developed in the West in such places as the Rockefeller financed Tavistock Institute in England. While the Communists have used these tools for mindbending, so have the Rockefellers. The hidden persuaders from Madison Avenue, the Rand Corp. think-tank or Hudson Institute, can and do manipulate public opinion. The Establishment elitists refer to it as " the engineering of consent." That means we are made to think the manacles they are slipping on our wrists are love bracelets. The techniques developed by the Rockefeller "Thought Trust " have just been adopted and used more brutally by the Communists.

With money the Rockefellers gained control of the media. With the media the family gained control over public opinion. With control over public opinion they gained control of politics. And with control of politics, they are taking control of the nation.

# Chapter Seven

## Surrender by Consent

*"We shall have world government whether or not you like it - by conquest or consent."*

-CFR member James Warburg  
testifying before the Senate foreign Relations Committee on  
February 17, 1950

As we have seen in the preceding chapter, there can be absolutely no doubt that the major Rockefeller goal today is the creation of a "**New World Order**" a one-world government that would control all of mankind. But, wanting a Global Superstate and getting one are two different things. How do the Rockefellers expect to round up all of us cows and herd us into their World Government corral?

The Rockefellers know that the roads to World Government can be as varied as human hopes, fears, ambitions, ignorance and greed. And since the Rockefellers' never put all of their financial or political eggs into one basket, you will not be surprised to learn that they are involved in promoting every conceivable route to a World Superstate. If there is an approach they have overlooked, we can't think of it. (And if you can, please don't mention it out loud-or the *New York Times* might announce tomorrow that the Council on Foreign Relations or a Rockefeller Foundation grant is supporting it.)

A complete listing of all organizations, movements, publications, and programs supporting World Government, which in turn are managed behind the scenes by the Rockefeller-CFR axis, would fill a book the size of the Los Angeles area telephone directory. Obviously, we can mention only a few of the more important trails along the Rockefellers' drive toward World Government.

Certainly the most visible pathway toward **World Government** is the organization that was created in 1945 by the Rockefellers for precisely this purpose - the **United Nations**. As we shall see in the next chapter, the controlled media have deliberately created a myth that the UN is a meaningless debating society. We are supposed to believe that the Rockefellers have spent millions on an organization that is, at best, an expensive but relatively harmless irritant. This public image of the **UN** has been invaluable to the global master planners, and it is about as accurate as an itinerant peddler's claim for his sure-fire snake oil potion.

If the Rockefeller thought-controllers can persuade enough Americans to accept voluntarily the surrender of US sovereignty to the United Nations, their long campaign for World Government will be over. The -New World Order -will have arrived- with all the hoopla of a Wall Street ticker tape parade. The Rockefellers would be willing to pay almost any price for such a bloodless coup d'etat , Infact, they are paying millions of dollars every year to finance just such a possibility. Here are just a few of the organizations in the United States which are financed and/or directed by the Rockefeller - CFR combine that are actively promoting the voluntary demise of American independence.

American Assembly

American Association for the United Nations

American Friends Service Committee

Arden House Group

Atlantic Union

Business Council

Center for Advanced Study in Behavioral Sciences

Center of Diplomacy and Foreign Policy

Chatham House

Citizens Committee for International Development

Committees on Foreign Relations

Committee for Economic Development

Council on Foreign Relations

Federation of World Governments

Foreign Policy Association

Institute of International Education

Institute for World Order

National Planning Association US National Commission

The Trilateral Commission World Affairs Council

United World Federalists

If you recognize more than half of this list, congratulations!

You are already well-informed about this Rockefeller road to serfdom. But if most of these names are new to you, we respectfully suggest that you have some homework to do. And while doing it, please remember that some of the most innocent sounding groups, or some apparently ineffective body whose avowed purposes seem totally non-political, may be one of the most dangerous tentacles on the whole World Government octopus.

Such is the case with one of the oldest organizations mentioned above, Atlantic Union. It is the granddaddy of regional government schemes, composed of those who believe that getting half a loaf is half way to getting a whole loaf. Atlantic Unionists argue that regional government is a necessary way station on the road to total World Government. Until Rocky's boy Henry sprung *détente* on them, Atlantic Union was also the organization for one-worlders who claimed to be anti-Communists. (And, indeed, there were some legitimate anti Communists in the group.)

The Atlantic Unionists believe that our War of Independence was all a ghastly mistake. This may seem a little odd as we prepare to celebrate the nation's bicentennial, but there are as many unreconstructed Tories on Wall Street as there are unreconstructed secessionists in Alabama.

The idea of Atlantic Union had its origin in the fertile brain of an Englishman named Cecil Rhodes, whose dream was to see the United States reannexed to the British Empire. To this end he established the Rhodes Foundation, providing for the education in England of bright young Americans.

In 1939, a Rhodes Scholar named Clarence Streit wrote a book called *Union Now*, which advocated a gradual approach to final world union by way of regional unions, starting with the union between the US and Britain. Committees were set up all over America, and Mr. Streit reported that over two million Americans had signed petitions asking for union with Britain.

In Streit's own words, Atlantic Union, now expanded to include Western Europe, was the first step towards total world government: "It [*Union Now*] proclaimed the need of world government and insisted that no country needed this more urgently than the United States.

Streit, who has been a close associate of Communists and socialists all his adult life, has no hostility towards collectivism. He said in *Union Now*: - Democracy not only allows mankind to choose freely between capitalism and collectivism, but it includes Marxist governments."

In his pamphlets Streit asks the question: "Does the rise of socialism in some Western European democracies prevent our federating with them?" He answers with an emphatic "No !"

In March 1949, Federal Union set up a political-action unit called the Atlantic Union Committee. The first president of this Committee was former Supreme Court justice Owen J. Roberts, who said he considers national sovereignty a "silly shibboleth."

More than twenty years ago the Los Angeles Examiner described what Atlantic Union would mean to America:

They [the nations of Western Europe] would impose their socialism in place of our republican self-government, extract taxes from us as they pleased, draft our men for their armies and our women for their factories, appropriate bulk of our productive wealth for their own enrichment.

How can any Senator or Representative elected to represent the people of the United States bring himself to advocate so clear a policy of national self-destruction?

The goals of Atlantic Union have not changed. But very few newspapers are as courageous or outspoken anymore. Bucking the Rockefellers is not the way to build your advertising revenue.

Less than a dozen years after its founding, the Atlantic Union Committee had grown to 871 wealthy and influential members, 107 of whom were members of the CFR. Today it has some 2,000 members.

An Atlantic Union Resolution which would, in effect, repeal the Declaration of independence, was first introduced in Congress in 1949. It has been reintroduced every year since, but until recently never received much attention-despite its endorsement by such Rockefeller CFR stalwarts as Richard Nixon, Hubert Humphrey, George McGovern, Dwight Eisenhower, Adlai Stevenson, John Foster Dulles, Jacob Javits, William Fulbright, Eugene McCarthy, and Henry Kissinger.

In 1975, the Atlantic Union resolution was once more introduced into the House of Representatives. Incredibly, 111 Congressmen (38 more sponsors than the resolution ever had before), all sworn to uphold the Constitution of the United States, officially co-sponsored the measure which would supersede our Constitution! According to the bill's chief sponsor, Illinois Republican Paul Findley:

This proposal never before had so much vigorous fresh blood as it has today. Nearly half of its sponsors are new 59 to be exact. Of these, 26 are freshmen, elected last November; 13 others voted for it when it was stalled on the floor last year by the thin majority of 210 to 197. Most significant of all, 10 of those who voted against it two years ago and still remain in the House are sponsoring it today; 56 of the 210 who opposed it in 1973 are no longer among the members of the House.

In 1973, the Atlantic Union resolution missed passing by a scant 13 votes. As Findley gloated, many of those who voted against it are now gone and several others who once opposed the measure have seen the Rockefeller handwriting on the wall and have become sponsors.

As you probably suspect, Atlantic Union is a Rockefeller operation.

The Oilbucks Gang has been tied to Atlantic federation for some 35 years. In fact, when Nelson Rockefeller was given the Atlantic Union's highest honor: the Pioneer Award, in 1964, Clarence Streit told the assembled dignitaries at the presentation that Nelson Rockefeller had saved the organization from a dangerous division back in 1939. It seems that the two strongest chapters, one in New York City and the other in Washington, were at loggerheads on where the group's headquarters would be established. Both wanted it in their own city.

"Ever the politician. Streit wanted to satisfy both factions, but he didn't have the shekels to finance such an elaborate operation. It was at that moment the Rockefeller cavalry came galloping to the rescue. Nelson promised to provide an entire floor at 10 East 40 th Street, New York City, rent free.

Twenty-five years later, it was Rocky's open espousal of ending American independence, expressed in his book *Future of Federalism*. that gave many secret World Government supporters in Congress the courage to speak up. According to Streit:

"The Future of Federalism- came at a time when other US political leaders and many of our best friends in Congress were afraid even to mention such words as

"federal" or " union-in connection with Atlantica, lest they arouse controversy and opposition from misguided

The Rockefeller family has provided free rental for the Atlantic Union headquarters, and Streit informs us that this fact had been kept a secret for 25 years. Even this admission was made at a private dinner of *Insiders*. You will find no mention of this incredible fact in the newspapers the next day. (Streit's disclosure appeared in their own publication, and was later placed in the *Congressional Record* for all to see by a - misguided patrioteer.-)

You are not supposed to know that the richest family in the country wants to abolish the independence of the United States.

For those Americans willing to go directly into the Great Merger with the Communists, without shilly-shallying around with regional intermediaries, the Rockefeller-CFR combine has several organizations available to support. The most blatant, as well as the most successful, is probably the United World

Federalists. The United World Federalists was formed in 1947 by two CFR stalwarts, Norman Cousins and James P. Warburg (whose statement, promising world government "by consent or conquest," began this chapter). One of the most famous slogans of this Rockefeller front was "One world or none."

The UWF has been particularly effective at appealing to the idealism of youthful Americans, through chapters on many high school and college campuses, with its promise of "world peace through world law." Most of these young members apparently assume that a World Government created and controlled by *Insiders* would protect individual rights, guarantee freedom of the press, respect religious beliefs and practices, and so on. Naturally, the UWF says nothing to disillusion them.

The United World Federalists has been a CFR operation since it was created, more than 25 years ago, by amalgamating three small organizations, the World Federalists, Student Federalists, and Americans United for World Government. Its membership has been heavily interlocked with that of the CFR from the day it began. Yet so successful has been the Rockefeller-CFR public relations job on behalf of the UWF that today it can-and does-promote virtually every major plank of the Communist Party, without losing an ounce of its Establishment-created -respectability."

The first president of the United World Federalists was Cord Meyer Jr., who, of course, was also a member of the CFR.

In a very curious book called *Peace or Anarchy*, Meyer touted the usual *Insider* line that the United States should be thrilled to disarm itself and merge into a -Federated World Government" under the control of the United Nations. And here is the kind of "peace- the UWF president wanted to see established:

... once having joined the One-World Federated Government no nation could secede or revolt ... because with the Atom Bomb in its possession the Federal Government [of the World] would blow that nation off the face of the earth.

Significantly, when he stepped down as UWF president, Meyer slid into a top position with another Rockefeller organization, the Central Intelligence Agency. His activities since then have been cloaked in a veil of secrecy, but one can only assume that his vision of an all powerful World Government, happily blowing recalcitrant nations" off the face of the earth," has not changed.

In recent decades, UWF\* supporters have become much more subtle in their advocacy of a World Superstate. The game is still the same, but the names have been changed to protect the guilty. They are now selected by Rockefeller's PR boys on Madison Avenue to be much more palatable to the public. You will not, for example, find a UWF member today stating the group's goals quite as crudely as a UWF professor named Milton Mayer did in 1949, when he said: " We must haul down the American flag ... haul it down, stamp on it, spit on it." The Rockefellers, you understand, never spit; they expectorate.

Although less than one American in a thousand would consider for a moment the suggestion that his political leaders have actually advocated abandoning our independence, the truth is that the UWF has been endorsed by such big-name politicians as Harry Truman, Adlai Stevenson, Hubert Humphrey, Richard Nixon, Jacob Javits, Dwight Eisenhower, Frank Church, justice William O. Douglas, and Ronald Reagan.

For decades Atlantic Union and United World Federalists and scores of less-effective Rockefeller fronts have followed a course of patient gradualism. They do not expect Americans to accept World

Government overnight like water dripping on a rock, they plan to wear down all opposition in time.

\* To make their commitment to globalism, not nationalism, even clearer, the UWF changed its name in 1969 to World Federalists, USA

But there are increasing indications that the leaders of the conspiratorial internationalists are running out of patience. Sure, they will permit the UWF and assorted cherries to continue on their merry way, urging us to put the gun to our collective heads and pull the trigger-all the while promising us we'll be better off for the experience, of course. But as we shall see in the next chapter, some of the top brass have contingency plans well prepared to move considerably faster should it become necessary.

One development that may signal more severe storms on the horizon was the formation, more than two years ago, of a new entity called "The Trilateral Commission." The founding meeting was called by David Rockefeller, the number one man in the Council on Foreign Relations and Chairman of the Board of Chase Manhattan Bank. When David asks some 200 leading bankers, businessmen, politicians, and labor leaders *throughout the world* to join him in forming a multi-national planning commission, you can be certain that the invitation has all of the force of a royal command.

Long-time Rockefeller watchers know that major shifts in the internationalists' plans are frequently signaled by brief articles in the *New York Times*. So when that *Insiders'* house organ mentioned in a small dispatch on June 18, 1974, that "the lives and fortunes of large numbers of human beings hang upon the outcome of decisions taken by a small handful of national leaders- on the Trilateral Commission, it was time to pay more attention -a lot more attention- to the group. If your life hangs upon (a rather strong choice of words for so august a publication as the *Times*) the deliberations and decisions of this commission, it is time to find out what they are deciding.

The tipoff came with the appointment of **Zbigniew Brzezinski** as a director of the commission. Shortly after the formation of the Trilateral Commission, the new director (who is an officer of the CFR) wrote an article for the CFR's official journal, *Foreign Affairs*, in which he said:

The world is not likely to unite [willingly] behind a common ideology or a super-government. The only practical hope is that it will now respond to a common concern for its own survival.

.... The Atlantic [Union] concept was a creative response to the problems of the cold war era. Today, the Atlantic framework is too narrow to encompass the multitude of challenges-and opportunities -that confront the international community. It is a recognition of this reality to propose ... that the active promotion of such trilateral cooperation must now become the central priority of U.S. policy.

In other words, Brzezinski says it's time to forget about the rather open and above-board approach to world government proposed by Atlantic Union. Voluntary union will not be achieved in time; it's time to try another approach. What is that "other approach"? Simply stated, it is to impose the very same controls over nations that World Government advocates propose, but this time to do it under the guise of solving economic, ecological, or energy problems.

The chairman of The Trilateral Commission is Gerard C. Smith, another CFR member and former director of the Arms Control and Disarmament Agency.\* Here is how he describes the purpose of The Trilateral Commission:

The United States, Western Europe, and Japan face a common condition. They are the major industrial areas of the world, and they share common concerns about the problems of environment and modern

industrial society.

They jointly share a global responsibility and we think their relations are threatened by domestic concerns which tend to drive the regions apart. (Emphasis added.)

\*The significance of Smith leaving the Arms Control and Disarmament. Agency to run this new Rockefeller operation should not be overlooked. The Disarmament Agency is a key part of the Insiders` program for a World Superstate. (See Chapter Eight.) For Smith to step down from such a major post means the Trilateral Commission must really be important.

According to Smith, the problems each country is facing may pose a serious obstacle to the establishment of a " New World Order." There is a danger that some nations may become so concerned about solving their own problems (such as having enough fuel to keep their factories going and enough food to feed their citizens), that they will lose sight of the larger objective-building World Government.

The first meeting of David Rockefeller's new group was held in Tokyo on October 21-23, 1973. Sixty-five persons were listed as North American members. Of those, thirty five are also members of the Council on Foreign Relations.

Six position papers, called " The Triangle Papers," have been issued so far by the Commission: two from the Tokyo meeting in October 1973, three from a meeting in Brussels in June 1974, and one from a Washington, D.C. meeting in December 1974. If the -Triangle Papers- are any indication, we can look for four major thrusts toward world economic controls: The first, toward a - renovated world monetary system"; the second, involving the looting of our resources for the further radicalization of -have-not-nations; the third, toward stepped-up trade with the Communists; and the fourth, toward milking the energy crisis for greater international controls.

So if you've been wondering what the next move of the World Government *Insiders* will be along the road to surrender by consent-they've already made it. The Trilateral Commission has been created by David Rockefeller to guide his fellow internationalists in using their private influence to make certain their governments remain on the proper public course-a headlong rush toward the Great Merger. And the country that ignores its warnings, and pays too much attention to its -domestic- concerns, may find itself in a food/fuel/financial crisis that will make the Great Depression seem like an idyllic trek through the Promised Land.

# Chapter Eight

## Surrender by Conquest

*``In Stage III [of disarmament] progressive controlled disarmament ... would proceed to a point where no state would have the military power to challenge the progressively strengthened UN Peace Force and all international disputes would be settled according to*

*agreed principles of international conduct .... The Peace-keeping capabilities of the United Nations would be sufficiently strong and the obligations of all states under such arrangements sufficiently far reaching as to assure peace and the just settlement of differences in a disarmed world."*

-Department of State Publication 7277

On his return from Vladivostok , USSR, where he had signed an agreement drafted at the Strategic Arms Limitation Talks (SALT), President Ford announced in a typically mixed metaphor that he had" put a cap- on the arms race. In the light of previous deals with the Communists, such a pronouncement was incredible. It conjured up memories of Chamberlain, newly arrived from Munich, standing on the sacred ground in which his head was buried and announcing through the sand that the treaty in his hand was proof we would have" peace in our time.-

While the Liberal press was singing hosannas to SALT II as the pinnacle of détente

(French for both a trigger and a lessening of tensions), the Communists were gobbling up territory faster than the Oklahoma Sooners. Using Soviet arms, the Reds were sweeping through Cambodia and South Vietnam. With the planned opening of Suez, they were preparing to link their naval forces in the Mediterranean and the Indian Ocean. And, Portugal, a long-time American ally, was being converted into a Soviet outpost in Western Europe. If this *is détente*, bring back the Cold War.

The road toward SALT began at the dawn of the nuclear age, when Leftist scientists and academics, standing at the wailing wall of disarmament, began to bemoan their fear that America's superior nuclear capacity would somehow frighten a worried Soviet Union into launching a major war. The "solution" to this peril begins with the Pugwash Conferences and might conclude with the forced surrender of a disarmed US

In 1955, the Parliamentary Association for World Government issued a call for a series of "Conferences on Science and World Affairs" between Russian and American scientists and intellectuals. The first of these was held in 1957 at the home of Russophile Cyrus Eaton in Pugwash, Nova Scotia. Eaton, who began his career a secretary to John D. Rockefeller and is now a business partner of the Rockefellers in promoting Red trade, earned the Lenin Peace Prize for fronting the deal and financing the first five Conferences. Since then, more than twenty have been held, most of them outside the United States. All have been financed by the tax-exempt Rockefeller CFR foundations.

"On September 23, 1960, three years after the first Pugwash Conference, the Soviets presented a plan for total and complete disarmament - to the United Nations. It called for a systematic reduction in arms by major powers of the world. The so-called "Soviet plan" immediately became the beneficiary of extremely influential American support, when a group of powerful proponents of disarmament within the CFR endorsed it.

This was no mere happenstance. A secret CFR disarmament program, entitled "Study No.7," was made public a few months later. Prepared by the CFR for the Senate Committee on Foreign Relations, "Study No.7" argued that the United States "must: (1) search for an international order ... in which many policies are jointly undertaken by ... states with differing political, economic and social systems, and including states labeling themselves as 'socialist.'" [That is, Communist.] In order to build such a "new international order," the CFR said, we must -maintain and gradually increase the authority of the UN," and "conduct serious negotiations to achieve international agreement on limitation, reduction and control of armaments.-

And here is the amazing part: This CFR position paper had preceded the Soviet proposal of September 23, 1960, by nearly a year. Pugwashed or not, the two schemes were almost identical!

This Pugwash-CFR conspiracy is one of the most brilliant achievements in psychological warfare since the Trojan Horse. While Americans were being told of the horrors of nuclear war and the supposed advantages of limiting our defenses, the Russians were arming to the teeth.

It was in June of 1964 that the Ford Foundation, already famous for bankrolling Rockefeller- approved fascist socialist causes, put up \$325,000 for a Pugwash production called the "Joint US - USSR Study Group in Disarmament."

The climate which Rockefeller partner Cyrus Eaton's Pugwash group and the CFR had created was by now well established. Advocates of the New World Order began to crow that World Government was at last in sight.

In September of 1961, the Department of State released Publication 7277, entitled : *Freedom From War: The United States Program for General and Complete Disarmament in a Peaceful World*.

It was a three-stage program which provided:

In Stage III progressive controlled disarmament and continuously developing principles and procedures of international law would proceed to a point where no state would have the military power to challenge the progressively strengthened UN Peace Force and all international disputes would be settled according to agreed

\* *Strategy for the Sixties*, Jay Cerf and Walter Pozen, New York Praeger, Inc., 1961.p92 THE ROCKEFELLER FILE

principles of international conduct. . . . The peacekeeping capabilities of the United Nations would be sufficiently strong and the obligations of all states under such arrangements sufficiently far reaching as to assure peace and the just settlement of differences in a disarmed world.

The same month that State Department Publication 7277 was issued, the United States Arms Control and Disarmament Agency was created by Congress. Within forty-eight hours the new Agency presented its disarmament scheme to the United Nations. Naturally, it was a carbon copy of the CFR-Soviet-Pugwash proposal presented to the UN *by the Communists* the year before While the newspapers and TV have prattled endlessly about disarmament, nary a word has been said about the other side of the coin: all such proposals call for arming the United Nations! This apparently is the best-kept secret since the formula for Coca-Cola.

In October of 1968 the US Disarmament Agency issued a revised proposal, entitled : *Arms Control and National Security*, which declared:

Since 1959, the agreed ultimate goal of the negotiations has been general and complete disarmament, i.e., the total elimination of all armed forces and armaments except those needed to maintain internal order within states and to furnish the United Nations with peace forces. . . . While the reductions were taking place, a UN peace force would be established and developed, and, by the time the plan was completed, it would be so strong that no nation could challenge it.

Notice that the document said," Since1959" The US Arms Control and Disarmament Agency was no established until September 1961. But it was in 1959 that the CFR " Study No.7 " was prepared and its content were transmitted to the Soviets.

How successful have these New World Order disarmers been in implementing their plans? What has happened to our military strength since disarmament was accepted as official US Government policy? The first Secretary of Defense to implement this policy was CFR member Robert S. McNamara, Secretary of Defense from 1961 through 1968. In *The Betrayers*, Phyllis Schlafly and Chester Ward discuss McNamara's wrecking job. Where Robert McNamara left office, they note, he had:

... reduced our nuclear striking force by 50% while the Soviets had increased theirs by 300%.

... caused the US to lose its lead in nuclear delivery vehicles.

... scrapped 3/4 of our multi megaton missiles.

... cut back the originally planned 2,000 Minutemen to 1,000.

... destroyed all our intermediate and medium-range missiles.

... canceled our 24-megaton bomb.

... scrapped 1,455 of 2,710 bombers left over from the Eisenhower Administration.

... disarmed 600 of the remaining bombers of their strategic nuclear weapons.

... frozen the number of Polaris subs at 41, refusing to build any more missile-firing submarines.

... refused to allow development of any new weapons systems except the TFX (F-111).

... canceled Skybolt, Pluto, Dynasoar and Orian [missile systems].

In fact, McNamara destroyed more operational US strategic weapons that the Soviets could have destroyed in a full-scale nuclear attack!

Supporting McNamara's efforts at unilateral disarmament were CFR members John J. McCloy and William C. Foster. McCloy, who preceded David Rockefeller as chairman of the board of both the CFR and the family' piggy bank, Chase Manhattan, was picked by President John F. Kennedy to be chairman of the General Advisory Committee for the Arms Control and Disarmament Agency, a post which he still holds. William C. Foster was appointed director of the Agency. In 1969, Foster was replaced as director by Gerard C. Smith, another CFR member. Smith's successor in 1973 was Fred Ikle who (this will probably not surprise you) is also a member of the Council on Foreign Relations.

John J. McCloy's current General Advisory Committee is composed of I. W. Abel, Dr. Harold Brown (CFR), William C. Foster (CFR), Kermit Cordon (CFR), Dr. James R. Killian, General Lauris Norstad (CFR), Dr. Jack Ruina (CFR), Dean Rusk (CFR), William Scranton, Dr. John Archibald Wheeler, and, Judith A. Cole, staff director.

What is going on here, alas, is all too simple. The Rockefeller - Establishment *Insiders* of the Council on Foreign Relations are working to weaken America's defensive capacity so the Soviets can "catch up." This policy, they believe, will lead eventually to a merger of political and economic interests- what the CFR calls a New World Order.

This is not academic skylarking. It is, as we have seen, official US policy. The operative phases of this scheme began in earnest when CFR *Insiders* persuaded President Lyndon Johnson to propose the Strategic Arms Limitation Talks (SALT) in 1966. The SALT talks to negotiate a first disarmament treaty were scheduled for July 1968. They were postponed until November 1969 because the Soviets were busy with their invasion of Czechoslovakia-only two weeks after Soviet officials signed the Declaration of Bratislava, guaranteeing Czech independence!

We have made such great progress at SALT that when the first meetings were scheduled in 1968, the Soviets had only 850 long-range missiles while the US had 1,054. But following the seventh SALT meeting, when President Nixon signed accords in Moscow on May 26, 1972, the Soviets had 1,618 ICBMs either deployed or under construction while we, in turn, still had 1,054 - the same number as in 1968. This, in short, is the way we have negotiated. We have frozen production and exported US technology to permit the Kremlin first to catch up, and then to surpass us.

What trends must we stop to prevent an ultimatum from the Soviets? To begin with, there is the effort to limit defense spending- especially in the area of strategic weapons development.

In the 1974 *Economic Report of the President* we learn that in 1953 our total government spending as a %age of national income was 33.2 %. That included 16 % for domestic spending, including welfare, etc. Twenty years later, in 1973, government spending had risen to 38.6 % of the national income. During this time the - better Red than deadboys hid cut defense back to 7 % of the national income while increasing domestic spending to 31.6 %. You might tap dance through those statistical tulips again. They confirm that the CFR plan is fully operative-that we are being prepared for the New World Order by being collectivized and disarmed at the same time.

Nor do those figures tell the whole story. With the advent of our -professional- Armed Forces, fifty-six % of the defense budget is now going for salaries. Congressman Larry McDonald (D.-Ca.) of the House Armed Services Committee observes:

The Liberals in Congress are constantly calling for the slashing of the -bloated- Defense budget so they can further increase Welfare spending. Since we cannot cut salaries, about the only thing which can be cut is hardware. Trimming the so-called fat actually turns out to be slicing out bone and muscle. If we had a war, we would have lots of men in uniform, but they wouldn't have adequate equipment with which to fight.

This result is a tribute to the skullduggery and conspiracy of the *Insiders* of the Rockefeller Council on Foreign Relations who planned it that way. Our -military industrial complex- had to be destroyed to make Soviet superiority - more plausible. It has, as a result, been literally starved to death on purpose.

Of course all of this was anticipated when President Nixon signed the SALT I agreement in Moscow back in May of 1972. Even the very -Liberal- Senator Henry Jackson (D.Wash.) admitted: -Simply put, the agreement gives the Soviets more of everything: more light ICBMs, more heavy ICBMs, more submarine-launched missiles, more submarines, more payload, even more ABM radars.

In no area covered in the agreement is the United States permitted to maintain parity with the Soviet Union.-

It is all too obvious that SALT has not limited the Soviets in any way. The US is being disarmed while the Communists are being given a first-strike Ultimatum Force.\*

\* The fact that SALT is merely an extension of the 7277 Disarmament Plan was acknowledged in this agreement which stated: The USA and the USSR regard as the ultimate objective of their efforts the achievement of general and complete disarmament and the establishment of an effective system of international security in accordance with the purposes and principles of the United Nations.

Remember the steel rolling plants we sold the Soviets on credit? Remember the aluminium factories the Rockefeller-Eaton Axis is building in Eastern Europe? And remember the Kama River truck factory, financed by David Rockefeller's Chase Manhattan Bank, which will be the largest in the world, covering some forty square miles? Truck factories, of course, are where tanks are built.

Now, ask yourself this question: If the Soviets are really sincere about détente and peaceful coexistence, why are they arming at such breakneck speed? Why aren't they diverting that spending into desperately needed consumer goods? And why is Henry Kissinger letting them get away with it? The answer is that the Comrades are preparing to deliver the New World Order ultimatum in case Americans refuse to lay

down and play dead. In other words, the traps have been set for world government by consent and by conquest.

The Communists are working hand-in-hand with our Establishment Insiders. When the former are powerful enough, the latter will insist we must scrap our national sovereignty and merge into a New World Order-our survival will require it!

If we have not the will to resist-to fight for national sovereignty-then we have no deterrent at all. We invite the nuclear ultimatum. And we are, indeed, in grave danger. The last SALT agreement arranged for a -working meeting- between President Ford and Soviet Party Leader Leonid Brezhnev in Vladivostok, November 23 and 24, 1974, after the President had visited Japan and South Korea to make "assurances." As usual, the trusted Dr. Kissinger arrived early to "work out the details." The President dutifully signed what was put in front of him.

The details, as it turned out, limit the US and Soviets to 2,400 land and sea-based missiles and long-range bombers through 1985. The United States, we are told in Newsweek for December 9, 1974, has some 2,206 intercontinental missiles (ICBMs), submarine-based missiles (SLBMs), and long-range bombers. The Soviets, we are assured, have deployed 2,375 such missiles and bombers. In addition, we agreed to equip only 1,320 missiles with MIRV warheads.

After dispatching Henry Kissinger to Peking to brief the Red Chinese, President Ford returned home to present his version of the summit to twenty-six Congressional leaders. Back in Washington the President crowed: "We put a firm ceiling on the strategic-arms race. What we have done," he stated with a straight face, "is to set firm and equal limits on the strategic forces of each side, thus preventing an arms race ... Vladivostok is a breakthrough for peace ... future generations will thank us.-

The National Observer for December 14, 1974, expressed amazement: "With such fanciful descriptions Mr. Ford, he of the plain word and honest face, is beguiling us-or has been beguiled and is merely repeating the phrases the beguilers used on him.-

The prestigious Aviation Week & Space Technology for December 9, 1974, warned: "The Vladivostok agreement puts a cap on nothing. The new SALT buzzword about 'putting a cap on the arms race' is just some more White House press agency that would be ludicrous if it had not proved so disastrous to the Nixon Administration and US interests at past summits."

So there you have it. Rockefeller Contingency Plan II - be used in the event that the American people cannot be persuaded to accept the surrender of US sovereignty to their New World Order-will be the blunt ultimatum: let the UN run the whole show, or those nasty Communist will blast us all to bits.

Step One was a massive media campaign, brainwashing the public into abject horror at the thought of nuclear war

Step Two was to increase Soviet military muscle (more on this in the next chapter), to lend some credence to Soviet claims of nuclear power.

Step Three was to make certain the US Armed Force were not permitted to advance technologically. The development of new weapons systems was forbidden; existing armaments were allowed to rust.

Step Four was to win Congressional approval for the Soviet-CFR planned disarmament scheme. What was approved wasn't disarmament at all; it was a proposal to arm a World Government police force by

taking weapon from the US and giving them to the UN.

Steps One through Three have already been implemented. And even while you are reading this Insiders in New York, Washington, Geneva, and London are working to convert Step Four from a plan to a fact '

As the CFR's James Warburg declared to the Senate Foreign Relations Committee twenty-five years ago:" We will have world government whether or not you like it-by conquest or consent." Warburg and his fellow conspirators have made certain that whichever deck is used to deal the next hands, the cards have already been stacked against us.

## Chapter Nine

### Building the Big Red Machine

*“There has been a continuing, albeit concealed, alliance between international political capitalists and international revolutionary socialists - to their mutual benefit.”*

-Antony C. Sutton  
*Wall Street And The Bolshevik Revolution*

That the Rockefellers are a unique and remarkable family is an understatement comparable to Custer observing that "the Indians seem restless today - just before his last stand. No fiction written would create such a family. No Hollywood movie mogul could concoct such a group to star in a celluloid epic.

The Rockefellers are bigger than life and stranger than fiction.

Yet, while many biographers have told of their fabulous wealth and virtually unlimited economic and political power, few have dealt with the most remarkable aspect of the family - its close relationship over many generations with its supposed arch-enemies, the Communists. Of course, there is much about this strange relationship that we do not know. But what is already a matter of public record is astounding. To say that things are not always what they seem is a hackneyed cliché, but there has never been a mystery to match that of the world Communist movement and the identity of its ultimate backers.

A bit of background is required in order to understand our subject. The Bolshevik Revolution in Russia was obviously one of the great turning points in history. It is an event over which misinformation abounds. The myth makers and re-writers of history have done their jobs well.

Today, most people believe the Communists were successful in Russia because they were able to gain the support of peasants who were sick of the tyranny of the Czars. This is not what happened.

While most know that the Bolshevik Revolution took place in November 1917, few recall that the Czar

actually abdicated seven months earlier. With the collapse of Czar Nicholas II's monarchy, a provisional government was established by Prince Lvov, who wanted to pattern the new Russian government after the American Republic. But, unfortunately, Lvov was maneuvered out and replaced by Alexander Kerensky, an admitted Marxist who claimed to be an opponent of the Bolsheviks.

At the time the Czar abdicated and for the next several months, the eventual leaders of the Bolshevik Revolution, Lenin and Trotsky, were not even in Russia. Lenin was in Switzerland and had been living in exile since 1905. Trotsky also was in exile, working as a reporter for a Communist newspaper in - would you believe - New York City.

Trotsky was allowed to return to Russia with an American passport; Lenin was spirited across Europe in the famous sealed train. They joined forces and by November, through bribery, cunning, brutality and deception, were able to hire enough thugs and make enough deals to seize control of Petrograd. The Bolsheviks came to power not because the downtrodden masses of Russia called them back, but because very powerful men in Europe and the United States, including members of the Rockefeller family, sent them in.

But while these facts have been somewhat suppressed, the biggest secret of all is that throughout this period, the financing for the revolution came from super capitalists in the West, and primarily from the United States.

A meticulously documented book on this subject was written by Antony Sutton, a research fellow for the prestigious Hoover Institution for War, Revolution and Peace at Stanford University. Entitled *Wall Street And The Bolshevik Revolution*, this book by a respected and fastidiously thorough scholar was almost universally

*Building The Big Red Machine* ignored by the mass media. One does not have to be a Quiz Kid to figure out why. Sutton sets the stage for the Bolshevik Revolution with this background:

" While monopoly control of industries was once the objective of J. P. Morgan and J. D. Rockefeller, by the late nineteenth century the inner sanctums of Wall Street understood that the most efficient way to gain an unchallenged monopoly was to " geopolitical - and make society go to work for the monopolists - under the name of the public good and the public interest. This strategy was detailed in 1906 by Frederick C. Howe in his *Confessions of a Monopolist*. Howe, by the way, is also A figure in the story of the Bolshevik Revolution.

In his book Howe had stated:

These are the rules of big business. They have superseded the teachings of our parents and are reducible to a simple maxim: Get a monopoly ; let Society work for you; and remember that the best of all business is politics, for a legislative grant, franchise, subsidy or tax exemption is worth more than a Kimberly or Comstock lode, since it does not require any labor, either mental or physical, for its exploitation.

Sutton postulates why wealthy men like the Rockefellers would cooperate with and even finance the very Communists who are allegedly sworn to bury them.

The British-born scholar points out:

... one barrier to mature understanding of recent history is the notion that all capitalists are the bitter and

unswerving enemies of all Marxists and Socialists. This erroneous idea originated with Karl Marx and was undoubtedly useful to his purposes. In fact, the idea is nonsense. There has been a continuing, albeit concealed, alliance between international political capitalists and international revolutionary socialists-to their mutual benefit.

Through Sutton we can learn the names of the secret men who bankrolled the conspiracy in Russia. We know that no revolution can be successful without organization and money. The -downtrodden masses- usually provide little of the former and none of the latter. But the Rockefellers and their cohorts can provide both. In *The Surrender of An Empire*, the brilliant English historian Nesta Webster observed:

Had the Bolsheviks been, as they are frequently represented, a mere gang of revolutionaries out to destroy property, first in Russia, and then in every other country, they would naturally have found themselves up against organized resistance by the owners of property all over the world, and -the Moscow blaze would have been rapidly extinguished. It was only owing to the powerful influences' behind them that this minority party was able to seize the reins of power and, having seized them, to retain their hold of them up to the present day.

Sutton introduces his evidence of -powerful influences" behind the Communists by stating:

In brief, this is a story of the Bolshevik Revolution and its aftermath, but a story that departs from the usual conceptual strait jacket approach of capitalists versus Communists. Our story postulates a partnership between international monopoly capitalism and international revolutionary socialism for their mutual benefit. The final human cost of this alliance has fallen upon the shoulders of the individual Russian and the individual American. Entrepreneurship has been brought into disrepute and the world has been propelled toward inefficient socialist planning as a result of these monopoly maneuverings in the world of politics and revolution ...

So long as we see all international revolutionaries and all international, capitalists as implacable enemies of one another, then we miss a crucial point-that there has indeed been some operational cooperation between international capitalists, including fascists.

Sutton then proceeds to present evidence of such cooperation. The proofs-which are on the public record that international banking elements, most notably Morgan and Rockefeller interests, financed the take-over by the Bolsheviks, are simply overwhelming. The thousands of facts and documents that Sutton cites are too numerous to even summarize here. For those interested in the complete

Building " The Big Red Machine " story, I highly recommend reading Sutton's book,

**Wall Street And The Bolshevik Revolution And "War on Gold" try "The Rise of Hitler"**

The Hoover Institute researcher asks the obvious question: What is the motivation behind this coalition capitalists and Bolsheviks? The advantages to the Communists are obvious. But of what possible benefit could such a union be to the super-capitalists of the West?

Sutton suggests that Russia was then - and is today- the largest untapped market in the world. Moreover, Russia then and now, comprises the greatest potential competitive threat to American industrial and financial supremacy." Wall Street, - says Sutton," must have shivers when it visualizes Russia as a second super American industrial giant." By saddling Russia with unproductive economic system dependent on the West for continuous infusions of capital and technology for survival Russia could be both exploited and contained Sutton concludes:

Revolution and international finance are not at all inconsistent if the result of revolution is to establish more centralized authority. International finance prefers to deal with central governments. The last thing the banking community wants is laissez-faire economy and decentralized power because these would disperse power.

This, therefore, is an explanation that fits the evidence. This handful of bankers and promoters was not Bolshevik, or Communist, or socialist, or Democrat, or even American. Above all else these men wanted markets, preferably captive international markets-and a monopoly of the captive world market as the ultimate goal....

Wall Street did indeed achieve its goal. American firms controlled by this syndicate were later to go on and build the Soviet Union, and today are well on their way to bringing the Soviet military-industrial complex into the age of the computer.

Of course, far more is involved here than just monopolists seeking new captive markets. The same people who bankrolled the Russian Communist Revolution turn out to be the same ones who fastened the Man graduated income tax onto the American middle-class while avoiding it themselves; and it is the same group that foisted the fraudulent Federal Reserve System onto an unsuspecting American public. The actions of these super-capitalists over a period of many decades reveal that they were not merely plotting to acquire more profits; they were involved 'in a conspiracy for control of the world!

No doubt all this has been a handy and profitable byproduct of the super-capitalist capture of Russia. But, it is only part of a bigger picture. Like the cartel capitalists, the Communists work for a world government. And world government is promoted from both the top and the bottom of the conspiratorial apparatus.

In the Bolshevik Revolution we have some of the world's richest and most powerful men financing a movement which claims that its very reason for existence is to strip of their wealth such super-rich cartel and banker capitalists as the Rockefellers.

But obviously these men have no fear of international Communism. It is only logical to assume that if they financed it, and are willing-even eager-to cooperate with it, it must be because they control it. Can there be another explanation that makes sense? Remember that for over 100 years it has been a standard operating procedure of the Rockefellers and their allies to control both sides of every conflict.

Having created their colony in Russia, the Rockefellers and their allies have struggled mightily ever since to keep it alive. Beginning in 1918 this clique has been engaged in transferring money and, probably more important technical information to the Soviet Union. This is made abundantly clear in Antony Sutton's monumental three volume history, *Western Technology and Soviet Economic Development*. Using for the most part official State Department documents, Sutton proves beyond any possible doubt that virtually everything the Soviets possess has been acquired from the West, principally America. It is not an exaggeration to say that the USSR was made in the USA. No one has even attempted to refute Sutton's almost excessively scholarly works. They can't. But the misinformation machines that compose our mediocracy can ignore Sutton. And they do. Totally.

None of the foregoing makes sense if Communism really is what the Communists and the Rockefeller Establishment tell us it is. But if Communism is an arm of a bigger conspiracy to control the world by power-mad billionaires (and brilliant but ruthless academicians who have shown them how to use their power) it all becomes perfectly logical.

It is at this point that we should again make it clear that this conspiracy is not made up solely of Rockefellers and other bankers and international cartelists, but includes every field of human endeavor. Starting with Voltaire and Adam Weishaupt and running through John Ruskin, Sidney Webb, Nicholas Murray Butler, and on to the present with *Insiders* such as Henry Kissinger and John Kenneth Galbraith, it has always been the scholar looking for avenues of power who has shown the "sons of the very powerful" how their wealth could be used to rule the world.

We cannot stress too greatly the importance of the reader keeping in mind that this book is discussing only one segment of the conspiracy. Other important segments which work to foment labor, religious and racial strife in order to promote socialism have been described in numerous other books. These other divisions of the conspiracy often operate independently of the Rockefellers and other international bankers and it would certainly be disastrous to ignore the danger to our freedom they represent.

It would be equally disastrous to lump all businessmen and bankers into the conspiracy. A distinction must **be drawn between competitive** free enterprise, the most moral and productive system ever devised, and cartel capitalism dominated by industrial monopolists and international bankers. The difference is crucial: the private enterpriser operates by offering products and services in a competitive free market, where consumers have numerous choices offered to them, while cartel capitalists use the government to force the public to do business with them. These corporate socialist-fascists are the deadly enemies of competitive private enterprise.

Liberals are willing to believe that the Rockefellers will fix prices, rig markets, establish monopolies, buy politicians, exploit employees and fire them the day before they are eligible for pensions, but they absolutely will not believe that these same men would want to rule the world or would use Communism as the striking edge of their conspiracy. When one discusses the machinations of the Rockefellers and their allies, Liberals usually respond by saying "But don't you think they mean well?"

However, if you assemble the evidence, carefully present your proofs, and try to expose these power seekers, the Establishment's mass media will accuse you of being a dangerous paranoid who is - dividing- our people. In every other area, of course, they encourage dissent as being healthy in a 'democracy.'

The Rockefeller-CFR *Insiders* began pushing to open up Communist Russia to US traders soon after the revolution. However, at that time public opinion ran so high against the Bolsheviks because of their barbarism that it was official US government policy not to deal with the outlaw government. The US did not even recognize the Bolshevik regime until 1933.

Galloping to the rescue were the super-capitalists of the West-men like the Vanderlips, the Harrimans, and the Rockefellers. One of the first to arrive was Frank Vanderlip, an agent of the Rockefellers and president of the Rockefeller First National City Bank, who once favorably compared Lenin to George Washington.

Before the Bolshevik revolt, Russia had succeeded the US as the world's number one oil producer. The chaos and destruction of the revolution effectively eliminated Standard Oil's competition from Russia for several years until Standard could move in and get a piece of the Russian oil business.

In 1926, Standard Oil of New York and its subsidiary, Vacuum Oil Company, concluded a deal to market Soviet oil in European countries. Part of the price for the arrangement, it was reported at the time, was a loan of \$75,000,000 to the Bolsheviks. In 1927, Russia's secret partner, Standard Oil of New York, built an oil refinery in Russia. The refinery helped immeasurably in putting the Bolshevik

economy back on its feet. According to Professor Sutton," This was the first United States investment in Russia since the Revolution." (We have been unable to find out if Standard Oil was even theoretically expropriated by the Communists.)

It is possible the Rockefellers still own oil production facilities behind the Iron Curtain and get the profits out through Switzerland. By doing this, they would not have to share the loot with stockholders or the tax collector.

Wherever Standard Oil would go, Chase National Bank was sure to follow. In order to rescue the Bolsheviks, who were supposedly the archenemy of profit-seeking businessmen, the Chase National Bank was instrumental in establishing the American-Russian Chamber of Commerce in 1922. President of the Chamber was Reeve Schley, a vice-president of Chase National Bank. According to Professor Sutton:

In 1925, negotiations between Chase and Prom-bank extended beyond the finance of raw materials and mapped out a complete program for financing Soviet raw material exports to the US and imports of US cotton and machinery ... Chase National Bank and the Equitable Trust Company were leaders in the Soviet credit business.

The Rockefeller's Chase National Bank also was involved in selling Bolshevik bonds in the United States in 1928. Patriotic organizations denounced the Chase as an "-international fence." Chase was called " a disgrace to America ... They will go to any lengths for a few dollars' profits.-

Congressman Louis McFadden, chairman of the House Banking Committee, maintained in a speech to his fellow Congressmen:

The Soviet government has been given United States Treasury funds by the Federal Reserve Board and the Federal Reserve Banks acting through the Chase Bank and the Guaranty Trust Company and other banks in New York City ...

... Open up -the books of Amtorg, the trading organization of the Soviet government in New York, and of Gostorg, the general office of the Soviet Trade Organization, and of the State Bank of the Union of Soviet Socialist Republics and you will be staggered to see how much American money has been taken from the United States Treasury for the benefit of Russia. Find out what business has been transacted for the State Bank of Soviet Russia by its correspondent, the Chase Bank of New York;

In his three-volume history of Soviet technological development, Professor Sutton proves conclusively that there is hardly a segment of the Soviet economy which is not a result of the transference of Western, particularly American, technology.

This cannot be wholly the result of accident. For fifty years the Federal Reserve-CFR-Rockefeller-Insider crowd has advocated and carried out policies aimed at increasing the power of their satellite, the Soviet Union. Meanwhile, America spends \$90 billion a year on defense to protect itself from the enemy the *Insiders* are building up.

What has been true in the past is even more valid today. Heading the parade to transfer technology and increase aid and trade with the Communists are the Rockefellers and the Council on Foreign Relations.

The bandmaster for the entire enterprise is David Rockefeller.

Most Americans regard Nelson Rockefeller as the most important member of the Rockefeller family. He is, after all, the (unelected) Vice President of the United States. Since 1960 he has been a perennial candidate for the Presidency. Nelson Rockefeller is a compulsive extrovert who loves to be in the public eye. As a result, he is far better known than his brothers. **But notoriety is an unreliable measure of power.**

Students of the Eastern Establishment are well aware that while Nelson gets the ink, it is little brother David who 'wields the power.' " As the *de facto* head of the American Establishment,- reports *Time*," It has been said that for him the presidency would be a demotion. " The *New York Times*" - concurs: "He has come to be regarded as a spokesman for enlightened American capitalism.- Of course, to the *New York Times*, "enlightened American capitalism" means government planning of virtually every facet of the American economy, major transfers of America's vital technology to the Communists, the internationalizing of American business through multinational holding companies, and the creation of a World Government.

In 1964 David Rockefeller and Nikita Khrushchev were closeted in Moscow for two and a half hours. The Chicago *Tribune* of September 12, 1964, reported:

David Rockefeller ... briefed President Johnson today on his recent meeting with Premier Nikita S. Khrushchev of Russia ... the Red leader said the United States and the Soviet Union " should do more trade." Khrushchev, according to Rockefeller, said he would like to see the United States extend long-term credits to the Russians.

As a matter of fact, the meeting between Rockefeller and Khrushchev had been held two months earlier, in July. Apparently whatever trouble had developed was not settled until the President was briefed in September. Within a month, Khrushchev was deposed. David Rockefeller was soon meeting on the Black Sea with his successor, and in October of 1966 L.B.J. announced his new policy of "building bridges" to Eastern Europe. This was at the time the Communists were escalating the Vietnam War, and virtually all of the war materiel to do so came from the ammunitions factories of Eastern Europe. It seemed politically incredible for Johnson to propose such a policy while American troops were being killed and maimed by ammunition and weapons from the Communist bloc. It would have been flabbergasting if one had not been following the machinations of David Rockefeller.

On October 7, 1966 , President Johnson, a man who has appointed a CFR member to virtually every strategic position in his administration.,stated:

We intend to press for legislative authority to negotiate trade agreements which could extend most-favored-nation tariff treatment to European Communist states ...

We will reduce export controls on East-West trade with respect to hundreds of non-strategic items ...

Six days later, the *New York Times*- reported:

The United States put into effect today one of President Johnson's proposals for stimulating East-West trade by removing restrictions on the export of more than four hundred commodities to the Soviet Union and Eastern Europe ...

Among the categories from which items have been selected for export relaxation are vegetables, cereals, fodder, hides, crude and manufactured rubber, pulp and waste paper, textiles and textile fibers, crude fertilizers, metal ores and scrap, petroleum, gas and derivatives, chemical compounds and products,

dyes, medicines, fireworks, detergents, plastic materials, metal products and machinery, and scientific and professional instruments.

Virtually every one of these "non-strategic" items has a direct or indirect use in war. Later, items such as rifle cleaning compounds, electronic equipment, computers, and radar were declared "non-strategic" and cleared for shipment to the Soviet Union. Congress drew the lines at sending -strategic- goods to the Reds, but the trick was simply to declare almost everything "non-strategic" A machine gun is strategic, but the tools for making it and the chemicals to propel the bullets were declared "nonstrategic."

The Viet Cong and North Vietnamese received 8 % of their war materials from Russia and the Soviet bloc nations. Since their economies are incapable of supporting a war, the Communist arm of the conspiracy needed help from the Finance Capitalist arm. The United States financed and equipped both sides of the terrible Vietnamese war, killing nearly 55,000 of our own soldier by proxy. Again, **the mass media kept** the American public from learning this shocking truth.

Not surprisingly, the Rockefellers have been leaders in championing this bloody trade. On January 16, 1967, one of the most incredible articles ever to appear in a newspaper graced the front page of the Establishment's daily, the *New York Times*. Under the headline, "Eaton Joins Rockefellers To Spur Trade With Reds," the article stated:

An alliance of family fortunes linking Wall Street and the Midwest is going to try to build economic bridges between the free world and Communist Europe.

The International Basic Economy Corporation, controlled by the Rockefeller brothers, and Tower International, Inc., headed by Cyrus S. Eaton, Jr., Cleveland financier, plan to cooperate in promoting trade between the Iron Curtain countries, including the Soviet Union ...

International Basic Economy Corporation (IBEC) is run by Richard Aldrich, grandson of Federal Reserve plotter Nelson Aldrich, and Rodman Rockefeller (CFR), Rocky's son. On October 20, 1969, IBEC announced that N. M. Rothschild & Sons of London had entered into partnership with the firm.

Cyrus Eaton, Jr. is the son of the notoriously pro-Soviet Cyrus Eaton, who began his career as secretary to John D. Rockefeller. It is believed that Eaton's rise to power in finance resulted from backing by his mentor. So the agreement between Tower International and IBEC continues an old alliance. Although Eaton's name does not appear on the CFR's membership rolls, the Reece Committee which investigated foundations for Congress in 1953 found that the notorious Soviet apologist was a secret member.

Among the "non-strategic" items which the Rockefeller-Eaton axis is going to build for the Communists are ten rubber goods plants and a \$50 million aluminum producing plant for the Reds. (Aluminum for jet planes has been considered -non-strategic- under the Johnson Nixon-Ford Administrations.)

Even more incredibly, the *Times* reveals:

Last month, Tower International reached a tentative

*New York Times January 16 1967*

*Eaton Joins Rockefellers To Spur Trade With Reds.*

*Cleveland and New York Financers to set up an East-West Exchange*

David Rockefeller, chairman of the Chase Manhattan Bank, is the most important and most effective promoter in the US of aid to the Communists. He was all smiles (above) after concluding a deal in Red China with Chou En-lai; he has joined with Cyrus Eaton Jr. (see clipping on left) to promote further trade with the Soviet Union; his successes have delighted such important Communist rulers as Soviet Finance Minister V. F. Garbuzov, (below). Thanks to the House of Rockefeller, "trade" with the Communists (always financed by the US taxpayer, of course), now amounts to millions of dollars every year.

## Eaton Joins Rockefellers To Spur Trade With Reds

**Cleveland and New York  
Financiers to Set Up an  
East-West Exchange**

By ROBERT E. BEDINGFIELD

An exchange of funds between the United States and the Soviet Union is going to try to build economic bridges between the free world and Communist Europe.

The International Development Corporation, controlled by the Rockefeller brothers and Tupper International Inc., headed by Cyrus S. Eaton Jr., Cleveland financier, plan to cooperate in promoting trade between the United States and the Soviet Union, including the Soviet Union, and the United States, Canada, and Latin America.

The I.D.C. was organized in 1962 under the principal direction of Nelson A. Rockefeller, now New York's Governor. It was organized as an investment company specializing in enterprises in underdeveloped areas. The company already has interest in 22 foreign units.

Tupper Inc. President  
Cyrus S. Eaton Jr.

but more is in the Communist bloc.

Tupper International is a wholly owned subsidiary of Tupper Industries, a partnership

(Continued on Page 47, Column 1)

Agreement with the Soviet patent and licensing organization Licensintorg, covering future licensing and

patent transactions. Until now, Mr. Eaton said, the Russians have left the buying and selling of licenses and patents to the Amtorg Trading Corporation, the official Soviet agency in this country for promoting Soviet-American trade.

This means that the Rockefellers and Eatons have a monopoly on the transfer of technological capability to the supposed enemies of the super-rich, the Soviet Union. According to the *Times*:

Mr. Eaton acknowledged the difficulties that Amtorg's representatives had encountered here in trying to arrange licensing agreements with American companies." As you can imagine," he said, " it is almost impossible for a Russian to walk into the research department of an American aerospace company and try to arrange the purchase of a patent."

Certainly every loyal American will say to himself, " Well, I would hope to God the Soviets couldn't walk into our defense plants and buy a patent." The Rockefellers and the Eatons have solved that problem for the Communists. Now, instead of dealing with an official agency of the Soviet government, American concerns will be dealing with the Rockefellers. You can imagine how many doors that will open to the Communists!

Thus, by the purchase of patents for the Communists, the Rockefellers are virtually in charge of research and development for the Soviet military machine. Their goal is to enable the Soviets to mass-produce American developments. And let us emphasize that the transfer of such technical knowledge is even more important than the sale of weapons. Ammunition is used once, then it is gone. Weapons break down, vehicles need replacement parts, and sophisticated arms are not easy to produce in a backward economy, no matter how much manpower is available.

While the trade doors were, opened during the LBJ Administration, the advent of détente under the Nixon Kissinger era produced an open house in American plants

and research labs for the Red traders. Now, a process that may have taken an American corporation a decade to develop is transferred *in toto* to the Communists. Does it make sense to spend \$90 billion a year on national defense and then deliberately to increase the war-making potential of an avowed enemy? It does to Mr. Rockefeller and the *Insiders*.

Since the Rockefellers now have an exclusive contract to supply American patents to the Soviets, they are by dictionary definition agents of the Big Red Machine. It goes without saying that they are the most important Communist agents in history. Or perhaps it would be more accurate to define the Communists as Rockefeller agents?

An increasingly important tool for the looting of America by the Rockefellers and their cohorts is the Export-Import Bank, known as Eximbank. It was established in 1934 to finance and promote trade with the Soviet Union. But it wasn't until Richard Nixon signed a -Presidential Determination- on October 18, 1972, that the Eximbank began to finance trade with the Soviets.

The process by which the Eximbank works is simple enough. An US exporter goes to his own bank, which makes arrangements for the Eximbank to loan money to the exporter's foreign buyer. Eximbank then grants a credit to the American bank, which in turn pays the US exporter. Thus the exporter is immediately paid, the American bank is cut in on the deal, and the foreign importer gets a subsidized interest rate.

Who pays the interest subsidy? You hardly need ask. The US taxpayer pays it through Treasury grants

to the Eximbank. While most Americans consider themselves lucky if they can arrange to borrow money for less than twelve % interest, and even the prime rate (the rate at which the largest American corporations with the best credit rating can borrow) is as high as ten %, the Eximbank has been making loans to foreigners at six % interest. The difference is a four % subsidy to any foreigner who buys our goods.

What happens if the foreign buyer defaults? Auf Wiedersehen. Adios. Sayonara. If the customer sneaks out of the restaurant without paying the check, the waiter puts the arm on the American taxpayer who, once again, picks up the tab. How would you like to be in a business in which the government paid you in full for all sales and accepted the responsibility for collecting all accounts receivable? As the late General Thomas Lane noted:

In this system, the U.S. exporter has nothing to lose by sales to bad credit risks. The US commercial bank has nothing to lose. The inclination therefore under our profit system is to sell products to anyone who will sign a loan agreement which you can run by the Eximbank. Irresponsibility is rewarded ...

It is an old story. Public money is nobody's money. As a sense of civic responsibility declines, the public money is used to private advantage [often the Rockefellers].

As with other free enterprisers, we favor foreign trade. But when American exporters ask the taxpayers to take the risks while they take a guaranteed profit, it is not trade but looting. It is as though you were an automobile dealer with an exclusive to sell Cadillacs to deadbeats in Chad, and you had a guarantee that American taxpayers would make all payments the Chads defaulted. Assuredly, you could "sell-a lot of cars that way. You could unload every Cadillac General Motors could produce! And you wouldn't care a fig whether the *customer* ever pays for the car.

Shortly after the May 1972 Summit Conference in Moscow, the Nixon Administration began pushing to extend the credit of the US taxpayers directly to the Soviets. As part of the Nixon-Kissinger *détente*, Congress was to extend to the Bolsheviks tariff status as a "Most Favored Nation,- and Eximbank loans were to be arranged for the transfer of the most advanced American technology to Russia and for the development of Soviet energy sources. A UPI release dated July 17, 1973, provides the explanation David Rockefeller gave for such outrages:

David Rockefeller, board chairman of Chase Manhattan Bank, urged Congress Tuesday to grant most favored nation trading status to the Soviet Union, claiming the move could help slow the arms race. "The desire of the Soviets to use Western trade, credits and technology to bolster their own economy hopefully could be accompanied by their giving lower priority to military programs," Rockefeller testified . . . "We haven't stopped the arms race by withholding exports (in the past)," he said.

David told an audience in Rome that he would replace the Iron Curtain with "a plate-glass curtain." He claimed -Better communication and then understanding through expanding trade are ingredients of world peace." Just as the scrap metal we sold Japan before Pearl Harbor helped bring peace!

So far, Most Favored Nation status has not been granted by Congress because of publicity about Russia's policy of refusing emigration by Soviet Jews to Israel. But the sluice gates for loans have been opened. Already legal counselor for Eximbank, under pressure from President Nixon and Secretary of State Henry Kissinger has pushed the bank's directors to approve questionable loans to the Reds.

As part of the massive effort to build the Communist economy by looting the United States, *on credit*, Richard Nixon appointed William Casey as president of the Export-Import Bank. Casey, a member of

the Rockefeller-controlled CFR, is the perfect man for the job that Kissinger and the Rockefellers have in mind. As part of his goal of promoting "trade-with the Communists," last year he told the Society of American Business Writers:

To implement this vital aspect of our overall foreign policy, our Ambassadors to Communist nations have been instructed to put trade promotion at the top of their list of priorities. Shortly we will have doubled the number of State Department employees serving in commercial positions in the USSR, eastern Europe and [Communist] China.

Naturally the Communists are delighted to have the American super-capitalists build

factories for them as long as the American taxpayers agree to pick up the tab when the Commissars default. **It is foreign aid in a big, big way!**

The first of the giant projects we are inflating our currency to build on credit for our Bolshevik brothers is the Kama River factory, which is to be the largest producer of trucks in the world. But please don't mention that trucks are the backbone of modern military operations, and that during open warfare truck factories are quickly converted to build tanks. If you do so, Liberals will look at you as if you have four heads and nine eyes.

The Kama River factory will produce 150,000 heavy trucks and 150,000 heavy engines per year. This output is greater than the combined production of such trucks by all factories in the United States. The complex is being built by a division of the Pullman Company at a cost of two million dollars. The Soviets are going to put up ten % of the cash for the project, while David Rockefeller's Chase Manhattan Bank and the Export-Import Bank will each advance forty-five %.

To say that Eximbank is bending over backwards with our tax dollars to accommodate the Soviets is like saying that J. Paul Getty is fairly confident his personal cheque won't bounce. On Exim's usual loans, repayments must start in three to five or, at the most, seven years. The repayment period for this loan is twelve years, with a grace period of 4.5 years. Which means that it will be 16.5 years, if ever, before anyone sees the first payment! Try to get that kind of a deal as an American businessman ... at six % interest.

And what happens when the Comrades don't pay? Do we foreclose and repossess the factory? That's about as practical as growing bananas in Minnesota. Krupp, the German industrial giant, almost collapsed as a result of its extension of credit to the Soviets. It had to be bailed out by its government.

But, you say, surely David Rockefeller, the shrewdest and most powerful banker in the world, would not risk Chase Manhattan's money unless he were sure of repayment. You're right. David is sure of repayment. Chase's loan is guaranteed by the US taxpayer through other government agencies, the Overseas Private Investment Corporation and the Foreign Credit Insurance Association. The US taxpayer is on the hook for every dime. Just as with the Eximbank loans, OPIC and FCIA guarantee the businessmen - a profit no matter how badly the deal turns out. What is happening is that we are giving the Soviets a two-billion-dollar truck plant, and insuring the Rockefellers' cut on the deal.

The Kama River project kicked off a spree of such looting. One of these loans is for thirty-six million dollars to help construct and equip an international trade center in Moscow. Joint venturing in this deal - all fully guaranteed by you, the taxpayer - are Chase Manhattan and the Bank of America. Arranged by Armand Hammer of Occidental Petroleum, a personal friend of Lenin and son of a founder of the US Communist Party, the huge Trade Center will be built by the Bechtel Corporation. Comrade Hammer

and his Occidental Petroleum also have a huge natural gas deal in the mill with the Soviets. According to former Eximbank boss Henry Kearns:

For a proposed gas development deal in Siberia that the Soviets are eager to make, the required Eximbank credit is \$1.5 billion - more than the bank has- granted any other customer. The Soviet Union has already received Exim credits of about \$350 million without disclosing financial data ...

The Nixon-Kissinger Administration had to pour millions in paper currency into our economy, thus pushing inflation higher, to lend the Soviet Union \$180 million at six % interest. The deal is for the construction on a Soviet site of a new fertilizer plant made in the USA This, incidentally, comes at a time when America is in the midst of a severe fertilizer shortage. Crops are being limited in our own country because of that shortage, but our government is determined to help the Comrades at our expense, by looting us of the hardware to build this desperately needed fertilizer plant,

The cost of the Russian fertilizer plant will be \$400 million. Of this, the Soviet Union is putting up only \$40 million-a mere 10 % of the cost. All the rest will come from the US

In addition to the Export-Import Bank's loan, for which the bank has already made a preliminary commitment, private American banks will lend another \$180 million for the Russian plant-but at a realistic 10 to 12 % interest. The American taxpayer is therefore subsidizing the Export-Import Bank's part of the loan-a subsidy that could cost between \$50 million and \$75 million in lost interest over the 12-year period of the loan.

" The Soviet Union is the last great undeveloped market for the US, " says Alfred R. Wentworth, senior vice president of Chase Manhattan Bank and head of Chase's recently opened Moscow office. " It now is opening up, and our bank wants to participate in the many opportunities being created.-

To be sure no one misunderstands, Chase Manhattan Bank has been running advertisements in major newspapers across the country. They read:" Now you can get banking insights on developing business relationships in the Soviet Union direct from our Moscow office ... In addition to our Moscow office, we have another in Vienna for dealings in Eastern Europe ... Our Moscow representatives can be contacted at:

**Metropol Hotel, 1 Karl Marx Square, Room 227, MOSCOW, USSR.**

**Tel: 225-6277.**

From 1 Chase Manhattan Plaza to 1 Karl Marx Square, we are international money experts with a knack for making good sense out of confusing East-West trade talk."

One would expect the Rockefellers to open up shop at the most prestigious (and, as *Business Week* says, " symbolic") address in town. As *Newsweek magazine* headlined its report: The Kremlin now has a - Comrade at Chase.-

So has Peking. After David and Nelson Rockefeller called for the - " normalizing of relations " and establishing " trade-with Mao Tse-tung and the Red Chinese", Richard Nixon and Henry Kissinger reversed the Republican platform and a hundred Nixon promises to follow that line also. The door was opened for trade with the butchers of Red China.

While Mr. Nixon's sudden cozying up to the Peking mob received reams of comment and publicity,

there is one aspect of all this which has attracted virtually no attention. It is the fact that large oil deposits have been found near the Senkaka Islands in the East China Sea.

Our Insider - arranged deals with Red China are cut from the same cloth as our "trade-with the Soviet bloc; we have made numerous concessions and have asked none in return. Perhaps one of the concessions" we-will receive will be drilling rights for Standard Oil. After all, David Rockefeller has been promoting an opening with Red China for the past five years. Yes, the plot thickens. And in this case oil is thicker than blood.

"I'm very encouraged,- said David Rockefeller in July 1973." In every case we've been invited by the socialist governments and have been warmly and generously received even though I head a large capitalist bank and my name is closely identified with capitalism.-

David was so impressed with the glories of Mao land that he wrote a puff piece for the *New York Times* of August 10,1973, entitled " From A China Traveler." The chairman of the Council on Foreign Relations observed:

One is impressed immediately by the sense of national harmony ... Whatever the price of the Chinese Revolution, it has obviously succeeded not only in producing a more efficient and dedicated administration but also in fostering high morale and community of purpose ... The social experiment in China under Chairman Mao's leadership is one of the most important and successful in human history.

Batten, Barton, Dursten & Osborne couldn't have written better ad copy to puff the " social. experiment which has killed some sixty-four million of its own people and keeps millions more in the slavery of labor camps.

" And you must remember," says David Rockefeller,

" the Chinese are not only purposeful and intelligent, they also have a large pool of cheap labor. So they should be able to find ways to get trading capital." If wages are low behind the Iron Curtain in Europe, imagine how attractive they are in Red China. Such things are not missed by David Rockefeller.

What does the building of the Big Red Machine in the Soviet Union and Red China mean? Constructing some of the world's largest factories for the Soviet Union, and shipping the Communists the most sophisticated US technology and equipment, has a multitude of implications. Professor Antony Sutton, the world's foremost expert on the use of Western technology to develop the Soviet Union, has written an entire book on this subject under the provocative but very deliberate title, *National Suicide*.

The military potential of the industrial plants which we are building for the Soviets should be obvious to anyone. Trucks, aircraft, oil, steel, petro-chemicals, aluminum, computers-these are the very sinews of a military industrial complex. These factories, the product of American genius and financed by American capital, could have been built in the United States. Instead, they are constructed at the US taxpayers' expense in the Soviet Union-a nation whose masters still keep millions in concentration camps and who have sworn to bury us.

And the program to loot America to build the Soviet Union is escalating. Remember that the factories we are constructing for the Communists represent the latest in American technology. This technology is unobtainable anywhere else in the world.

Another important thing to remember is the strong possibility that Russian factories using American

capital and American technology will, with Soviet slave labor, produce goods which will undersell those produced by American labor in world markets. Just as many thousands of Americans have already lost their jobs to foreign labor (working in European and Asian factories constructed with American foreign aid) still more American workers will see their jobs destroyed by their own government. And these runaway -capitalists- are well aware of the cost benefits of such slave labor.

But as important as jobs are, there is even a more important aspect to the on-going -partnership- between the Rockefellers and the Communists which has been operating for over fifty years. At stake is the very survival of independence and liberty in this country.

Professor Sutton has assembled an abundance of evidence which nobody has even attempted to refute. First, he has shown that Communism is a stagnant system incapable of innovation or high productivity. Its survival, even at a subsistence level for its captives, has required regular transfusions of capital and technology. Without aid from the West, the Soviet Union would have long since collapsed. But without the Soviet Union, the Rockefellers and other super-rich would not have had an " enemy-to justify their schemes for monopoly World Government.

The Soviet Union was first saved by Herbert Hoover with food. Next, came Lenin's New Economic Plan which let the super-capitalists back into Russia. This was followed by FDR's diplomatic recognition of Russia (long advocated by the Rockefellers), which allowed the Soviets to obtain desperately needed credits. World War II turned on the \$11 billion Lend-Lease spigot. Following the war. Russia was allowed to denude much of Germany of factories and scientists. During the Kennedy Administration. We started, providing wheat for hungry Soviet factory workers. During the Vietnam War, America shipped vital supplies to the East European bloc, which was providing North Vietnam with the war equipment to kill our own soldiers. Now we are supplying the world's largest truck factory, extremely sophisticated computers and a cornucopia of other manufacturing technology. To cap the climax, the *Wall Street Journal* of April 25, 1975, headlines " US Quietly Allows Uranium Shipments to Soviet Union For Processing Into Fuel." Is that unbelievable?

Where was the public outrage that the mediocracy is capable of creating?\*

As former Secretary of the Navy James Forrestal observed:

"Consistency never has been a mark of stupidity. If the diplomats who have mishandled our relations with Russia were merely stupid, they would occasionally make a mistake in our favor." In short, what is happening is not just the looting of our economy, but treason. There is something rotten, but it's not in Denmark, it is in Manhattan.

The game plan is simple: We are going to be blackmailed into surrendering or merging with the Soviets. Meanwhile, our Congress wants to stop weapons development so that we can have more welfare programs. Since most of the military budget goes to salaries which cannot be cut, any slashing of " fat" usually means that real muscle-weapons systems-has been amputated.

For five decades the Communists' propaganda line has been that they were going to destroy the Rockefellers and the other super-rich. Yet the Rockefellers have been breast feeding the Bolshevik monster since its childhood. Today they are leading the parade to provide their Soviet Frankenstein with a high-protein diet. We are supposed to believe those international cartelists do this because they are foolish or greedy. Of course the Rockefellers are greedy for the profits produced by their alliance with the Soviet Union, but that cannot be the total answer. Lenin claimed that capitalists would sell the Communists the rope with which they would be hung, if it could be done for a profit. The Rockefellers

know that. And now they are building them factories in the Soviet Union.

\* A group of concerned Americans arranged for Sutton, who has testified numerous times before Congressional Committees, to present these facts before the COP Platform Committee in Miami in 1972. The committee did not show up to hear Sutton's testimony and a scheduled news conference was canceled. A newsman told Sutton that his story was "too hot- for the newspapers to deal with. When Sutton returned to Hoover, he was ordered by his superiors to make no more public statements during the campaign. Somebody important had obviously made a phone call. Later, Sutton's contract at Hoover was not renewed. He obviously was stepping on too many tender toes.

But the Rockefellers are not fools. They are brilliant, far-sighted plotters who became immensely powerful by devious Machiavellian planning, and by infiltrating, subsidizing and controlling their opposition.

Plain old-fashioned common sense insists that the Rockefellers know something about Communism that we do not. Since they subsidize it and do not fear it, logic tells us they are either partners with the Communist hierarchy - or they control it.

But if this is true, how do the Rockefellers keep their partners from taking the gun and turning it against their secret backers? We do not pretend to know that answer. There has to be a control mechanism. The Rockefellers would not be so foolish as to let a competitor put a pistol to their heads-let alone provide the pistol. So we must conclude once again that the Rockefellers know something that we do not. Certainly this ultimate secret is known only to the top handful of the conspirators. No researcher is going to learn the answer by pouring over the *New York Times* at his local library.

Because we cannot identify the control mechanism, or describe how it works, many will ridicule our thesis. But, how do they explain the fifty-year Rockefeller program to build the power of Communism? Since the days of John D. Sr., the Rockefellers have prided themselves on their intelligence-gathering capabilities. They know more about their competitor opponents than those competitors know about themselves. You can bet your bippy that the Rockefellers are not naive about the Communists.

But let us assume that they are. Let us assume that in the end the Rockefellers will be the major victims of the Communist empire they have played such an important role in creating. Assume that it has all been done out of sheer stupidity and greed. Where does that put us? Right in the Gulag Archipelago along side them, that's where it puts

Either way you lose. The Big Red Machine may or may not devour the Rockefellers. We are convinced it will not, because we believe the Rockefellers and their allies control the comrades who control the guns. But the question is rather academic, because the whole purpose of the Big Red Machine is to swallow us! And unless some big changes are made mighty quickly, that's exactly what it will do.

# Chapter Ten

## The People Planners

*“It is Kissinger's belief... that by controlling food, one can control people, and by controlling energy, especially oil, one can control nations and their financial systems. By placing food and oil under international control along with the world's monetary system, Kissinger is convinced a loosely knit world government can become a reality by 1980.”*

-Paul Scott  
nationally syndicated columnist

The Rockefellers learned nearly a century ago that there are two standard ways for one of their companies to absorb another corporation. If the firm to be acquired is much smaller, a "take over" is the simplest procedure: buy em out.

But if the competitor is more your equal, a merger- "must be arranged".

The same principles hold true among nations. No matter how much this country sends abroad as foreign aid, technical assistance, loans that are never repaid, or other largesse, there is simply no way another country -or even a bloc of countries- can be made powerful enough to take us over.

Recognizing this political fact of life, the master planners devised the strategy of a merger - a Great Merger - among nations.

But before such a merger can be consummated, and the United States becomes just another province in a **New World Order**, there must at least be the semblance of parity among the senior partners in the deal - How does one make the nations of the world more nearly equal? The Insiders determined that a two-prong approach was needed, use American money and know-how to build up your competitors, while at the same time use every devious strategy you can devise to weaken and impoverish this country. The goal is not to bankrupt the United States, we must emphasize. Rather, it is to reduce our productive might, and therefore our standard of living, to the meager subsistence level of the socialized nations of the world.

Only a fascist-socialist dictatorship would have the power to accomplish such a - redistribution.- Notice that the plan is not to bring the standard of living in less developed countries up to our level, but to bring ours down to meet theirs coming up.

You may be assured, however, that the Rockefellers and their allies are not talking about reducing their own quality of life. It is your standard of living which must be sacrificed on the altar of the New World Order.

The Rockefeller game plan is to use population, energy, food, and financial controls as a method of people control which will lead, steadily and deliberately, into the Great Merger. Much of the spade work for setting up this ploy is being done by Henry Kissinger, who was a personal employee of Nelson Rockefeller for a decade before Rocky placed him in the Nixon Administration. On numerous occasions Herr Kissinger has declared that his goal is to create a "New World Order." Syndicated Washington columnist Paul Scott reveals:

It is Kissinger's belief, according to his aides, that by controlling food, one can control people, and by controlling energy, especially oil, one can control nations and their -financial systems. By placing food

and oil under international control along with the world's monetary system, Kissinger is convinced a loosely knit world government operating, under the frame-work of the United Nations can become a reality before 1980.

Common sense tells us that a Rockefeller hireling such as Kissinger would not be setting up an "international control" system which takes assets from the Rockefellers and gives them to someone else. Obviously, the game plan is to take other people's assets and put them under the umbrella of a Rockefeller-controlled World Government.

This new strategy may be termed the crisis route to World Order. It runs parallel to and eventually will converge with the Atlantic Union treaty and regional government approach to the Universal State. Washington columnist Paul Scott calls this "the new strategy change from the direct to the indirect approach to bring about world government. "The plan, as publicly stated by the CFR's Richard Gardner, part-time State Department functionary and Columbia University Professor of Law and International Organization, amounts to this: Instead of trying to make the UN a complete world dictatorship immediately, the Establishment will identify different problems in different countries. Then they will propose a "solution," which can only be achieved by some kind of international agency, so that each country concerned will be forced to surrender another segment of its national independence. Gardner considers this piecemeal approach the practical road to the end of nationhood:

We are likely to do better by building our "house of world order - from the bottom up rather than from the top down. It will look like a great - booming, buzzing confusion " to use William James' facetious description of reality; but an end run around national sovereignty, eroding it piece by piece, is likely to get us to world order faster than the old-fashioned frontal assault.

So this is what the Rockefeller gang, working through agents like Kissinger and Gardner, have in mind-an "end run around national sovereignty." Gardner continues, with obvious glee:

The hopeful aspect of the present situation is that even as nations resist appeals for " world government-and "the surrender of sovereignty," technological, economic and political interests are forcing them to establish more and more far-ranging institutions to manage their mutual interdependence.

One of the most obvious back-door approaches to World Order is through the control of food. The ploy is to establish a World Food Bank, with the necessary goodies supplied (naturally) by the United States. The concept was proposed at the International Monetary Fund Conference in Nairobi by long-time Rockefeller front man Robert S. McNamara (CFR). R. Strange McNamara (yes, that really is his middle name) was made president of the World Bank after he had successfully completed his earlier assignment of crippling this country's military might. McNamara advocated the food-producing nations of the world surrender their surpluses to a " world authority," which would then take charge of redistributing the bounty to the 'have-not" nations. The topic was to be discussed at the UN's World Food Conference in Rome in November 1974. Between the time of the original proposal and the Rome conference, Richard Nixon was shuffled into an early retirement and was replaced by a compliant Jerry Ford.

One of Ford's first official acts was to go before the UN General Assembly and assure the international flotsam gathered there that the voice of the Rockefeller's Charlie McCarthy, Henry Kissinger, was the very voice of America in all matters pertaining to international relations. Later, Ford announced that the Secretary of State would appear as keynote speaker on behalf of the United States at the upcoming World Food Conference, superseding the more logical choice, Secretary of Agriculture Earl Butz, who was the official head of the US delegation. Of the hundreds of political commentators around the country, only Paul Scott had the courage to assess the implications of Ford's actions:

Whether he fully realizes it or not, President Ford has put his stamp of approval on Secretary of State Henry Kissinger's grand design foreign policy for the establishment of a loosely knit world government before the end of the 1970s.

By calling for the development of a global strategy and policy for food and oil within the structure of the United Nations, the President clearly signaled his acceptance of the "new international order" being sought by Kissinger.

Scott went on to point out that instead of using this nation's enormous food production as a weapon of US foreign policy, to promote the expansion of freedom throughout the world, Ford accepted Kissinger's plan of passing policy control over US food surpluses, "and eventually all US food " to a national food bank.

Herr Henry made no bones about the fact that all of this is designed to further the New World Order. He told the delegates at Rome: "We are faced not just with the problem of food but with the accelerating momentum of our interdependence." And "our-man in Rome went even further; he declared we should" make global cooperation in food a model, for our response to other challenges of an interdependent world - energy, inflation, population, protection of the environment.

Agriculture Secretary Earl Butz admitted of the proposed food bank that "in the end it will be the American taxpayer who pays for it." Who else? And the fact that worldwide distribution of our food will inevitably create food shortages and skyrocketing prices in America has not been overlooked by the Rockefeller conspirators. That is part of the plan.

And before you conclude that any such program would be emphatically rejected by an angry American electorate, remember this: by the time the plan is implemented, the UN will have an army to back up its looting of America! Doubtless the clan's minions in the bureaucracy and the media will refer to the planned food shortage as a mandatory national diet program.

The whole thrust of the Rome gathering was that it is the obligation of the United States-which means you, the worker and taxpayer -to feed the world. This, despite the fact that for years America has supplied more than 80 % of the food given to foreign countries. It is such American giveaways that in recent years have provided over \$25 billion in foodstuffs to such ingrates as Marxist India, now a dictatorship openly allied with the Soviet Union, where the bulk of our grains winds up feeding rats, not hungry people.

\* While US reserves of food and feed grains are already being depleted, Russia and Communist China have quietly been using part of their massive purchases of bargain-priced American grain to build up their stockpiles. Crews of US and foreign ships carrying US grain to Russian and Chinese ports have been told by Communist dock workers that every third or fourth shipment of US grain is being placed in permanent storage facilities as part of those countries' national reserves.

At least \$200 billion in such aid has been similarly squandered to more than 125 nations-including more millions now going to members of the OPEC cartel, which has quadrupled oil prices. To pay for all of these giveaways, the Insiders who run the show have used printing press inflation money to add hundreds of billions of dollars to our National Debt. This, coupled with the consequent reduction of domestic supplies, has sent our own food prices out of sight. -

But, at least in the past our stupidity was of our own doing and under our own control. Informed Americans could have stopped it-and could still stop it today-by throwing the Congressmen who voted

for the giveaways out of office. In the future, when the Rockefeller Kissinger plan for the international authority over food is implemented, our food supply will no longer be under our control. What then?

Increasingly we hear plaintive bleats from the Rockefellers' sheep in the media, calling for Americans to make increased sacrifices to feed the rest of the world. Incredible as it may seem, the truth-twisters of the airwaves and press are attempting to make us feel guilty that we are not starving.

None of these Rockefeller lackeys dares suggest, of course, that the difference between American agricultural production and the poverty levels of the so-called -have not- nations is the difference between individualism, with its reliance on private property and free enterprise, and feudalism-fascism-socialism-collectivism. It is the difference between incentives and a planned economy; between efficiency and wasteful boondoggles; between a million salesmen pushing the "too much - and a million ration clerks dividing up the "too little."

This is not to say America's agricultural system is perfect. To the extent that we have instituted price supports and subsidies, paying men not to grow food, we have suffered. Nevertheless, the success of American agriculture under freedom is a model the rest of the world should be encouraged to copy.

But if more nations achieved independence in food production, much of the impetus for world government would disappear faster than a freeloader when the check arrives. In order for the Rockefellers to achieve their New World Order, first they must create famines and the fear of further suffering. All that is required to create a famine is to put all agriculture under control of government bureaucracy, then wait awhile. The bigger the bureaucracy the shorter the wait, and international bureaucracy is the ne plus ultrain producing red tape instead of wheat.

Intertwined with food production grab is the push for population control. People planning are an important tool in building the net that will drag us fishes into the New World Order. The -population bomb- real or exaggerated, is being used in conjunction with food, energy, and international money problems as part of the One-Big-Brother snare.

Coinciding with the UN-sponsored conferences in Nairobi and Rome, the United Nations sponsored the World Population Conference at Bucharest, Romania in August 1974. Headlining the program was none other than John D. Rockefeller III, who proclaimed: " I come to Bucharest with an urgent call for a deep and probing reappraisal of all that has been done in the population field.

I have changed my mind and now believe family planning alone is not adequate. "

An Associated Press report explained: - Rockefeller ... has for years been one of the world's leading advocates of family planning. He donated millions of dollars toward population research and is founder and chairman of the Population Council, a private US organization funded largely by [millions of dollars] the Rockefeller and Ford Foundations." The wire service continued: "His speech reflected the viewpoint voiced at this conference by many members of the Third World and Socialist [that is, Communist] countries." John D. III obviously felt right at home behind the Iron Curtain, as he called for a redistribution of wealth and piously proclaimed that modern development should emphasize "inequitable distribution of the fruits of progress."

In his remarks to the gathering of people planners, the eldest of the Royal Rockefellers made three main points: First, he echoed the Communist line that the rich must give their wealth to the -poor. Second, he asserted that voluntary family planning is inadequate and called for Big Brother to start dictating whether or not a couple is permitted to have a baby. Third, in calling for -moderate levels of

consumption- in advanced nations, Rockefeller advocated that Americans voluntarily reduce their standard of living.

The fact that it is a little incongruous-not to say hypocritical -for a man whose family is worth uncounted millions, who has thousands of servants, hundreds of luxurious homes and lives in an opulence unknown by the oriental potentates of yore, to ask the rest of his fellow citizens to scale down their living standards, went unnoticed in the *New York Times*. But to belabor the obvious, whose wealth do you think Rockefeller wants to share, yours or his?

Going along with the call by Rockefeller (who claimed the -United Nations is the world's highest authority for governmental control over people), the conference set in motion the machinery to institutionalize the totalitarian demands of the Stop the Storkers.

The Washington Post ,a chief Establishment mouthpiece, has discussed the Nazi like policies being advocated by the people planners:

The day may be approaching when couples will have to prove eligibility and demonstrate qualifications before they are permitted to become parents.

Or there may be baby ration cards for couples, group marriages, mass distribution of anti-fertility drugs, parent licensing, legal Polygamy, abortions on demand, more varied life options for women and more restricted ones for men-such as forced paternity leave for new fathers.

Understand that such enforced infertility is not planned for India or Senegal, but for the United States, where zero population growth is already a fact.

All this, despite the provable fact that there is ample room on earth for all of us-in fact if every man woman and child in the entire world moved to the State of Washington, (twentieth in size of all the states), each would have 490 square feet of space.

But we are being led to believe that unless we give Big Brother total power over people's rights to have children, we will all be ankle deep in human beings within a decade. Such august organizations as the National Academy of Sciences are helping to hawk this Rockefeller line, with doomsday messages such as:"There can be no doubt concerning the long-term prognosis. Either the birth rate of the world must come down or the death rate must go up.

This is not to discount the possibility that overpopulation, particularly in backward nations, cannot be a genuine problem. But, if the Rockefellers were truly interested in curbing population growth without enslaving everybody, there is a much better solution. When a country's standard of living goes up, the birth rate goes down-voluntarily. Assist nations such as India and Red China to benefit by the adoption of free market, private property principles, and the abundance produced by such newly free peoples would astound the world. The Rockefellers, however, are interested in more controls, not fewer problems.

The specious Rockefeller argument that the world must accept Mao-style people control or perish is so phony that it is amazing the conspirators have gotten anyone to buy it. As Reverend R. J. Rushdoony points out in his excellent book, *The Myth of Overpopulation*:

Socialism always creates ultimately an imbalance between the number of people living and their food supply, which results in hunger or famine. There is in this sense therefore always a problem of

overpopulation under socialism. Socialism, moreover, affects both the food supplies, by limiting it, and also the population, by both expanding it at one stage and limiting it at another.

To the Rockefellers, socialism is not a system for redistributing wealth - especially not for redistributing their wealth -but a system to control people and competitors. Socialism puts power in the hands of the government. And since the Rockefellers control the government, government control means Rockefeller control. You may not have known this, but you can be sure they do!

When the Rockefellers join the UN's World Population Conference in calling for the promotion " of a new economic order by eradicating the cause of world poverty, by ensuring the equitable distribution of the world resources, by eliminating the injustices of existing world trade systems and exploitation perpetrated by capitalistic ... corporations, - something smells as fishy as an unwashed tuna boat.

Curbing population growth is just part of the Rockefeller war on the American family. Abortion is another. According to John H. Knowles, president of the Rockefeller Foundation and one of America's foremost promoters of the slaughter of the unborn, the goal of the Foundation is to achieve the capacity in America for 1.8 million abortions every year.

Not coincidentally, it was John D. Rockefeller III who was appointed by Richard Nixon as chairman of the newly created Commission on Population Growth and the American Future. In accepting the appointment, John D III pontificated:

The average citizen doesn't appreciate the social and economic implications of population growth and what it does to the quality of all our lives. Rather than think of population control as a negative thing, we should see that it can be enriching.

One of the early reports of the Rockefeller Commission recommended:

... that present state laws restricting abortion be liberalized along the lines of the New York State Statute, such abortions to be performed on request by duly licensed physicians under conditions of medical safety.

And the Commission further suggested that -federal, state, and local governments make funds available to support abortion services in states with liberalized statutes."Rockefeller is so callous about individual beliefs that he would forcibly extract money from Catholic taxpayers, among others, to finance what their religion teaches is the murder of the unborn. Tough rocks, says the Rock: "Religious preconceptions must be overcome. "

The New York model abortion law which chairman John enthusiastically applauded was passed, of course, under the leadership of brother Nelson. During the Vice Presidential confirmation hearings Dr. Charles Rice, Professor of Law at the Notre Dame Law School, characterized Nelson as "the incarnate symbol of the anti life movement - and said that Mr. Rockefeller" is perhaps the leading proponent of permissive abortion in the United States.-

The Rockefellers have even financed the establishment of an abortion mill. In the summer of 1971, Planned Parenthood-New York City opened its first large scale abortion center -a prototype for the development of additional centers throughout the city, state, and nation. The center was originally designed to perform more than 10 000 abortions a year for an average fee of \$80, with funds provided in many cases by Medicaid. The initial funds to establish the abortion mill came from a \$200,000 pledge from The Rockefeller Brothers Fund.

The past three generations of Rockefellers have not been notoriously considerate of other people's feelings and beliefs. When a group of pro-life activists picketed a speech by Nelson Rockefeller in Nebraska, the loveable old politician told a 15 - year old girl: "Don't knock it [abortion], girl, you might need one someday.

In all wars this nation has fought, from the battle of Lexington in 1776 through the last fatality in Vietnam, American combat deaths totaled 668,226 men. Yet, in just the single year of 1972, 700,000 innocent babies were killed in this country, legally, before they could draw their first breath. (Current estimates are that this figure could increase to 1.6 million abortions a year.)

That is the price of the Rockefellers' promotion of easy abortion in the United States. But it is just part of the price all of us will pay (and pay, and pay), if the people planners succeed in herding all of us into their New World Order.

Yes, the Rockefellers are planners. As John D.'s aide, Fred Gates, once confessed: "In our dreams we have limitless resources and the people yield themselves with perfect docility to our molding hands." Now, thanks to the taxpayers, the Rockefellers have almost limitless funds. As a result, faceless bureaucrats in Washington whom you did not hire and whom you cannot fire -now tell you how to run your business, whom you may hire, where your children will be bussed to school, what products you can purchase, and even what foods you can and cannot eat. It is only a matter of time until the dictocrats tell you how many children you are permitted to have.

There is nothing wrong with planning. The question is who is doing it. Our Founding Fathers believed people should be free to plan their own lives. The Rockefellers believe their agents in the federal government must plan your life for you. It is a simple choice: Will you run your own life, or will you be forced to obey the dictates of bureaucrats, social workers, college professors, sociologists, psychologists, and others who are fronting for the House of Rockefeller?

Nelson is very candid about it. In an October 1975 interview in Playboy magazine, Rocky admitted: "I am a great believer in planning. Economic, social, political, military, total world planning." (Emphasis added.)

When Big Brother arrives, he may well be wearing horn-rimmed glasses.

# Chapter Eleven

## The Great Energy Swindle

*"The craziest notion that has hit this country in a long while ... is that shortages of gas, beef and a lot of other things are bad for the American people. What America needs is more shortages"*

-James Reston (CFR)  
New York Times

Having set the wheels in motion for establishing international controls over food and population, the Rockefellers then made their move in the all-important energy field. As Dr. Medford Evans has noted: "Energy makes the world go'round." And he adds the obvious, but crucial fact: "Who controls what, makes the world go round controls the world." In other words, when the New World Order controls the planet's energy, the world dictatorship will be established.

Syndicated columnist Paul Scott informs us: "Once [the] concept of international policy control over food is accepted by UN members, Kissinger then plans to move to establish this same concept over oil and eventually all energy in the world.-"

You will recall that in the last chapter we quoted a report by Mr. Scott that Kissinger believes that by controlling energy, especially oil, the Insiders can control nations and their financial systems; and that such international controls of oil and monetary systems could bring about a world government within the next five years.

But according to the Rockefeller-Kissinger game plan, before oil can be internationalized, there must be a crisis which threatens to bring about a worldwide depression. Remember, "crises ... are the great federators." There can be little doubt that the current international petroleum crisis has been deliberately contrived. It was engineered from start to finish. The planning involves typical bureaucratic idiocy which may or may not have been intended to have the result which it inevitably did; and to conspiratorial planning by Rockefeller agents who at all times knew exactly what they were doing.

Contrary to the incantations of the doomsayers, America is not running out of oil. As Don Oakley of the Copley News Service notes: "Forevery one of the billions upon billions of barrels of petroleum the United States has consumed since Colonel Drake drilled the first well in 1859, at least another barrel remains in the ground." According to John Knight, editorial Chairman of the Knight newspapers: "A figure of 100 billion barrels [of oil reserves] is offered as conservative, although some studies place the figure at several hundred billion barrels excluding shale oil.-

Get that? We are sitting on several hundred billion barrels excluding shale. Yet even today the United States consumes only about six billion barrels of oil a year.

Shale oil is-oil locked up in porous rock. The Interior Department estimates our "easily-recoverable shale oil at eighty billion barrels, and shale oil recoverable with intensive technology at six hundred billion barrels. The six hundred billion barrels that appear to be recoverable are enough to last one hundred years at the present rate of consumption. However, most US shale resources are on federal lands in Wyoming, Colorado, and Utah. None is yet being produced commercially because the federal government has been very slow - some say suspiciously slow -to permit development of this crucial resource.

We are literally surrounded by oil. U, S. News & World Report stated as far back as November 22, 1971 that our total offshore oil reserves amount to approximately 780 billion barrels. This does not, of course, include the estimated twenty billion barrels of oil in Alaska. Counting only the offshore oil, the Alaskan reserves and the easily recovered shale oil, the United States has 880 billion barrels of oil reserves. At the current rate of consumption, my calculator says that this is **enough oil to last beyond the year 2121**. That is a lot longer than any of us is going to last. Surely we can produce alternative forms of power and energy in that amount of time!

Why is it, asks economist Tom Rose, that after over three hundred years of continuous material progress in America, without fuel shortages, we should suddenly stumble upon an energy crisis in 1973 ? If

America has abundant fuel supplies, why aren't they abundantly available? Could it be, asks Professor Rose, that the historical process by which these supplies have been made available has changed? He observes:

Historically, energy in America has been supplied by profit-seeking private entrepreneurs and profit-oriented corporations. These risk-takers have invested millions and millions of dollars every year in their long-range plans to supply the ever-growing energy needs of the American people. Historically, they have adjusted their production plans to price signals received through the competitive marketplace. For over three centuries this free market process has been eminently successful. And competing sources of energy have always been in abundant supply at reasonable prices.

In recent decades, however, the bureaucrats and the politicians have thrust themselves into the market process. As Professor Rose notes, "during the last two or three decades-especially since 1955 when the FPC (Federal Power Commission) started controlling the wellahead price of gas and oil-energy suppliers have faced non-market signals ... Neither the Mideast war nor American prosperity has caused our present energy crisis. It was caused by political meddling.-"

That last point is so crucial to understanding the mess we are in that we want to repeat it. Fuelish, oil-consuming Americans didn't cause the energy crisis. The Mideast war didn't cause it. Our growing prosperity didn't cause it. Political meddling (by some of the brightest -planners around, we might add) did.

Have you heard the Rockefellers, Standard Oil execs, or even other petroleum countries screaming bloody murder about the fact that a bunch of paper-shuffling bureaucrats have so distorted the realities of supply and demand that we now face a worldwide crisis? Yes, Mobil has run a few ads hinting at this. But, if the Rockefellers really wanted to demonstrate what a palpable fraud the energy crisis really is, they would be showing 60-minute documentary specials on ABC, NBC and CBS. Instead, these networks have produced a spate of specials to bamboozle the public into believing we are down to our last gallon of Exxon.

One of the major excuses for the massive interference by government in the development and marketing of energy resources has been the ecology movement. The "crisis" used to strangle development of offshore oil began with the Santa Barbara oil spill in 1969. The "Liberal" media heralded the Santa Barbara spill as a greater disaster than the bubonic plague. Television newswatchers were treated every night to heart-rending closeups of goeey gulls covered with crude oil.

A study of the Santa Barbara spill was subsequently undertaken by forty leading scientists under the direction of Dr. Dale Straughan, a marine biologist from the University of Southern California. This \$250,000 study produced a 900 page report which declared: "Not only had overall damage by the spill been greatly overestimated, but where damage had been done, nature had returned it to normal."

The conclusions of Dr. Straughan and her team became one of the biggest secrets since the whereabouts of judge Crater. The Brinkleys, Cronkites, and others who had made a national horror story of the unfortunate spill were so busy beating the drums to stop all offshore drilling that they didn't have time to cover the less dramatic, truthful story of what really happened in Santa Barbara. They were too preoccupied with promoting a shortage - producing power grab by government to report that out of approximately fourteen thousand offshore wells which

have been drilled, there have been a grand total of three - yes, three-serious oils pills.

The phony propaganda about the Santa Barbara spill was the excuse used by the Nixon Administration to cancellases and strangle offshore oil and gas drilling, not only in Santa Barbara Channel, but around the nation. Just as it had done time and time again, the Administration surrendered to the cries of the mob and kept silent about the known facts. While consumption of petroleum and gas was jumping every year, the Nixon poohbahs put the lid on expansion of supply. Anybody who has plodded his way through elementary economics knows that if demand increases while supplies and prices remain the same, the inevitable result will be a shortage. The masters of Nixonomics knew what they were doing, and they did it anyway.

But stopping further offshore drilling was not the only plus from the Santa Barbara oil spill for the creators of our shortages. In the wake of this "ecological disaster," Senator Henry Jackson of Washington was able to put through his oft-defeated bill to establish a national policy on environmental protection and to create the Council on Environmental Quality. The law seemed innocent enough at first glance. But, as Dan Smoot relates in: *The Business End of Government*

.. it was a sleeper, as activist attorneys exultantly called it after it was safely on the statute books. This legislation provided the activists with legal standing to make court attacks against major business activities throughout the United States ....

The environmental l - policy law left the definition of environment so vague and open-ended that it gave federal courts almost limitless power to veto the actions of executive agencies and the laws of Congress. No business can initiate a major activity without first dealing with a government agency of some kind-about permits, licenses, rights-of-way leases, land leases, use of public thoroughfares, and so on. Any group of two or more people willing to post a small bond and engage an attorney can bring court action against a government agency, alleging that, in granting permission for a business activity, the agency failed to file an adequate environmental -impact statement as required by the National Environmental Policy Act of 1969. They can demand a court injunction to halt the business activity until the government agency files an adequate impact statement and suggests an alternative approach.

The Jackson Bill, which Richard Nixon refused to veto, was used to delay the construction of the Alaskan pipeline for an incredible five years. Under the guise of keeping the tundra virginal for the dainty hooves of caribou, the ecomaniacs tied up the pipeline project in the courts. A pipeline across the frozen tundra of central Alaska is about as conspicuous as a thread stretching from the eighth to the ninth hole of a golf course-and about as harmful to the game. But the Jackson Environment Law gave the radicals not only respectability in the courts, but a legal club that declared any developers must be assumed guilty until they proved their innocence.

Stung by public outrage, Congress finally acted to allow the contractors to begin construction of the pipeline. So after a five-year delay, we can look forward to crude pouring out the end of that pipeline sometime in 1978. But had the Nixon Administration not gone smilingly down to defeat at the hands of the ecomaniacs, Alaskan crude would now be flowing into refineries at the rate of one million barrels a day-which just happens to be almost the same amount that the US has been importing from the Middle East. Needless to say the Sierra Clubbers are about as popular in Alaska as Bobby Riggs at a baby shower for Gloria Steinem.

One of the most important moves in the effort to create artificial shortages of petroleum occurred in June 1970, when President Nixon issued an Executive Order creating the Environmental Protection Agency. A preliminary Report on the activities of the 9,000 bureaucrats in the EPA has now been issued by the House Appropriation Subcommittee. It declares:

The subcommittee is convinced that the Environmental Protection Agency has played a major role in the current energy crisis. The approval by the agency of overly restrictive state plans, which call for the meeting of primary and secondary ambient air standards at the same time, has resulted in the need for the industry to convert from coal to low sulfur fuels. This increased requirement for oil and gas has been a major contributor to our current fuel problems.

In addition, the automobile emission control standards imposed by the agency have greatly increased the requirements for gasoline, which is also in short supply and will probably require rationing.

Mr. Nixon's Environmental Protection Agency, in the name of controlling air pollution, has forced auto manufacturers to pile all kinds of gas-eating gadgets onto our motors. The net result has been a drop of at least twenty % in mileage, and considering the near impossibility of keeping such engines properly tuned, the loss may be as high as fifty %.

According to Shirley Scheibla, Barron's Washington editor, the gadgets applied to our cars by the EPA now resulting the use of 300,000 extra barrels of gasoline a day; by 1980, the controls will require the consumption of an added two million gallons of gasoline a day. Meanwhile, federally required reduction of lead in gasoline has reduced fuel efficiency by another twenty %. And, no two experts even seem to agree on whether the required gadgetry actually decreases pollution. Some think that the net effect is an increase. We don't pretend to know, but it seems to us that if our car is burning up to twice as much gasoline, the net amount of pollutants coming out the exhaust pipe has probably increased.

The ten thousand independent oil companies in the US drill 80 % of the wells. Government or "people-control of the oil industry would, in practice, mean Rockefeller control over their competitors. It would mean the death knell for the independents and create One Big Oil Company under the sway of the House of Rockefeller. Yes, competition is still a sin.

If you still have any lingering doubts about the Rockefellers promoting the energy shortage for power and profit, consider the fact they have financed their alleged enemies, the ecomaniacs.

Incredible, you say? Well, it's true. And for reasons other than the Rockefellers' love of blue sky and falling profits. The - environmental legislation - pushed through Congress was based on lobbying by innumerable "experts." Putting together these -citizens lobbies- takes lots of money; and contrary to the hokey publicity from most such groups, the dollars do not come from school children donating their milk money-or even from college students foregoing a beer. The money to fight " the entrenched interests- comes largely from those same entrenched interests, and the foundations which they have created. It represents the old ploy of Bre'r Rabbit begging Bre'r Bear not to throw him into the briar patch. Only in this case, Bre'r Rabbit is the Rockefellers and the briar patch is socialistic controls. Remember, more controls mean worse shortages; and when oil and gas are scarce, prices go right through the skylight.\*

\* About one-third of the cost of a gallon of gas goes to the oil company. When gasoline reaches one dollar a gallon, as most experts anticipate, Standard Oil's share will be a lot bigger than when you could filler up at 34.9c

During Congressional Hearings on the National Environmental Policy Act of 1969, none other than J. C. Harrar, then president of the Rockefeller Foundation (and a CFR member, of course), advocated the United Nations developing an international program for dealing with worldwide pollution. Other lobbyists who joined the clamor for more government controls were financed by the Ford Foundation, which is more closely interlocked with the Rockefellers than two teenagers in the last row of drive-in

movie. Edward Rogers, general counsel of the Ford-backed Environmental Defense Fund, actually advocated international control of automobiles.

The testimony at such hearings and the lists of those presenting it are monotonously repetitious. In one way or another all those appearing favored an increase in federal control over the "environment" - which boils down to federal controls over almost everything and everybody. Some witnesses, less sophisticated than their mentors, boldly called for the destruction of the capitalist system; others suggested that - regional- or -international planning agencies are needed to cope with pollution.

The loud - mouth Marxists have relatively little impact on Congress, of course. It is the corporate socialists in the Brooks Brothers suits who are really dangerous. They bring with them the credibility, prestige and financial backing of the Rockefeller complex, and you can be - sure Congress listens to them very closely.

Although it seems to have been around forever, the environmental movement appeared on the national scene almost overnight. Five years ago, not one person in a thousand had even heard the word ecology. But suddenly all of - us were supposed to panic at the thought of the slimy hand of pollution suffocating us as we sleep.

The major bankrollers of this -spontaneous- movement were the numerous Rockefeller foundations, the Rockefeller-controlled Ford Foundation, the Rockefeller controlled Carnegie Foundation and the Rockefeller interlocked Mellon (Gulf Oil) foundations. Among the most vigorous public advocates were Roberto Anderson of Atlantic Richfield (and the CFR) and Henry Ford II of the Ford Motor Company (and the CFR).

The number one piggy bank for the -ecology movement has been the Ford Foundation, almost all of whose trustees are members of the Rockefellers' CFR. It has poured millions of dollars into hustling population planning and environmental controls of every sort.

The Ford Foundation gave \$2 million to the Energy Policy Project to aid it in the creation of a federal energy policy. For that sum of money, it expected results, and it got them. Ford also gave \$309,000 to the Center for Law in the Public Interest and \$162,000 to the Royal Institute of International Affairs (the English counterpart of our CFR) to study the role of oil companies in the energy market!

The most effective organization in using law suits to force Zero Economic Growth on the country-by blocking construction of refineries, airports, shopping centers, housing and every other form of development-is the Sierra Club. The Sierra Club was for many years a respected group honestly promoting conservation and preservation of forests and wildlife, until it was taken over by political radicals. Now, using the Environmental Protection Act, it has used the courts to throw hundreds of thousands of workers out of jobs.

The Sierra Club is the very symbol of the ecology movement's fight against the "big corporations". Supplying the funds for its allegedly humanitarian crusade is you guessed if ! -the Ford Foundation. Ford made grants to the Sierra Club Legal Defense Fund of \$98,000 in 1971 and \$143,000 in 1972, and the Rockefellers have also donated to the Sierra Club Legal Defense Fund.

Next to the Ford Foundation, the leading founders of the ecology movement are the various Rockefeller foundations. The Rockefeller Brothers Fund, the Rockefeller Foundation and the Rockefeller Family Fund are all contributing heavily to the environmental revolution from which Standard Oil is profiting so handsomely by driving petroleum prices into orbit.

We realize that this sounds like something out of Ripley's -Believe It or Not." But here are the facts:

In 1969, the Rockefeller Foundation donated \$250,000 to the Academy of National Sciences; \$200,000 to the American Conservation Association; \$60,000 to the National Audubon Society; and, \$25,000 to the Conservation Fund.

In 1970, the Rockefeller Brothers Fund gave \$500,000 to the Population Council. The Rockefeller Foundation gave ecology grants of \$10,000 to the New School for Social Research, and \$ 10 000 to the Population Reference Bureau.

In 1971, the Rockefeller Foundation gave \$300,000 to Citizens for a Quieter City; \$23,200 to Columbia University Center for Policy Research; \$500,000 to the Conservation Foundation; \$152,000 to the Environmental Law institute; \$50,000 in ecology funds to the Massachusetts Institute of Technology; and, \$1,000,000 to the Population Council,

In 1972, the Rockefeller Family Fund gave \$10,000 to the National Resources Defense Council; and two grants, one for \$17,750 and one for \$25,000, to the Sierra Club Legal Defense Fund. The Rockefeller Foundation donated \$25,000 to M.I.T. for environmental studies, and the Rockefeller Brothers Fund donated \$ 500,000 to the American Conservation Association.

And, in 1973, the Rockefeller Foundation gave \$500,000 to the Population Council and \$25,000 to the Population Crisis Committee. The Rockefeller Brothers Fund donated \$250,000 to the Population Council, \$10,000 to the Population Council, and \$25,000 to the Population Institute.

It should be mentioned that it is illegal for foundations to finance political activities. If the law were - enforced, these foundations would lose their tax exemption. But don't hold your breath until this happens. The IRS's sauce for your goose is not sauce for the Rockefellers' gander.

Typical of the bilge pumped out by the organizations bankrolled by the Rockefellers is this Los Angeles Times report of August 27,1975:

Americans will have to eat less, switch from cars to bicycles and adopt other belt-tightening measures in the next decade because the energy shortage is here to stay, according to a paper published by the Aspen Institute for Humanistic Studies. The paper's author, Abraham M. Sirkin, a former member of the State Department's policy and planning staff, predicts the cutbacks will produce a generation of healthier Americans.

The Aspen Institute, we hope you will not be surprised to learn, is funded by the Rockefeller Brothers Fund.

The Rockefellers are not the only oil interests helping to finance the ostensibly anti-oil ecology movement. Major donors have been Gulf Oil Foundation, the Humble Companies Charitable Trust, the Mobil Foundation and the Union Oil of California Foundation. All, of course, are either Rockefeller-controlled or interlocked with the Rockefellers through the CFR. These groups in essence paid for the legislation which has killed the mileage obtained by automobiles. But, the ultimate stakes are much bigger - using the continued energy crisis as the rationale for the creation of the New World Order.

Ralph Nader, the man who once told an audience that what we need is "somekind of communism" is also bankrolled by the Rockefeller network in his attempt to destroy the free enterprise system. Among the groups financing the Caped Crusader are the ubiquitous Ford Foundation and the Field Foundation,

both CFR interlocked. Nader is not really fighting the Establishment. He works for it. According to a Business Week article reprinted in the Congressional Record of March 10, 1971, John D. Rockefeller IV is even an advisor to Nader.

Naturally, the shortages of petroleum which have been artificially created in the US has made us dependent on foreign oil. In order to calm an angry public, there has been much talk of taking off the political restrictions and achieving "energy independence". It is strictly a smokescreen. While talking independence, the Rockefeller conspirators are planning to keep us dependent on foreign oil. After all, they own or market most of that foreign oil.

In the Wall Street Journal for March 6, 1974, Henry Kissinger admitted the talk about "energy independence" was a fraud. Project Independence is merely "away station on the road to a new Project Inter-dependence and at the World Energy Conference in Detroit during September 1974, President Ford, speaking without any detectable ventriloquist's strings, declared: "I call on all of you to respond to the challenge and to propose to the world your recommendations for a global energy strategy. Whether you call it Project Interdependence, or some other name, is not the essential point." It is the -interdependence- which is essential. The created crises in energy, food, and population are straw men, set up by the Insiders so they can be knocked down -and a "New World Order- can be established. Yes, crises are the great federator.

Kissinger's plan to maneuver international policy control over oil is beginning to emerge, and, as Paul Scott notes, it "is one of the most intriguing stories of our times."

According to Paul Scott, officials at the World Bank have estimated that the flow of Western dollars to oil producers in the Middle East is "now running at the rate of \$100 billion a year -or more than all of US investments abroad. To put it in the most stark terms, the Middle East oil producers are accumulating so much wealth from the Western industrial nations that they will be able -if current prices continue- to buy them out by 1980"

With OPEC gaining control of most of the world's oil and money, Kissinger sees a confrontation situation developing between oil producers and consumers, reports Scott, out of which will arise" the internationalization of oil production, pricing and distribution.- It would be the ultimate monopoly.

Very conceivably the Arab sheiks are being set up to trigger a war in the Middle East. Remember, Kissinger is already on record as stating that we might invade the Middle East if oil is embargoed. With the super-sophisticated military equipment we are providing the sheiks the war would be a bloody one - especially if it, like the arranged wars in Vietnam and Korea before it, is fought under the UN banner. The end result, of course, would be the -internationalization of oil.-

Again, only the naive will think that the Rockefellers are having their agent Kissinger arrange the "internationalization of oil" so that the Oilbucks can be stripped of their holdings. The prospects of such a scenario should make any independent oil developer in the world worry. Competition is still a sin, and monopoly is still the name of the Rockefeller game.

While Armageddon is being set up in the Middle East, the Rockefellers are preparing to stick John Q. Taxpayer with the bill for the world's oil deficits. A story in the Chicago Tribune of October 2, 1974, is headlined "US To Back New Way to Foot World Oil Bills -Simon." Secretary of the Treasury William Simon, an international banker and CFR member, told leaders of the World Bank and International Monetary Fund that if "developing nations" were having difficulty paying the oil tab, they need look no farther than the American taxpayer. "If there is a clear need for additional international lending

mechanisms, the United States will support their establishment," he said.

Under the Kissinger-Rockefeller plan, Americans will pay the bills in more ways than one. Without a peep of complaint from the kept press, Kissinger met with members of the International Energy Agency and agreed to share our oil with them in case the Rockefellers stage another Arab oil boycott. Unkept columnist Paul Scott reveals:

Under the oil-sharing plan worked out recently in Brussels by the US and 11 other major industrial countries, for example, domestically produced oil in the US for the first time in our history would be shared and allocated in case of another Middle East oil embargo.

Precise allocations would be worked out by a quasi independent management organization set up within the Paris - based Organization for Economic Cooperation and Development, an economic consultative grouping of leading non-Communist industrial nations.

Most puzzling and alarming part of this Kissinger oil plan is that it in effect puts the -triggering device- in the hands of the Middle East oil producers-thus increasing the power of their oil weapon and making it more tempting for the Arabs to use.

For control over US domestic oil to pass into the hands of an international body, all the Middle East oil producers now need do is impose their oil embargo as they did during the 1973 Arab-Israeli war.

The control over agriculture and energy as part of the Rockefeller-Kissinger strategy for looting the country is the core of the Insiders' plan to force Zero Economic Growth on the country.

Leading the call for ZEG is a group of international establishmentarians called The Club of Rome. The Club is described by author Ovid Demaris in *Dirty Business* as "an organization of distinguished industrialists, bankers and scientists from twenty-five countries. "The Club was created at the Rockefeller family's private estate at Bellagio, Italy. The Club put out a report which warned that, unless the standard of living of the developed nations was severely restricted, "A rather sudden and uncontrollable decline in both population and industrial capacity- was inevitable.

Here we have fifty key businessmen and international bankers gathering under the auspices of the Rockefeller family and coming to the conclusion that production in America should be reduced! Again, understand that it is your standard of living they are proposing to decimate, not their own.

Naturally, the controlled press did everything possible to legitimize the scare stories concocted by the Roman clubbers. For example, here is how Time magazine portrayed their predictions in a feature story on January 24, 1972:

The furnaces of Pittsburgh are cold; the assembly lines of Detroit are still. In Los Angeles, a few gaunt survivors of a plague desperately till freeway center strips, backyards and outlying fields, hoping to raise a subsistence crop. London's offices are dark, its docks deserted. In the farm lands of the Ukraine, abandoned tractors litter the fields; there is no fuel for them. The waters of the Rhine, Nile and Yellow rivers reek with pollutants.

The message from these fright peddlers appeared in a 197 page paperback which was published in eighteen editions and made available in twenty-three languages, including Serbo-Croatian, Finnish, and Thai. The *Insiders* who run the show know that the only way to achieve surrender by consent is to frighten Americans into supinely accepting their plans.

Before continuing, however, we feel duty bound to assure you that, despite the huzzahs from the chorus of the CFR -controlled media, the Rockefeller -sponsored study," titled The Limits To Growth,was (and is) considered absurd by informed demographers. Wilfred Beckerman, the respected professor of political economy at the University of London, went so far as to call the book " abrazen piece of impudence." (Which is the harshest language you will ever hear a proper Englishman use.)

Our only hope for survival, the ecological fright peddlers assure us, is ZPG combined with ZEG. America has already reached Zero Population Growth, but putting enough brakes on our economy to achieve Zero Economic Growth has been a hayburner of a different hue. Only direct government intervention can assure ZEG as advocated by the Club of Rome.

Clickety-clack, clickety-clack, the message is being dutifully parroted by the Establishment media as its propaganda machines grind out the doctrine of survival through a lowered standard of living. Features like "Running Out of Everything- (Newsweek) and "Time For A New Frugality- (Time) have been appearing with regularity in the slick weeklies. Much of the propaganda has been geared towards making Americans feel guilt for their prosperity and shame for their alleged greed and profligacy.

So what is the solution? There is only one way to Stop the profit system and that is by direct government intervention (which can take a wide variety of forms taxation, regulation, allocation, rationing, etc.). The two words most often used to describe such governmental actions are of course, socialism and fascism.

But, proponents of socialism within the Establishment are careful never, ever, to use the word. While outspoken radicals are less hypocritical, Liberal politicians, bureaucrats, and media managers are aware that mainstream Americans know what socialism means, and they want no part of it. So the Establishment salesmen for socialism, who for thirty years have been implementing P while the radicals talk about it, always use code words and euphemisms. Instead of calling socialism or fascism by their right names, the Establishment prefers terms like planning.

The question is: Who is going to plan your life, you or the Frankenstein monster created by the Rockefellers, called Big Brother?

If the Rockefeller - CFR clique has an official spokesman, it is James Reston, leading columnist of the New York Times whose syndicated column appears in hundreds of papers across the nation. Read Reston and you can keep up with the latest Rockefeller-Establishment line. In 1973, Reston wrote:

The craziest notion that has hit this country in a long while -and we've had quite a few nutty notions lately -is that shortages of gas, beef and a lot of other things are bad for the American people,

What America really needs is more shortages. It is not our shortages but our surpluses that are hurting us. Too much gas, too much booze, and -fire me tomorrow! - too much newsprint are our problem. . . .

Yes, you read that correctly. James Reston of the New York Times says that what we need are more shortages. Like playing for a losing football team, shortages build character. The more we are deprived, the better off we will be! Of course, the worthies who insist you must take a hacksaw to your own standard of living are themselves living very well. And they expect to continue to do so, thank you.

The whole ploy is such obvious hogwash that not even P. T. Barnum would have dared try to peddle it. Of course, times were different when he said there's a sucker born every minute. He didn't know they could be created even quicker-if the denizens of government, education, and the media were all in on the plot.

## **We are not running out of energy.**

But if the American people swallow the phony Rockefeller - inspired and financed propaganda, the doomsday prediction of depression and famine will be a self-fulfilling prophecy. If we can be panicked into surrendering our freedom in the name of survival, the socialist-fascist dictatorship of the Rockefellers' New World Order will be a reality.

## Chapter Twelve

### The Eternal Power Behind the Throne

*“Single acts of tyranny may be ascribed to the accidental opinion of a day, but a series of oppressions, begun at a distinguished period, unalterable through every change of ministers, too plainly prove a deliberate, systematical plan of reducing us to slavery.”*

-Thomas Jefferson

When John D. Rockefeller was coming close to monopolizing the oil industry, one of his favorite and most effective ploys was to capture a competitor from the inside. He would place his men inside a competitor's office, or bribe employees of other firms to do his bidding. John D.'s descendants now play the same game with our government. It makes no difference which party is in power; whether a Democrat or Republican Administration, the Rockefeller people hold the key positions, especially in the fields of foreign policy and finance. The House of Rockefeller is the eternal power behind the throne.

Rockefeller influence in the White House began in 1894 with the election of William McKinley. But it was not until the election of Franklin Delano Roosevelt that it became a deciding factor in determining policy. In many ways, the New Deal was a Rockefeller deal.\*

\* Although it is generally believed that the New Deal was designed to help business and the stock market quickly recover from the depression, its effect was to prolong the depression for several years. We now know that this result was deliberately contrived; among other reasons, the Rockefellers wanted a depressed stock market so they could buy up shares cheaply. (It is worth noting that the "New Deal" dealt most kindly with the Rockefeller interests.

For detailed information see Chapter III of the author's book,

None Dare Call It Conspiracy, and Antony Sutton's Wall Street and F.D.R.)

The main Rockefeller agent was Harry Hopkins, who had been financed by the Rockefeller - foundation for more than a decade when he ran the Organized Social Service. Hopkins was to become Franklin D. Roosevelt's alter ego, even to the point of living in the White House. He was the second most powerful man in America during the war years.

As Walter Winchell reported at the time, Hopkins acknowledged his debt to the Rockefellers when he was appointed Secretary of Commerce, by offering the post of Assistant Secretary to Nelson. William Rusher tells us in the Los Angeles Herald Examiner of September 7, 1975: Nelson Rockefeller was recruited for the New Deal by FDR's confidante, Harry Hopkins, back in the 1930 's.... He apparently wasn't even a Republican by 1940, let alone a conservative. In that year, at any rate, as World War II approached America, FDR did him the handsome favor of giving him a soft civilian berth in the White House where he remained straight through to V-J Day.

The fact that Nelson's name was number ten on the local draft board list, when he fortuitously -landed- his job with the New Deal, may explain why the young Rockefeller was so willing to abandon a plush family position to join the Washington bureaucracy.

The New York Times of May 20, 1960, reveals that after his appointment -Rockefeller became a Roosevelt intimate, spending secret holidays with the President at Shangri-la (now Camp David). . . ." Twenty years later, Nelson reminisced to Newsweek that " this country hasn't had a sense of purpose and direction since Roosevelt." In that 1962 interview, the future Vice President dismissed conservative Republicans, saying they were " like cattle that aren't going anywhere."

In the Dwight D. Eisenhower (CFR) administration, Nelson helped to create and served as Assistant Secretary in the Department of Health, Education and Welfare, which now takes an even larger portion of the Federal Budget than does defense. But the job of running a government is so immense that the Rockefellers must delegate most of -the work to friends, associates, hirelings and agents.

Eisenhower's first Secretary of State, John Foster Dulles (CFR), was a Rockefeller cousin. Dulles' successor was Christian Herter (CFR), who had the good sense to marry into the Standard Oil fortune. Herbert Brownell (CFR) was a Rockefeller employee when Eisenhower tapped him to be Attorney General. Brownell subsequently selected hundreds of federal judges, district attorneys, US Marshals, and White House staffers.

Seventeen other key figures at the top of the Eisenhower Administration were supplied by the Rockefellers' CFR.

Soon after his election as President, John F. Kennedy (CFR) followed Rocky's advice and named Dean Rusk of the CFR to be his Secretary of State. Rusk, whom Kennedy had never met, took a leave of absence as head of the Rockefeller Foundation to accept the post.

Kennedy's appointment for Under Secretary of State was Chester Bowles, a fellow CFR member who has been a trustee of the Rockefeller Brothers Fund and a director of the Rockefeller Foundation. Democrat Kennedy then named Standard Oil executive Alexander Trowbridge (CFR) as Assistant Secretary of Commerce, and President Johnson later promoted him to Secretary of Commerce.

President Kennedy also named Roswell Gilpatrick (CFR), a trustee of the Rockefeller Brothers Fund, as Deputy Secretary of Defense. Virtually every top position in the administration of JFK and LBJ was held by a member of the CFR.

Richard Nixon appointed Nelson Rockefeller's attorney John Mitchell as Attorney General, and Mitchell ran the President's campaign for re-election and became his chief advisor on domestic policy. Nixon's first Vice President was the ill-fated Spiro Agnew, who had been national chairman of the Rockefeller for President Committee in 1968 and an outspoken opponent of Nixon until Rocky approved his White House role.

Chief advisor to both Nixon and Ford on foreign policy, of course, is the ubiquitous Secretary of State, Henry Kissinger, who left a staff position with the CFR to join the Nixon Administration. For ten years Kissinger had been Nelson Rockefeller's personal foreign policy advisor. Altogether Richard Nixon staffed his Administration with over 115 CFR members. (The complete list is contained in the author's *Richard Nixon: The Man Behind The Mask*.) The vast majority of these remain in the Ford-Rockefeller (or is it vice-versa?) regime.

Years ago, Nelson Rockefeller reportedly demanded, and received, the privilege of naming his men to top administrative posts on all important Republican committees-including the vital National, Senatorial, Congressional, and Policy committees. The effect on the Republican Party is all too (perfectly) clear. It has been reliably estimated that over the years the Rockefellers have placed at least five thousand persons in important positions at the highest levels of the federal government. The Rockefeller influence and authority now runs the top Civil Service bureaucracy, thereby transcending the administrations of mere Republicans and Democrats.\*

Having a big stake in an internationalist foreign policy, the Rockefellers always make sure that the Secretary of State and the Director of the Central Intelligence Agency (CIA) are "their boys". Marshall, Acheson, Dulles, Herter, Rusk and Kissinger have all labored to turn the backward Soviet Union into a creditable power to force the Great Merger, while at the same time fighting wars to make the world safe for Standard Oil. The CIA has served as the State Department's and Standard Oil's enforcement arm, destroying genuine anti-communist movements around the world.\* (Chile seems to be the one exception. Apparently the Rockefellers did not care to lose their holdings in that nation.)

The CIA was created and staffed by Rockefeller relative Allen Dulles.

\* Indeed, Ford's most important early appointment was Edward Levi as Attorney General. Levi was the first Attorney General in modern history who had never met the President who appointed him. It is well known in Washington political circles that Levi, from the Rockefeller -endowed University of Chicago, and not a Republican, was Nelson's choice. The new Attorney General has a reputation of being about as conservative as Mao's Red Guard.

American foreign policy has meant billions of dollars for the Rockefellers. It has been paid for in many cases by the blood of our soldiers and in every case by the sweat of our taxpayers. In his *Reminiscences* John D. Rockefeller informs us: "One of our greatest helpers has been the State Department in Washington. Our ambassadors and ministers and consuls have aided to push our way into new markets to the utmost corners of the world.-

Washington reporter Jack Anderson put it this way in 1967: ". . . the State Department has often taken its policies right out of the executive suites of the oil companies. When Big Oil can't get what it wants in foreign countries, the State Department tries to get it for them. In many countries, the American Embassies function virtually as branch offices for the Oil combine ... The State Department can be found almost always on the side of the 'seven sisters', as the oil giants are known inside the industry. . . .- The more things change, the more they remain the same.

Just as the Rockefellers make sure their capos are running" our-perennially disastrous foreign policy, you can bet your last devalued dollar that the Rockefeller Mafia controls the national and international money game.

\* The Rockefellers occasionally lose a property to nationalization- at least temporarily - through madcap coups, but such instances are remarkably rare.

Here is where Rockefeller influence in the World Bank comes in handy. In the Political Economics of International Oil, Michael Tanzer admits that, although the

World Bank favors active government participation in virtually every other area, oil is a major exception: ". . . the general policies of the Bank strongly tend to favor minimizing the public sector's role. . . . The World Bank too has refused to lend money for any government oil operations in underdeveloped countries. In addition,

the Bank has also played an active, albeit subsurface, role in trying to dissuade underdeveloped countries from using their own capital for oil exploration. . . ."

The Rockefellers have made the Treasury Department virtually a branch of the Chase Manhattan Bank. Eisenhower's Secretary of the Treasury was Robert Anderson (CFR). Kennedy -switched- to Douglas Dillon (CFR and a trustee of the Rockefeller Brothers Fund). Henry Fowler (CFR) was the House of Rockefeller's rep heading the Treasury during the LBJ era. And in the year of our Ford, William Simon (CFR) runs the temple for the CFR money changers.

While Secretary of the Treasury is a significant position, chairman of the Federal Reserve Board is infinitely more important. The Federal Reserve is a mystery wrapped in an enigma for most Americans. Yet it is critical to the Rockefeller manipulations of the economy.

The Rockefellers were instrumental in creating the Federal Reserve System. It was designed at a secret meeting in 1910 at Jekyll Island off the coast of Georgia. Rockefeller agent Frank Vanderlip admitted many years later in his memoirs:

"Despite my views about the value to society of greater publicity for the affairs of corporations, there was an occasion, near the close of 1910, when I was as secretive indeed as furtive -as any conspirator ... I do not feel it is any exaggeration to speak of our secret expedition to Jekyll Island as the occasion of the actual conception of what eventually became the Federal Reserve System."

Out of the Jekyll Island meeting came the Monetary Commission Report and from it, the Aldrich Bill. Warburg had urged that the proposed legislation be designated simply, the - Federal Reserve System, 11 but Aldrich insisted his name appear as the bill's chief sponsor. This proved to be a serious mistake; the legislation was so obviously a project of the international bankers that it could not be pushed through Congress.

A new strategy had to be devised. The Republican Party was too closely identified with Wall Street. The conspirators recognized that the only way to establish a central bank was to disguise the proposal, and have it promoted by Democrats as a means to strip Wall Street of its power!

The opportunity to do this came in 1912 when the Jekyll Island conspirators induced Teddy Roosevelt to run on a third party ticket to split the Republican vote. The result was that the underdog Democrat, Woodrow Wilson, won. Wilson paid off like a slot machine that has just rung up three bars.\*

\* A more comprehensive account of the creation and operation of the Federal Reserve is told in the author's book, *None Dare Call It Conspiracy*.

In order to support the fiction that the Federal Reserve Act was a "people's bill," the *Insider* financiers put up a smoke-screen of opposition to it. It was strictly a case of Br'er Rabbit begging not to be thrown into the briar patch. Both Aldrich and Vanderlip denounced what was actually their own bill. Nearly twenty-five years later, Frank Vanderlip admitted: "No walthough the Aldrich Federal Reserve Plan was defeated when it bore the name Aldrich nevertheless its essential points were all contained in the plan that finally was adopted."

Taking advantage of Congress' desire to adjourn for Christmas, the Federal Reserve Act was passed on December 22, 1913, by a vote of 298 to 60 in the House and in the Senate by a majority of 43 to 25.

After the vote, Congressman Charles A. Lindbergh Sr. father of the famous aviator, told Congress:

" This act establishes the most gigantic trust on earth ...When the President signs this act the invisible government by the money power, proven to exist by the Money Trust investigation, will be legalized. . . .

This is the Aldrich Bill in disguise.

The new law will create inflation whenever the trusts want inflation. .

The Federal Reserve Act was, and still is, hailed as a victory of "democracy" over the "money trust." Nothing could be further from the truth. The whole central bank concept was engineered by the very group it was supposed to strip of power.

How powerful is our central bank" ?

The Federal Reserve controls our money supply and interest rates, and thereby manipulates the entire economy creating inflation or deflation, recession or boom, and sending the stock market up or down at will. The Federal Reserve is so powerful that Congressman Wright Patman, Chairman of the House Banking Committee, maintains:

**"In the United States today we have in effect two governments ... We have the duly constituted Government ... Then we have an independent, uncontrolled and uncoordinated government in the Federal Reserve System, operating the money powers which are reserved to Congress by the Constitution."**

Neither Presidents, Congressmen nor Secretaries of the Treasury direct the Federal Reserve. In the matters of money, the Federal Reserve directs them!

How successful has the Federal Reserve System been? It depends on your point of view. Since Woodrow Wilson took his oath of office, the national debt has skyrocketed from \$1 billion to over \$500 billion. Interest paid to the international bankers holding that debt is staggering; at \$27 billion annually, it is now the third largest item in the Federal Budget. And it is climbing steeply, as inflation pushes up the interest rate on government bonds, while the government runs grotesque deficits every year.

Under the brilliant expertise of these Rockefeller-CFR money managers, the dollar has lost three-fourths of its purchasing power since 1940. And the pace is accelerating. Soon your paper dollar, now totally

divorced from gold and silver by Rockefellers' agents, will not be worth a plugged nickel. It's all right for the Rockefellers, they don't have to live on a fixed income or a pension.

America is being set up today for another 1929 style debacle. To think that the Crash of 1929 was an accident or the result of stupidity defies all logic. The international bankers who promoted the inflationary policies and pushed the propaganda which pumped up the stock market represented too many generations of accumulated expertise to have blundered into the Great Depression. As Congressman Louis McFadden, Chairman of the House Banking and Currency Committee, commented:

**It [the Depression] was not accidental. It was a carefully contrived occurrence ... The international bankers sought to bring about a condition of despair here so that they might emerge as rulers of us all.**

It was the game of boom and bust, using economic crisis to consolidate political power at the top where it can be most easily controlled.

The major cause of the economic collapse was the deliberately created credit inflation by the Federal Reserve. In six years it had inflated the money supply by sixty-two %, inducing market speculations and unwise investments by middle Americans who were being set up for a shearing. When the shearing came, the sheep took a realistic look at their economy and panicked. Optimism was replaced by economic despair; despair produced a willingness to accept a major expansion of government controls over the economy.

Now, the Rockefellers are sharpening their shears to give the sheep of the world another trimming. But this time may be the last time. In 1929, America was a long way from total government. The next depression will be used as the excuse for complete socialist-fascist controls at home and the creation of a World Superstate internationally.

Just as the Rockefellers use the Export-Import Bank as a tool to loot the capital and credit-starved American economy and its over-taxed citizenry, so they also use the UN's World Bank as yet another siphon in the U.S. Taxpayer's wallet.

A key lieutenant in fleecing American workers has been Eugene Black (CFR), a director of the Rockefeller's Chase Manhattan Bank. For fifteen years Black was (successively) executive director, president, and then chairman of the executive directors of the World Bank. It is an amazing - coincidence- how officers of the Rockefeller's Chase Manhattan Bank keep turning up as officials of the World Bank.

The current head of the World Bank is the notorious Robert Strange McNamara, who did more than any American since Benedict Arnold to betray America's defenses. If you have not guessed that McNamara is a member of the CFR, you haven't been reading carefully enough. Not surprisingly, Mr. McNamara is eager to multiply the World Bank's loans to finance socialism. As he puts it: "The rich nations could easily contribute more than they have done to the poor nations. "He continues:

**We in the US can do far more to cure our own national problems. And just as we can do more to correct those conditions, so we can do more to contribute to the economic development of the developing nations. It's simply a question of getting a proper order of priorities.**

And in line with CFR policy, McNamara is already pushing the World Bank to begin pumping out your money to the Communist bloc. As Chairman McNamara puts it: "We're quite willing to receive

approaches by any Eastern European or other Communist bloc members not now members of the bank.-

Through their Council on Foreign Relations, the Family Rockefeller has controlled the executive branch of government, especially the Departments of State and Treasury. Public opinion is manufactured by the CFR's ventriloquists in the mass media. But, Congress still plays a key role in governing the United States. The House of Rockefeller has formed two organizations specifically to influence Congress. They are Common Cause and the National Committee for an Effective Congress.

The National Committee for an Effective Congress was formed by Eleanor Roosevelt in 1948 to elect - progressive- (read fascist-socialist) Senators. The organization makes no pretense at being a grass-roots group. The average donation by the limousine liberals to the NCEC in 1972 was \$13,000.

Members of the NCEC believe the selection of Congressmen is too important to be left to the local voters.

Since 1948 they have helped change the composition of Congress by passing the hat around Wall Street to ensure that "their kind- of Congressman was elected in Montana, Iowa, Tennessee and West Virginia." Their kind includes such ultra-liberals as Senators Hubert Humphrey, Birch Bayh, Alan Cranston, Frank Church, Clifford Case, Adlai Stevenson, Thomas Eagleton, and George McCovern -all of whom have been supported by the Wall Street internationalists of the NCEC; and all of whom can be counted on to vote for more and more fascist-socialist government.

In the past, the National Committee for an Effective Congress has concentrated on bankrolling compliant Senators. But in 1974, the megabuck liberals began financing" their kind - of candidates for the House of Representatives. During the election that year, the NCEC worked to eliminate opponents of the Rockefeller's " New World Order." The result was a mighty leap to the left in the House, as dozens of veteran Conservatives went down to defeat.

For the 1974 campaign, the NCEC hired professional campaign managers for 49 Democrat candidates around the country. Thirty-five of them won and promptly became the much heralded -Freshman Democratic Caucus.-

Having eliminated most of the old-line Republicans, in 1976, according to the Washington Post's David Broder, the NCEC will concentrate on electing Liberal Republicans who can work with Nelson Rockefeller. Candidates who convince the multi-millionaire internationalists of the National Committee for an Effective Congress that they are willing to represent them, rather than their constituents, can receive unlimited thousands of dollars. It will come in the form of "services" - free publicity from the mass media, free "research," free polling to determine the "image" which the candidate needs to project, free attacks on opponents, free mailings and literature on appropriate"issues." Above all, the candidate can expect free workers who will not only manage his campaign, but will proceed to manage him when he gets to Congress.

The Rockefeller front entrusted with the task of creating popular support for the Insiders' takeover is an organization called Common Cause. Common Cause masquerades as "the people's lobby," but nothing could be further from the truth.

Common Cause was launched in the early 1970's with all of the hoopla of a million-dollar advertising campaign planned by P. T. Barnum. Full-page newspaper ads and slick direct-mail pieces announced that something called Common Cause would be neither Republican nor Democrat, but a -people's lobby, representing all Americans against the "rich and powerful." It should be sued for false advertising.

Chairman of Common Cause is an establishmentarian with impressive credentials, John Gardner. As Secretary of the Department of Health, Education and Welfare in the mid -1960's, Gardner pushed federal money and programs at everything that moved. In the area of federalized health care alone, HEW programs initiated under Gardner included Medicare, Medic aid, federal staffing of community mental health centers, federal planning of public health services, and scores of other socialist fascist programs costing billions. But Gardner now heads an Establishment -financed -people's lobby- to destroy the - special interests- dominating politics.

Of course no huckster worth his salt is anxious for the public to become aware of the sting. So John Gardner has removed a few of his more revealing credits from the biography he prepares for Who's Who In America. Among those positions which he has expunged from the record are his seat on the board of trustees of the Rockefeller Brothers Fund. After all, it might be embarrassing while calling publicly for emasculating the power of the big banks and their fat trusts if people found out you are currently serving at the pleasure of the controllers of Chase Manhattan Bank. Some suspicious souls might doubt your sincerity. The giant oil producers are another "target-of Gardner's Common Cause. Naturally he no longer lists his position on the board of directors of Shell Oil, which is the world's second-largest oil company.

Buried deep in the records of the Senate Clerk is a lobbyist's report filed by Gardner showing receipts for the last quarter of 1970. The largest donor was John D. Rockefeller III, who anted up twenty-five thousand dollars; David Rockefeller gave ten thousand dollars; Martha Rockefeller provided another ten thousand; Chase Manhattan Bank gave five thousand dollars; kindly Amory Houghton Jr. of the Rockefeller Foundation provided ten thousand; Nelson Rockefeller gave a guarded five hundred dollars; J. Richardson Dilworth, the family's financial advisor, gave five hundred; A. Meyer, senior partner in Lazard Freres and Company, the Rothschild's US Bank, provided ten thousand dollars; A. E. Friedman, a partner in the Rockefeller-allied Kuhn, Loeb and Company, gave a thousand; and, the list of the Establishment's super-rich goes on and on and on.

Notice that this was the "up-front" money-the big cash that made Common Cause possible. It was the Rockefellers and their allies who supplied the seed money, the money used to buy the advertisements in all those magazines and newspapers and to pay for the mailing to 2.5 million Americans soliciting those fifteen-dollar memberships in Common Cause. Without the Rockefellers there would have been no kickoff, no quarter of a million members whose dues allow the organization's spokesmen to claim that the Rockefellers supplied only a small %age of money raised. But how many people out in Kumquat Corners would fall for the Gardner snake on routine if they knew that he was fronting for Daddy Rockabucks? About as many as attend submarine race at Boise.

Common Cause claims a membership of 350,000 and operates on an annual budget of \$6.3 million. Ironically, in the yearly report required by law of lobbyists it now find itself in the position of declaring the highest expenditure of any lobby on Capitol Hill. The Rockefeller anti-lobby is now the biggest of the bunch.

The massive coverage given Common Cause by the Establishment journals is indicated by the fact that during 1974 the New York Times News Service, alone, carried over one hundred articles about Common Cause. That is a major article about Common Cause every 3.5 days. When you consider the hundreds of key newspapers across the country that subscribe to the New York Times News Service, and remember that the other major news services have also carried a similarly large number of stories puffing Common Cause, you readily see why the impact of its every move is enormous.

The other major triumph of the Rockefellers' Common Cause is the -campaign reform- act of 1974. In its recruiting brochure, Common Cause proclaims that 11 members of Common Cause have led the

citizens' effort to change the way our nation finances political campaigns.-

There are many dangerous implications to the law. Howard Phillips reports in Human Events for November 2, 1974, that under this legislation "a candidate whose views are at variance from the dominant political establishment is limited in how much he may spend or cause to be expended in his own behalf." Meanwhile, Phillips says, the problems of candidates challenging the Liberal Establishment "can be seriously increased through "non-political expenditures made by issue-oriented" Liberal organizations [like NCEC or Common Cause] which put forth large sums to advance their viewpoints, although escaping any spending limitations under the act (because, technically, the money is not spent 'against' the candidate with which they disagree).

This is what Common Cause calls -opening up the system." It is a dodge to allow the Rockefellers and their friends who control Common Cause to raise and spend vast sums to defeat their opponents while limiting the ability of those opponents to raise funds.

Now that the Rockefellers have the kind of Congress they want, they mean to keep it that way. They know that a Liberal Establishment which controls the mass media can give its favorite candidate vast amounts of free publicity which, in the past, anti-Establishment candidates could only match with money. They believe that they have now closed that potential source of opposition. Common Cause advertises that it is a "new force on the American political scene." What it is ... is a Rockefeller political front. And it is dangerously powerful. As Congressman F. Edward Hebert declared in an NBC interview on February 5, 1975:

**The American people better wake up to what this outfit is doing because they can destroy the country. The new Congressmen are not running Congress, Common Cause is running Congress.**

Who elected them?

That is a good question, Congressman Hebert. And the answer is: The same Insiders who -elected- Nelson Rockefeller Vice President of the United States.

# Chapter Thirteen

## Was Nixon Watergated ?

*``After all, when you think of what I had, what else  
[other than the Presidency ] was there to aspire to? "*

-Nelson Rockefeller

Nelson Rockefeller has admitted that his goal in life since he was a child has been to be President of the United States. "After all" he admitted, "when you think of what I had, what else was there to aspire to?" He has a point there.

Newsweek of September 2, 1974 tells us: "Ever since his boyhood meeting with Teddy Roosevelt, it

seems, 'Nelson Rockefeller had been propelling himself toward the Oval Office. Nothing less would suit his ambition. . . "

But the road to the White House for Nelson has been, if you will pardon the expression, rocky. He has had to settle for an un-elected and politically engineered Vice Presidency, a position at which he had previously turned up his nose several times.

Nelson's first attempt at the Presidency came in 1960, shortly after his election as governor of New York. Richard Nixon had been Vice President for eight years, however, and had spent much of the time making speeches for the GOP. In 1960, he collected his political IOUs from the majority of party activists and Rockefeller had no chance of getting the nomination. Where Rocky found he could not win the actual nomination. He moved to dictate policy from behind the scenes. A meeting was thus arranged between Rockefeller and Nixon on the Saturday before the Republican Convention opened in Chicago.

The Republican Platform Committee had been meeting for an entire week, laboriously pounding out a platform reflecting the views of party members from all fifty states

The Watergate Caper, the coup d'etat that knocked President Nixon out of the White House, was carefully engineered by the two agents for the House of Rockefeller

shown above. It is now known that Henry Kissinger (left) was responsible for creating the Plumbers squad in the first place, while the instant

General," Alexander Haig (right), made sure that the most incriminating evidence on the tapes was given in advance to the men investigating his boss!

Together, the two men forced a bitter and dejected Nixon to resign, thus paving the way (finally!) to get a Rockefeller into the White House without risking an election Rocky would surely lose.

But, at the meeting between Nixon and Nelson at Rockefeller's Fifth Avenue apartment in New York City, Nixon accepted everything Rockefeller dictated. The Platform Committee's sweat-stained document was ashcanned and, presto Chicago, Rockefeller's Liberal platform was substituted. Goldwater dejectedly called Nixon's surrender to Rockefeller" the Munich of the Republican Party.-

Republicans everywhere understood the significance of the new Rockefeller-Nixon alliance. Nixon had traded his independence for approval by the House of Rockefeller.

The truth is that Nixon had the nomination in the bag; there was no need for him to crawl to Rockefeller to win it. Nixon knew this, but he also knew who held the ultimate power behind both political parties.

Certainly there was never any love lost between Richard and Rocky. They have detested each other for years. Newsweek of September 2, 1974, tells us: "The Nixon Presidency was a painful period for the proud governor. Privately, friends say, Rockefeller despised the self-made man from Yorba Linda. . . .

Rocky, the man born to economic royalty, must have deeply resented having to operate through this Sammy Click-type character who looked like a used car salesman, but had clawed his way to the White

House. But the two men needed each other. Nelson's influence in the COP is immense at the top, but is almost non-existent among voters at the grass roots.

After forcing Nixon's humiliating surrender, Rockefeller virtually sat out the 1960 campaign and allowed New York to go for Kennedy. Nixon surprised most observers by quietly accepting the defeat that had been arranged for him, refusing even to protest the vote fraud in Texas and Illinois which deprived him of the election.\*

\* This story is described at length in Richard Nixon: The Man Behind The Mask by this author.

Richard Nixon returned to California to practice law but remained at the beck and call of his jealous and hostile boss in New York. One indication of their real relationship was the Joe Shell affair. Shell was a long-time California State Assemblyman who planned to oppose Democrat incumbent Pat Brown for the governorship in 1962. Early in the year, he received a call from Rockefeller, asking whom he would support at the 1964 convention if he were elected. The conservative Assemblyman told Rockefeller that under no circumstances could he support the ultra-liberal New Yorker. One week later, Shell's office received a call from Rockefeller's New York office with the news that Richard Nixon would oppose Shell in the COP gubernatorial primary-even though Nixon had previously assured Shell that he had absolutely no interest in being Governor of California.

The important point here is that Nixon was not interested in the job until he received orders from his boss in New York. Nixon had everything to lose and virtually nothing to gain by running against an incumbent Democrat governor in a state with an overwhelming Democrat registration plurality.

Following an incredibly inept campaign, in which his chief target was Nelson's old bugaboo, the -radical right," not Bungling Brown's record, Nixon lost the race. His political career appeared to have come to an end.

As he put it: -You won't have Nixon to kick around anymore."

Apparently, the Nixon candidacy was as much a test of obedience as it was a move to head off a potential Rockefeller opponent. In any case, having thrown himself onto a bed of nails at the behest of Rockefeller, Nixon was thrown a lifeline and brought to New York. He moved into an elegant \$125,000 apartment in the same building as Nelson Rockefeller-the very one in which the infamous 11 Compact of Fifth Avenue- was signed. Nixon was made a partner in a law firm which did a lot of trust and bond business with the friendly folk at Chase Manhattan Bank.

During the next five years Nixon practiced very little law, yet his net worth jumped from practically nothing to over half-a-million dollars. Most of his time was spent touring the nation and the world rebuilding his political reputation. When the Rockefellers needed him in 1968, he had been resurrected from the political trash heap and turned into a legitimate candidate.

Meanwhile, Nelson had been giving the Presidency the old college try himself. He might have made it in 1964 had not his divorce and remarriage alienated a large segment of middle America. Rockefeller learned the hard way that a lot of women don't forgive a man who abandons a wife of long standing to marry a much younger and prettier one. When the new bride abandons her own children to marry the man in question, it compounds the outrage.

In 1968, Nelson made a half-hearted attempt to wrest the nomination from Nixon. But the handwriting was on the wailing wall. "The old avidity is gone," groaned Nelson. Once again, he had to settle for

owning the team instead of starting as quarterback.

Nixon's appointments to policy-making positions confirmed that the House of Rockefeller did indeed own the team: they went almost entirely to Rockefeller men. In his inner circle, however, Nixon tried to surround himself with men like H. R. Haldeman and John Ehrlichman, who were personally loyal to him, not to Rockefeller. The two most notable exceptions were Kissinger and General Alexander Haig. Both men were known Rockefeller agents, and it is these two men who may have masterminded Nixon's early retirement.

If Nixon was an obedient Rockefeller man-if not necessarily a loyal one-why then did the Rockefeller controlled media orchestrate the campaign to dispose him? Several possible explanations have been advanced. One is that Nixon grew too accustomed to the prerogatives of power, and believed that he had become an equal partner in the deal. There are some hints that Nixon himself may have initiated some of the in-fighting between the two factions. The forced resignation of Spiro Agnew, brought about by a combination of pressure from the Executive Branch and prosecution by Executive departments, may have been part of this.

Another suggestion is that Rockefeller gave the nudge that toppled Agnew from the White House, counting on Nixon to appoint him to the Vice Presidency. When Nixon refused, and appointed Ford instead, the media dropped on him like a piano from the top of a ten-story building.

We may never know the full story of what started the internecine warfare. But we do know what was the decisive encounter in the battle: Watergate. And as we unravel the twisting threads of this strange saga, we find that each tug that ultimately toppled Nixon from the throne can be traced to Rockefeller.

The burglary at the Democratic Headquarters in the Watergate Hotel was not exactly carried out with the precision of a James Bond movie. It was more like the Three Stooges at their most slapstick. It was so clumsy, in fact, that the whole operation smells of a set-up. First: one of the burglars alerted a guard, by replacing the tape over the door locks after the guard had discovered and removed the first one. Even though their efforts had been discovered, the boss of the operation, Cordon Liddy, sent the burglars back to the Watergate. There they proceeded to flash lights, rip the place apart, and in general act as if they had all night to perform their mission. The man posted as lookout saw the police enter the building, but either failed to alert the men inside-or his warning was ignored.

It was as though the burglars were meant to be caught. And when they were, one of them conveniently was carrying the White House telephone number of E. Howard Hunt in his pocket.

Watergate began with the creation of the "Plumbers." The Plumbers were created by Kissinger to stop leaks on his staff. Both Nixon staffers John Dean and Charles Colson reported that Kissinger got Nixon so upset over leaks that the President decided, at Kissinger's suggestion to set up a Special White House Investigating Unit, which later became known as the Plumbers. According to Dean it was Rockefeller who had Kissinger sucker Nixon into forming the Plumbers. Little did Nixon know that he being mouse trapped.

Nationally syndicated columnist Paul Scott reports:

Records of the Senate Watergate Committee investigation indicates that Dean's testimony concerning Rockefeller was never followed up by the committee's staff. The reason: Committee members were against calling Rockefeller.

Kissinger put a member of his staff, David Young, in charge of the unit. You have never heard of David Young? join the multitudes. He was a Wall Street lawyer who had worked for Rockefeller before being promoted to Kissinger's staff.. After Watergate, Young was spirited off to a cushy assignment in London as a very advanced student, and the mediocracy has dutifully ignored his key role in Watergate.

The Watergate burglary, which was bungled more badly than a Keystone Cops chase, ended with a proven link to the White House. But no one ever claimed that Nixon gave the nod for the break-in; it was his role in the coverup that led to his downfall.

Watergate did start in the White House, however. But not by Nixon or any of his men. It was launched by the premier Rockefeller man, Henry Kissinger.

It was the activities of the Plumbers which brought the downfall of Richard Nixon. And Kissinger, Rockefeller and the CIA were obviously deeply involved. Former White House aide Charles Colson has said that Nixon suspected the CIA was in the plot "upto their eyeballs." Colson says Nixon wanted to fire the director of the CIA and personally investigate what was believed to be a CIA conspiracy against him. He was persuaded not to do so by General Alexander Haig, the Rockefeller man who replaced Bob Haldeman. Colson portrays Nixon as a virtual captive of Kissinger and Haig in the Oval Office during his last months in the Presidency.

But Richard Nixon would have survived the Watergate scandal had it not been for those damned tapes. At the beginning of the Watergate hearings, no one even knew they existed. The fact that all Nixon conversations had been recorded was revealed almost casually by Alexander Butterfield, White House liaison with the Secret Service. It is hard to believe that this bombshell, which was to remove a President, could be dropped with such an air of innocence. Could it have been planned?

We now know that Butterfield had been a CIA informant. He has been accused of working with (if not for) the CIA when he was in charge of all the tapings in the White House. Had Blabbermouth Butterfield, who was called to testify about other matters-not the tapes-- stonewall edit, Nixon would not have been forced to resign. Even if asked a direct question about any recordings, Butterfield could have maintained that such matters related to national security and must remain confidential.

Nixon has said that the taping system was installed in the Oval Room at the suggestion of LBJ to preserve his conversations for posterity. Soon the whole White House and even Camp David were bugged. The White House monitoring system kept better track of people than do most prisons. The President could not walk from one room to another without that fact being recorded and a buzzer ringing and a light flashing on a console operated by Butterfield. Voices automatically started the tape recorders spinning. Keep in mind that it was not Mr. Nixon who turned the recorders off and on. It is as though the President were under constant surveillance by others, who wanted to know about his every word and movement.

Why didn't Nixon have the tape machines shut off the day after the! Watergate arrests? Or, failing that, why didn't he destroy the tapes after Butterfield revealed their existence? Several rationalizations have been put forth, none of which ring true. One is that Nixon was mesmerized by the arrogance of power and did not believe the Supreme Court could or would subpoena the tapes. Since there was no precedent, why take the risk? Nixon must have known his very survival as President of the United States was at stake.

Another explanation is that Nixon is compulsively greedy for money and wanted to keep the tapes for use in writing his memoirs, or to donate to the national archives and take a multimillion dollar tax

deduction. Much as Nixon may like money, he would hardly jeopardize the Presidency -and risk a jail term- to keep the tapes.

And he is now in the process of writing his memoirs for a million dollar fee without, benefit of those tapes.

Remember, releasing the tapes would not exonerate Nixon, they would prove him guilty of every cover-up charge made against him. Why would this cunning politician, this ruthless abuser of power, this man from whom no one would buy a used car, not simply destroy the tapes himself?

Nixon could have gone on national television in the great tradition of the Checkers speech, and said something like this:

My fellow Americans. As your President, it is my sacred duty to protect your rights and our national security. And, let me make this perfectly clear - I shall not shrink from that duty, no matter how unpleasant the consequences.

The tapes contained privileged and highly secret information, the publication of which would embarrass many honorable public servants and jeopardize our delicate relations with foreign powers. It is therefore necessary to do what is best for the country and not what is best for myself.

Public release of the tapes would exonerate me, but jeopardize the fate of the nation. I have met this obligation, knowing full well that I shall be terribly criticized by a cynical and hostile press, by destroying the tapes. I know that you, the American people -the finest people in the world-will back me up in this crisis. Thank you and good night.

To be sure, if Nixon had - stonewalled - it this way, the screaming would have been loud and profane. Senator Kennedy, the hero of Chappaquiddick, would have made a speech about abusing power to cover up crimes. But, there would have been no proof. And there is no way in the world that the President of the United States could have been removed from office without such evidence. Controversy would rage and Nixon would finish his second term under a cloud of doubt. But, there is no doubt he would finish the term! Better ugly suspicions than the damning truth. Watergate Prosecutor Leon Jaworski has admitted that "if Mr. Nixon had destroyed the tapes at the time their existence was disclosed in July, 1973, he would still be President.-

Can anybody believe, as Dr. Susan Huck has asked, that Nixon sat there like a good scout, watching the lynch mob fasten a hangman's knot out of those wretched tapes, and refuse to destroy the noose? That isn't the Nixon depicted on the tapes-much less in public life.

Why then did not Nixon, that ultimate political opportunist, burn the tapes? We believe the only logical answer is that either Nixon did not control the tapes, or he knew there was more than one set. In a word, he did not destroy them because he could not.

Have you ever wondered how everybody seemed to know what was on the tapes, and where, before they were "turned over - to committee staffs, special prosecutors, or judge Sirica? The mediocracy didn't wonder. So far as we can discover, the only person who has asked this question is Dr. Susan Huck, in the February 1975 issue of American Opinion magazine.

Consider the fantastic detail involved in the requests. On August 14th, for example, judge Sirica demanded the "entire segment of tape on the reel identified as 'White House telephone start 5/25/72

(2:00 P.M.) (skipping 8 lines) 6/23/72 (2:50 P.M.) (832) complete." I don't know what all the identifying numbers mean-but you have to agree that only somebody very familiar with the tapes would know.

These boys knew precisely what to look for! Here is another sample request:

January 8, 1973 from 4:05 to 5:34 P.M. (E.O.B.)

- a) at approximately 10 minutes and 15 seconds into the conversation, a segment lasting 6 minutes and 31 seconds:
- b) at approximately 67 minutes into the conversation, a segment lasting 11 minutes;
- c) at approximately 82 minutes and 15 seconds into the conversation, a segment lasting 5 minutes and 31 seconds.

As Dr. Huck observed:"It does sound as though some body-obviously not the President - has been curled up with those tapes for many a long hour, doesn't it? Somebody knows exactly where the juicy parts are, down to the second.-

Remember, all White House conversations-in person and on the phone-had been"bugged-for at least a year. There were literally miles of tapes in storage somewhere. But it is obvious the investigators already had the evidence they sought when the various subpoenas were issued!

Who then controlled the tapes, or had access to a duplicate set? There is (understandably) very little information available on this crucial question. It is worth noting, however, that while L13J's recording system had been installed by the Army Signal Corps, the Nixon monitors were established by the Secret Service. So it is of more than passing significance that Newsweek on September 23, 1974, reported:

While former White House chief of staff H. R. Haldeman awaits trial for his part in Watergate, the Secret Service chief he ousted from the White House last year has landed a plum job. Robert H. Taylor, 49, who tangled with Haldeman over Nixon security procedures, is now head of the private security forces for all the far-flung Rockefeller family enterprises.

Hmmm. Once Nixon is deposed, the head of the Secret Service-the man in charge of the agency which was in charge of the tapes-gets"a plum job- with the Rockefeller Empire. And what of the Rockefeller's number one man in the White House?

We know that Henry Kissinger was deeply involved in wire tapping his own staff and several journalists. But the one member of the White House staff who apparently never had his remarks taped in the Oval Office was Herr Kissinger -who also, as it happens, was chief of all US intelligence gathering operations. And who also, we now know, was responsible for establishing the Plumbers in the first place!

But through all of this, Kissinger's loyalty was not with his President, it was with the Rockefellers! Kissinger had been through three losing campaigns with Nelson Rockefeller and openly spoke of despising Nixon. Biographer David Hanna quotes Kissinger as stating, after Nixon's nomination in 1968: "That man is unfit to be President. I would never work for that man. He is a disaster."Yet Kissinger was the first appointment made by Nixon.

Nixon did not know Kissinger well; in fact, he had only met the man once before in his life-at a cocktail

party. And Kissinger was on record as standing 180 degrees to the left of Nixon's campaign utterances. Clearly, Kissinger was put in the Nixon Administration by Rockefeller (who sent his protégé off to Washington with a tidy little gift of \$50,000). In his Vice Presidential hearings, Nelson Rockefeller even acknowledged that Kissinger took the job because Rocky asked him to do so.\*

While it was Henry Kissinger who set Nixon's head on the chopping block, it was another Rockefeller agent, General Alexander Haig, who applied the axe. Haig was appointed -at Kissinger's suggestion-as an interim replacement for the hastily deposed Bob Haldeman.

Like Dwight Eisenhower and George Marshall, two generals whose careers had a bad case of the blahs until anointed by the House of Rockefeller, Haig's career took off like a Saturn rocket when he joined the Rockefeller team through the Council on Foreign Relations. In 1969, he was a colonel. Four years later he had miraculously become a four star general, having skipped the three star rank entirely. What happened to trigger this remarkable rise? In 1969, Haig became an assistant to Kissinger; subsequently, he was catapulted over 240 general officers when Nixon raised him to four-star rank. Such a promotion should mark Haig as one of the great military leaders in our history. But, his promotions did not come as

\* So critical was the Kissinger appointment that Nixon waived the customary FBI security clearance for his nominee as Secretary of State. The reasons Kissinger could never pass accurate security procedures will be discussed in our follow-up book, *The Kissinger File* a result of military achievements -there were none. They were political. Haig was now a general in the Rockefeller Army, an army which tells other armies when to march.

Syndicated columnist Jerald TerHorst, who did a short stint as Ford's press secretary, tells us:

For most of the final Nixon year, as Haig himself would agree, he [Haig] was the acting president of the United States. With a troubled President drawing more and more within his shell, everyone in the government, with the possible exception of [Haig's sponsor] Kissinger, was working for Al Haig.

William Safire, a Nixon speech writer, says in the November 11, 1973 New York Times magazine: "Haig is far more powerful than Haldeman ever was; but he exercises it more gently ... Haig learned this technique from the past master, Henry Kissinger. . . .- In his new book, *Before The Fall*, Safire calls Haig -Kissinger's alter ego." Significantly, the Washington Post's Barry Sussman refers to Haig as " Butterfield's former colleague."

You see, it was Alexander Haig who had control of the vault where the Watergate tapes were kept. Two months after Haig became the keeper of the keys, his former colleague Butterfield tipped off the Watergate Committee about their existence. Since it is perfectly clear that the subpoenas for the tapes were written by persons already possessing a detailed familiarity with their contents, it is painfully obvious that Haig had already provided them with copies of the pertinent excerpts.

It was now time for the axe to fall. In the June 8, 1975 issue of Parade magazine, Lloyd Shearer tells us: "From May 1973 to August 1974, Haig was Nixon's chief of staff. It was he who adroitly engineered, orchestrated and choreographed Nixon's resignation from the Presidency.

According to Shearer, Nixon was determined not to resign. "Yet Haig knew that he must." The reason for Haig's insistence, according to Parade, was that if the President insisted on a trial and lost, he would lose his pension and other government benefits. You will pardon us for believing that Haig had much more compelling reasons for giving Nixon the final push.

How did he do it? Haig -orchestrated the resignation march," says Shearer, by taking the evidence against Nixon to Republican Congressmen, Presidential speech writers and others close to Nixon. "Haig saw to it that Senator Barry Goldwater, the conservative bulwark of the Republican Party, was provided with the damning tape transcripts of June 23,- Shearer reported. Get that? The President's chief assistant finds out the boss won't budge, so he takes copies of the most damning tapes to the few supporters Nixon had left! Why didn't Nixon fire Haig and burn the tapes? Again, the most obvious, most logical answer is that he did not because he could not.

Shearer continues:

And at the next and final Cabinet meeting, with at least half the members expecting him to resign, Nixon rambled on about inflation, declared his intention to stay on, ordered them to pass the word.

Haig and Kissinger exchanged glances. ! When the Cabinet meeting was over, Kissinger stayed behind. Gently he suggested that the President resign.

Later that same afternoon,"Haig played his final card."Republican Senate leaders Hugh Scott and Barry Goldwater, joined by House Minority Leader John Rhodes, visited Nixon and told him his support in the Senate had evaporated. "That night," reports Shearer, "after again talking to Kissinger and Haig, Richard Nixon decided to resign."

And that is how the Three Musketeers for the House of Rockefeller engineered the coup d'etat that removed Nixon from the White House, and put Nelson in. There must have been quite a celebration that night in Pocantico Hills.

Please do not misunderstand us. We are not claiming that Richard Nixon was an innocent lamb done in by the big bad wolf. It was more like Al Capone rubbing out Bugs Moran and then sending flowers to the funeral. The point is that the entire scenerio-from the creation of the Plumbers, through the incredibly bungled Watergate break-in, to the revelation of the existence of the tapes, to the preservation of the tapes and their use to force Nixon to resign -was written and directed by Rockefeller front men.

It is not without meaning that only those connected with the Rockefeller empire survived Watergate, while nearly everybody else was in disgrace-some pounding big rocks into little rocks.

Alexander Haig, the - instant General - as Dr. Huck called him, was quick to get his reward. Haig is now Supreme Allied Commander Europe, the general in charge of the NATO military command. In order to replace Haldeman, Haig had to retire from the Army. Can you imagine chucking four stars for a ride on the Titanic? Not bloody likely. There can be little doubt that Haig had been promised instant reinstatement and a very posh life jacket when the good ship Nixonia \ slipped beneath the waves. He got both.

Henry Kissinger is another big Watergate winner. Despite the fact that he not only bugged his own staff, but newspaper reporters as well, nary a word of criticism appeared in the press. Then came the disclosure that Kissinger was responsible for creating the Plumbers. Ho hum. During the Watergate scandals, Kissinger rose to the high office of Secretary of State while retaining his position as National Security Advisor. He had unprecedented power over foreign policy and intelligence. The source of his power was his sponsor, Nelson Rockefeller.

Kissinger proved, once again, that no man can serve two masters. just as Haig had said that he "was never a Nixon man," Kissinger had boasted of Nixon, "I would never work for that man." He didn't. He

worked for the Rockefellers.

Another beneficiary of the Watergate fiasco was that -staunch mid-western conservative," Gerald Ford. As usual, the image created by the media moguls and the truth are light years apart. Despite what some wags have said, Ford showed, while serving on the Warren Commission investigating the assassination of John F. Kennedy, that he had not played football without a helmet once too often: he proved he could keep his mouth shut about a major cover-up. At the time he was made Vice President, Ford had attended Bilderberger meetings and had been appointed by Rockefeller to the National Commission on Critical Choices.\*

\* The Bilderbergers are sort of an international CFR. They meet once a year at some posh secluded hideaway to make a mockery of democracy. The meetings, composed of the world's elite men of politics, business, banking and labor, receive virtually no serious attention from the mediocracy. See Chapter 5 of *None Dare Call It Conspiracy*.

The catalyst who arranged Ford's appointment was former Wisconsin Congressman Mel Laird. Laird had been Secretary of Defense under Nixon and later a Presidential advisor. A member of Rockefeller's CFR, Laird knows where the power lies. If you will pardon the pun, he keeps his standards well oiled.

Acting as what Paul Scott calls "Mr. Inside - for Rockefeller, Laird succeeded in talking Nixon out of nominating former Treasury Secretary John Connally to succeed Agnew. He convinced the President that Connally could never be confirmed by Congress and suggested the compromise nomination of Gerald Ford as Vice President.

But of course, the ultimate winner of the Watergate roulette was Nelson Rockefeller. He is now only the proverbial heartbeat away from his lifelong ambition - to be President of these United States. (And just recently, two women have pointed pistols at jovial Jerry and his limousine was in an automobile accident. Understandably, Jerry doesn't look quite so merry anymore.)

When Bobo Sears Rockefeller was obtaining a divorce from the late Winthrop Rockefeller, s he exploded two bombshells at the trial. The first was that Winthrop had one of the largest and most valuable collections of pornography in the world. (The punch line is that the pictures were not of girls.)

Revelation number two from the bizarre divorce proceedings was the disclosure that the Brothers Rockefeller would get together from time to time - to brainstorm on ways they could make Nelson the President, without the benefit of an election. (They realized he could never get into the Oval Office via the ballot box.)

So Rockefeller became an appointed Vice President. And, he was named by a man who was not elected, who was appointed by a man who resigned because he was about to be impeached. We doubt if the Brothers Rockefeller could dream up anything quite this wild even after the fifth martini. Or could they?

Ford went through the motions of asking Republican Congressional leaders for their recommendations for the Vice Presidency. The choice had all the suspense of an election in Russia. Anybody who was surprised at the selection of Rockefeller must have arrived in town on top of a wagon full of turnips.,

Are we suggesting there was a deal made for Nixon to appoint Ford, get pardoned by the new President, and then have Ford select Nelson Rockefeller as Vice President? That is exactly what we are saying. Anyone who doubts such a deal was made probably thinks professional wrestling matches are for real. It may just be coincidental, but on December 7, 1973, the headline on the upper- right-hand part of page

one of the New York Times was:

FORD SWORN AS VICE PRESIDENT AFTER HOUSE APPROVES.

The upper-left-hand headline of the very same issue read:

GOVERNOR TO QUIT AND SEEK PRESIDENCY, HIS AIDES SAY.

While the nation focused on the Watergate hearings circus, the real show was going on inside a different tent. Columnist Paul Scott wrote at the time: "The drama packed Senate Watergate hearings are only the colorful sideshow to one of the boldest and slickest transfers in US history." And he continued with this revelation:

With everyone's attention focused on the cast of "small time" actors parading before the TV cameras recording the special Senate inquiry, only a few privileged insiders are alert to the really big show taking place at the other end of Pennsylvania Avenue.

As part of the plan to create a new world order [world government], the main show involves the carefully planned transfer of power from President Nixon to New York's Governor Rockefeller, now strategically positioning himself to become the President's heir apparent for 1976.

Whether Rockefeller with his family's vast economic wealth, social and political power will be able to pull off this carefully managed "powergrab" - is one of the most chilling and exciting political stories unfolding in our times.-

Half of the Rockefeller coup d'etat has already been achieved. The question of the decade is: Where does Rocky go now? In 1968, after his third flop on the primary circuit, Rocky announced: "... the old avidity is gone. Has the 'old avidity' returned? Is a four-pound robin fat?

Does King Kong like bananas?

Obviously the Rockefellers did not go to all of the trouble in setting the Watergate wheels in motion without having something big in mind. Being a political prognosticator is an occupation only slightly less dangerous than riding tandem with Evel Knievel. Gathering facts is one thing, projecting them with accuracy into the future is quite another. Circumstances change, and we don't think there is a single plan which has been carved in stone. The Rockefellers never put all of their financial or political eggs in one basket "Doubtless, the family is considering a whole fleet of alternatives.

Rocky now says that he will not run with Ford in '76. He did not say he wouldn't run without him. Our Washington sources tell us that it was Nelson's idea to announce that he would not be on a Ford ticket, and that Jerry unmerrily begged him not to make the announcement. The reason Nelson is getting off the S.S. Jerry Ford, is that it is a sinking ship. Rocky's private poll! reportedly show that Ford could well lose early '76 primaries and thereby throw the nomination wide open.

At that point the Rockefeller bandwagon would begin rolling with the greatest media promotion campaign in history, the theme being that only Rocky can save us. Indeed, according to Washington's best informed columnist, Paul Scott, Rockefeller began setting up an independent campaign organization two weeks before announcing he would not run with Ford. But wait, the plot thickens.

Many will refuse to believe the next prediction will happen, but we would bet our last farthing on it. If

Nelson gets the top spot, the number two man on the ticket will be Ronald Reagan. It will be successfully sold to the Republican faithful across the nation as "the ticket to save the party." Would Reagan prostitute himself to accept the number two man on a Rocky ticket? Unfortunately, the answer is yes. Reagan will do whatever his -Kitchen Cabinet- of -money men tell him to do. When he first got the Republican nomination for the Governorship of California in 1966, he quickly cut himself loose from tough conservatives and put Rockefeller men in as his key advisors.

Whether Rocky is at the top or in the number two position on the ticket may depend on whether his private surveys indicate he could be elected President. Recent public polls show that he is not exactly as popular with the American people as ice cream at a picnic. Even though the Rockefeller family is reportedly ready to spend \$100 million dollars to put Nelson in the White House, it still might not work. The American people seem intuitively suspicious of him.

How widely this book is read could influence Rocky's decision.

In addition to financing a lavish direct and indirect campaign for a Rockefeller-Reagan ticket, the House of Rockefeller can be counted upon to pump money in a thousand different and devious ways into splitting the Democrat vote. The odds-on favorite to get the Democrat nod is Hubert Humphrey. The US has moved so far toward fascism - socialism that Hubert Humphrey, a founder of the radical Americans for Democratic Action (ADA), is now considered to be a middle of -the road - candidate. Like Nixon in 1968, Humphrey is a man whose time has come. Nobody is too wild about him, but he is acceptable to most.

A far left ticket headed by Eugene McCarthy or Senator Frank Church of Idaho would siphon off enough traditional Democrats so that the Republicans could win with forty % of the vote. Divide and conquer is the name of the electoral game.

Wallace can be counted upon to run as a patriotic third party candidate and take some workingman-type votes away from Humphrey. Wallace is not a Rockefeller man and the family would hope that he does not start such a wildfire rebellion against the Establishment that he actually gets elected.

Meanwhile Nelson can continue as the de facto President, letting Ford walk around with a target on his back. Since Ford has made Rocky head of the Domestic Council (which controls national policy), and since Kissinger runs foreign policy, the House of Rockefeller already controls the government in everything but name. Having Nelson as Veep is a gun perpetually cocked at Ford's temple. If Jerry for some reason does not want to go along, a Secret Service man may look the other way while an assassin does a number on the President.

Let us assume that public revulsion at Rocky is so great that he is dumped from the Republican ticket. And let us assume also that Humphrey or another Democrat wins the Presidency. Does that mean that the royal Rockefellers would be stripped of their power? No, not unless the whole CFR socialist -fascist-world government strategy is repudiated. If Rocky is ousted, it will be a huge blow to his inflated ego and might set the Rockefeller Great Merger timetable back somewhat. The House of Rockefeller would simply be back to operating through the CFR. But their plan for world conquest will roll on unabated.

You see, we have the Rockepubs and the Rockedems, but there is not a dime's worth of difference. Both parties belong to the House of Rockefeller.

[Back to table of contents](#)

# Epilogue

Now you have read the most important contents in The Rockefeller File. The assembled evidence is almost overwhelming, isn't it? And yet we have left out reams of important material.

This book was originally targeted for 144 pages. But we wound up with over 260 pages -even after omitting a great deal of explosive material. In order to keep the cost from climbing through the ceiling, we settled for the size you are reading. If we have not convinced you of the dangerous power of the House of Rockefeller in 200 pages, you probably would not believe another 200 pages anyway.

We deeply regret not using the voluminous files of research, all on very important subjects, which were gathered for this book. Several volumes could be written on Rockefeller efforts to involve America in World War I, World War II, Korea and Vietnam -and the profits they made from those conflicts. The alliance between Nazi Germany and the Rockefellers is truly shocking. (Hitler's Luftwaffe ran on Standard petrol, and the Rockefellers were partners in I. G. Farben Industries, whose thousands of war products included the poison gas used in Nazi death camps.) The no-win war in Vietnam was almost totally engineered, from its foolish beginning to its disastrous conclusion, by CFR minions.

Nothing has been said about Nelson's tenure as Governor of New York. We did not relate how he quadrupled state spending; We did not cover his campaign promises not to raise taxes-which were always followed by increases after he was elected. Neither have we touched upon Rocky's edifice complex, such as the \$1.5 billion Albany Mall or his creation of "moral obligation bonds" to finance projects the voters had rejected.

Lack of space prevents us from discussing the Rockefeller power-play behind the myriad regional government plans, which would abolish city, county and state lines thus destroying traditional local government and putting the citizens at the mercy of unelected (and unremovable) federal bureaucrats. The Family is also the prime mover behind the push for "land use" controls which would allow the government to dictate to you what you can or cannot do with your own property.

But all of these stories will have to wait for another book. We can summarize all of those bulging files of research material by saying that the Rockefellers want federal control of everything. Since they intend to control the federal government, either directly or from behind the scenes, this means that they will control everything. And when they control everything, they will control everybody.

We have shown that the House of Rockefeller is worth billions of dollars -and has considerable leverage over hundreds of billions more, through influence over the mega-banks, financial institutions, manufacturing and petroleum production.

The Family has used foundations to preserve and multiply their wealth, and to mold public opinion through education, the media and religion. Through their Council on Foreign Relations they have extended their influence in government, the Federal Reserve, communications and education. An unquenched, ruthless, psychopathic lust for monopolistic power has motivated three generations of Rockefellers. Because America is a large, diverse and decentralized nation, it has taken them a hundred years to complete the scaffold which would strangle freedom. Now they are ready to put the rope around our necks and trip the lever.

The question is: Can we cut the rope before the Rockefellers drop the trap door? The most honest and

realistic answer is: Perhaps.

Let's not kid ourselves; resisting the power arrayed against us won't be easy. Many persons who have read this far won't even try-they will decide that it is hopeless and simply return to their business interests or their bridge games. Others might decide that their best course is to support the House of Rockefeller! Switching sides and joining with your oppressors is as old as war. But if you haven't already been tapped, you are probably too late. The House of Rockefeller doesn't need you. (Sorry, Charlie!)

Unfortunately, some newly awakened patriots will go off on wild, impractical schemes. They may want to haul the Rockefellers before the courts in an attempt to put them in jail for their crimes and strip them of their power. But, let's face it, this is not going to happen. And such ill conceived crusades end up hurting the cause of freedom far more than they help. There is, however, an Achilles heel in the Rockefeller plan for world dictatorship. It is that a Rockefeller triumph depends on their continued control of the US government. If their influence in the federal government were removed, all of their Hitlerian dreams for world conquest would collapse. (Not that Nelson and David would spend the rest of their lives in rags, but at least you wouldn't either.)

Rockefeller control over the Executive branch of our government is deeply entrenched. The voters, for example, cannot fire the State Department bureaucracy. But there is a solution.

If a buzz saw suddenly went berserk and was ripping your house to pieces, what would you do? You would pull the plug, of course. The same thing must be done to the Rockefeller conspirators. The way to pull the plug on them is to gain control of the House of Representatives. All government spending bills must originate in the House. And Congress could refuse to pass any law pushing us further into World Government. We need 225 Congressmen who have the guts to say NO to the Rockefellers.

The Rockefellers can control key bureaucrats; they can buy and intimidate too many Senators. But a member of the House with enough character and enough support can remain independent of the Rockefeller Family.

The problem is that too many citizens listen to what a candidate says during the campaign, and then promptly forget about the issues-and what he does about them after the election. A Congressman may go to Washington with good intentions, but succumb to the Rockefellers' siren song after he gets there. The pressures are tremendous. He is told that in order to get along, he must go along. If he goes along, his district gets fat government grants and contracts. If he doesn't go along, a Rockefeller-supported demagogue may defeat him in the next election.

What we must have is a "Truth In Advertising" standard for politicians. If you buy a product to do a specific job you expect it to do that job. Why should you expect less from elected politicians? We believe it is time to end the "vote and hope" system of elections, where *you hope* the new Congressman votes in the interest of his country after he gets to Washington. The usual result is that the constituency gets sold down the river. (A prime example is the confirmation of Nelson Rockefeller for the Vice Presidency when Congressional mail ran 24 to 1 against approval.)

We think any candidate worth supporting should sign an elementary contract before you agree to contribute to his campaign or otherwise support him.

'76 PRESS has prepared such a contract, a copy of which appears on the next page.

Any political candidate who will hem, haw, double-talk or waffle in an effort to weasel out of signing such a "Truth In Politics- contract will surely not stand up to the blandishments of the Rockefellers once he is elected. Forget him. Be especially leery of the smiling, glad-handing, all- things - to-all- people moderate type of candidate. Such a "middle of the roader" will often compromise on the key issues and still manage to get re-elected time and time again. He is the most dangerous of all politicians.

The diabolical designs of the Rockefellers - their push for fascism- socialism at home and an international World Government must become the key issue of the next

## **CANDIDATE'S CONTRACT**

### **Campaign Pledge\_**

In the belief that "Truth In Advertising- should apply to politicians as well as to commercial products and services, I whole heartedly agree that the citizenry is entitled to expect a candidate to keep his campaign promises once he is elected.

Therefore, as a candidate for election to the office of .....

I do hereby pledge, if elected, to adhere faithfully to the following positions on all votes and debates on these matters:

1. **I agree** to oppose any treaties, legislation, or other measures which would strengthen any regional or world bodies at the expense of American sovereignty.
2. **I agree** to oppose any proposals which would grant foreign aid, tax payer- financed loans or loan guarantees, or other assistance to any Communist nation, whether such aid is given through national or international agencies.
3. **I agree** that the United States must retain military superiority over any potential aggressor; I will oppose any disarmament proposals that would support a World Government military force or that would not provide for thorough and reliable inspections of other nations.
4. **I agree** to oppose any deficit spending by the federal government, since such deficits increase the national debt and the inflation of our currency.
5. **I agree** that the expansion of government over every facet of our lives must be stopped, and that the marriage of Big Government and Big Business must be ended. I pledge to work to reduce the size and number of federal bureaucracies and agencies, not expand them.

Should I violate any of the promises made in this Campaign Pledge, I agree that the v

THE MAN WHO MISRULES THE WORLD

Emblem of Rockefeller - Soviet Axis

*"These letters make it clear that Rockefeller's Institute of Pacific Relations controlled the spy ring that instigated the attack on Pearl Harbor, and that they knew in advance, to the very day, when it would occur and involve us in the war."*

*(p. 281)*

EMANUEL M. JOSEPHSON was born in Baltimore, Md., September 23, 1895. Educated at Johns Hopkins University and Columbia University. B.S. 1916, M.D. 1917. In 1921-22 he was Assistant to the Medical Director of the American Red Cross in Europe. Since then he has engaged in medical research, in the practice of medicine, and in writing on medicine, politics and economics. He has been fearless in his exposure of sham and corruption in those fields.

Among his publications are:

The Gold Standard Myth  
Your Life Is Their Toy  
Rackets—Social Service & Medical  
Merchants In Medicine  
Glaucoma & Its Medical  
Treatment With Cortin  
Near-Sightedness Is Preventable

Breathe Deeply and Avoid Colds

The Strange Death of Franklin D. Roosevelt

With a note on "Education" By Fred H. Johnson

Proceeds from the sale of this book are devoted to  
the struggle for the preservation  
of human freedom.

It is dedicated to

#### THE CONSTITUTION

a blueprint of human organization drawn up by the wisest  
group of men who ever assembled for that purpose.

It is eternally true in its concept of freedom as the  
fundamental basis of government.

This is published in the hope of restoring the Constitution  
as our basic law, and preserving the freedom that it was  
designed to give us, against the onslaught of conspirators from  
without and within, so that America may become again

"... the land of the free . . ."

"The Carnegie-Rockefeller influence is bad. In two generations they can change the minds of the people to make them conform to the cult of Rockefeller, or the cult of Carnegie, rather than the fundamental principles of American democracy."

Sen. Chamberlain (Ore.) March 26, 1917

"In our dreams we have limitless resources and the people yield themselves with perfect docility to our molding hands. The present educational conventions fade from our minds, and unhampered by tradition, we work our own good will upon a grateful and responsive rural folk . . . The task we set before ourselves is a very beautiful one, to train these people as we find them to a perfectly ideal life just where they are. So we will organize our children into a little community and teach them to do in a perfect way the things their fathers and mothers are doing in an imperfect way, in the home, in the shop and on the farm."

The objectives of Rockefeller "philanthropies" stated by him and Gates in Occasional Letter No. 1 of the G.E.B.

"ANYTHING ROCKEFELLER WANTS IS OK."

Senator Arthur H. Vandenberg, "Bipartisan", San Francisco Conference For UN Organization, May 1, 1945, quoted by Drew Pearson.

"Even after we were in the war, Standard Oil of New Jersey was putting forth every effort of which it was capable to protect the control of the German government over vital war material.

"As Patrick Henry said: 'If that is treason (and it certainly is treason) then make the most of it'.

"YES IT IS TREASON.

"You can not translate it in any other way."

Harry Shippe Truman, March 27, 1942

"They should look at their hands. THERE IS BLOOD ON THEM—the dried blood of the last war and the fresh blood of the present one."

Chicago Tribune editorial, December 9, 1950

"... by thy words thou shalt be condemned."

Matthew, 12:37

# PHYSICAL SYMBOL OF ROCKEFELLER-SOVIET AXIS

At West Corner of Park Avenue and 68th Street there stand three buildings side by side that are the emblem of the Rockefeller-Soviet Axis. "A" is the home of Rockefeller's Council on Foreign Relations, the Foreign Office of the Rockefeller Empire. "B", on the opposite corner is the home of the Soviet Russian Delegation to the UN. "C" houses Rockefeller's Institute of Public Administration, controlling city and state governments.

To my many patriotic friends who have helped me  
unstintingly in my efforts I offer my sincere gratitude.

W A R N I N G ! Soviet Russia is controlled by a ruthless gang of criminals, moral and ethical lepers who pose as "philanthropists" and champions of "the masses". They are bent on conquering, looting and raping the world; and will not stop until, either they have accomplished it, or themselves have been destroyed. Any dealings with them as a government merely gives them the advantage of the delays and aids implied in international amenities, that they scorn but use to full advantage.

There never has been a more effective way of checking the spread of contagion than isolation. A policy of strict isolationism would weaken the Soviets by withholding from them the material they require for their mad, criminal plans.

Their accomplices in our midst have undertaken to discredit isolationism and make it a term of opprobrium and reproach, to further their conspiracy. They foster "internationalism" which Stalin has dictated shall mean that:

"An internationalist is one who is prepared unreservedly, unhesitatingly and unconditionally to defend the USSR". (New Leader, March 11, 1950) All of the conspirators' "internationalist" schemes, the Marshall Plan, the NATO, the MSA, the Point 4 program, etc. are designed to supply the Communists with the equipment and material without which they can not wage war on us. The material is sent to our treacherous "allies" in the East and the West, and is transhipped by them, to their criminal scum, Communist partners indirectly, when not sent directly. To increase their loot, the Red racketeers are now resorting to blackmail, in the ransoming of our prisoners, the "snatch racket". We must act immediately to oust and bar from public office any person identified with the vicious conspirators.

Most absurd of the futilities with which the conspirators are deluding us is the idea that the Communist criminal scum, or our own, will ever change their stripes—that there ever can be any peace with them so long as we make war so profitable for them. The Korean "truce" farce demonstrates that well. Unless we abandon "internationalism", and frustrate the conspirators, it will inevitably lead us to bankruptcy and destruction by the enemies within and without our gates.

## CHAPTER I

### U.S. BETRAYED "WHODUNIT?"

"Anything Rockefeller Wants Is O.K."

Sen. Vandenberg, "Bipartisan", San Francisco UN  
Conference, May 10, 1945.

For the fourth time within half a century, the people of the United States have found themselves drawn into and forced to fight a war that was not their concern and in which it was not their desire or will to participate. On each occasion the nation was tricked into war by the same clique. The more observant and intelligent sections of the public have sensed that there is a power behind and above the government that controls it and dictates its actions without regard to the will of the people. That power has thus far been immune to exposure.

So insolently confident has this power become that in the last two wars precipitated by them, World War II and the Korean War, they have not even made a pretense of complying with the form prescribed by the Constitution, declaration of war by Congress. In violation of the Constitution, the United States has been thrown into the wars by "royal" edict issued by the power behind the Government, though ostensibly at the instance of the Presidents who have been their puppets, after incidents obviously incited by them through their pawns in our own and foreign governments.

There can be no question, at this late date, that our Government in Washington, for several decades past, has been, and now is, very largely composed of subversives, Communists and their fellow travellers and traitors. Only a few of them have as yet openly confessed their betrayal of our land to Communist Russia and to other foreign agencies. A large number have been exposed as involved in the treason. A very small fraction of the number involved have been caught in the act of treason or perjury in connection with treason, and convicted. The trials and convictions of Alger Hiss, Judy Coplon and William Remington, and the confession of Lee Pressman, among others, have given the nation, at the expense of millions of dollars, legal proof of

what has been obvious for decades to the intelligent citizenry—that the nation has been betrayed persistently by treason of a wide array of public servants who range from the top policy-makers, such as the "father" of the United Nations, former Assistant Secretary of State, Alger Hiss, to the lowliest clerks.

Charges have been made repeatedly by the Committee on Un-American Activities, by members of Congress and by the informed press and public, with offers of proof. They have all been brushed aside in the past and labelled as unfounded by the administrations of Presidents Roosevelt and Truman, and by official agencies appointed by them supposedly to investigate, but actually to whitewash them, under circumstances that clearly bespoke involvement of the highest officials of the land in the treason.

The impassioned bias of Presidents Roosevelt and Truman, and their entourages, in favor of the traitors has raised the question: "Are they themselves not involved in this treason and conspiracy to destroy our land, its Constitution and its government?"

This suspicion was materially strengthened when there rose to the defense of Alger Hiss, Supreme Court Justices Felix Frankfurter and Stanley Reed; also U.S. Senators, including that mysterious power who has operated for years, sometimes behind the scene, without official status and sometimes on the scene, John Foster Dulles. It reached fever heat when Secretary of State, Dean Acheson publicly professed his friendship and loyalty to freshly convicted Alger Hiss, his associate in the State Department and the brother of his law partner, in the words "I will not turn my back on Hiss.". It became even more apparent from the hundreds of thousands of dollars expended upon the defense of Hiss, in his two trials, that tremendous power and unlimited wealth support the conspirators. The refuge he was reported to have been given in the home of Benjamin J. Bittenwieser, partner of Kuhn Loeb & Co. and then assistant to John J. McCloy, American High Commissioner of Occupied Germany, confirmed this impression.

The Tydings Committee treatment of the charges made by Senator Joseph McCarthy clearly reveal how widespread is the government circle involved

in the conspiracy and how overwhelmingly powerful they are. Especially was this true of the charges made against Owen Lattimore and the hearings accorded him. Never was there revealed in the hearings an important phase of Lattimore's activities, his close association with Alger Hiss. Nor was he questioned regarding the control and financing of AMERASIA of which he had been editor. This might have given some clue to the identity of the powers who protected the Communist spies, traitors and thieves of highly confidential State Department and other government records that jeopardized the secrecy of our codes and menaced the lives of our soldiers; and who forced their release by the court under criminal circumstances, after the Justice Department refused to press charges against them.

The shielding of Owen Lattimore is all the more reprehensible and startling because it is the type of propaganda in which he engaged that effected the turning over of China to the Communists for use by them in the Lenin plan for slaughter of our troops and vanquishing and destroying our country. Engagement of our troops, planted in Asia by the conspirators within our own government, in a diversionary action, insured the Communists of a free hand in taking over the lands allotted to them by the conspiracy. The blood of thousands of our troops is on their hands.

Vituperative, smear-skilled Owen Lattimore has been built up as wronged, abused and falsely charged. His propagandist drivel was insured immediate publication under the title of "TRIAL BY ORDEAL". It appeared so soon after his Senate hearing that it could have been managed only if pre-arranged by an ultra-powerful clique who were sure of "fixing the rap" and to whom money was no object. Even under those conditions the publication constituted a miracle from the viewpoint of both speed and access to publication, even in a book trade that publishes only pro-Communist propaganda. Sister Eleanor Lattimore was given an opportunity to swell the volume of this insolent propaganda in the October and November, 1950, issues of the crimson Harper's Magazine. Any author can tell how complete a control of avenues of publication by the clique such a press implies.

A few months later, the Korean "police action", as it was termed by Truman, precipitated us for the

second time in a decade into a war by Presidential ukase, in a violation of the Constitution that legally requires impeachment of the President. This "emergency" was engineered in time to influence the oncoming election. It has also served as a perfect device for cover-up of the wholesale treason that had begun to come to light.

The engineered "emergency" resulted in freezing in their control of the nation for the duration—and possibly for a period long enough to enable them to carry out fully their conspiracy for the betrayal of our country—the very subversive and traitorous elements that had been exposed. This is the real emergency that confronts the nation.

During the Korean War, our State Department and other Government agencies have served the Communists more effectively than could any openly registered Communist agents or spies. The order that was issued by the Navy to the 7th Fleet, to patrol Formosa Strait and bar any attack by the Nationalists on the Communists on the mainland, has served to protect the flank of the Chinese Communists and left them free to employ their forces in butchering our troops in Korea. It also enabled them to proceed to take over Tibet, Indo-China and other points.

Truman, Acheson and the State Department initially pretended that the purpose of the order was to allay the suspicions of the Chinese Communists that we planned an attack on them, in order to insure that they would not intervene in Korea. This pretense was palpably false and fraudulent. For it was known from the very start of the Korean War that the Soviets and the Chinese Communists were collaborating fully with the Korean Communists and were supplying them with both munitions and men. But the conspirators preferred to ignore this and deliberately misrepresented the situation to the nation.

They carried their treachery to the point of insuring initial defeat of our forces and slaughter of our troops. The conspirators engineered to make their war a United Nations affair, despite the reluctance or actual opposition of its members. Together with our national sovereignty, the conspirators arranged to turn over to the United Nations control of our troops. On the UN military staff there sits a representative of our enemy, a Soviet

general. Through his hands pass the confidential reports of the field commander, which he as a matter of course, transmits to Moscow to be relayed to the enemy. He participates in dictating the instructions to our field commander. This gives the enemy the power to dictate the terms and conditions under which we must fight them. It robs the field commander of one of the most essential elements in successful warfare, the element of surprise.

Aligned with the enemy are our false UN "allies", who dictate absurd restrictions that bar our forces from attacking the Manchurian bases from which the Korean Communist armies are armed, supplied and reinforced. In the meantime the Communists are being supplied with oil and munitions by our own nationals and by our UN "allies" at the expense of our Treasury and taxpayers, through such devices as the Marshall Plan supplies and arms shipped to Western Europe under the terms of the Atlantic Pact, and the Point 4 program. Our own troops in Korea were denied reinforcement and supplies on the ground that their services are needed in Europe.

To cap the climax, offers of 500,000 South Korean troops were rejected just as were the offers of Chinese Nationalist troops. The conspirators, for reasons of their own, insist that American blood must be shed in Korea and the flower of our youth maimed, mutilated and killed in a Communist booby trap. Benedict Arnold was a patriot as compared with these brazen, ruthless traitors who completely control our country, betray it and are seeking to encompass its downfall.

As a climax, when General MacArthur overcame all the barriers that they placed in the way of success, and threatened to attack the Communists on their own ground, in Manchuria, the conspirators arranged to have him relieved of his command.

Apologists for the conspirators are doing their best to make the nation believe that these constant acts of national betrayal are mere "BLUNDERS". But it must be obvious even to the most imbecilic that no one could conceivably be so stupid as to commit such repeated acts of betrayal, as mere "blunders." For it is quite obvious that in the case of real blunders, the element of chance would insure that an occasional blunder would be made in our own favor. The fact that these acts have consist-

ently militated against us, eliminates completely the "blunder" alibi, even if we did not have at hand conclusive proof to the contrary.

The absurd campaign of mass hysteria over the atom bomb that has been engineered by the conspirators in this country with low cunning and on a vast scale, attests to their treacherous design and their assured contempt of the nation. Though the conspirators have done their best to traitorously turn over to Russia full knowledge and blueprints of the bomb and even supply them with processed uranium, no announcement openly claiming possession of A-bombs had ever been made by the Russian government. The first two announcements stirring up the A bomb mass hysteria were made by President Truman as an excuse for demanding and seizing wartime dictatorial powers, attaining more intensive looting of the nation by staggered taxation, and keeping the nation "artificially alarmed," the avowed policy of the conspirators.

On each occasion when the Administration subsequently sought increased appropriations, the threat of A-bombs was brought forth, or Truman announced that Russia had exploded another A-bomb. It was not until a year later, after a host of scientists had vanished behind the Iron Curtain, that Stalin announced that Russia had exploded an A-bomb. There is much in the situation that suggests that the conspirators themselves had supplied some A-bombs to be exploded in Russia, for the deliberate purpose of intensifying the hysteria they create and feed. But Russia continued to demand elimination of the use of the bomb, which indicates it had no bombs for warfare.

Truman's announcement of Russia's possession of atom bombs was false and was known to be false by the announcer. The Communists made it quite clear that Russia had no bomb other than what had been stolen from us by traitors and their agents. They openly acknowledge this in the Stockholm "Peace Petitions" which they circulated for the express purpose of elimination of the bomb from use in warfare. Normal intelligence dictates the conclusion that the Soviets would not seek the elimination of the bomb if they possessed a supply of them. They have not asked for the elimination of planes, rockets, disease warfare or of any of the devastating weapons which we know they possess; nor have

they hesitated to use them where they served their own purposes. And intelligent or informed persons could have no delusions regarding humanitarianism amongst the Communist leaders.

Nevertheless the conspirators in our midst seek to gain our submission to the Communists by creating craven terror of our own bombs in our midst. One begins to wonder if they actually conceive of using our bombs against us, or holding them until the Communist conspirators take over and use them against us. In many respects the situation resembles that of children trembling before a bugaboo that they have created with their own hands. Infinitely sad and damaging is the spectacle of craven cowardice and hysterical terror which they seek to have us present to the world. They are aiding and abetting our enemies by undermining our morale at home and our prestige abroad.

So gross and persistent has been the exaggeration of the effects of atom bombs, in daily newspaper headlines and on the air by officials and others that even the appearance in our midst of a missionary, Father Hubert F. Schiffer, who sat in his mission less than a quarter of a mile from the exploding atom bomb at Hiroshima, and suffered no injury, has failed to bring the public to their senses. To be sure the conspirators have been very careful to minimize or suppress the truth illustrated by his experience; the newspapers have failed to make any mention of them or buried small paragraphs on them in their back pages as contrasted with the daily, screaming terror headlines and official pronouncements. (N.Y. Times, March 30, 1950.)

This situation also is fraught with elements of sabotage by the conspirators of our military preparedness and defense. For so much time, money and material are being diverted into protection from the exaggerated terrors of the atom bomb, that industry and rearming of the nation are being slowed down by them; and needless costs and added taxes are being incurred. In short the bombs which should be used to weaken and scare our enemies are being used by traitors and fools to effect our ignominious submission to the Soviets and even to Communist China. We are going down in a blaze of cowardice and treachery.

Only one public figure, former New Deal Ambassador to England, Joseph P. Kennedy, has openly

intimated that the situation in which we find ourselves may not be a product of mere blunders. He characterized our policies as "suicidal". Ex-President Herbert Hoover has protested the insanity of a foreign policy that seeks to purchase allies and aims to instill in them courage and the will to be free, by monetary infusions.

Meanwhile as our troops were being sent to the slaughter, to die by the thousands in Korea with inadequate reinforcements and supplies, as our people are being whipped up into a frenzy by the phoney atom bomb scare, as our purses and Treasury are being depleted by the Marshall Plan, by the Atlantic Pact arming of Europe to permit those treacherous "allies" to ship their own arms to our enemies, the conspirators whip up a new plan to hasten national bankruptcy and provide support for the enemy—the Point 4 program. At this point there comes to the fore the questions: "Who are these notorious and callous traitors?" "Who enables them to penetrate into the topmost ranks of our Government?" The authors and directors of our destiny and the masters of our national fate, stepped out on the scene into the open to claim credit and acclaim for putting us on the international merry-go-round. In the December 30, 1950, and subsequent issues of the Saturday Evening Post there appeared a series of articles, the first of which was entitled The Rockefellers: The Story Of Five Young Millionaires. In these articles the Rockefellers, with characteristic "modesty", take the bow as Messrs. "Internationalism". The author states that they allege that their "philanthropies" transcend all bounds of national interests or patriotism. Like the rest of the "internationalist" breed, it appears that they scorn patriotism as reprehensible and undesirable because it interferes with their schemes. The sole ultimate criterion of desirability is stated in the articles to be profit to themselves. On that basis, the "internationalist", activities have been highly desirable to them, because, undeniably, they have been highly profitable for them, however disastrous they are for us, the "peasantry", individually, and for our country. For it is we who have had to foot the bills for the expansion of the "internationalist" interests of the Rockefeller Empire, with our fortunes, our liberties and in many cases, our lives.

## CHAPTER II

### THE RISE OF THE ROCKEFELLER EMPIRE

#### A Lamp More Magic Than Aladdin's

The rise of the Rockefeller Empire, the greatest the world has ever known, has been the most fateful development of the twentieth century. Coupled with the spread of Marxism, with which it has been closely identified, it has assumed the rule of human destiny.

The story of the origin of the Standard Oil Company, and of the Rockefeller fortune with which it is synonymous, has been repeatedly told in such works as Ida Tarbell's *The Standard Oil Company*; in the exhaustive biography, John D. Rockefeller (JDR), written by Professor Allan Nevins, of Rockefeller's Council on Foreign Relations and Columbia University, with the authorization of John D. Jr. and the cooperation of the family, as a definitive memorial; and in numerous official government investigations, lawsuits and other records. A brief resume will suffice.

John D. Rockefeller was the son of "Doc" Williams Avery Rockefeller. "Doc" was a cunning, crafty, unscrupulous, ruthless and irresponsible vendor of patent medicines and a quack physician. He advertised himself as "The Celebrated Cancer Specialist—All Cases Cured Unless Too Far Gone", according to John K. Winkler in his *John D.—A Portrait In Oil* (p.12). It is reported that his cancer remedy was crude petroleum oil, sold at twenty five dollars a pint, (JDR, V. 1, p. 93) when the traffic would bear it. Nevins also reports rumors of horse thievery (JDR, V. 1, p. 50) bigamy and an indictment for rape (JDR, V. 1, p. 52). As a consequence, the Rockefellers were forced to migrate, an incident that has been repeated in the family history; and they hit upon hard times. John D's early life was one of insecurity and spells of poverty. As biographer Nevins states it: (JDR, v. 1, p. 90)

"... the inevitable tendency of this family atmosphere of hazard and dubiety was to foster in him ... a profound desire for certainty and dependability . . ."

Though for the major part the father derived a handsome income from his devious devices, and at times provided well for the family, the lapses in-

tensified in John D. an instinctive penuriousness and love of money. This was further intensified by the training which the father gave his sons, mayhap unintentionally and instinctively to make amends for failing to provide adequately at all times for the family, a training that would help materially in keeping the wolf from the door. Nevins quotes his boasts about it to his crony, Uncle Joe Webster, as follows: (JDR, v. 1, p. 93)

" 'I cheat my boys every time I get a chance', the 'doctor' said. 'I want to make 'em sharp, I trade with the boys and skin 'em, and I just beat 'em every time I can. I want to make 'em sharp.' "

Ruthlessness and rapacity were masked by a pose of benevolence and philanthropy. This attitude and training have become a family tradition.

John D. acknowledged that even as a multi-billionaire he suffered from an insane fear of poverty. He related in a talk to the Standard Oil Club on May 7, 1904, quoted by Nevins, (JDR, v. 1, p. 103) that

"As a multimillionaire, he would occasionally awake fancying that he was still a clerk under Hewitt (his first employer) and had discovered a shortage." Fear of poverty was imposed by him on those about him, especially on his family, to such extent that it became the mainspring of the character of Rockefeller enterprises. This fear could be allayed only by such complete domination of the community and of the world that no one could ever arise to offer competition or to threaten impoverish him. This mental condition gave rise to a super-Napoleonic complex, a driving urge to rule the U.S. and the world.

The initial urge manifested itself in the field of oil. Rockefeller had built up with ruthless skill the powerful Standard Oil monopoly. By 1915, it produced almost a third of the oil of the United States. Complete monopoly of all phases of the oil business loomed as a conceivable goal. This dominant role had been gained by gangsterism that would make an Al Capone blush. In the process there had been used unsavory methods ranging from theft to arson and slaughter. The tactics adopted by the Rockefeller interests differed primarily in their excesses, from those adopted by the respected Morgans, Vanderbilts, Goulds and others

of the time. But the Rockefeller Standard Oil tactics were even more ruthless than the others and were crowded with inordinate success. His methods are illustrated by the reports of Ida Tarbell in *The History Of The Standard Oil Co.* and by Anton Mohr in *The Oil War*. The latter reports: (p. 209) "Standard Oil's intrigues—the Americans even hired bands of Mexican brigands, who destroyed Pearson's (Mexican) oil-pipes and set his wells on fire . . ."

Nevins subtitled his official biography of Rockefeller, *The Heroic Age Of American Enterprise*. If systematic use of arson, murder, burglary, theft, extortion, swindling, blackmail, wholesale corruption of public officials and gangsterism on a grandiose scale are "heroic", this was indeed an heroic age. And one of the most "heroic" of the contemporary figures was John D. Rockefeller. All his untiring energy and sleepless enterprise were devoted to the "holy" purpose of acquiring unlimited wealth and power, and the "security" he sought for himself.

In the process of development of the Standard Oil Co. by merger with powerful allies and by ruthlessly crushing rivals and weaker independents, a score of great fortunes were made. A curious collaboration has prevailed among most of those families whose fortunes were made in the Standard Oil Co., and retained. They have accepted the domination of the Rockefellers. This is denied by them and by biographer Nevins. But there is much evidence to bear it out. Many enterprises are controlled by these fortunes, and in turn by the Rockefellers, and innumerable matrimonial financial alliances have been formed.

Oliver H. Payne acquired as in-laws, William C. Whitney and Gertrude Vanderbilt. They have come to dominate American Tobacco Co., Great Northern Paper Co., Belmont Park Race Track, Pan American and New York Airways (with Juan Trippe), Hudson Bay Mining & Smelting Co., Whitney Realty Co., Technicolor Inc., Selznick International, the Communist newspaper PM, now defunct, and many others.

Oliver B. Jennings acquired as in-laws, William Rockefeller and Mary Brewster. They dominate Bethlehem Steel Corp., McKesson & Robbins, U.S. Industrial Chemical Co., National Fuel Gas Corp.,

National Distillers Co., Amalgamated Textiles, and others.

Stephen V. Harkness' family are important factors in New York Central and Southern Pacific railroads, and in Time Inc. The Pratts are factors in the Chase National Bank and Corn Products Refining Co. John D. Archbold and his family had important holdings in National City Bank, Equitable Trust Co., General Electric Co. and Pennsylvania Central Airlines. Henry Flagler controlled Florida East Coast R.R. and other extensive holdings in Florida. Edward T. Bedford was an important holder of stock in Title Guarantee & Trust Co., American Tobacco Co., Bedford Petroleum Co., Corn Products Refining Co. and Penick & Ford Ltd., Inc.

William Rockefeller numbered among his inlaws the Dodges, Stillmans, Carnegies and the Wat-jens. He was a dominant factor in National City Bank, Anaconda Copper Co., American Brass Co., Air Reduction Co., U.S. Industrial Alcohol Co., U.S. Rubber Co. and many others. Their holdings in the Standard Oil Co. are small as compared with those of John D.

The holdings and wealth of John D. Rockefeller and his descendants mushroomed so rapidly that it is difficult to keep track of them. Indeed the task has been made almost impossible because of the family practise of holding stock in the names of nominees and trustees, almost exclusively in many instances. They appear in person in very few corporations which they control. Their nominees and agents are multitudinous. The more important of them are generally placed by the Rockefellers on the boards of trustees of their various "philanthropies" and in the membership of their agencies, especially the Council on Foreign Relations. As a rule, this is done at the time of acquisition of the property for which the individual acts as nominee.

Thus, about 1937 it was rumored that the Rockefellers had acquired control of the New York Times for the sum of seventeen and a half million dollars. At about the same time one of the nominal owners of the Times and its publisher, Arthur Hays Sulzberger, became a trustee of the Rockefeller Foundation. The name of Rockefeller has never been publicly identified with the Times. But the publication has been obviously the official journal of the Rocke-

feller Empire, in much the same sense that the London Times has been the official journal of the British Empire. Reliable information regarding Rockefeller ownership or control of the Times, however, has never been made public.

It has been an apparent objective of the Rockefeller interests to gain monopolistic control of every necessity of life and of every source of energy, oil, gas, coal, water-and wind-power, electricity, atomic energy and every other source that exists or comes into being. They have not yet succeeded in making the greatest of all sources of power, the sun, render them tribute. But when a means for doing so will be devised, they will control it, and make the world pay for its solar energy. They seek to control all necessities from the time they are produced until they are consumed, and to cartelize the process. They control every important governmental agency in the land, and abroad, and have converted them into their private agencies that are empowered to levy upon and confiscate the wealth of every private citizen, and of the nation, through taxation and control of the expenditure of the funds thus levied. The citizenry of the U.S. virtually have been disfranchised in the process. For all effective purposes, the Rockefellers remain free of taxation under the laws written and enforced by their agents.

As a consequence, the wealth of the Rockefellers is incalculable. Favored by the law, their fortune grows while others are wiped out. It is doubtful if there exists enough money in the world to make their wealth liquid. For it represents the wealth of all of us, plus control of the natural resources of the larger part of the world, or possibly of all of it. In effect, the wealth of all of us is levied on and, in many instances, confiscated, for the advantage of the Rockefeller Empire. Our tax and other laws are effecting for the Rockefeller interests a monopoly of all the wealth of the nation. This serves to explain why the Rockefellers personally are so consistently and insistently demanding increased taxation to pay for ever larger expenditures for the Marshall Plan, the Point 4 program, and any device for squandering the taxpayers' moneys. The tax moneys from these programs flow into their own coffers. Their "philanthropies" are defrayed with "other people's money", the taxpayers'. These matters will be related later in full detail.

The visible wealth of the Rockefellers, that which they hold in their own names, is, nevertheless, the world's largest fortune. Their holdings of the various Standard Oil Companies, that constituted the nucleus of their wealth, has been variously estimated. The semi-official figures released by them in their publication *Life*, on April 17, 1950, expressed as percentages of the outstanding voting stock, is as follows: Standard Oil of New Jersey, 14.52% of sixty million shares with market value of more than four billion dollars; Standard Oil of Indiana, 13.58%; Standard Oil of California, 12.58%; Socony-Vacuum, 17.25%; Standard Oil of Ohio, 10%; Ohio Oil Co., 13.02%. (Their market prices have doubled in the past year and their earnings and dividends have risen commensurately.) These figures are a bit lower than reported to the Interstate Commerce Commission in 1933, when in addition the following holdings were listed: Prairie Pipe Line, 14.72%; Atlantic Refining Co., 7.12%; South Pennsylvania Oil Co., 32.92%; and 69,020 shares of Shell Union Corp. of the Royal Dutch group. These holdings constitute but a small fraction of the holdings in those companies held by the Rockefellers in the names of the Foundation and other nominees, and holding companies, interlocking stock ownership and other devices. Their holdings in the so-called "independent" oil companies, such as Texas Co., Pure Oil Co., and a host of others, are equally important.

Each of these companies controls a host of subsidiaries that operate throughout the world. Many of them are quite as important and impressive as their mother companies. Among the 149 subsidiaries of the Standard Oil Co. of New Jersey that circle the world are Creole Petroleum Corp., Imperial Oil Co., Humble Oil & Refining Co., and the Arabian American Oil Co. (known as Aramco). The concession of Aramco holdings to the Rockefeller interests cost the U.S. and the world two World Wars, the lives of tens of thousands of GI's, and endless misery for mankind. The expense of its development has been defrayed largely by U.S. taxpayers. It produces more than 850,000 barrels of oil, a day for Rockefeller interests exclusively, that they have supplied to Russia, the Chinese and Korean Communists, and yields them a tax-exempt gross income of almost two million dollars a day,

largely, and possibly entirely, paid them by the U.S. Treasury. The international ramifications of the Rockefeller Empire are illustrated by the principal affiliates listed in pages 20-21 of the 1950 Annual Report of the Standard Oil Co. of New Jersey, as follows: STANDARD OIL CO. OF NEW JERSEY

Consolidated Companies & Percentage Owned UNITED STATES Esso Standard Oil Company (100%)  
 Refining, transportation and marketing on Eastern seaboard Humble Oil & Refining Company (72%)

terminal in Lebanon

The Standard Oil holdings of the Rockefellers is a small fraction of their wealth. One of the most astute students of the Rockefeller interests is Henry H. Klein, former Commissioner of Accounts of New York City. His estimate of the Rockefeller wealth in the depression year 1938, published in his pamphlet *Rockefeller Or God*, is as follows:

"In my book, *Dynastic America and Those Who Own It*, published in 1921, I estimated the wealth of the Rockefeller family at \$2,400,000,000. I estimated at that time, that the Rockefellers owned about \$1,000,000,000 in oil alone; \$400,-000,000 in railroad stocks, bonds and notes; \$400,000,000 in industrial corporations, mines and banks; \$300,000,000 in national, state, city and

foreign bonds; \$200,000,000 in public utilities securities; and \$100,000,000 in real estate and mortgages.

"I now revise this estimate to date. The Rockefeller family now owns about five billion dollars (\$5,000,000,000), and enjoys an income of about \$250,000,000 a year, or about \$5,000,000 week. In my opinion, their holdings are approximately as follows: Standard Oil and other oil

securities.....	\$2,000,000,000	
National, state, city and foreign		
bonds .....	1,000,000,000	
Real estate and mortgages.....	600,000,000	
Railroad stocks, bonds and notes	400,000,000	Industrial
corporations, mines and		
banks .....	400,000,000	
Public utilities securities .....	300,000,000	
Miscellaneous investments		
(unclassified) .....	300,000,000	

"The Rockefellers are the richest family on earth, all made in the lifetime of one person, the late John D. Rockefeller. When the latter died a year ago his will disposed of \$25,000,000 to a grandchild. It made no mention of any other property. It is obvious, therefore, that all the other wealth that he had accumulated had been distributed before his death, on which no inheritance tax was paid. In fact, in my book, *Dynastic America and Those Who Own It*, published in 1921, I tell of the transfer of more than one billion dollars in oil holdings alone, to his son, John D. Rockefeller, Jr., the year before. I also tell of the transfer of vast oil holdings to his daughter, Alta Rockefeller Prentice; to Mrs. Edith R. McCormack, another daughter; to the Rockefeller Foundation, General Education Board, and Laura Spelman Rockefeller Memorial Fund. These transfers from John D. Sr., included hundreds of thousands of shares of Standard Oil securities, and a vast amount of other securities which doubled and tripled in value before he died.

"In *Dynastic America and Those Who Own It*, I estimated Mr. Rockefeller's income from his total Standard Oil holdings alone, prior to 1921, at about \$400,000,000 cash, and about \$250,000,000 in dividend stocks. Since 1921, these amounts have been at least doubled.

"Aside from their ownership of about one-quarter of the securities of the leading Standard Oil corporations, the Rockefellers own securities, consisting of stocks, bonds and notes, in most of the large, so-called independent oil corporations in the United States. They are also heavily interested in the Royal Dutch and other foreign oil monopolies in many countries. Their interests cover virtually every spot on earth, including Russia, where they own a half interest in the Nobel Oil Works.

"It is known that the Rockefeller family owns a vast amount of government securities. John D. Sr. was credited with having bought most of the second Liberty Loan, and a large amount of Victory bonds during the World War (tax exempt), and it is known that he and his brother, William, bought other securities of the U.S. Government, and of many cities and states. The Rockefeller family is credited with owning the largest amount of bonds of the City of New York, their holdings in these securities being estimated at more than \$100,000,000. When William Rockefeller died in 1922, he left many millions of dollars of the bonds of the City and State of New York. His wealth at the time (about \$150,000,-000), was less than one-tenth his brother's holdings. Because of their ownership of government securities, aside from other wealth, the Rockefellers are the most influential factors in government.

"The Rockefellers' holdings in real estate are tremendous, their holdings in New York City alone, being estimated at over \$500,000,000, or about 3% of the total assessed value of all real estate in Greater New York. They have similar large holdings in other cities, and their personal estates are estimated to have cost at least \$50,-000,000. Besides these personal holdings, the various Standard Oil corporations which they control, own real estate whose actual and potential value is several billion dollars.

"The Rockefellers have long been credited with controlling the leading railroads in the U.S. through their ownership of the largest share of railroad securities. They are known to be heavily interested in the Pennsylvania, New York Central, Union Pacific, Southern Pacific, Central R. R. of

New Jersey, Erie, Western Maryland, Wabash, Michigan Central, Missouri Pacific, West Pacific, Texas and Pacific, Northern Pacific and Great Northern, Baltimore and Ohio, Wheeling and Lake Erie, Seaboard Air Line, Reading, National Railways of Mexico, Missouri, Kansas and Texas; Atchison, Topeka and Santa Fe; Chicago, Milwaukee and St. Paul; Denver and Rio Grande; Chicago and Alton; Chicago, Rock Island and Pacific; Illinois Central; New York, New Haven and Hartford; Kansas City Southern and other railroads.

"The Rockefellers have been credited with being the leading, if not controlling factors in most of the large industrial corporations and mines. They were heavily interested in the U.S. Steel Corp., Bethlehem Steel, General Electric, International Harvester, Westinghouse Manufacturing Co., Armour & Co., American Linseed Co., National Lead, Corn Products Refining Co., Sheffield Farms and Borden's, American Tel. & Tel., Radio Corp. of America; Colorado Fuel & Iron Co., American Shipbuilding Co., Virginia Carolina Chemical Co., Republic Iron & Steel Co., Jones & Laughlin Steel Co., Provident Loan Society, Consolidated Coal Corp., and in other mining and industrial companies in various parts of the U.S., and in other countries.

"Rockefeller holdings in banks and other financial institutions are indicated by the fact that they control the Chase National Bank, the largest in the U.S., with deposits of two billion dollars, in which they invested \$45,000,000 cash, and that before they acquired this holding, they sold their interest in the Bankers Trust Company for \$28,-000,000. They owned the Equitable Trust Company almost outright before they combined it with the Chase National Bank. Winthrop W. Aldrich, chairman of the Board of the Chase National, is a brother-in-law of John D. Rockefeller, Jr., who married Aldrich's sister, a daughter of the late Senator Nelson W. Aldrich of Rhode Island, who was one of Rockefeller's chief agents in the U.S. Senate. The Rockefellers are interested in other large financial institutions in the U.S. and in foreign countries, including life and fire insurance companies, and they are heavily interested in the National City Bank in New York City, the second

largest bank in the country; Central Hanover Bank & Trust Company, New York Trust Company, J. Henry Schroeder Banking Corporation, and banks and trust companies in many cities.

"The Rockefellers have long been interested in public utilities corporations. They early acquired control of the Consolidated Gas Company in New York City which is now the Consolidated Edison Co., in which their holdings are worth at least \$50,000,000. Most of the Rockefeller stock holdings in this corporation are in the names of "dummies". They control the Manhattan Elevated R. R. Co. in New York City, in which they invested about \$25,000,000, and they hold millions of dollars of the bonds and notes of the Brooklyn Manhattan Transit Corp. and Interborough Rapid Transit Company, which operate subways in Greater New York. They own millions of dollars of stocks, bonds and notes, in other utilities monopolies, including the United Gas Improvement Co., Public Service of New Jersey, People's Gas of Chicago, Mountain Fuel Supply Co., Colorado Interstate Gas Co., Mutual Fuel Gas Co., Chicago Railways Co., Philadelphia Co., etc.

"The Rockefellers are interested in many corporations aside from those enumerated or referred to, whose securities are not traded in on the Stock Exchange, but which do a large business in their lines. They are interested financially in almost every large corporation in the country.

"The Rockefeller family controls the wealth of the world. No family owns more than half their wealth. The Rothschilds of Europe, the Du Ponts in the United States, and the Mitsuis in Japan, are their closest rivals. The wealth of these families is estimated at about \$2,500,000,000, each. The Rockefellers' wealth is about five billion dollars. Their income is estimated at \$250,000,-000 a year, or about \$5,000,000 a week. At that rate, the Rockefellers will continue to outstrip every other family. They control about \$250,-000,000 a year in newspaper, magazine, and radio advertising, and their influence in this direction is supreme. It is realized by those in the publishing business, that no newspaper or magazine could live without the advertising patronage of the corporations which they control. For that reason, the Rockefellers are able to shape editorial

policies in newspapers, magazines, and on the radio. The Rockefellers are interested in three daily newspapers in France, and they undoubtedly own or control newspapers and magazines in other countries. They control broadcasting and moving picture corporations in this country, directly through their ownership of 500,000 shares of R.K.O. and through their interest in the Radio Corporation of America (in which they owned 300,000 shares), Westinghouse, and General Electric, all of which own the patent rights on all sound equipment in all the moving picture houses. Their banking houses finance large moving-picture corporations." These estimates of Rockefeller wealth, made in 1938 in the midst of a depression on the basis of the depressed market price of stock holdings and at a time when crude oil sold as low as 10c a barrel as compared with the present price of more than \$2.00 a barrel, have been made absurd underestimates by ensuing developments. Two World Wars and inflation have multiplied the visible Rockefeller wealth fantastically. To-day, their oil holdings purchased for them by U.S. taxpayers' money and the lives of tens of thousands of doughboys and GIs lost in two World Wars, are alone worth more than five billion dollars. Their share of the capitalized income from approximately 160 wells in the hundreds of square miles of their Saudi Arabian concessions, producing almost 850,000 barrels of oil a day yielding an income of about \$2,-000,000 a day, are alone worth over \$2,500,000,000 aside from the value of the proved reserves in the one field which runs many times that figure. And though it was being produced, refined and marketed virtually entirely at the expense of the American taxpayer, largely for direct or indirect delivery to the Soviets, it is tax-exempt for all practical purposes. From the value of this one holding it can be discerned that the wealth of the Rockefellers is incalculable and can not be expressed in terms of money. It must be expressed in terms of control of the limitless resources of the world.

These holdings of the Rockefellers are but a small fraction of their domain. They control the Borden (Milk) Co., as well as National Dairy Products Co., comprising together what their protege, Henry Wallace, has labelled the "Milk Trust". "Philan-

throphically" it has raised the minimal price of milk from six cents to more than twenty cents a quart while degrading its quality. They control the Drug Trust, including American Home Products Co. and its subsidiaries, Winthrop Chemical Co., Sterling Products, the I. G. Farbenindustrie and its American and world-wide subsidiaries, American Cyanamid Co. and its Lederle Laboratories, and numerous other major drug and chemical concerns. They control most of the important newspapers, magazines and book-publishing houses in the country, including the Curtis Publications, the Hearst Publications, Time, the New York Times, the Associated Press (through control of its members) and many others, both here and abroad; and they and their associates have liberally subsidized the staffs of such radical and Communist publications as the Daily Worker, Masses, PM and Amerasia. Through their control of member banks, they dominate the Federal Reserve System, and through it, the U.S. Treasury.

Personal charm is now rated highly by the Rockefellers, as an asset in attaining their goal. It helps to delude and serves well in lieu of more substantial coin, John D. Jr. has recounted with pride his experiences in this direction with the victims of the massacre of the families of the striking workers of his Colorado Fuel & Iron Co. When public indignation against them for this brutal affair ran high, on the advice of their public and labor relations adviser, Mackenzie King, he visited the homes of the intimidated victims amidst a burst of publicity. He relates, proudly, that not even their victims could resist his personal charm. In their publicity releases, they stress the fact that they are liberal with charm only, for it costs them nothing. Charm and hospitality masking an iron fist, have won them many victories in dealing with the unsuspecting, and much profit.

## CHAPTER III

### MEET THE ROCKEFELLERS

The Rockefeller Myth has been so cunningly elaborated and embellished by their host of publicists and propagandists, that it takes research to get at the true evaluation and understanding of the character of the members of this omnipotent clan, whose whims and schemes have meant so much to the world in the past, and are certain to be even more fateful in the future. Crafty schemer, John D. Sr., bred in his son and grandsons the dominant traits of his own character, including those bred in himself by unscrupulous "Doc" William Rockefeller. He accomplished it by a mode of upbringing that has become traditional in the family.

This training is aptly illustrated by an anecdote related to the author by a mutual friend about Winthrop Rockefeller: In the early 1940's, when women wore the hobble skirts dictated by fashion, this friend was walking along Fifth Avenue in New York City with her boy friend. Winthrop, who is six feet and two inches tall, was taking inordinately long strides. She found it impossible to keep up with him no matter how fast she hobbled. In desperation, she turned and pleaded with him to slow down. In all seriousness, he replied, "My grandfather and father have taught us to take long strides, because it saves shoe leather". And he strode on at the same pace.

Concerning Nelson there is told a story that is said to illustrate his innate craftiness. The proprietor of a candy store that the children patronized showed his Christmas spirit by offering the children a handful of candy. When Nelson was told he could have his handful of candy, he wagged his head and refused. On the following day, the tale relates, Nelson returned with his father. Once again the proprietor offered Nelson a handful of candy, and again he refused. But this time he talked up and said:

"Let father take it. He has bigger hands."

The active principals of the Rockefeller Empire are "Emperor" John Davison Jr., and the five "Princes": John Davison 3rd, Nelson Aldrich, Lau-rance Spelman, Winthrop and David. Each of them has played a definite and significant role in Rocke-

feller Imperial affairs; and all of them work together in harmony and close union. There is one curious and striking characteristic in the activities of all of them. They all assiduously and ostentatiously dissociate their names from the enterprises that they most completely control, the Standard Oil companies. The last of them to hold a Standard Oil directorship, Winthrop, director of Socony Vacuum Oil Co., resigned on July 1, 1951. It is common knowledge, however, that they control these companies and dominate all their major activities through nominees and agents, in much the same manner as did John D. Sr. after his pretended "retirement". John D. Winkler, in his *John D. A—Portrait In Oil*, relates that at the age of 90 years he kept

"... in very very close touch with events in Wall Street that are likely to affect his holdings. Through his son he has retained stock interest in some fifteen companies of the old Standard group and is always a considerable subscriber ... to new stock issues. He has several personal representatives at 26 Broadway and always commends them warmly when profits are netted from transactions entered into upon their advice. He has never retired and never will retire in a definitive sense. "He follows world events in which he is interested with great care. But the newspapers really tell him very little. He himself could publish the most interesting newspaper in the world! And each day he'd have a flock of beats.

"For while the papers are speculating upon the health of a great diplomat or the possible overthrow of a foreign government, he has already been informed of latest developments through direct wires leading from Pocantico Hills to Standard Oil offices and, indirectly, to the remote places of the earth. There are over a hundred telephones at Pocantico, forty of them local, suburban and long distance lines.

"... He has never lost interest in finance. During the period we are describing he was very keenly interested in various deals of the Standard Oil Company of New Jersey. Through representatives he advised the transaction by which the New Jersey Standard cut its capital cost by retiring \$200,000,000 of preferred stock and floating a new

issue of \$120,000,000 in debenture bonds. His information about this and other matters that interest him is invariably accurate." (pp. 229-35) This is the Rockefeller tradition; and they are not a clan that deviate from familial tradition, as their biographer, Joe Alex Morris, stated in his blurb on them in the Saturday Evening Post.

On the other hand, they make an equally insistent and ostentatious display of officership in their so-called "philanthropies", in the autobiographies which they submit to Who's Who and in other reference books. It smacks excessively of "... thou dost protest too strongly."

John Davison Rockefeller Jr. was born in Cleveland, on January 24, 1874, the first son of four children. He received his early education in four schools, one of which, the Browning School, was established by his father for the specific purpose of providing him with a school in which he could rub shoulders with other children of his own age. He learned to fiddle and take his place in the family orchestra; and he earned his pocket money by pulling weeds from the lawn of the Forest Hill family estate at a cent for each fifteen weeds and by chopping wood at fifteen cents an hour. At the age of nineteen, he entered Brown University, a Baptist institution that was in keeping with the spirit of his religious training, with several of his friends. At college, John D. Jr. showed no great brilliance, but managed to get by. A member of the Alpha Delta Phi, he was junior class president; and he managed the football team in his senior year with such frugality (he made the players carry their own luggage on train trips) that it showed a profit. He received his A.B. degree in 1897; and his M.A. in 1914.

In October, 1897, John D. Jr. joined the staff of the Standard Oil Co. There he learned accounting and business methods, under the tutelage of Rev. Frederick T. Gates, then his father's investment manager who also handled "philanthropies" as investments. For more than a year he was vice president and director of the Standard Oil Co. of New Jersey. On his own, he was "taken" in a swindle

by David Lamar, to the tune of almost a million dollars. In this respect he merely matched the experience of his father, who had been "taken" repeatedly by other swindlers, in such deals as the West Superior Iron & Steel Co., the Everett Land Co., the San Miguel Consolidated Mines, the Puget Sound Pulp & Paper Co., the Everett & Monte Cristo Railroad and others into which he had been led by faith in friends and co-religionists, when too busy to give such matters his personal attention.

With Gates, John D. Jr. managed the family investments in Brooklyn Union Gas Co., Consolidated Gas Co., National City Bank, American Linseed Co., Lake Superior Consolidated Iron Mines Co. which controlled Mesabi, the New York Central, Santa Fe, and Lackawanna railroads, the Gould group, including the Missouri Pacific and the Missouri, Kansas & Texas railroads, and the Colorado Fuel & Iron Co.; on the boards of the last three John D. Jr. and Gates served as directors. Of the last, Gates made his nephew president.

It was in connection with the Colorado Fuel & Iron Co. strike in 1914, that John D. Jr. learned at first hand the disadvantage of being publicly identified with the Rockefeller enterprises. These experiences are undoubtedly the basis of the family practise of hiding their control of industrial enterprises and parading their "philanthropic" fronts at every opportunity; and no doubt their publicity men and public-relations counsellors have confirmed them in this practise. For both John D. Sr. and Jr. were grilled in connection with the investigation by Congress of the massacre of strikers at Ludlow, Colorado, by agents of the Colorado Fuel & Iron Co. And it took all the efforts of the newly engaged Ivy Lee and W. L. Mackenzie King to "regild the lily", the Rockefeller repute. John D. Jr. even was compelled to resort to the device of lending his name to a volume entitled The Colorado Industrial Plan. Whether it was ghosted or was a product of his own pen is not a matter of record; but Mackenzie King's ideas stand out in the text. This was the beginning of Rockefeller's fostering of labor unionism as a device for regimentation of the "peasants" and monopoly of industry through monopoly of labor; and of subsidy of "social sciences", which placed the Rockefeller interests in the position of panderer to the prostituted intellects, the professors, who

serve as handmaidens to the labor union leaders and lead their activities into channels desired by their sponsor. This is an essential feature of Rockefeller-ism. John D. III is continuing this tradition as director of Industrial Relations Counsellors Inc. which is subsidized by the Foundation.

John D. Jr. resigned virtually all his frank business directorates at about this time, with the exceptions of his directorates in the Merchants Fire Insurance Co. and the Washington Assurance Co. Currently he lists himself in the biographies which he furnishes Who's Who, as President of the Board of Rockefeller Institute For Medical Research, which position he has recently turned over to his son David, and as Chairman of General Education Board and of Rockefeller Foundation. However noble these sound, they make it quite clear that he thereby assumes full personal responsibility for the nefarious activities of these organizations which are here disclosed. In the Directory of Directors, he is also listed as director of the New York Life Insurance Co.

John D. Jr. emerged as the "power behind the throne" in Standard Oil Co. in connection with the prosecution of the Teapot Dome case, when he testified in favor of Col. Stewart, president of the Standard Oil Co. of Indiana; and subsequently, when he ousted Stewart for withholding and diverting funds rightly due to the stockholders of the Company, that had been exposed incidentally. He did so with a righteous show of indignation that was hardly impressive in view of the huge pension with which Col. Stewart was rewarded.

John D. Jr. married Abby Greene Aldrich, daughter of Senator Nelson W. Aldrich, of Rhode Island, Republican leader of the Senate, in 1901. Nevins, in his biography (JDR, v. 2, p. 459) reports:

"Thereafter, John D. Rockefeller Jr., saw a great deal of the circle of elder statesmen close to Aldrich, notably Senators Platt, of Connecticut, Spooner, of Wisconsin, and Allison, of Iowa ..."

The couple had one daughter, Abby, who married David M. Milton and subsequently divorced him to marry her psychoanalyst, Dr. Irving H. Pardee (who did not long survive the nuptials) ; and five sons. In one basic manner, John D. Jr. deviated from the pattern laid down by his father,—a distaste for fundamentalist religion which had done so much to

aid in his father's advancement. It is open to question whether greater influence in this direction was exercised by his mentors at Brown University or by Reverend Frederick Taylor Gates, his father's "man of business" who, though detesting much of religion, had made it serve him nobly as a stepping-stone to personal advancement. At the time of the creation of the Rockefeller Foundation, fundamentalist ministers had noted John D. Jr.'s advocacy of a "new" and "liberal" theology that decried sectarianism as pragmatically unsound and veered toward Marxism and "higher criticism". John Roach Stratton accused him of seeking to standardize education and religion through the rationalization of the German school.

In an address before the Protestant Council of New York City on January 31, 1945, John D. Jr. revealed, however, that his aims in respect to religion were much more far reaching. In this address, which has been published for distribution by the Council under the title of *The Christian Church, What Of Its Future?*, he suggests its transformation into the "Church of the Living God", and eliminating or subordinating "ordinance, ritual, creed, all non-essential". In the fostering of Marxism in the churches through such agencies as the Federal Council of Churches of Christ in America, by the Rockefeller Foundation, there emerges the idea that the real intent and purpose is the destruction of religion as the modern world knows it and its replacement by ancient concepts of religion in which the "Living God" is the ruler of the State,—in the Roman sense of "Rex, Imperator et Deus" and in the sense that Stalin is the god of the religion of Communism. Can it be that this is one of the objectives of the Rockefeller Empire?

John D. Jr.'s Sunday School classes, nevertheless brought rich returns in publicity, favorable sentiment and seduction of public opinion. The mask of religiosity, combined with the sham of pseudo-philanthropy, was invaluable in blinding the public to the true nature of the activities of the Rockefeller interests, which are here related. He held close and purposeful control, both direct and indirect, over the activities of the "philanthropies" and over the frankly commercial and political activities of the Empire. His was a missionary zeal to force others to accept the brand of salvation that

he had to offer and to mold them and affairs generally according to his designs and purposes, that derived in part from his training, in part from the unbounded zeal that is characteristic of his clan, and in part from the influence of Reverend Frederick Taylor Gates, at whose side he worked. Nothing conceivably could have gained the support of their "philanthropies" without his instigation, approval and consent, no matter how much there was maintained the appearance of independence of his agents. The allegation that John D. Jr. has no responsibility for all the activities of the Rockefeller Empire is as absurd as the spider's disavowal of responsibility for the fate of the fly that he ate, and its allegation that it merely wove the web, which the fly entered of its own free will.

His remarriage, to Mrs. Martha Baird Allen, widow of a Brown University classmate, on August 15, 1951, should put at rest any rumors of his lack of competence, energy or alertness. There can be little doubt that John D. Rockefeller Jr. has been for many years the most powerful man in the world and the purposeful dictator of its fate, in so far as it can be humanly or inhumanly dictated.

It is for this reason that such views as those expressed by Elizabeth Dilling in her *Red Network and The Roosevelt Record And Its Background* (p. 166) that John D. Rockefeller Jr. is a "sap" who was lured into support of the Communist League for Industrial Democracy agency, the National Advisory Council on Radio Education, and other Red agencies, are so completely unwarranted and absurd. This will be made more apparent in the account of the high purposefulness the support of Communist activities had in the program of the Standard Oil companies and of the Rockefeller Empire. It will become obvious that these activities, however malevolent and subversive, manifest a high order of cunning, ruthless diplomatic skill and exceptional grasp and brilliance, and an ability to penetrate shallow thinking and shibboleths that are so dear to the masses and the demagogues who sway them, to discern deeper and ultimate meanings.

This is undoubtedly the real significance of the Rockefeller support and subsidy of labor organization. John D. Jr., supported by his father and Reverend Frederick Taylor Gates, fought the Colorado Fuel and Iron union strike vigorously and

bitterly. Following the shooting of a score of miners and their women and children by the company's armed guards and the militia, and a number of government investigations, John D. Jr. about-faced. He awoke to the value of regimentation of the "peasants" under amenable leaders, the value of "homogenizing" mankind, about which he now appears as enthusiastic as homogenizing milk. Indeed the "homogenizing" of the heterogeneous mass of mankind in Asia, with their endless varieties of religions, customs, superstitions and languages may be one of the purposes of the Rockefeller Empire in turning over Asia to the Communists; and on a lesser scale the F.E.P.C. in the U.S. has as its objective the "homogenizing" of black and white "peasants".

Two books on union regimentation of workers have been published under John D. Rockefeller Jr.'s name, one of them, The Colorado Plan, devoted to the company-union plan proposed for the Colorado Fuel & Iron Co. The Rockefeller interests have not overlooked and have made good use of the monopoly of labor that is afforded to unions, to effect monopolies of industry that would be recognized as illegal if they had been effected by a monopoly of machinery.

Labor unions have proved to be a powerful weapon for the Rockefeller Empire in extending its world conquest; and subsidized unioners are always in the forefront of the emissaries that they send out into newly conquered territories. With Marxism as a shibboleth, they are rapidly accomplishing a world-wide subjugation of the "peasantry". This has earned for wily John D. Jr. a reputation for "liberalism". It is more appropriately labelled "Rockefellerism".

Since the balance of this book is devoted to a detailed consideration of the activities of the Rockefeller Empire as directed by John D. Jr., this brief introduction will suffice.

John D. Rockefeller 3rd, the eldest son, was born in 1906. He received his preparatory education at Browning School, which as has been noted, was established by his grandfather for the specific purpose of the education of his father. Subsequently he attended the Loomis School. He received a B.S. degree from Princeton U. in 1929. There he was exposed to the subversive influence with which the

Rockefeller "educational philanthropies" plague our school system. This exposure was intensified by his serving during his student days as assistant in the information section of the Rockefeller-sponsored and subsidized League of Nations at Geneva, under the tutelage of his father's agent, Raymond Blaine Fos-dick, secretary of the League. It was further intensified by his serving as junior secretary at the 1929 conference in Kyoto, Japan, of his family's wholly subversive agency, the Institute of Pacific Relations.

On his return from a trip around the world, John D. 3rd immediately assumed the "philanthropic", "social uplift" pose that had become a family tradition. It was broken by only a few commercial directorates in firms wholly owned or controlled by his family, including directorships in the Dunbar National Bank of Harlem (that was active in connection with the numbers racket and other practices among the Negroes), Rockefeller Center Inc., Underel Holding Corp. (real-estate holding companies) and Rockefeller Bros. Inc. He makes no public mention of his posts as director of the New York Life Insurance Co. and Chairman of the Paper Industry Board. In his latest biographic note he lists the following "philanthropies":

- Colonial Williamsburg, Chairman of the Board
- Rockefeller Brothers Fund, President
- General Education Board, Trustee
- Rockefeller Foundation, Trustee
- American Museum of Natural History, Trustee
- Princeton University, Trustee
- Tarrytown Hospital, Director
- China Medical Board, Trustee
- Industrial Relations Counsellors Inc., Trustee
- International Education Board, Trustee
- American Youth Hostels, President and Director
- International House, Trustee
- Spelman Fund, Trustee
- Riverside Church, Trustee
- United China Relief Inc., Director
- British War Relief Society, Member of the Board

It is significant that International House and American Youth Hostels have been under fire for the aiding or sponsoring of questionable or subversive groups. The Institute of International Education like the other Rockefeller "educational philanthropies", has been identified with actual Communist espionage activities in the person of its Director,

the late Laurence Duggan, former State Department officer associated with Alger Hiss and charged with being a member of a Communist cell in the Department.

Like so many of the personnel of the Rockefeller-sponsored and subsidized left-wing, New Deal and other subversive organizations identified with the Rockefeller Empire, Duggan met with a sudden violent death under extremely strange and suspicious circumstances. With a hat on his head, wearing a raincoat and one rubber (the other rubber and an umbrella rested beside a chair in which he had been seated), Duggan "fell" from the sixteenth story window of his office a few days after he had been interrogated by the House Committee on Un-American Activities. Despite the fact that he left no suicide note, that folk who plan to commit suicide by jumping from a window do not dress for the occasion, that people who begin to dress usually complete the act before going on to other acts, and that there was evidence of a scuffle in his office, no question was ever raised by the authorities and his death was instantly and definitively declared to be "suicide", without an investigation by the police, as if by pre-arrangement.

In his biography John D. 3rd announced that he is still a member of the family's Institute of Pacific Relations American Council, which has been pronounced to be subversive and has been exposed by Congressional investigation as being actively engaged in Communist espionage activities on behalf of the Soviets. He is also a member of the family-subsidized, and equally subversive Foreign Policy Association; and needless to say, he is a member of the Foreign Office of their Empire, the Council on Foreign Relations.

In 1932, John D. Rockefeller 3rd married Blan-chette Ferry Hooker, daughter of the head of the Hooker Electrochemical Co., one of the world's largest producers of caustic soda and chlorine. Their family includes three daughters and one son. They occupy a duplex apartment at 1 Beekman Place, New York City. His office is listed at 30 Rockefeller Plaza, Rockefeller Center, New York City.

Following a two-month trip to Africa in 1948, John D. 3rd returned on November 14, so filled with enthusiasm about the commercial and industrial

potentialities of that continent that it took all the efforts of his public-relations counsellor to divert his New York Times interview to the supposed interest of his journey "in connection with his work as Trustee of the Rockefeller Foundation", the health and welfare of the natives. Since then subversive agitation among the natives has risen to a new high level, fostered by such organizations as the Rockefeller-subsidized Urban League, under the stimulation of such Rockefeller pawns as Ralph J. Bunche. On January 18, 1951, John D. Rockefeller 3rd was present at a dinner given in Bunche's honor by the trustees of the Phelps Stokes Fund to signalize his receiving the 1950 Nobel Peace Prize. He lauded Bunche following a speech made by the latter in which he predicted: "... it will not be many years before the same kind of upheaval now appearing in Asia (Rockefeller-Soviet Axis inspired) will be witnessed in Africa."

The Times interview with John D. 3rd reverently played up in its headline **ROCKEFELLER LUGS HIS BAGGAGE HERE** (because of a longshoremen's strike). It laid little stress on his statement that he planned to go to Washington and see President Truman about providing for the development of the unlimited resources of Africa. Six weeks later, Truman announced the Point 4 program for development of the resources of the backward areas of the world, a description which aptly fits Africa, but also can be applied to many sections of the United States. The President had "heard his master's voice" and promptly required Congress to provide funds, at the American taxpayers' expense, for the development of Africa for the Rockefeller Empire. The Rockefeller Point 4 boondoggle bids fair to cost the public many times what their Marshall Plan scheme cost, as will be related. Further aspects of the program will be discussed in another chapter.

The Foreign Office of the Rockefeller Empire, the Council on Foreign Relations, was briefed on the subject of the Africa Program by John D. Rockefeller 3rd,—so important was the matter to the interests of the Empire,—in a group meeting presided over by Whitney H. Shepardson (Annual Report, 1948-9, p. 6). The Point 4 program was subsequently presented by Isaiah Bowman, with Francis Adams Truslow presiding. Discreetly, the

Point 4 program was represented by its authors as President Truman's Point Four Program, not as that of the Rockefellers.

On October 17, 1951, the New York Daily News carried a dispatch of the UP from Tokyo that curiously was not carried in their official organ, the Times. It announced that John D. Rockefeller 3d had arrived in Tokyo by plane, with his wife and his private secretary. His presence in Japan shortly after kinsman John Foster Dulles had rushed through his peace treaty, after arranging the dismissal of General MacArthur, has a major significance that is not yet apparent. The plant of Rockefeller's agents in Japan, the Mitsuis, is running full blast turning out merchandise for the export trade, to Red China. The Russians accelerated the reinforcement of garrisons on their Pacific islands adjacent to Japan. After MacArthur's dismissal, Japanese Communists became more active and aggressive, under the influence of Communist agents of Rockefeller's Institute of Pacific Relations, who had been planted on MacArthur's and Ridgeway's staffs. Within a month after John D. 3d arrived in Japan, on November 12th, Communist students at Kyoto University greeted Emperor Hirohito with the Communist anthem, Internationale, and heckled him, the first such incident in Japanese history. Is the way prepared for turning over Japan to the Soviets, as per the Axis plans?

Nelson Aldrich Rockefeller was born at Bar Harbor, Maine, in 1908. He and the rest of his brothers received their preliminary education at the Lincoln School of Teachers College. The school was guided by the Marxist "liberalism" of John Dewey and his "progressive education" that spell out the libertinism and totalitarianism of the "youth" movement so dear to the heart of the Communist. The school was heavily supported by the General Education Board and was one of the strongholds of the Rockefeller brand of totalitarian indoctrination of the younger generation, a so-called "model school" from which the schools of the rest of the nation were infected. But thanks to home influences, particularly John D. Jr., the boys penetrated the moronic concepts of Marxism to a discernment of the device for attainment of power, the power pattern, that is the true essence of Marxism; and they have become adept at its use.

A short time after receiving his A.B. from Dartmouth, where he acquired a Phi Beta Kappa key and "made" the soccer team, Nelson married the daughter of a Philadelphia "mainliner", Bar Harbor neighbor, Mary Clark Todhunter. They have three sons and two daughters, including a set of twins, and occupy a triplex apartment on Fifth Avenue, New York City, but list Pocantico Hills as their home. His office is at 30 Rockefeller Plaza, New York City.

After a honeymoon trip around the world, Nelson became interlocking director of the family's Chase National Bank and its Rockefeller Center, acting director in charge of renting for the Center. The mercilessly cut-throat tactics adopted in that process, which are described in another chapter, severely depressed real estate on a national scale, very materially prolonged the depression and cost numerous "peasants" their homes and fortunes. But it subsequently enabled the Rockefellers to buy some of the most valuable properties in the country and in the world at bankruptcy figures.

In accord with the family policy of avoiding any open association with the Standard Oil companies Nelson served for a time on the directorate of the Creole Petroleum Corporation, a Standard subsidiary, which does not disclose in its name its identity with the Standard Oil Co. of New Jersey. In this connection, Nelson proved that he possesses the astuteness, the aggressiveness and the grasp of his Rockefeller grandfather, plus the political sense of his Aldrich grandfather. He set about winning over the peoples of the lands in which his company operates, as a matter of shrewd dollar diplomacy. He flattered Latin-American vanity by patronizing its art. He employed Diego Rivera to do a Rockefeller Center fresco, but rejected the work because it went the full length in following the Communist Party line by including a portrait of Lenin in its composition with a caricature of the Rockefeller patron. But he wooed and won over Rivera, in spite of this incident, by paying him his full contract price, \$21,500, before covering up the rejected work. Nelson also placed Rivera's work in the family's Museum of Modern Art, of which he is president, and to which he contributed, "anonymously", \$25,000 for the specific purpose of purchasing Latin American art.

In 1935, he traveled to Creole Petroleum's home territory, Venezuela, to inspect the museum of fine arts there. Two years later with Joseph C. Roven-sky, Vice President of the Chase National Bank, under whom he had worked, he toured Venezuela and nine other South American countries on Standard Oil business, and returned with a plan for New Deal sponsorship of private U.S. investments there. In the meantime he had organized a profitable development company there in association with Edward H. Robbins, a relative of Franklin D. Roosevelt. Then in 1940, at the time of the draft, when he was 32 years old, he arranged through Harry L. Hopkins, Rockefeller almoner and New Deal plant, to have Roosevelt approve a hemispheric program drawn up by Laurance Rockefeller and two of the top agents of the Empire, Ruml and Roven-sky, for the purpose of financing its expansion in South America at the expense of the U.S. taxpayer.

The Rockefellers, though they have controlled the country for more than half a century and dictated all important nominations and appointments, were extremely cautious about emerging openly into the government. Public reaction was feared. For many years their name had been anathema to the American public, and they feared to undo the deodorization that had been effected by their phony "philanthropies". Their public relations counsellors repeatedly sent up trial balloons to test public reaction, in the form of lines in the columns of Walter Winchell, Drew Pearson and other of their columnists. In these releases the positions were reported usually as being offered to Nelson by Harry L. Hopkins, including the post of Assistant Secretary of Commerce. Finally, with their approval, Franklin Delano Roosevelt, himself a mere Rockefeller puppet, appointed Nelson Rockefeller to the post of Co-ordinator of Hemispheric Defense, that later became Administration of Inter-American Affairs.

As Co-ordinator of Inter-American Affairs, Nelson Rockefeller spent \$6,000,000,000 of the taxpayers' money on what the members of Congress called "boondoggling propaganda". He distributed in South America such motion picture sensations as "Willie & The Mouse" and "Does Nature Prefer Blondes?" He sent movie stars and clowns as "good will ambassadors" to divert the Latin-Amer-

ican "peasants", or insult their intelligence. He spent \$600,000 to combat Nazism in the Latin American press with advertisements published in pro-Nazi newspapers that were strengthened financially thereby.

Elizabeth Bentley, in her autobiography published by Devin Adair under the title *Out Of Bondage*, reveals how ready Nelson Rockefeller was to take notorious Communists into his agency and play into their hands. She relates that Bob Miller, who was editor of *The Hemisphere*, a pro-Communist Latin-American publication, supplied the Communist spy ring with which she was connected, (p.138) When, in 1941, *The Hemisphere* reached the end of its financial rope, the Communist apparatus advised Miller to take a job in the government in Washington. She reports that Miller naively doubted that he could get by the State Department because of his notorious record as a Communist. He did not know the extent to which the apparatus of the Rockefeller-Soviet Axis had taken over the State Department. He was urged, however to apply for the position by the chiefs of the Communist spy ring, because he could be an invaluable source of espionage information. Nelson Rockefeller not only employed this notorious Communist with a long Red record, but actually made him head of the political research division from which position he could influence the policy of the Inter-American Affairs bureau, and purchased from him for the bureau the carefully expurgated files of *The Hemisphere* for a large sum. (p.155)

The personnel of his Office was so completely Communist in its complexion that popular report had it that applicants for positions were required to hold Communist Party cards. Its propaganda was correspondingly Red. It did much to foster Communism and totalitarianism in Latin America and to breed antagonism to the U.S. of greater intensity than had ever existed, especially in Argentina and Venezuela. Its activities have served to endanger the sources upon which this country deliberately has been made dependent for strategic war materials, as evidenced by Communist uprisings in Colombia and Bolivia.

Making the U.S. dependent for its source of supply of raw materials essential for war upon foreign lands, especially Latin America, became a

deliberate policy of Rockefeller's administration and of the New Deal. This dependence on foreign sources for essential material, in turn, has been used by them to force upon the nation their policy of "internationalism."

Chase National Bank is an important factor in the Patino Enterprises that turn out a grade of tin ore far inferior to that which could be produced inexpensively in the U.S. A special refinery for this impure, low grade ore, that refines it to a sub-standard purity, was built by the Government at the expense of many millions to the taxpayers, for operation by the Rockefeller interests with their Bolivian ore. A Rockefeller attorney, Warfield, heads the company that operates the refinery in Texas City.

The production of high grade domestic tin has been hampered and discouraged, and the nation left dependent for its tin upon the British-Dutch-Rockefeller cartel which grudgingly supplies at exorbitant prices less than the country needs.

As Walter Trohan stated the case in an article in the April 22, 1949, issue of the Chicago Tribune, under the headline "South American Work Not 100% Altruism":

"... Nelson Rockefeller . . . outdid his grandfather, John D. Rockefeller, by giving away billions of American tax dollars, where the oil king gave away his own dimes." But there was a deep purpose and a method in this boondoggling. During Nelson Rockefeller's administration as Co-ordinator of Hemispheric Defense, La Prensa of New York reported that Bolivia was notified that it would not receive money appropriated by Congress for its defenses until and unless it turned over to the Standard Oil interests certain oil fields. A timely decision of the Mexican Supreme Court restored to the Rockefeller Standard Oil companies two oil concessions that had been expropriated previously.

At about the same time the Standard Oil interests were indicted in Venezuela on the order of President Medina for the theft of \$200,000,000 in oil by means of false registry of tanker capacity. A settlement, rumored to be \$9,000,000 was made, and the indictment was quashed. Medina was then ousted and fled to New York to become a neighbor of the Rockefellers on Park Avenue. An interesting commentary

is that the task of measuring the oil removed, on behalf of the Venezuelan government was a hereditary privilege of a Venezuelan family, handed down from father to son. They thereby became very affluent, while the government was looted.

Nelson Rockefeller flitted about South America attending presidential inaugurations and revolutions indiscriminately, superseding the accredited U.S. Ambassadors, assuming the role of Uncle Sam in his high silk topper, embracing a president here and a concession there, magnificently cloaking the Rockefeller Empire with the waning majesty of our United States and expanding it with the squandered funds of tax money of the looted American "peasants". He also collected decorations: the Order of Merit of Chile from President Rio, and the National Order of the Southern Cross of Brazil from its dictator, President Getulio Vargas.

In 1944, the Administration for the Co-ordination of Inter-American Affairs was merged into the State Department, and Co-ordinator Rockefeller entered by the back door the Department that has been so consistently controlled by his family's Standard Oil interests. There he became more intimately associated with the subversive, Communist, or pro-Communist and, in some cases, traitorous officers of the State Department who represented the Rockefeller Empire's Foreign Office, the Council On Foreign Relations, in the Department, including Alger Hiss, Joseph E. Johnson, Dean Acheson, William Benton (now Senator), John Carter Vincent, and Haldore Hanson among others.

As Assistant Secretary of State, Nelson Rockefeller directly participated in setting up the Rockefeller-Soviet United Nations, in the company of kinsman John Foster Dulles and their protege and agent, Alger Hiss, both of Rockefeller's Council on Foreign Relations. As has been related, he there showed his indiscriminate totalitarian bent, a family trait, by ordering the American delegation to admit Argentina to committee posts. In doing so he offended his Soviet allies. A show was made of appeasing them by ousting Nelson and replacing him with former Ambassador to Argentina, Spruille Braden, also of Rockefeller's Council on Foreign Relations. Braden made a show of hewing close to the Party line.

During his administration as Co-ordinator, 46

Nelson Rockefeller had worked hard to get the American republics to promote, organize and finance industry and business. But after they had been financed by the governments he worked just as hard to force the governments out of the industries that its taxpayers had financed, to turn them over to "private interests". These, needless to say, were to be controlled by his associates. This scheme, which was the bone of contention at the Chapultepec Conference, that he helped engineer and attended with Secretary of State Edward Stettinius and Assistant Secretary Will C. Clayton, both of the Council on Foreign Relations, reveals the pattern that is intended to emerge from their "New" and "Fair" Deals at home.

Nelson Rockefeller established a pattern of use of public office for personal gain that is being ever more widely followed by public officials. When adopted by less powerful individuals it is apt to be regarded as venality. But the country is rapidly accepting a royal concept regarding Rockefellers and their agents,—"the King can do no wrong".

On leaving the State Department, Nelson Rockefeller undertook (in the words of Walter Trohan, in the Chicago Tribune of April 22, 1949) "to reap a harvest of dollars, tax free in America", from the lavish sowing of U.S. Treasury funds in Latin America. He and his brother organized the International Basic Economy Corporation, known as IBEC, for the specific purpose of exploiting the Latin American situation. It was organized with a capitalization of \$8,405,000, most of it supplied by Nelson, and a staff of employees who had been groomed for their functions in the Government service and at the expense of the taxpayers.

IBEC is playing its role in the expansion of the Rockefeller Empire and its profits in South America. It has undertaken to give Latin America a "New Deal" that will be as profitable to the Rockefeller interests as that in the U.S. In Venezuela it has set up in partnership with Rockefeller-controlled oil companies, that have invested \$10,000,000 in its non-voting preferred stock, a \$12,380,000 Venezuela Basic Economy Corporation. It established, in cooperation with the Venezuelan government, a group of retail enterprises which, as in the case of R. H. Macy, Nelson Rockefeller favors and has found profitable. These include a food and grocery chain

that was designed to give them a throttle-hold on the food supply of the country. It naturally aroused the antagonism of the established merchants, has made Rockefeller and Americans unpopular in Venezuela, and stirred powerful efforts to oust the Rockefellers and their "benevolence". Similar activities have been entered into by IBEC in Brazil, with the collaboration of dictator President Vargas, and in Ecuador, where President Plaza acts as agent of the Rockefellers.

The IBEC is being operated as an extension of the Rockefeller Foundation's pioneering activities and its profits are being surrounded with the usual Rockefeller aroma of "philanthropy". Likewise it is the spearhead of the usual Rockefeller-Soviet Axis penetration. It is following the usual pattern of their decoy activities, shifting the burden of maintenance to the taxpayers and the profits into their own purses. They established the American International Association for Economic and Social Development which, following the Communist vogue, is abbreviated to AIA. In its agricultural development it is a cooperative, New Deal Farm Security Administration program with socialized medicine, health clinics, farm credits and other devices. Arthur H. Vandenberg Jr., son of Rockefeller's former "bipartisan" leader in the Senate, is employed by the Rockefellers in their Brazilian subsidiary.

The inter-American program has been so advantageous to the Rockefeller-Soviet Axis that the Rockefellers have undertaken to extend their sham philanthropies to other sections of the world that affect their interests, at the expense of the American taxpayer. The use of their Marshall Plan, Point 4 program and Atlantic Pact for this purpose will be described presently.

On September 24, 1951, Nelson Rockefeller, as officer of the family's Museum of Modern Art, opened the People's Art Institute, a la Stalin, as a new division. The addresses at the ceremony, and the television broadcast in connection with it, clearly revealed that its purpose was that common to all Communist and totalitarian propaganda,—to bring about a degeneration of intellect, taste and judgment and to reduce public intelligence to the lowest level of depravity with the objectives of more readily gaining the submission and subjection of the "peasantry" and of holding them in subjugation.

One of the devices used, the exacting of admiration of the fumings of diseased minds as "art", is a process comparable to Petruchio's requiring Katherine to call "black", "white", in Shakespeare's *Taming of the Shrew*. The participants, most of them pawns and agents of the Rockefeller Empire, presented the new Institute as one of Nelson's "noble philanthropies", in spite of the fact that the money for its erection and equipment was supplied by others.

The pattern of his activities indicates that it is the objective of the Rockefellers to place Nelson Rockefeller in the White House by some means, whether direct, indirect or cataclysmic. Direct election as President is now possible with the sham "philanthropic", "benevolent" and "public-spirited" build up he has had; but it is improbable. More probable would be his nomination as Vice-Presidential candidate on one of their "bipartisan" or "omni-partisan" tickets at the side of a Presidential candidate whom they know to be tottering at the edge of the grave, or who could be disposed of by some other of the methods of purging that have become so commonplace during their New and Fair Deals. But most likely method of all, would be his appointment as Secretary of State in an Administration headed by two dying or expendable men, following whose exitus the Secretary of State might be eligible to succeed as President. Stranger things than that have transpired in Washington in the past several decades.

The confidence of the Rockefeller Empire planners in their success in duping the American public is evinced by the shows they are staging of participation of the Rockefeller wives in public position, as semi-royal consorts. Thus on September 17, 1951, according to a special dispatch to their New York Times, Mrs. Nelson Rockefeller attended a conference at the Pentagon as one of forty-four members of the Defense Administration Committee on Women in the Services, which was presided over by Imperial agents, former Secretary of Defense General George Marshall, his successor, Robert Lovett, and Assistant Secretary Anna M. Rosenberg. In the early edition of the newspaper, Mrs. Nelson Rockefeller is reported to have posed a rhetoric question on civil defense, which elicited from their puppet Secretary of the Air Force

Thomas K. Finletter the familiar, anticipated, and most probably pre-arranged, answer that not enough money was being squandered on this favorite psychologic device and method of money-wasting of the conspirators.

Laurance Spelman Rockefeller, who is nicknamed "Bill", was born in New York in 1910. He received his preliminary education at the "progressive" Lincoln School and then graduated from Princeton, where his special interest was philosophy. In 1934, two years after his graduation, he married Mary French, whose family were old friends. They have one son and three daughters.

In August 1933, Laurance widened the "liberal" contacts to which his "education" had exposed him by representing his family interests at the Banff Conference of the Institute of Pacific Relations, as secretary. He was there in company of such characters and Rockefeller proteges as the self-proclaimed "top American Communist", who is now imprisoned for his less savory Communist activities, Frederick Vanderbilt Field, Benjamin H. Kizer, Harriet Moore, Kate Mitchell and Owen Lattimore, birds of a feather, all of them editors of the notorious espionage agency Amerasia, and all subsidized by Rockefeller "philanthropies".

Laurance Rockefeller holds the family seat on the New York Stock Exchange. His business interests include directorates in the Merchants Fire Assurance Corp., International Nickel Co. of Canada, Ltd., Filatures & Tissages Africains, Eastern Air Lines, International Basic Economy Corp., Chase National Bank, Rockefeller Center Inc. and Rockefeller Brothers Inc.

Winthrop Rockefeller, now thirty-eight years old, received his preliminary education at the Lincoln School, and in 1931 graduated from the Loomis School. He attended Yale University, but did not graduate, lacking interest. In the words of Mrs. John D. Rockefeller Jr., quoted by Joe Alex Morris in the Saturday Evening Post press release of theirs in the January 6, 1951 issue, his brothers used to "make Winthrop the goat all the time . . . You know very well," she is quoted as writing, "that the only way to help him is being kind to him. Abuse only makes him angry and much worse, while for love and kind treatment, he will do anything". Apparently he was regarded as a weakling and

something of a black sheep; but has grown to be the strongest and biggest of them and has acquired a reputation as a Don Juan.

In February 1949, Winthrop married the divorced wife of Richard Sears Jr. of the Boston social set. Born Jievyte Paulekiute, the daughter of a Lithuanian emigrant coal miner of Nobleton, Pa., she was taken with her sister, by their mother after her divorce from their father, to Chicago. There the mother obtained employment in a mattress factory. And Jievyte attended high school under the name of Eva Paul, won a Miss Lithuania contest, attended Northwestern University for a year and a half, and then became a model and "bit part" actress. She married Sears in 1941, adopted the name of Barbara, mingled in Boston society, and in October 1948, divorced him. In the following February she married Winthrop, after a quarrel and a flight to Palm Beach. Their son Winthrop Jr., was born seven months later, fully matured.

Shortly after the birth of the child, rumors of estrangement were followed by a separation. "Bobo", as Barbara Paulekiute Sears Rockefeller is nicknamed, has refused to grant a divorce to Winthrop, whose name has been coupled romantically in the newspaper columns with an endless array of women. Rumor reports that one of the barriers to a divorce is the refusal by Winthrop to make adequate financial provision for his son; and that "Bobo" has said: "I want to make him suffer the way he has made me suffer." She is living with her mother and stepfather on a farm near Lowell, Indiana, with her son.

The "Cinderella marriage", in which there appears to have been some element of hurriedness and emergency, was made the best of by the Rockefeller publicity men. It was made the basis of a story for "humanizing" the Rockefellers in the eyes of the American "peasants", just as a similar use was made of the remarriage of John D. Jr. several years later. Attempt was made to use this "humaniza-tion" in connection with the political ambitions of Winthrop, as will be related below.

Winthrop was the only one of the Rockefeller boys to identify himself directly with the oil industry. He worked as a hand in the oil fields. He later served as vice president of the Socony-Vacuum Oil Co., which is not too closely identified, in name and

in the public mind, with the Standard Oil Co., though it is an integral part of it. He fell in line with the family tradition of dissociating from public identification with the Standard Oil, however, by resigning his Socony Vacuum position at midyear, 1951, with sufficient attendant publicity to emphasize the act. Winthrop's active interest in oil included a participation in the drilling for oil in in the Jackson Hole Park in the Tetons that had been set up following a "philanthropic gift" of some acreage to the government by the Rockefellers, on condition that the large holdings of the local ranchers be expropriated for inclusion in the park. The records do not indicate whether the ranchers were permitted to retain rights to their oil.

Their Saturday Evening Post apologist, Joe Alex Miller, portrays Winthrop as the humanitarian of the family. He writes:

"His job is, broadly, human relations, both during office hours at Socony Vacuum and in such outside activities as the Urban League, where he has provided vigorous leadership in dealing with the social and economic problems of Negroes. Perhaps, only a psychologist could suggest whether his interest in this field stems subconsciously from the fact that his older brothers sometimes were inclined to push him around, as a child . . . until he outgrew them all." The reason the author assigns for the interest of Winthrop in the activities of the Urban League is an erroneous one. It has become a tradition in the Rockefeller Empire that each of the princes inherit and take over one of the traditional "philanthropies" of the family as a device for maintaining the benevolent pose before certain elements. As a Baptist, one of the prominent activities of John D. the First was displaying a missionary interest in the welfare of his Negro co-religionists. Just as John D. 3rd took on the Rockefeller Foundation, Nelson A. the Museum for Modern Art and the fostering of Communist ideals in the arts, sciences and politics, Lau-rance the Memorial Center for Cancer, so Winthrop took on the Urban League as his special "philanthropic" pose. His father had originally developed the General Education Board from what was an organization for the education of negroes; and the Laura Spelman Rockefeller Memorial that was set up in honor of his grandmother, was a steady con-

tributor to both the National and the New York Urban Leagues. The League is an organization that has been active in stirring up the question of racialism and color. It has largely come under Communist influence and serves the purposes of the Rockefeller-Soviet Axis, especially in the U.S. and Africa, as will be related. With Rockefeller support it has been very active in the Fair Employment Practise Act agitation that has split the Democratic Party wide open. Winthrop Rockefeller is Director of the Urban League.

In the Army, which Winthrop entered as a private, to be promoted with amazing rapidity to the rank of lieutenant colonel, he had an opportunity to display his pose of pro-Negro favoritism by refusing to discipline a Negro sergeant who refused to take orders from white, Southern superior officers; this incident has been widely publicized, especially in Negro circles and in the Saturday Evening Post propaganda referred to above.

Some of the uses to which this pro-Negro pose has been put has been recounted in connection with the Point 4 program for the development of Africa for Rockefeller's Standard Oil Co. Another significant use has escaped wide public notice—use in politics in the U.S. This is illustrated by a story carried by the New York Herald Tribune in its February 25, 1949, issue. This report reads as follows:

DUBINSKY, WINTHROP ROCKEFELLER AND CORSI  
MAY BE FUSION SLATE

Line-Up of Republicans and Liberals Is Reported  
Under Discussion by Anti-O'Dwyer Forces  
By Murray Snyder

Anti-O'Dwyer forces were reported last night to be discussing a possible fusion ticket for the city election consisting of:

For Mayor—David Dubinsky, president of the International Ladies Garment Workers Union, vice-chairman of the Liberal party and a leading New Dealer.

For Comptroller—Winthrop Rockefeller, fourth son of John D. Rockefeller Jr., leader in the Public Education Association and Urban League, an executive of Socony-Vacuum Oil Company, and a Republican.

For Council President—Edward Corsi, State Industrial Commissioner, a Republican.

Two leaders in the independent Republican group which is digging into the city administration's record in the effort to induce a formal investigation by the Legislature admitted hearing this ticket discussed, but denied sponsorship of it.

Clendening Ryan, organizer of the National Clean Government Fund, who has announced that a \$500,000 campaign fund would be made available for a fusion campaign, insisted he was backing no candidates. But he said the Dubinsky-Rockefeller-Corsi line-up "looks like a pretty good combination."

Desmond Fitzgerald, chairman of the Committee of Five Million, said: "We're not picking candidates; we're interested in producing proof of maladministration and corruption in the city."

The tentative fusion slate even includes a candidate for Borough President of Manhattan, a race the group believes will rival the Mayoralty, due to the fact that Tammany Leader Hugo E. Rogers is the incumbent and candidate for re-election. The fusionists have suggested Secretary of State Thomas J. Curran, Manhattan Republican leader, for the nomination.

Mr. Ryan, an original fusioneer in the 1933 campaign and a secretary and Commissioner of Commerce under the late Mayor F. H. LaGuardia, expressed surprise last night—and some annoyance—that the discussions of a Liberal-Republican ticket had leaked out.

Asserting that his group's primary interest was "restoring clean government" rather than naming candidates, Mr. Ryan said that many "good, bad and indifferent" suggestions had been made to him in the last week. Asked for his appraisal of the Dubinsky-Rockefeller-Corsi city slate, he said:

"There's no question but that they would qualify as patriotic and able officials. Until the full picture of what has been going on under the present administration is brought out, I hope these gentlemen will keep an open mind and not turn down an opportunity to serve the city."

The importance of the suggested nomination of Mr. Dubinsky was twofold: (1) Mayor William O'Dwyer, having broken with the Left-Wing American Labor party, has courted the Right-Wing Liberals, who, though uncommitted, have criticized the

Mayor and Tammany Hall increasingly of late; and (2) the Liberals, with Mr. Dubinsky as the moving spirit, gave more assistance to President Truman last fall than did Mayor O'Dwyer and Tammany Hall, thus making it difficult for the President to intercede in an O'Dwyer-Dubinsky contest.

Mr. Corsi has the high regard of Governor Thomas E. Dewey, who last week voiced his full support of the projected fusion movement after a talk with Mr. Ryan and Mr. Fitzgerald. The Governor is understood to feel that Mr. Corsi could be elected Mayor. Friends of Mr. Corsi credit him with a considerable following among labor unions.

Mr. Rockefeller, who is chairman of the board of trustees of New York University-Bellevue Medical Center, has been a leader in the Public Education Association's campaign for greater state aid for schools. His services as a director of the Urban League won him national recognition as an opponent of anti-Negro discrimination. (End of quote from N.Y. Herald Tribune)

The Rockefeller propagandists and publicity agents are cautiously trying to ease the Rockefellers into elective public offices that will give them direct control of our government and will facilitate the plan to make them openly the nation's rulers. In each case it is sought to build them up as the proponents of some minority group or splinter fraction; but in every case as "liberals" or Marxists of the Rockefeller-Soviet Axis pattern, as proponents of "Rockefellerism". In the case of Winthrop, the special groups toward which the propaganda was slanted were the Reds, Labor and the Negroes.

In this particular instance, the scheme struck a snag for various reasons. The campaign was called off, in so far as it concerned David Dubinsky, Socialist labor unioner (who was one of the original organizers of the Communist-dominated CIO, and a member of the Rockefeller Empire's Foreign Office, the Council on Foreign Relations), and Winthrop Rockefeller. Marxist State Industrial Commissioner Edward Corsi became the Rockefeller "tripartisan" Republican mayoralty candidate in a three-cornered campaign against two Rockefeller-dominated Democratic candidates, Judge Ferdinand Pecora and Acting Mayor Vincent Impellitteri. Corsi accused his opponents of being the candidates

of a split underworld, of the Maffia, the former, according to his statement, was the candidate of Genovese, Adonis and Costello (top men in the national Crime Syndicate), and the latter that of Thomas Luchese, alias Three-Finger Brown (No. 4 man in crime in the East). All of them played stellar roles in the Senate Committee For Investigation of Crime headed by Kefauver, that for a time diverted the attention of the nation from that acme of crimes, the Korean "police action", engaged in, in the words of kinsman Dulles, "to keep the American people artificially alarmed." There does not seem to be any reason to question the accuracy of Corsi's statements. But in view of the foregoing story and Corsi's record, they might have rejoined that Corsi was the candidate of an allied gang, the Rockefeller gang. But the Rockefeller press would not have published the story.

Though Winthrop Rockefeller would have been in friendly company with any and all of these Rockefeller dominated candidates, no doubt it was deemed wiser for him not to be openly identified with the mobster complexion of the election. A number of schemes of the Rockefeller agents had misfired. It had been planned that the opposition gangster elements would be forced to run for cover by the exposure, through the wiretaps, of their tie-in with former Mayor O'Dwyer and the wholesale bribing of police officials. This has been done since, by the District Attorney, just as it had been done for them in the 1930's by their agent, District Attorney Thomas Dewey. At that time Dewey effected the conviction and jailing of "Lucky" Luciano with evidence largely fed him by his bosses, merely to release him several years later, after Dewey had risen to the position of their puppet Governor of the State of New York, largely on the basis of the reputation he had gained through that conviction. This release left Luciano free to flood this country with narcotics, as the chief agent of the drug interests producing them. This performance was to have been repeated, with the aid of the wire-tappers employed by Clendening Ryan. Incidentally, Danton Walker revealed that the same wiretappers were employed on behalf of Alger Hiss.

Clendening Ryan announced that \$500,000 (of Rockefeller money) would be available for the fusion campaign of Winthrop Rockefeller. Ryan had

been Commissioner of Commerce, and with David Rockefeller, was secretary to the Rockefeller puppet, Mayor Fiorello LaGuardia. He is the son of Thomas Fortune Ryan. Ryan, Anthony Brady and John D. Rockefeller were old-time buccaneer allies in New York City politics, who joined forces to gain control of the utilities of New York City and employed Bernard Baruch as their stock-market operator in their malodorous enterprises.

The scheme was inadvertently upset by me when I caught the wiretappers employed by Rockefeller's agent, Clendening Ryan, attempting to tap the wires of city officials through a phone box in the basement of my home. The stench aroused by this exposure and threats of prosecution undoubtedly were factors in impelling the calling-off of the "Fusion" move and the Winthrop Rockefeller candidacy. But Rockefeller interests lost little. As usual, all the candidates were theirs. Vincent Impellitteri, product of Sicily, the birthplace of the Maffia, appointed their agent, Beardsley Ruml, to the post of Deputy Comptroller of the City of New York, where he could write their tax bills as effectively as if Winthrop had been elected Comptroller. Winthrop, in all probability, will be candidate for some other elective office that will further the interests of the Empire, at a future date and under more auspicious circumstances.

In the meantime Winthrop has been busy expanding the interests of the Empire in South America, more especially in Brazil, in company with Arthur Vandenberg Jr. and the dictator President Getulio Vargas.

David Rockefeller was born in New York City on June 12, 1915. He received his preliminary education at John Dewey's Rockefeller-financed and Marxist, Teachers College's Red experimental school, the Lincoln School. Of all the Rockefeller offspring, David, the youngest, was most successfully indoctrinated as a Rockefeller Red. This indoctrination was reinforced at Harvard, where he received his B.S. in 1936. The process was carried even further at the Rockefeller-subsidized Marxist breeding ground, the London School of Economics, under the tutelage of the Rockefeller protege Harold Laski. And the Marxist thought-control process was finished off at Rockefeller-dominated University of Chicago, where David took a Ph.D.

degree in "social sciences" in 1940.

For his U. of Chicago Ph.D. thesis, David Rockefeller wrote on the subject that is closest to the heart of all Rockefellers, thrift. The thesis *Unused Resources and Economic Waste*, was published by the University of Chicago Press in 1941. In the preface, he gives credit for "my greatest intellectual debt" to Professor Frank H. Knight, whose thinking and writings are sound and rational. But he also acknowledges a debt of gratitude to Professor Oskar Lange, who resigned from his professorial position at the University of Chicago to serve the Communist regime of his homeland, Poland, when the Russians took it over. The latter now is a Communist Polish representative to the United Nations, whose activities have been heavily subsidized by the Rockefellers for the writing of textbooks for use in American public schools. David represents his purpose as follows:

"... I was interested in finding the meaning and cause of economic waste." After some two hundred pages of "social science" abacadabra, mixed with commonsense observations, criticism of some fellow "social scientists" and their work, and the usual charts that are intended to convey a sense of mathematical exactitude and are therefore so dear to dispensers of social quackery, he arrives at the inconclusive conclusions: that for the individual and the family there is no real waste except what might be dictated by carelessness or stupidity (p. 220) ; that for the businessman ("entrepreneur") waste is a matter of profits, and "is measured by the ratio of actual performance to the alternative performance which could be most remunerative" (p. 222) ; and "the really crucial wastes to be considered are broad social wastes in the general economic system, which, from the standpoint of action, fall primarily in the province of governments." Social waste, he states, may be predicated on the assumption "that total welfare moves in the same direction as economic welfare and that waste is the ratio of the actual to the ideal", that might be considered on the basis of relative actual employment to "full" employment, of relative actual production to "full" production, or relative "full" employment and "ideal" distribution of income and purchasing power to that actually prevailing. It involves much evasiveness and

double-talk that can be summed up in the remark: "Waste is waste, if that is what you mean."

Though giving credit for influence and advice to his professors, David Rockefeller avoids expressing conviction in the ideas of any of them. He is critically contemptuous of the economic claptrap which the family philanthropies and their allies subsidized as propaganda for influencing and "guiding" the Roosevelt and Truman administrations. Among these are Brookings Institution report, *The Distribution of Wealth and Income in Relation to Economic Progress*, and the National Resources Committee's report, *Patterns of Resource Use*. The Columbia University Commission report, entitled *Economic Reconstruction*, he dismisses as even more stupid and ludicrous than the rest.

From the thesis, it is obvious that the strongest influence on David's thought was the pragmatic commercial advice of his father. This is confirmed by the report in the *Saturday Evening Post* publicity on the influence of the father on the activities of his sons. This leads one to seek for clues in this thesis, which was obviously designed to mask thought rather than to express it, of what is in the minds of its authors. In the concluding chapter, he states:

"Social waste brings up the whole question of how far and by what means a government can or should play a positive and aggressive role designed to promote welfare." In the discussion of this topic he points out that a "tyranny may exercise many of the same controls as a popularly sanctioned government . . . ", and then hastily drops the topic as if to avoid revealing his preference for it. Then he goes on to confirm the impression thus given in the next sentence, reading "Even if the principle of popular sovereignty is taken as axiomatic . . . ", which clearly indicates that he questions this premise, again indicating his preference for some form of tyranny. He goes on to say:

"... there remain a variety of government forms under which, if their advocates are to be given credence, the 'good of all' is to be cherished above everything else."

His cynicism regarding popular sovereignty and democracy is quite obvious. His views coincide with those of his father's adviser, Hoffman Nickerson,

and his protege, Professor Philip Mosely, who scorn the "peasants".

He then proceeds to list as distinguishable, "three systems of popular government which find support at the present time" and the measures which each would adopt to combat unemployment. The choice in his listings of both forms and remedies, suggests the rationalization of "bipartisanship" which his family have so actively advocated and effected in our government. The "laissez faire", or free-enterprise, system that he suggests would discourage monopoly, adopt government operation or regulation of "natural monopolies," "distribute wealth" and income by a graduated income, estate or inheritance tax, grant temporary relief to the unemployed; but diminish government interference and act merely as an economic "policeman." His definition of freedom of enterprise comes as close to a description of a Marxist managed economy as does his definition of a democratic managed economy except in the rate of concentration of power and management in the hands of the rulers, and in price fixing. In practise the transition from the former to the latter has been accomplished by stealth and by gradual encroachment on the Constitution, by Rockefeller agents in government posts. Finally the Marxist Socialist economy is represented as not in any respect differing from the other two, except in that the government would own industry and control wages more directly and distribute wealth directly instead of through taxation. It is notable that no reference is made to the alternative of a truly free economy, such as has restored prosperity in Belgium, when the other lands about her pined under a (mis)managed economy; or to the possibility of a free surplus economy in compliance with the intent of those who wrote our Constitution.

For popular consumption Dr. David Rockefeller threw in a line that could be played up by the publicity man as an illustration of "reform" and "benevolence" of the Rockefellers. That line, which appears on page 170 and was quoted by all the reviewers, reads:

"The existence of monopoly offers prima facie evidence of a social evil." There is little in the text other than reference to some crackpot "social science" dribbles to bear out the statement. Perhaps, Dr. David had the family-

controlled monopoly of American Telephone and Telegraph Co. in mind when he wrote that passage. And who are we to disagree?

Following the completion of his erudite thesis and the receipt of his doctorate, David Rockefeller married Margaret McGrath of Mount Kisco, New York. They have two sons and three daughters and reside at 125 East 65 Street, New York City. He maintains an office, with his brothers, at 30 Rockefeller Plaza, and a summer home at Pocantico Hills, Westchester County, New York.

Immediately following his graduation, David Rockefeller became secretary to the Rockefeller-puppet "Fusion" (they prefer that term in local politics to "bipartisan", which they reserve for their agents on the national scene) Mayor of New York City, the violently Red and shiftily Fiorello H. La Guardia. In that position David applied his vast erudition, in company with Clendening Ryan, to the task of overseeing one of the most "virtuously" corrupt and most extravagant administrations that the City of New York had ever had. It proved highly profitable to the Rockefeller interests in many directions, but literally bankrupted the City. In the LaGuardia administration David's "liberalism" had ample opportunity to develop by contact with some of the most notorious Communists and fellow travellers in the land, such as Vito Marcantonio and Simon Gerson, that infested the regime.

At the outbreak of World War II, he received an appointment as Assistant Regional Director of the Office of Defense, Health and Welfare Service. Following a period of duty in the intelligence service in Africa and France, in the course of which he rose from the rank of private to captain, and became assistant military attache in Paris, he assumed the post of Vice President and Assistant Manager of the Foreign Department of the Chase National Bank. In the meantime he adopted the familiar "philanthropic" pose as trustee of various of the family "philanthropic" enterprises, including the Rockefeller Institute for Medical Research, the University of Chicago, the International House, the Museum of Modern Art and the Carnegie Endowment for International Peace. In the latter post he shared with his kinsman John Foster Dulles and other fellow members of the Council on Foreign Relations, the responsibility for the appointment of

the Empire's agent, Alger Hiss, a close associate and fellow member of the Council on Foreign Relations, to the post of President of the Carnegie Endowment; and for the appointment of Hiss' top assistant in the State Department, (who had resigned when a leak of top secret information was traced to the Division of International Security Affairs) as Hiss' successor as president of the Carnegie Endowment For International Peace.

David Rockefeller is also president of Morning-side Heights Inc., an organization for planning the redevelopment of that section of New York City.

David Rockefeller's next foray into public life was as Commissioner of Westchester County, acting in advisory capacity in the Council's five-year planning program. Those five-year plans are redolent of the stench of the Rockefeller-Soviet Axis. He acknowledged the Communist tang of such "plans" in an interview which he gave Merrill Folsom for a special dispatch to the New York Times on October 18, 1948. He said:

"Too many planners have held a socialist philosophy and their planning has reflected that philosophy. The reputation of planners is that they are left wing. This accounts for the prejudice many persons have against planning.

"I am in this work because planning is essential to any institution that is dynamic in growth. Any intelligent person should look ahead and plan for an objective. And I believe in the (N.B. he omitted private) enterprise system, not planning for socialism."

No one acquainted with the extent of the Rockefeller holdings in Westchester and adjacent Putnam counties would suspect any Socialism about their activities there. Imperialism is the order of the day. Mention has been made of the devices that have been adopted by Rockefeller's Westchester County to reduce their taxes. Most notable is the old "robber baron" device of charging a toll for use of the roads. Each year there are fewer highways that the public can use in Westchester County without paying a toll, or several tolls. To what extent Rockefeller "planning" has accounted for this baronial pattern, would bear investigating. But there can be no question of the overshadowing influence of the Rockefellers in the counties.

It is hard to believe that the Paul Robeson in-62

cident could have occurred in Peekskill without their acquiescence. The Communist Party undertook to stage a treasonous demonstration near Peekskill in the summer of 1949, in spite of the protests of the local citizenry and veteran organizations. They invaded the county under the protection of the officials who defied the loyal citizenry, created a disturbance of the peace, and were driven out by a group of veterans. On the following Sunday, a Communist mob armed with weapons of all varieties invaded the town, with the permission, and under the protection, of local officials, that they demanded and obtained. A group of veterans and loyal citizens assembled to drive out the subversive invaders, who came to disturb the peace in organized caravans recruited from five surrounding states. The local authorities and the augmented police force defied the citizenry and fought with them to protect the invaders. Instead of arresting the latter for disturbing the peace of the community and outraging the patriotic citizenry, the police arrested loyal townsmen; and the local authorities subsequently undertook to prosecute the latter on the demand of the Communist Party and of the subversive demonstrators. In this manner the Duchy of the Rockefellers undertook to make a crime of loyalty of the citizenry. To cap the climax, when the veterans undertook to organize a patriotic counter-demonstration, their plans were sabotaged and their efforts blocked by forces so powerful that no loyal demonstration could be staged. Neighbor Rockefeller never raised voice or finger to help or come to the support of the loyal citizenry.

Among the projects that Commissioner Rockefeller told his interviewer that he had in mind were new parkways and throughways, highway improvement and airport expansion. But he stated he was more especially interested in effecting a consolidation of the villages of Tarrytown and North Tarrytown into a city, as proposed by his father, that would eliminate duplicate services. The Rockefellers are endlessly persevering in their plans, pass them down from generation to generation, until they carry them through. Some future date will undoubtedly arrive when the Rockefellers will openly emerge as Barons of Westchester.

David Rockefeller, as has been related, is an active member of their Foreign Office, the Council on

Foreign Relations, where he has been associated with such distinguished gentry as Owen Lattimore, David Dubinsky, Justice Felix Frankfurter, Dean Acheson, Philip Jessup, Senator William Benton, Frederick Vanderbilt Field, Joseph E. Johnson and Alger Hiss.

There are several traits which the Rockefellers share in common, of which they boasted in their publicity release by Joe Alex Miller in the Saturday Evening Post. First they made it quite clear that their highest principle is profit. This is illustrated by the tale of John D. Jr. who though he was in theory a Prohibitionist and one of the most important forces in imposing Prohibition on the nation, was perfectly satisfied to lease his property to speakeasies and to extend to them the protection of his authority. It is frankly related that:

"Their attitude toward money was of importance. By training and example they were far from soft about financial affairs. On the contrary, they were keenly interested in making money and, on various occasions, have made full use of all the legitimate business advantages the Rockefellers possess to do so. And one of the boys, while at college, distressed his mother by remarking that he was deliberately training himself to be cold and calculating in order to prevent his personal feelings from influencing his judgment in financial affairs."

Their parsimony, according to the publicity matter, even exceeds that of John D. Sr.; and in whatever they do they seek "to get a sound return on their investment." They are lavish with what costs them little or nothing—words and sentiment, as quoted by a friend of theirs:

"The Rockefellers almost never give presents of much value, but they understand the value of thoughtfulness." But they are ultra-lavish with other people's money, usually spent to serve their own interests, as is illustrated by Nelson Rockefeller's lavish squandering of public funds as Coordinator of Hemispheric Defense and his current demand for billions for their Point 4 program, Marshall Plan and Atlantic Pact. The situation has been aptly expressed by Walter Trohan to the effect that they outdo John D. Sr. who sparingly gave away his own dimes, whereas his descendants are lavishly dissipating

other people's money and property, the wealth and patrimony of the nation, largely for their own advantage.

In all of this there emerges added proof that their so-called "philanthropies" were conceived as, and are, enormously profitable indirect investments. This is virtually conceded in the same publicity release in the statement:

"In the Rockefeller concept, however, the philanthropic principle of helping people to help themselves, of using money as a tool to make available the means of progress and self improvement, is inseparably linked to the development of sound business principles." This "principle" has been well understood and frequently restated by all Rockefeller "philanthropic" agents; and it has been most recently restated by their agent, Beardsley Ruml, in his announcement of profits that can be derived from the diversion of tax money to research and philanthropy, as detailed elsewhere.

There also emerges from a study of the situation, an amazing picture of overshadowing fear of poverty and loss of fortune. This was clearly indicated by John D. Sr., when he acknowledged to the members of the Standard Oil luncheon club, when he was worth many billions of dollars, in 1905, that he often awoke at night in a cold sweat in fear of ruin and poverty. This pathologic driving force behind their super-Napoleonic complex emerges once again in their Saturday Evening Post publicity in a statement by one of them:

"There is an old saying: 'Shirt sleeves to shirt sleeves in three generations.' Well we have to avoid a third-generation anticlimax." In ail the publicity matter released by them there stands out a studied effort to undervalue their fortune. At every turn they mention the figures on its size that they want the public to accept. Thus in the publicity release on August 15, 1951, made by the firm of Ivy Lee & T. J. Ross in connection with John D. Rockefeller Jr.'s remarriage, it was stated by them:

"His personal fortune has been estimated at between \$250,000,000 and \$400,000,000." This figure is so absurdly low that it appears probable that it is part of a long and deep laid plan to avoid the payment of inheritance taxes on the bulk

of the fortune at a future date, in the case of John D. Jr. as in the case of John D. Sr. The latter's estate paid an inheritance tax on only \$25,000,000, though his fortune was probably hundreds and possibly thousands of times larger.

These estimates can be arrived at in a number of ways. First, John D. Sr. acknowledged his practise to be to give away only a tithe, a tenth of his earnings. He gave away well over a billion dollars, making it apparent that his earnings were well over ten billion dollars. The capital value, from which those earnings had been derived, could scarcely be less than twice that sum, or twenty billion dollars. His estate paid inheritance taxes on approximately one tenth of one percent of that sum. Since then the fortune has grown by leaps and bounds. It has been augmented by the development of new industries, technologic developments, new conquests and inflation. It has been augmented by the dissipation of the tremendous volume of taxes levied on the nation, by their "New" and "Fair" Deals, a large part of which has flowed into their enterprises and eventually into their purses. It has been augmented by the tremendous expenditures of the nation on "Lend Lease", the Marshall Plan, the Point 4 program and numerous other schemes for looting the taxpayers of the nation and the peoples of the world, the preponderating part of which has flowed into their coffers. It has been augmented by endless wars, including World Wars I and II, and their Korean "police action". It has been augmented by the tremendous profits of their Drug Trust. It has been augmented by the virtual exemption from taxation of many of their enterprises, particularly those launched by them abroad, as in Saudi Arabia and Africa, at the expense of the American taxpayers. It has been augmented steadily by the events that have spelled pain and misery for the rest of the world.

It is probably safe to say that the extent of the Rockefeller fortune is so fabulous that it can not be expressed in terms of money. In substance their fortune represents control of the natural resources of the world, plus the control of most important developments of the future, including atomic developments, on which the American taxpayer is spending billions for them. It is safe to say that if John D. Jr.'s estate will pay an inheritance tax

commensurate with that levied on others, the payment will more than wipe out our national debt. And that would be poetic justice. For the bulk of that debt has been incurred in the expansion of the Rockefeller Empire.

If the Rockefellers desire to extend a true philanthropy to the nation, let them pay and wipe out the national debt, which has been so largely incurred in the expansion of their Empire.

On December 1, 1951 the press announced that a John D. Rockefeller had been jailed. He had not undertaken to overthrow governments and enslave their citizenry. He had not looted nations of billions and impoverished whole peoples. He had committed no act of treason. Nor had he started wars that robbed mothers of their sons and wives of their husbands, and killed thousands of persons. His chief offense was lack of imagination that makes such grandiose schemes "respectable". His instincts were traditionally "correct". But he had robbed someone of a trivial sum that would scarcely be missed; and he lacked the ingenuity to pretend that it was done in the interest of his victim and for his benefit. And even more serious was his offense in being caught. His was really a grave crime and for it he will be punished by imprisonment under the law. There he will learn that crimes can be committed with impunity and honor only if the criminal controls the government.

## CHAPTER IV

### "PHILANTHROPIES" OBJECTIVES OF ROCKEFELLER

#### U.S. Monarchy & World Dictatorship

"The people yield themselves with perfect docility to our molding hands"

#### Rockefeller-Gates' Occasional Letter No. 1

As early as 1872, in the Southern Improvement Company scandal, public recognition of the ruthless greed involved in its affairs threatened to bankrupt and ruin the Standard Oil Co. and put an end to Rockefeller's aspiration for security through monopoly and dictatorship. Fortuitous circumstances saved Rockefeller and his company. But learning nothing from that experience, Rockefeller and his associates went right on with their schemes and continued recklessly to flaunt the force of public opinion, in a headlong career of ruthless rapacity.

Rockefeller made hosts of enemies who were alert to the powers of public opinion. They undertook to use it as a weapon in their battle with the Standard Oil pirates. They organized and synthesized into an effective force the "socially conscious", the radicals, the "liberals" and other vocal groups, together with the demagogues, the politicians, the clergy and the press, in order to carry their fight to the public and win its support. Some of this was nothing more than commercial blackmail.

As resentment against the Oil Trust grew, the Rockefeller-Standard Oil interests were held up by the politicians through the device of "strike bills", and badgered by investigations and court actions. The muckrakers, church organizations and social-service groups exposed the ugly situation and further fanned public resentment. President Theodore Roosevelt, who had succeeded Rockefeller's hand-picked ally, President McKinley, played to the gallery by attacking the Standard Oil Company while indirectly he demanded increased Standard Oil contributions to his campaign funds.

The situation reached its climax in 1907 with the decree handed down by Judge Kenesaw Landis against the Standard Oil Company, imposing a fine of twenty nine million dollars. Two weeks later the panic of 1907 was precipitated. In 1911 the dis-

solution of the Standard Oil Company was ordered by the Supreme Court.

Rockefeller fiercely resented what he regarded as government interference in his private business. He regarded its conduct as his own affair. It could hardly be expected that he would not fight back. He responded as keenly and as incisively to the virulent and well organized slander and persecution as he had to the other problems that had confronted him in his business. Two modes of approach to such a problem were habitual; first was to compromise with a powerful enemy and to join forces with him; the second was to maneuver in the meantime to master and destroy him.

The enemies who confronted Rockefeller and who were responsible for the situation were three—the Wall Street crowd whom he had bested, the welfare and "liberal" crowd and the government. His score with Wall Street he paid rapidly. Within two weeks after the handing down of the decree, there broke loose the 1907 panic. As a result of the panic, the Rockefeller interests managed to get control of numerous, diversified and allied enterprises, and to tighten their hold on national banking.

As early as 1887, his in-law, Dr. A. H. Strong, pointed out to Rockefeller that only by a conspicuous pose of philanthropy could he hope to win over and seduce public opinion. Nevins cites the correspondence of Strong to Rockefeller of February 22, 1887, from the Harper Papers (JDR, v. 2, p. 208), as follows:

"Very many people do not understand you and they very unjustly accuse you . . . Your present gifts, to education and to the churches, do not stem the tide of aspersion as would the establishment of an institution for the public good, so great that it has manifestly cost a large self-sacrifice to build it." He went on to point out the success of George Pea-body in living down a bad reputation acquired by the commercial ruthlessness that was usual in the period, and continued to point out:

"He changed in his later days; began to make benevolence, not moneymaking, his principal aim in life; immediately he got a name for charity and public spirit; now he is remembered for nothing else. You have the opportunity of turning the unfavorable judgments of the world at

large into favorable judgments—and not only that —of going down to history as one of the world's greatest benefactors."

How little true spirit of charity there was in Rockefeller is demonstrated by the reply he made to a letter from his own mother, containing a plea for help from his cousin, cited by Nevins (JDR,

v. 2, p. 177) :

"I decided (I) would not comply with the request contained in it. I want to know surely, in giving, that I am putting the money where it will do the most good." Avowedly, his was an ostentatious display of charity, carefully studied to do the most good for himself and to yield him the highest profit. There was none of that true spirit of charity which does not let the right hand know what the left does. It was his plan not to give unless others were made acutely aware of his giving through being forced to give, too, unless giving served to advertise him, unless it furthered his objective and yielded him a profit. It is the same spirit that has permeated all of the Rockefeller "philanthropies", even to the present generation. It is the same spirit that, bred in his grandchildren, impelled one to tell his mother "that he was training himself to be cold and calculating in order to prevent his personal feelings from influencing his judgment in financial affairs." (Saturday Evening Post, December 30, 1950, p.64) John D.'s patriotism and his ruthlessness with the members of even his own family are illustrated by his relations with his brother Frank. Frank volunteered for service in the Civil War. John D. opposed the enlistment and bitterly refused to lend his brother seventy-five dollars for the purchase of equipment that he needed. When on his return from the war, Frank went into the oil business, John D. stripped him of the business. Frank's estimate of his brother John D. is as accurate a description of the clan as has ever been published. Removing the bodies of his children from the family cemetery plot in Cleveland, Frank said:

"No one of my family will ever rest on land controlled by that MONSTER, JOHN D. ROCKEFELLER."

Coping with public opinion was a more complex problem that required long-range planning, craftiness and cunning. The mob, whom he held in con-

tempt, had not dealt kindly with Rockefeller. He had taken the brunt of the blows directed against the "Oil Trust", and had become the most hated man in the country. He could not walk the streets in safety. The ill will and hatred of the public also extended to the members of his family. It is not surprising, under these circumstances, that contempt of the people should ripen into hatred and should breed a desire for revenge. No subtler form of revenge on the mob could be conceived than to delude it into accomplishing its own subjugation and enslavement. No more cunning weapon could be conjured for accomplishing this revenge than fake "philanthropies". Rockefeller's "philanthropic" activities and their horrible consequences for mankind have been his slow but sure revenge.

Prominent in building up public antagonism against Rockefeller and the Standard Oil Co. had been "welfare" or "social service" organizations; the radical, Marxist and self-styled liberal elements; the church elements, especially the more "liberal" of them that were incorporated in the Federal Council of Churches of Christ in America and allied organizations; and sections of the press. Acting on the principle—"If you can not lick your enemies, join 'em" — Rockefeller took them over, lock, stock and barrel.

Many of them, such as the social-service agencies of the type of the New York, and the National Tuberculosis and Health Associations, the Association for the Improvement of the Condition of the Poor and others that raised funds among the sucker public, emerged as extremely valuable ventures from every angle. The control of "social service" and of church organizations proved especially useful. For it served to muzzle and to check the censure of the sanctimonious and self-righteous elements in the community, and to cover all activities engaged in through such agencies with a cloak of respectability. And the most delicious irony of it, Rockefeller was wise and shrewd enough to discern, lay in the fact that by their goals, especially those of the radical and Marxist organizations, the unthinking mob was betraying itself into bondage and actually paying the cost thereof, and yielding a profit to those who engineered their betrayal. Sweet indeed were the uses of "benevolence" and "philanthropy"—and very, very profitable to some.

Rockefeller first became alerted to the uses of systematic and purposeful philanthropy, according to his biographer Nevins, (JDR, v. 1, p. 124) in his youth, through reading *Extracts From The Diary & Correspondence Of The Late Amos Lawrence*. The lesson he learned there on making philanthropy purposeful was well remembered.

The Rockefeller "philanthropies" were conceived for the dual purpose of taking the curse off the Rockefeller name and enabling the Rockefeller-Standard Oil interests to carry on without interference from a hostile public or the government. One could hardly expect a man of Rockefeller's efficiency and financial ability to fail to expect to profit handsomely from the disarming advantages of a "philanthropic" front. That Rockefeller realized the profitable business possibilities of a "philanthropic" set-up is indicated by an interesting and revelatory story told of the inception of the plan to buy over public opinion and confound his detractors. It was conceived by Rev. Frederick Taylor Gates who had won John D's respect by his sharpness clothed with piety. Rockefeller had profited handsomely from deals engineered by Gates through religious activities as an executive officer of the American Baptist Education Society. Especially appreciated was his aid in gaining control, for a pittance, of the Mesabi mines, one of the richest iron deposits in the country. It netted many millions of dollars when later incorporated into the U.S. Steel Corporation. In *John D.—A Portrait In Oil*, John K. Winkler quotes Rockefeller Sr. as follows:

" 'Fred Gates was a wonderful business man,' said John D. with satisfaction. 'His work for the American Baptist Education Society required him to travel extensively. Once, as he was going south, I asked him to look into an iron mill in which I had an interest. His report was a model of clarity!

" 'Then I asked him to make some investigation of other property in the west. I had been told this particular company was rolling in wealth. Mr. Gates' report showed that I had been deceived.

" 'Now I realized that I had met a commercial genius. I persuaded Mr. Gates to become a man of business.' "

Mayhap one can judge with reasonable correctness that if religion helped net Reverend Frederick

T. Gates inordinately large profits in his dealings with his fellow men, the manipulation of millions certainly would not fail to do so. The "philanthropies" established with the cooperation of this "wonderful business man" could be expected to be highly profitable, directly or indirectly. They have been more profitable than investments of identical sums in even the Standard Oil Company.

The objective that lay at the back of Gates' and Rockefeller's minds at the inception of these "philanthropies" was clearly stated by Gates in the first publication of the General Education Board, the Occasional Paper No. 1, in 1904, as follows: "In our dreams we have limitless resources and the people yield themselves with perfect docility to our molding hands. The present educational conventions fade from our minds, and unhampered by tradition, we work our own good will upon a grateful and responsive rural folk. We shall not try to make these people or any of their children into philosophers or men of learning, or of science. We have not to raise up from among them authors, editors, poets or men of letters. We shall not search for embryo great artists, painters, musicians, nor lawyers, doctors, preachers, politicians, statesmen of whom we have ample supply. The task we set before ourselves is very simple as well as a very beautiful one, to train these people as we find them to a perfectly ideal life just where they are. So we will organize our children into a community and teach them to do in a perfect way the things their fathers and mothers are doing in an imperfect way, in the homes, in the shop and on the farm." For the past half century, however, the Rockefeller "philanthropies" have maintained the pretense that their purpose is exactly the reverse of that above stated. But that is characteristic of the strategies of the Rockefeller Empire, especially when dealing with the mob and its psychology. However, careful examination of the "philanthropic" activities will reveal that they are slowly but surely attaining the above stated goal.

The clear-cut statement of Rockefeller's purpose in his "philanthropies" has never been lost to sight by the Rockefellers or their agents. That purpose, from the very start, was, and still is, a "new social order," the establishment of a dictatorship in the

United States. The objective is to convert our republic into a totalitarian state, into what Hilaire Belloc has named a "Servile State", a state of slaves. This Rockefeller proposed to attain by propaganda, "thought control", bribery, corruption and force. And it is to be ruled by him or his heirs. In other words, Rockefeller was the first of the modern crop of would-be world dictators with super-Napoleonic paranoia. His was the inspiration of the crop that has plagued the world in the past half century. And in most instances, the Rockefellers extended support to them. The Empire which he founded, the Rockefeller Empire, is the first in all history that has approached his goal.

A more detailed statement of this purpose was made by John D. Jr.'s intimate friend, adviser on sociology and fellow member of the Union Club, Hoffman Nickerson. It was published in book form in 1930, by Doubleday Doran & Co., of which Theodore Roosevelt Jr. was president, under the title, **THE AMERICAN RICH**. This volume was the blueprint of the New Deal. In it, Nickerson, who fancies himself a superior specimen of the human animal ordained to rule by "divine right", and who speaks of all other Americans, whom he fancies as being of lesser clay, as "peasants", anticipated Hitler's regime and advocated a similar form of government for the United States. He suggested the ultimate goal of the New Deal as abolition of universal franchise; restriction of the vote to wealthy property owners; elimination of education because of the spirit of inquiry which it fosters, so that there may be restored the medieval mind and its submissiveness; and he urged the adoption in the United States, when the people shall have been forced into line, first of an elective but absolute monarchy and later of an hereditary monarchy.

This plan was advocated by implication and endorsed by another Rockefeller spokesman, Professor Philip E. Mosely, whose salary as Professor of International Relations is paid by the Rockefellers through funds granted by their Foundation to Columbia University for its Russian Institute. Professor Mosely is Assistant Director in Social Sciences of Rockefeller Foundation, and a member of Rockefeller's Council on Foreign Relations and Foreign Policy Association, which, as will be re-

lated presently, are top agency or "cabinet" and subsidiary, respectively, in the chain of Rockefeller-financed "internationalist" propaganda agencies. In a Headline Series pamphlet which Mosely wrote for distribution by the Foreign Policy Association as part of its propaganda and lobby barrage, he said:

"Over the long run, great numbers of people will judge both the Soviet and American systems, not by how much individual freedom they preserve, but by how much they contribute, in freedom or without it, to develop a better livelihood and a greater feeling of social fulfillment." So clearly stated are the totalitarian and subversive objectives of the Rockefeller "philanthropies" and so well have they been recognized, that Congress refused repeatedly to grant a charter to the Foundation. When directly after the Supreme Court decision in 1911, ordering the dissolution of the Standard Oil Company, Rockefeller sought of Congress a charter for the Rockefeller Foundation "to promote the well-being of mankind", Congress twice refused a charter to hold one hundred million dollars, on the grounds that it was a device for evasion of payment of taxes, that it was primarily intended for propaganda for seduction of public opinion and influencing politics, and that it would be a menace to the nation. The Foundation succeeded in securing from New York State in 1913 a charter to hold five hundred million dollars. Subsequently, Senator Chamberlain of Oregon, in 1917, on the floor of the U.S. Senate, sounded a warning to our country on the menace of the Rockefeller "philanthropies". He stated:

"The Carnegie-Rockefeller influence is bad. In two generations they can change the minds of the people to make them conform to the cult of Rockefeller or to the cult of Carnegie, rather than to the fundamental principles of American democracy." Unfortunately this prediction already is fulfilled. Senator Robert F. Wagner, planted in the New York State Senate as a pawn of the Rockefeller interests, introduced and steered through that legislature a bill chartering the Rockefeller Foundation with a capitalization of \$500,000,000 and unlimited scope. It may be significant that Senator Wagner's reputed forebear was Professor Adolph Wagner,

who guided Prince Otto von Bismarck in setting up in Germany a "New Deal" and "welfare" state as a foundation for a German dictatorship and Empire, and for the eventual conquest of "Deutsch-land uber Alles". The pattern of the program which the Rockefeller interests had undertaken was a power pattern as old as human history, that already had become familiar to the modern age by the activities of Prince Otto von Bismarck. Prince Otto von Bismarck, Teutonic Knight who was bound by the Order's thousand-year-old oath to conquer the world, launched the "welfare" and "social service" program that now parades as the New Deal. Subsequently, he became the foster-father of Marxism and Communism. His objective in doing these things was world conquest, "Deutschland uber Alles". No one who knew the Iron Chancellor could be deceived for one moment into the belief that he had the remotest interest in the welfare of the weak or downtrodden. His mottoes were "Blood and Steel" and "Might Makes Right".

His program was a recrudescence of one which was old when it was introduced by the Gracchi in ancient Rome and which eventually destroyed the Empire. It furthered Bismarck's quest for personal power in several ways. First, it robbed the Socialists of the planks of their platform which made the greatest appeal to the mob—Social Security, Unemployment Insurance, Workmen's Compensation, Health Insurance, and all the other quasi-benevolent and paternalistic clap-trap. Bismarck shrewdly saw in these plans, devices fashioned to destroy liberty and to chain the workingclass to his program and to any jobs to which they might be assigned. He saw in that program a snare which would deceive them into accepting submarginal wages and the surrender of adequate present existence in return for a mirage of future security. As a means of winning the favor of the workers and of gaining some measure of power over industry and entree to its records, a part of the cost was levied on the employers. This made of what conceivably might have been a boon to the worker a penalty on industry for offering employment; and meant a tax on industry which materially increased the cost of production. Both factors ultimately operated to increase unemployment.

Second, Bismarck foresaw that with the working 76

class tied to him by this program, he could force into line the German industrialists, the nobility, and finally the reluctant Prussian king, to support his plan of a united German Empire. Junker Bismarck, who had contemptuously spurned any traffic with the workingclasses, whom he called a "revolutionary rabble," had grown tired of being buffeted about and shelved by his liege lord, the weakling King of Prussia. Adversity had served to make of him a diplomat who could advance from one compromise to another, from one treachery to another, to attain by a series of adroit maneuvers his ultimate goal—the consolidation of his own power by forcing his king to accept the position of Emperor of Germany. How well he planned, history reveals. With the Danish invasion, the elimination of Austrian interference in 1866, and the consolidation of his position by a treacherously conceived conquest of France in 1870, the German Empire became not only a reality, but also simultaneously a "first class power."

But for Bismarck, this was merely a beginning. With far greater vision, he planned the political and commercial conquest of the world—"Deutschland uber Alles." He placed on Germany the stamp of a national paranoia which still drives it with mad singleness of purpose and signal "success." The World Wars were mere interludes, which scholars tell us Bismarck foresaw and would have avoided.

The conquest of world markets by German industry and commerce was planned by Bismarck. In such a struggle the burden of taxation and cost involved in the "welfare" program might have proved a severe handicap. Obviously it was necessary to overcome it by forcing the adoption of the same program and handicap on competitor nations. Resort was had for this purpose to subjugation by ideas, propaganda and "boring from within."

There was launched one of the most persistent, persevering and skilled propaganda campaigns in the world's history for the imposition of Bismarck's "New Deal" on the entire world. Now more than half a century later it still continues to sway history and the world.

In this "New Deal" propaganda Bismarck found many allies. The pretended humanitarianism of the program won over many unthinking, kindly persons as well as most religious sects. These are the best possible camouflage and front for any propa-

ganda. Throughout the world these deluded groups still ardently advance Bismarck's destructive propaganda.

Allies of unusual value were the labor movement, Karl Marx and the Communist Internationale. Initially Bismarck had regarded them as the archenemies of his plan. He had called upon Marx's antagonist, Lasalle, for advice in his fight on them. On his counsel, he plucked the "New Deal" from the program which they agitated, with the objective of deflating them.

But Bismarck soon came to recognize what is just beginning to dawn on present day deluded Socialists and Communists. He realized that Karl Marx and his revolutionary Socialism or Communism were shams. He saw that they offered no real menace among dull, plodding, intense, unimaginative, docile and disciplined workers. He discovered that Karl Marx was an intense German nationalist who gloried in the "superiority" of the German worker and who sensed that his program offered no threat to his Vaterland. Marxian Socialism was therefore the ideal propaganda weapon with which to demoralize other lands.

Karl Marx was the son of Henrich Marx, whose correct name before it was "Aryanized" was Hirschel Levy, (Karl Marx—Man & Fighter, by Nicolaievsky & Maenchen-Helfen, p.4) the son of Rabbi Marx Levy of Trier. His mother was a Polish Jewess, derived from a family of rabbis, including Rabbis Meir Katzenellenbogen of Padua, Joseph Ben Gerson ha-Cohen and Joshua Herschel Lvov. His elder brother, Karl's uncle, was also a rabbi.

In order to retain his post as counsellor in the Trier court, when the Rhineland was taken over by Germany, Heinrich Marx (ne Herschel Levy) was baptized in 1817, one year before Karl was born. He retained his court job and advanced to the position of Justizrat and a leader of the Moderate Constitutional party in Trier. Karl's Hungarian Jewish mother, Henriette, did not become baptized until after the death of her parents in 1825. Karl and his brothers and sisters were baptized in the National Evangelical Church (Protestant) on August 24, 1824, when Karl was a little over six years old.

Karl Marx suffered from an acute inferiority complex regarding his Jewish origin. He never could bring himself to realize that those about him re-

garded him with questioning, if not contempt, because he pretended to be something he was not. He held the Jews responsible for his state. His paranoia and inferiority complex were compensated by an intense hatred of the Jews. This found expression in the first works he wrote for publication. In the *Deutsch-Französische Jahrbuch* of 1844 he wrote in a review entitled "Zur Judenfrage" ("On the Jewish Question") the following:

"What is the basis of Judaism? Selfishness and greed. "What is their faith? Swindling. "Who is their God? Money. "There can be no solution of the problems of the world without the destruction of the Jews and their religion, (Judenthum)." In 1875 he wrote: "The Hebrew faith is repellent to me". Thus Karl Marx, the renegade Jew, became one of the fathers of Nazism, acknowledged by Hitler and his crew.

At college, as a phase of compensation for his paranoid inferiority complex, Marx paraded as a Christian and undertook an intensive study of Canonical, or Church, Law. Thus he wrote to his father from Berlin on November 10, 1837:

"I confined myself to positive studies . . . some of Gauterbach's books . . . especially on ecclesiastical law."

In the Canonical Law he found sections which interpret profits in commercial transactions as usury and a cardinal sin. That meant that the Church Law demanded "production for use and not for profit".

This left open only three legitimate vocations: one was to join the Church orders; the second was to labor; and the third was to assume the role of the baron who preyed on the laborers on the pretense of protecting them, as do the modern labor barons and their gangster henchmen, and to live by physical force or violence. This was Medievalism. The Church later abandoned this doctrine except within its own orders, because it was found unsound and dangerous. It was largely responsible for the breakdown of civilization, law and order in the Middle Ages, and for the enslavement of mankind. It threw Europe into a reign of terror that lasted more than a thousand years.

But Karl Marx was not merely anti-Jewish; he 79

was anti-religious and especially anti-Catholic. He wrote that he classed Christianity as a Jewish religion. In this respect his ideas coincided with those of Bismarck, whose anti-Catholic activities have been recalled by the Pope recently as the origin of Nazi activities in Poland. Marx attacked religion as an opiate for the masses. But he stole the doctrine, "to produce for profit is a cardinal sin", which the Church abandoned because it was proved false, and made it the basis of his new religion, Marxism or Communazism.

Marx's hatred, like that of his followers, the Nazis, extended to all non-Germanic peoples, even those that supported his movement. He disparaged the Negro and held the Russian revolutionaries in contempt.

Labor, Marx hated whole-heartedly, and he despised the individual worker. When he married he sought out a noblewoman, Jennie von Westphalen. When one of his daughters wished to marry a worker, he forbade it and ordered her to marry a Negro bourgeois capitalist. Karl came from an affluent bourgeois family and never did a day of labor in his life. The loss of the fortune which his father left him, as a result of his incompetence, bred in him a paranoiac hatred of all who possessed property, the "Capitalists", because he regarded them as responsible for the loss of his fortune. This aligned him as a bitter supporter of the "have nots", not because he loved Labor but because he hated "the Capitalist" more.

His neurotic, paranoid character and overwhelming sense of inferiority gave rise in Marx to a compensatory delusion of superiority that insisted upon autocratic and absolute dominion, and to violent suspicions that were the origin of the "purge" complex that characterizes all his followers. Karl's sisters related that even as a boy, he was a fearful tyrant. He drove girls downhill at full gallop and compelled them to eat the cakes he made with his dirty hands out of filthy mud. His schoolmates feared him because of the satirical verses and lampoons he hurled at his enemies.

Utterly lacking in originality or capacity for lucid thinking, Marx showed faith in his concept of distribution of wealth only by plagiarizing the fallacious ideas of others. Foremost among the fallacies which he borrowed was the so-called "Law of Supply

and Demand." By its converse form—"it is primarily scarcity that gives value"—he undertook to justify ethically its application to human beings and their labor. That became the basic idea underlying labor unionism.

But unionism is only a half-way measure in carrying out the idea of maintaining a scarcity of human beings and their labor. The full and bold program for creating a shortage of human beings is concentration camps, wholesale murder. Hitler alone carried out Karl Marx's precepts completely and to their logical conclusion. In this, as in applying his anti-Semitism, Hitler was Marx's most faithful disciple. In faithfully following in Hitler's footsteps, Stalin and his Communist cohorts are carrying out Marx's precepts.

Quite as fallacious was Marx's reasoning in justifying his German patriotism. As a defense against the Prussian attitude that Jews were aliens, Karl Marx developed an intense German nationalism. Among the first words that he wrote were: "The emancipation of the German is the emancipation of Man".

His sham pacifism and internationalism vanished with the outbreak of the Franco-Prussian War, and were replaced by martial enthusiasm and anxiety for a German victory. Expert at self-deception by dialectics, he justified his attitude in a letter to Engels, as follows:

"The German workingclass is superior to the French from the viewpoint of organization and theory." In a victory of Germany he pretended to discern a victory of the German workingclass, and most important, of his theories. Dialectics alone can match these views or his advocacy of class hatreds and warfare, which in final analysis is the worst form of civil war, with his pretended internationalism and a quest for the common welfare.

But even more obvious is Marx's deception in offering his Communist program as an improvement on human freedom. For Communism necessarily means total loss of freedom, virtual or actual slavery. Under Communism, the government and the people who control it, own everything and everyone. They dictate all conditions of life, including wages and employment. Without freedom to earn a living, all other freedoms are meaningless.

Foremost among the fallacies which he adopted were misconceptions regarding the interaction of supply and demand, expressed in the "Law of Supply and Demand", as contrasted with speculative manipulation. Fallaciously he treated supply and demand as inexorable forces, but sought to circumvent their interaction by a "managed economy".

The remedies that he proposes are fundamentally to frustrate the instinctive possessiveness of man by abolishing private ownership of property, through the devices of progressively heavier income and inheritance taxes, control of banks and credit with eventual nationalization of all industry; and enslavement of mankind by a process of progressive regimentation that begins with labor unionization, progresses to compulsory military training and compulsory labor and ends in serfdom and complete subjugation by dictatorship.

The basic fallacy of Marxian doctrines is of vast significance. For it ultimately justifies all measures which restrict and reduce population, such as war, exile, purges and birth control. It justifies barring fellow men from employment, and the opportunity to earn a livelihood, even when those fellow men happen to be unionists' own children. It justifies all the barbarisms which characterize present day society. The perfect expression of this phase of Marxism was Nazi Germany. Hitler alone carried the Marxian idea to its logical conclusion.

The antisocial character of Marx stamps the entire propaganda and doctrines that bear his name. It is indeed ironic that they should take the name "Socialism." For no doctrine is more antisocial or more destructive to the organization of society.

Bismarck came to regard Karl Marx as an important ally in his Pan-Germanic propaganda. He realized that Marxian Socialism planted in other lands would disrupt and demoralize them and would hasten the conquest of "Deutschland uber Alles." Bismarck eventually invited Marx to return from exile and offered him the editorship of his own paper. Marxian propaganda tracts printed in many languages became some of Germany's principal exports.

Only a dialectician trained to reason away the obvious and the truth can fail to realize that state ownership of the machinery of production implies irresponsible ownership and neglect. For what be-

long to everyone belongs to no one, and is neglected by everyone for a reason that is axiomatic and becomes evident from a psychologic experiment on rats.

Three rats were placed in a cage provided with three levers which released food to them from an overhead trap. The rats rapidly learned to press on the levers and catch the food. More complex conditions were then introduced into this rat society. The levers were placed on the opposite side of the cage distant from the traps that released the food. Only one of the rats had sufficient intelligence to associate pressure on the lever with the distant release of food, and had initiative and energy to do it. But this was of little avail to him. For the stupid and slothful rats learned to grab the food released by their ambitious colleague. Though he worked unremittingly he seldom managed to get the food which he released, and died of starvation.

Most humans are like the stupid, slothful rats. For that reason Socialism, Communism and state ownership of the machinery of production are doomed to failure. Eventually they degenerate into a dictatorship of the most forceful and most ruthless member of the community; for in final analysis the rule of the abstraction, the State, is the rule of an individual. The more absolute the power of the State, the more autocratic is the rule of that individual. Thus the Communist or Socialist State is inevitably a dictatorship; its dictator is owner of everything and everybody he surveys—he is a perfect feudal lord. Such overcentralization of power naturally implies the end of efficiency and initiative and the disruption or destruction of industry, commerce and social organization.

Communism and Socialism seek to dissemble and hide their true character and purpose. Bismarck's "New Deal", Fascism and Nazism are more frank and realistic in seeking the same goal. But in their ultimate expression they all turn out to be identical forms of feudalism. They imply dictatorship based on class hatred, established by propaganda and intrigue, and maintained by force and by violence. They are aptly designated as Bismarxian or Com-munazi programs. For one who understands their identity there is no surprise in current European events.

The Communist Internationales became important

agencies of propaganda of Bismarck's program. This is illustrated by the fact that through them Communism was planted in Russia during World War I with the aid of the German General Staff and of German funds. This is reported by Colonel Nikitine, organizer of Russian counterespionage, in his book *The Fatal Years*. Recent events have made it startling clear that Germany maintained her grip on the Communist movement throughout the following decades. The unity of purpose of Bismarck's propaganda and that of Communist Russia has been fully confirmed by every phase of Soviet policy.

The Labor movement has been a part of the Bis-marxian and the Communazi propagandas from their very beginning. It still continues to serve the purposes of Bismarck as a most efficient agency for paralysis of industry and commerce and for fomenting misery and unrest. It owes its efficiency to several features in a democratic land. It is a mob that commands a large vote, which compels the attention and compliance of the Government. By demanding an ever larger share of what it aids in producing, it can bankrupt and destroy commerce and industry. It simultaneously increases unemployment and the burden on the national treasury. Eventually it leads to destruction of the nation.

It masks, under the camouflage of "class war," acceptance of the basic fallacy underlying Karl Marx's doctrines—man must be scarce to have value. Labor is not only destroying itself by its greed and ruthlessness, but is also destroying its children. It is notable that it is Labor that has barred a refuge in this country for the victims of persecution abroad without a dissenting voice from its ranks. For it recognizes the same motives that prompt the Com-munazis as its basic doctrine.

Led usually by gangsters, thugs and racketeers, and allied with equally unscrupulous groups, organized labor has seized control of the governments of nations and converted them to base and destructive uses. In so doing it prepares the way for the conquest of Bismarck's successors. Whatever justification labor unions may have had and whatever sympathy they may have deserved they have forfeited by their criminal purposes and actions. Theirs is not the way to salvation of the cause. It is the path to destruction.

Propagandists and pseudo-liberals in the guise 84

of "authorities" and college professors have been ever at hand to instigate and justify the subversive activities of Labor. On the payroll of unions, prostituted to their dictates, with lectures censored by the union "leaders," they act as show-fronts for their racketeers and are accomplices of their gangsters. They reflect the thoroughness of Bismarck's organization of his propaganda.

Germany's entire education system, as well as her diplomatic corps, was made part and parcel of the Bismarxian propaganda system. Subsidized learning and scientific achievement were widely advertised and publicized and lent color to claims of German intellectual superiority. Trading on this reputation, Germany was able to palm off on the world, pseudo-sciences, such as sociology, social service and modern economics, which are nothing more than very thinly disguised false propaganda.

A system of recognition, adulation and decoration of foreign educators and scientists fostered their teaching doctrines that served the purposes of the Bismarxian propaganda. Germany thus made the education system of other lands a part and parcel of her propaganda machine. The Communist propaganda machine which has recently been exposed as dominating our entire school and university system, is but a subsidiary of the machine which Bismarck built and Rockefeller financed and fostered.

Bismarck's foreign "New Deal" propaganda came out into the open in 1890, when Kaiser Wilhelm II, for personal and strategic reasons (which included a survival of the resentment which his grandfather had held against Bismarck for forcing him into the undesired role of Emperor of Germany), resolved to drop the "Pilot," Bismarck. To strengthen his position he first sought to win over the German Socialist and Labor elements. In so doing, he let the cat out of the bag with regard to the stimulation of Socialist and labor propaganda in other lands, when he called an International Congress on Labor Legislation to consider the plight of the German workers. When an individual so jealous of his prerogatives and so contemptuous of menials appeared so anxious to share the consideration of the internal difficulties of his Empire with others, there was obviously something evil afoot.

It was the spirit of Bismarck that clumsily led 85

Germany. The status of Nazi Germany was a direct, logical and inevitable consequence of the concepts of Marxian Socialism and of the "welfare" program, the "New Deal" devised by Bismarck. Its development was guided by Hitler's "Brain", Professor Haushofer and his Geopolitical Institute. The class hatred of Marx was converted to another equally absurd hatred—the Aryan. Marxian internationalism translates itself rationally into Aryan internationalism. The war on capitalism logically assumes the form of raping other lands; for the Marxian definition of "capital", in final analysis, is "the other fellow's property." Restriction of the supply of labor to control its wage is served by eliminating minorities. The philosophies of Marxism and Nazism are obviously identical. Nazism is merely the active tense of Marxism.

Marxism is, in essence, a power pattern. It is a device for conquest of lands from within, by gangsterism and crime. It operates by robbing the people of their wealth, through taxation, under the pretense of "distributing wealth". It forces the people to surrender their freedom to the criminal Socialist, Nazi, Fascist, New Deal, Fair Deal or Communist rulers. It is a device for the looting of peoples by the most ruthless and most violent elements, aided and abetted by the unthinking, the gullible and the stupid. It means rule by brute force and violence.

The first of the formidable competitors of Germany that succumbed to the propagandized Bis-marxian program was England. A few years before World War I, Great Britain was forced by the agitation among her workingclasses to swallow the whole bait—hook, line and sinker. German industrialists openly urged upon Parliament the adoption of the program. England thereby set in operation forces which are accomplishing the fall of the British Empire. Premier Ramsay MacDonald in an address before Parliament in 1929, frankly blamed the welfare, dole and health insurance laws for the insoluble economic problem presented in England by the unemployment situation.

From the point of view of American affairs, even greater significance was lent the situation when the wholly alien ideas were given an aura of respectability in the eyes of American Tories. This was accentuated by the fact that British industry was

now in the same position, with respect to the cost of the "welfare" program, in its competition for world markets. It became of interest also to British industry that the United States should adopt an identical handicapping program.

The earliest published record of the launching of the Bismarxian propaganda in the United States is found in the report of the German subsidized International Association For Labor Legislation (reported in the American Labor Legislation Review, V. 4, p. 511, 1914) :

"Work towards the formation of an American Section was initiated in 1902, when the Board of the International Association began to make its objects known in the United States and to form connections with interested individuals."

Among the original founders of the Association were Richard T. Ely, Edward T. Devine, Mary K. Simkhovitch, R. O. Lovejoy, Mary van Kleeck, and John B. Andrews. Later joiners were John A. Kingsbury, Charles C. Burlingham, William Hodson, Ida M. Tarbell, Homer Folks, Frances Perkins, Leon Henderson, Harry L. Hopkins and Eleanor

Roosevelt.

They numbered among them the leaders of the U.S. Communist Party, which was organized by them shortly thereafter, about 1908.

Numerous organizations were launched to further this Bismarxian propaganda. Prominent among them was the American Association for Social Security, as it is now called, and the American Association for Labor Legislation.

The engineering of this program of propaganda, as has been related, brought into play all the usual devices of the craft. All its phases were touted as "liberal" by converted or subsidized writers, lecturers, labor agitators, professional malcontents and university professors. Particular attention was given to the seduction of the younger generation in schools, colleges and universities. Magazines and periodicals were subsidized, or founded, to agitate for these "liberal" measures. The foreign-language press was perverted early to the uses of the propagandists, and was corrupted cheaply.

Capitalizing on human nature and the desire to conform, "polls" of "popular sentiment" have been developed into superlative tools for propaganda and influencing public opinion. Hero worship of leaders,

so essential for a dictatorship, has been fed by sickening adulation of them by fellow-travelling or prostituted columnists. Book clubs have been organized to control what is published and read by the nation. Finally, vested interests in the form of highly paid positions were created for the leaders of the various movements that were gotten under way by the propagandists.

In due time the propaganda began to assume the form of an indigenous movement and its foreign origin was completely masked and forgotten. So widely and insistently were the Bismarxian ideas touted as "liberal" that in due time anyone who realized their specious character was placed in the light of an extreme conservative or "reactionary."

Social-service agencies and foundations proved to be most effective in raising this alien propaganda above all suspicion. They also enabled placing the burden of financing the propaganda on the very people who were to be seduced. This was done by collecting funds and endowments ostensibly for charitable and other purposes. Organized social service joined hands with the Socialist and labor elements to form the self-styled "liberal" group.

Foremost among the social-service agencies which supplied propaganda funds in the early days were the Russell Sage Foundation and the "Charity Trust." The latter group, at the beginning, assumed leadership until misuse of charitable funds was exposed by Senator Thompson's investigation in 1914-1916. The most influential of the social-service agencies which became agents of the propagandists was the New York City group designated the "Charity Trust." Its activities came into such disrepute that in 1914 an investigation of them was demanded of the New York State Legislature and was made by the Thompson Committee appointed by it. Hearings before the Committee revealed how the moneys collected by these agencies for supposedly charitable purposes were converted to personal use and to commercial and political propaganda.

The objectives of Bismarck and Marx, a "new social order", totalitarian in character, became the purpose of Rockefeller's "philanthropies", for which all of these agencies were taken under his wing.

## CHAPTER V

### ORGANIZATION OF ROCKEFELLER "PHILANTHROPIES"

#### Schemed "Benevolence" Hides Mailed Fist

The commercial use of "philanthropy" for evasion of law and taxes is now a familiar pattern. The Rockefeller "philanthropies" were pioneers in this direction. They were conceived and planned to supplement the Standard Oil Co. and other controlled industries, as the nucleus of the world-wide Rockefeller Empire. This is made clear in Nevins's authorized biography of Rockefeller. (JDR, v. 2, p. 164)

"How could so enormous an accumulation of money be employed? To dissipate it would be easy enough; but it was intolerable to Rockefeller's systematic and careful mind to think of frittering it away. Nor could he spend it for personal whims of a philanthropic or pseudo-philanthropic kind; first, because, unlike many rich men, he had no whims, and in the second place, because he had an unconquerable instinct for giving in an orderly way on the basis of fixed principles (Ed. the "principle" of acquisition) . . . Year by year, he and Gates were finding out, often by bitter experience, that some types of philanthropy **SIMPLY DID NOT YIELD ADEQUATE RETURNS.**" Nevins goes on to state that the "philanthropies" were intended to serve "... to fructify some important work along a nation-wide or even international front." (JDR, v. 2, p. 465)

The "philanthropies" supplemented Rockefeller's industrial interests and made possible attaining objectives that would have been suspect and conquests that would have been unattainable in the normal straightforward course of business. It has proved a perfect instrument for world conquest and the subjugation of native and unsuspecting folk. It follows that basic pattern that Bismarck launched in the modern world as a political weapon for world conquest, the "welfare state". To this basic pattern the Rockefeller "philanthropies" have superadded improvements and refinements that make Bismarck's plans look amateurish and crude.

The Rockefeller "philanthropies" were conceived and planned as the nucleus of the political control and government of the projected Rockefeller Empire during its formative period of world conquest by propaganda of a "new social order", in other words, subversion. They are superbly organized to serve to the best advantage all the purposes of Bismarck's "New Deal". They constitute the most Machiavellian conspiracy in all human history.

The "philanthropies" were shrewdly designed to retain control for the Rockefellers of all the activities fostered and all profits, actual and potential, tangible and intangible, derived therefrom, while forcing others to assume the bulk of the costs. Nevins, in his biography, describes the method as follows: (JDR v. 2, p. 465)

"As the fortune grew, it became necessary for him, his son, and Gates to plan philanthropies which should aggregate not millions, but scores of millions, and should if possible fructify some important work along a nation-wide or even international front. He insisted that all principles that he had laid down during the eighties must be maintained. His money should be given, in general, on conditional terms which would stimulate (Ed. or exact) gifts by other men and organizations. And finally the work done should be of continuing character, which should remain vigorous after his aid was withdrawn." In brief, the plan was the same as that which Rockefeller adopted in his business enterprises. His "philanthropic" investments were designed to take over the enterprise of others that were in distress to serve his interests and render him tangible and intangible profits in perpetuo, and to give him perpetual control of them while forcing others to sustain them for his own advantage and gain.

In the earlier stages of the development of this system of "philanthropies", the Rockefeller interests assumed a maximum of one quarter to one half of the cost of an enterprise, and required the participation of others for the balance of the cost, as a condition for their "gifts." Thus they compelled public support and financing of their schemes of which they assumed full control, benefits and returns. They took over direct or indirect control, with but nominal contributions, of rich "charities" such as the Charity Organization Society, the State

Charities Aid and the Greater New York Fund. They were thus enabled to turn to their purposes and dispose of large sums contributed by the public at large. Through devious devices such as interlocking directorates and political maneuvers, they were able, later, to gain control of a progressively larger proportion of the colleges, universities, church organizations, foundations and philanthropies set up by others. At the present time there is no important foundation in this country that is not controlled, usually directly but sometimes indirectly, by the Rockefellers or their agents, to be converted to the propaganda, conspiracies and other uses of the Rockefeller Empire.

The program of monopolistic control of foundations, philanthropies, and charities was initiated by John D. Rockefeller himself in the "merger" of Carnegie "philanthropies" with his own, by direct arrangement with old Andrew Carnegie. The story of it is intimated in Nevins's biography (JDR v. 2, pp. 591-2), which relates: "Clark was the publicity agent of the Standard— Rockefeller has none. Still some of Clark's work benefited the nominal president of the corporation. His hand perhaps appears in the New York World's display article of May 10, 1908, on twenty-five years of the Standard Oil, full of praises for the organization and its founder. 'One by one', declared the story, 'the falsity and exaggeration of the charges made by interested rivals and demagogues of every class are being made plain'—a remarkable statement to appear in The World. We are tempted to see Clark's touch again in a statement by Carnegie on his golf matches with Rockefeller. 'Our last game was hotly contested', said the Scot. 'In fact, we were so excited over some special good work that we lost count of the score.' Carnegie intimated that Rockefeller had taken advantage of this to give himself an extra point." The last sentence of this quotation points up a Rockefeller trait that has characterized all their "philanthropies". Carnegie and Rockefeller had a community of interest in steel. Nevins points out (JDR v. 2, p. 39) "As a matter of fact, Rockefeller and Carnegie were personally always on the best of terms . . ." William S. Dutton, Rockefeller propagandist, 91

writing for their Collier's magazine, issue of April 28, 1951, relates that though there were antitrust laws that barred Rockefeller from attaining his objective of monopoly in business, there was no barrier to his attaining it through "philanthropy". He relates that Rockefeller and Carnegie merged their foundations, in effect, with an agreement to collaborate, not to compete or overlap, an understanding, he reports, that is still effective between their foundations. Thus did John D. Sr. lay the basis for a "Philanthropy Trust" that was destined to attain for himself and his descendants the subjugation of the world that he sought.

The pro-British slant of the Carnegie philanthropies was made to fit into the Rockefeller scheme of things, when the Marxist Labor Party, that was heavily subsidized by them, took over the government. On the Board of Trustees of the Carnegie Endowment for International Peace, one of the most important of the Carnegie group from the viewpoint of propaganda in international affairs, sit David Rockefeller and his kinsman John Foster Dulles, chairman of the Board, with Alger Hiss as President as late as 1949, General Dwight D. Eisenhower and Ambassador at Large Philip C. Jessup. It is also noteworthy that Senator Robert A. Taft served as Trustee, in the years 1935-1938, on the Board of this Rockefeller - dominated "internationalist" outfit.

Herbert Morrison, British Labor leader, was attached to the Rockefeller-dominated Carnegie Endowment For International Peace, and was a protege of the Rockefeller Empire. He displeased his masters when after becoming Foreign Secretary he announced on March 17, 1951, according to a special dispatch to the New York Times, that he opposed abandonment of British national sovereignty to the super-national Council of Europe, sponsored by the Rockefeller Empire. His patriotism aroused their antagonism and brought an attack on him and the Labor Government in the Sunday, September 12, 1951, issue of the New York Times, that presaged Labor's defeat less than two months later.

When the Rockefeller publicists set out to build the phase of the "philanthropic trust" sought by their employer in the field of "charity", they undertook to build further on the discredited organization of the "Charity Trust". They sought a new front for their organization, one that

would serve to dispel the odor of rot which had issued from the investigation that had discredited "uplift" activities. They had to have a fresh approach to the gullibility and purses of the "peasants".

They found it in the highly regarded New York Tuberculosis and Health Association set up by a group of physicians who were zealots devoted to the cause of fighting that scourge. It offered the dynamic approach to the public and its purse of the fear of disease, and the added advantage of periodic collection drives and a perennial income from the established sale of Xmas seals to finance the conspiracy.

The use of fear of disease had been one of the first approaches to public goodwill adopted by Rockefeller and he knew it to be effective. Since then it has become standard and accepted practise among the conspirators, even in radical circles. Thus the Russian Communists offered as an excuse for the invasion of Rumania, statistics that were designed to show "an appalling prevalence of endemic diseases" in Bessarabia. The Communists propose, in the words of one commentator, that "if Rumania will not treat the needlessly ill with Communism, Russia will cure them with bombs." The Rockefeller interests placed the relatively unknown social-service worker, Harry L. Hopkins, in charge of the program, as Director of the New York Tuberculosis & Health Association. Thus did they begin to groom him as one of their top lieutenants in their conspiracy to take over the nation and the world. Then their pseudo-philanthropic conspiracy emerged an ultra-potent power-pattern.

Under the aegis of Harry L. Hopkins, a Rockefeller almoner and agent, there was built up a social service, charity and philanthropy trust that was expanded to national and worldwide scope. In the 1920's it had an annual "take" of more than four billion dollars a year and was one of the country's five largest and richest businesses. This racket was built up about the nucleus of the New York Tuberculosis & Health Association. It made the sucker public finance its expansion through the purchase of Xmas seals. Not one penny of the money ever raised from the sale of the New York Tuberculosis & Health Association seals ever went to the relief of a person with tuberculosis or to an institution for

his care. This fact was confirmed by New York City Health Commissioner Louis I. Harris, in a letter to the New York Times of June 8, 1932; and by subsequent acknowledgement of the officers of the Association "that all its money had been expended on salaries and overhead". (Your Life Is Their Toy, 1940, p. 27) The Xmas seal funds were fraudulently used to build up a whole array of agencies for the exploitation of diseases, such as the Heart Association, the American Cancer Association, the Social Hygiene Association, the Diabetes Association, the National Association for the Prevention of Blindness and a host of others.

These organizations, in turn, cadged money from the public on the fraudulent pretense of helping victims of the diseases. The funds were used to build up the national and international "Charity Trust" that controlled the billions of dollars mulcted from the public under false pretenses. This money was used to build up a political machine fostering Rockefeller's objective, a "new social order", that in its initial phases emerged as the New and Fair Deals. Its ultimate goal is a Marxist "welfare state" dictatorship controlled by the imperial lords that rob the very people whose funds were obtained under the pretense of defending their freedom and property. Financial allies dominated by the conspirators swelled their war chest. Thus the Metropolitan Life Insurance Company officers, among others, violated their trust, and the law, by pouring millions of dollars of their policyholders' money into the political activities of these organizations, on the pretense of benefiting public health. (Your Life Is Their Toy, 1940, pp. 121-135)

These "social services" organizations contributed materially to the conspiracy to take over the government and convert it to the uses of the conspirators. They contributed both money and propaganda value. Under a pretense of an interest in the physical welfare of the public, they gained control of the health, hospital and welfare agencies of the governments. These they used in turn to aid in taking over control of the government as a whole and effecting its conversion to a "welfare state". Much of their funds supplemented those of the Rockefeller controlled "philanthropies" in financing the spread of the Marxist "social sciences" and Communism, as a device for attaining their totali-

tarian objective.

In all of these activities, "mastermind" Harry L. Hopkins, Director of the fraudulent New York Tuberculosis & Health Association, served as a pawn of the Rockefeller interests. His political ascendancy and power in Roosevelt's "New Deal" merely meant his emergence into the open as their top agent in effecting the seizure of the government through the "social service" device. Hopkins' subservience to the Rockefellers is clearly discernible in his repeated offers of government posts to Nelson A. Rockefeller, including the offer to make him his Assistant Secretary of Commerce.

Before reviewing the Rockefeller propaganda, "thought control" and commercial agencies that masquerade as "philanthropies" it should be noted that the Rockefellers never have let go of financial control of those "philanthropies", or of their Standard Oil or other industrial enterprises. At various times they have pretended that they have retired or relinquished control, for purposes of popular deception, or to escape the consequences of some nefarious activity. This pretense was exposed as false by testimony given under oath by John D. Rockefeller before the U.S. Commission on Industrial Relations in 1916, as stated in the summation of the chairman of the Commission, Frank Walsh, as follows:

"The Foundation is entirely outside and above the Government. The power it exercises is practically unlimited . . . There is hardly anything to which the enormous power of the money it employs cannot be applied, if Mr. Rockefeller deems it proper to apply it. I say Mr. Rockefeller because Mr. Rockefeller is the Foundation. The testimony shows that the Trustees exercised no authority that did not come from him." Rockefeller also testified that on dissolution of the Foundation the capital funds would revert to him or his heirs, which makes it quite clear that the Foundation is private property.

The extent of control exercised by Rockefeller dominated foundations over the activities of its grantees is clearly illustrated by the recent action of the Rockefeller dominated Carnegie Endowment For International Peace. It demanded a refund from the American Bar Association of a \$15,000 grant made to it for a study of the U.N. Genocide

Convention that had been approved by the U.S. Senate, because the report of the Committee condemned the Convention as approved (N.Y. Times, Oct. 15 & 20, 1950). "Researches", to the support of which grants are made by the Rockefeller controlled foundations, are required to make reports favorable to the Rockefeller interests or approved by them. As a matter of practise, grants are not made except to individuals who are known to support Rockefeller causes. When Rockefeller grants are given to Communists and other subversives, it can be assumed that the views of the Rockefellers coincide with those of the grantees, or vice versa. It is a striking fact that none of the Rockefeller "philanthropies" or their allies have ever been known to contribute to a patriotic cause designed to support the Constitution and inspire respect and devotion for our republic.

The flagrancy of violation of the law by the foundations is accentuated by the fact that the bulk of their funds are moneys which are due to the Treasury but are left with the foundations in trust for use in public interest. The Treasury has the final say as to whether activities undertaken are "in public interest" and the foundation funds therefore exempt from taxation, or whether the moneys shall go directly into the Treasury. Since the Rockefeller interests control the U.S. Treasury, it is a simple matter for them to exempt the funds of their own foundations from seizure for taxes and to bar the setting up of other foundations than those under their control. In effect, this means that the Treasury has ruled that the activities of the Rockefeller controlled foundations, no matter how subversive, are "in public interest".

Our tax laws are written by Rockefeller puppets at the instance of their agents. One of the most important of these agents in the field of taxes is Beardsley Ruml, former Director of the Laura Spelman Rockefeller Memorial who surreptitiously launched through it the Rockefeller campaign for the Marxist "social sciences". Of him Horace Coon has stated in his *Money To Burn*:

"... wherever the Rockefeller interests have made contributions to the 'social sciences', Beardsley Ruml's name is usually to be found." (Quoted by Hughes, *Prejudice & the Press*, p. 302) It is no mere coincidence that the same Beardsley 96

Ruml who directed the spending of the funds of the Rockefeller controlled foundations to foster Communism in the guise of "social sciences", has also served as the mouthpiece of the Rockefellers in dictating for them the tax legislation of the country. For it is a fundamental of the Marx-Lenin formula that Communism most readily can be imposed on lands through national bankruptcy. This was epitomized by Harry Hopkins, in his slogan:

"Tax! Tax! ! Spend! Spend! ! Elect! Elect! !" He omitted, as too revealing, the purpose of this policy:

"Betray! Betray! ! Enslave! Enslave! !"

Naturally the Rockefeller interests dictated no tax legislation that would affect themselves. Those who engage in the business of drilling for oil are especially provided with numerous loopholes for evading taxes, "in the interest of national security". Not even the lowest paid workers, who earn scarcely enough to keep body and soul together, are permitted to evade taxation, by the withholding tax so kindly provided for them by the Rockefellers through their agent Beardsley Ruml. In violation of the Constitution the government impresses the services of the employer to collect it and thereby misdirects public wrath against him.

In many directions the Rockefellers are permitted to evade taxation entirely by the laws their agents have drawn up. As an example, John D. Rockefeller's estate paid an inheritance tax on a mere twenty five million dollars of the fortune of billions of dollars he left behind. This explains why the Rockefellers personally are always in the vanguard of the citizens who appear before legislatures and Congress to demand the passage of bills calling for continually higher and more crushing taxes. They escape payment of those taxes by devices provided for them in the laws or by their administration.

But there is an even more cogent reason for the activities of the Rockefellers in demanding ever greater taxation and in their support of the program enunciated by Harry Hopkins, their agent, in his slogan above quoted. As will be shown at length and in detail in later chapters, the bulk of the moneys looted from the U.S. taxpayers by the outrageous method of taxation devised by them, flows into the coffers of the Rockefeller Empire. The U.S. Treasury and local tax collectors merely serve as

their collection agents. The Federal and local governments are administered largely by public officers who are handpicked agents of the Rockefeller Empire, whom it imposes on the electorate by control of the nominating machinery of all parties.

Through such devices the Rockefellers have compelled the Federal and local governments to assume the burden of any and all of the schemes launched by them to further their interests through their own and dominated foundations, as their supposed "philanthropies". They have compelled the Government to finance with taxpayers' money and property their private business enterprises that parade as "benevolences".

The numerous enterprises which the Rockefeller Empire has financed by sacrifice of life and confiscation of wealth of the taxpayers of the U.S. through control of the Government will be described later. Among them is the development of the Saudi Arabian oilfields by their Aramco to provide the Communists with oil for their war in Korea, for slaughtering our troops in a war that was "philan-thropically" engineered for them; and World Wars I and II that wrested for them from England the concession for Saudi Arabia and the right to develop it.

The "philanthropies" of the Rockefellers developed, as planned, not only into a source of unbounded political power, but also into the fountainhead of enormous revenues that literally comprise the bulk of the national income and wealth of the people of the U.S. and other lands, through such devices as Lend-Lease, Co-Ordination of Hemispheric Defense, the Marshall Plan and the ECA, UNRRA, the Atlantic Pact, the United Nations, the Point 4 program and many other "philanthropic" schemes.

Strangely enough there is one phase of the Rockefeller "philanthropies" that must be remembered. The law exempts philanthropic foundations from taxation. But it specifically provides that this tax exemption will be forfeited if the foundations engage in political activities and propaganda. Since the Rockefeller foundations are almost completely and exclusively engaged in propaganda and lobbying, their funds should be subject to full taxation that would virtually wipe them out. But the Rockefeller Empire thumbs its nose at our laws, even those they themselves write. For they are the powers behind our Government and in it, as well.

## CHAPTER VI

### ROCKEFELLER INSTITUTE FOR MEDICAL RESEARCH

#### "Philanthropy", Drug Profits and Treason

Rockefeller Institute For Medical Research was John D.'s first bid for public favor. It was intended to allay the bitter antagonism that his activities had created and had made him "the most hated man in America". This was done by bribing public opinion through a pretended interest in their health.

This plan was first conceived by Reverend Frederick Taylor Gates, an amazing and completely underestimated character who has left an indelible stamp on world history of an entirely unclerical nature. His influence derived from his collaboration with the Rockefellers in a conspiracy for a super-Napoleonic world conquest under the sham front of philanthropy.

Frederick Taylor Gates was born on a farm in Broome County, N.Y., in 1853. His father had studied medicine, which may serve to explain the son's interest in the subject, much as the medical quackery of John D.'s father, "Doc" William Avery Rockefeller, whetted the interest of his son. Gates' father, unlike John D.'s never practised medicine, but became a pitifully underpaid Baptist minister who served in country churches at Lamb's Corner, Mott's Corner and Ovid, N.Y. In his unpublished manuscript, Autobiography, which is quoted in Professor Allan Nevins' official biography, authorized by the family, entitled John D. Rockefeller, Gates expressed his bitter resentment of the family's poverty during his boyhood and his hatred of the rigid religious discipline to which he was subjected. He wrote:

"People handed their church subscriptions to my father from time to time in cash, as it became convenient. Father's usual salary amounted to about \$250 per annum, and his 'donations' added \$50 more. His wood was usually furnished, and we had trifling presents. So we were always poor, and during the Civil War we became progressively poorer, because while the salary did not rise, the cost of living did. Father's was probably a typical case of the country pastor. He had to keep a horse, because his church mem-

bership was scattered, and expected the usual amount of pastoral visits and preaching at out-stations. He had to dress in ministerial broadcloth and wear a silk hat; he must take papers and magazines, and read books, and his wife and family must dress respectably. Father always had to pay a rental of not less, I think, than \$50 a year for his house. He received a few wedding fees of from \$2 to \$5, but never, I believe, a funeral fee. Never while he lived in the State of New York did Father receive as much as \$400 in money in any one year." (JDR, v. 2, p. 271) "The best religion had to offer me as a boy, was death and heaven, the very things I most dreaded, —being a normal, healthy boy." Nevins recounts that "there was impatience, too, in his recollections of some crudities of rural religion—the public baptism in the creek, with hymns and prayers, and the revivals."

Gates' father was sent by the Baptists' home-mission service to Forest City, Kansas, in 1868. Fred attended Highland University, Kansas, for a brief period; and at the age of fifteen he left to teach primary school for three winters. He then went to work for a bank and proved himself to be a good money-getter. He also sold patent harrows and earned \$1500 in commissions. In 1875 he entered the University of Rochester and two years later, he matriculated at the Rochester Theological Seminary. He emerged a "modernist" minister, whose prime interest was money-getting, and became pastor of a poor congregation in Minneapolis. A series of essays in the Minneapolis Tribune on the happier observance of Sunday attracted attention and drew the interest of wealthy George A. Pillsbury, who called him in to advise on the disposal of his estate in a manner that would draw public interest.

Gates shrewdly carved out a job for himself by recommending to Pillsbury that he should give the Owatonna Academy only \$50,000 forthwith, on condition that the Baptist community raise an equal amount; and that he leave the additional \$150,000 he had planned to give the Academy, in his will. He then took on the job of raising the funds; and was so successful that he was offered simultaneously the positions of principal of the newly named Pillsbury Academy and the presi-

dency of the University of Rochester. He accepted neither, for in the meantime, he had attended the May, 1888 meeting of the American Baptist Education Society, and was appointed its executive secretary.

In his new post, Gates was in an excellent position to reveal and give full play to his true nature. Nevins makes it quite clear that Gates was quite as adept at using the front of religion and the ministry to advance his interests and those of his associates as was Rockefeller, and he became skillful at using the "philanthropic" fronts for the same purpose. Nevins points out that Gates was in essence "a business man with a talent for large affairs, a keen interest in the power of money . . .", who "combined strong altruism in some directions with strong self-interest in others." He gives the impression of having entered the ministry despite his aversion to fundamentalist religion for the primary purpose of advancing and serving himself; and he frankly acknowledged that he was attracted by Christ's "social and moral teachings . . . and . . . I wanted to side with him and his friends against the world and his enemies. That frankly was the only 'conversion' I ever had." (JDR, v. 2, p. 271) Nevins comments that it was an intellectual rather than an emotional experience. At any rate, he states: "He was, in short, a man after Rockefeller's own heart" or lack of heart.

Considerable light is thrown on Gates' character by the rules that he drew up for a financial agent of a Western college for raising money, that Nevins cites from the records of the General Education Board. "Keep your victim good-natured", he admonished. "Let the victim talk freely, especially in the early part of the interview, while you use the opportunity to study his peculiarities. Never argue with him. Never contradict him . . . Give your fish the reel and listen with deep interest. Appeal only to his nobler motives. His own mind will suggest to him the lower and selfish ones." He was as cold, callous, cynical, calculating, hard and unscrupulous as any swindler. The old adage that "birds of a feather flock together" no doubt accounts for Rockefeller's attraction to Gates; and in addition there were financial advantages that Gates gained for Rockefeller in the course of his religious activities.

Gates used his position to ingratiate and serve the wealthiest co-religionist, John D. Rockefeller. It was not long before John D. recognized his shrewdness, his unscrupulousness, his inordinate ambition and his business ability. First, he employed him as adviser in his "philanthropic" investments only, but it was not long before Rockefeller retained Gates to manage his other investments as well. John K. Winkler, in his *John D.—A Portrait in Oil*, reports Rockefeller's tribute to Gates, as follows:

"Fred Gates was a wonderful business man. His work for the American Baptist Education Society required him to travel extensively. Once, as he was going south, I asked him to look into an iron mill in which I had an interest. His report was a model of clarity!

"Then I asked him to make some investigations of other property in the west. I had been told this particular company was rolling in wealth. Mr. Gates' report showed I had been deceived. "Now I realized that I had met a commercial genius. I persuaded Mr. Gates to become a man of business." As a businessman Gates managed the notorious Colorado Fuel & Iron Co. through his nephew, Bowers, whom he made president of the company. One of the principal agencies for seducing public opinion, lulling suspicion and creating a false sense of trust, while at the same time reaping enormous profits from their victims, was medical research and practise. Gates acknowledges in his *Autobiography*, quoted by Nevins (*JDR*, v. 2, pp. 466-70), that it was he who inspired and initiated the schemes to take over control of medical education and practise, beginning with the Rockefeller Institute for Medical Research, that have progressed until today they dictate medical practise and what remedies may be used. They derive from this, unconscionable profits that levy a toll of billions of dollars on the victims for their patent medicines, whether they be good, indifferent, bad or positively harmful and lethal. It is a far cry from the shekels garnered by quack patent-medicine vendor, William Avery Rockefeller, to the billions raked in by his descendants through their I. G. Farbenindustrie and other Drug Trust concerns; the spirit, however, is the same.

Gates' story of his inception of this medical enterprise, that eventually was to prove richer than his most avaricious dreams, goes back to the days of his pastorate in Minneapolis. The homeopathic physicians of his parish, who were unaware of the allopathic medical training his father had received, appealed to Pastor Gates for his support and gave him Hahnemann's *Organon* to read. He regarded it, as do most allopaths, as absurd; and he reported himself as "depressed to learn that there were thirty schools teaching their doctrines in the country." When he undertook to investigate the practises of the allopathic physicians and to read Osier's *Principles and Practise of Medicine*, he discovered that all medical treatment of the time was empiric, and that the majority of patients recovered in spite of it. And he awoke to the realization that whereas the homeopathic remedies were harmless, not so much could be said for some of the poisons used by the allopaths in larger doses. Quoting from the Nevins biography (JDR, v. 2, pp. 467-8) :

"Being thus convinced that medicine as taught and practised in the United States was at best largely futile and at worst very injurious, Gates searched in Osier for proof or disproof. He thought he found a verification. Osier's pages indicated that of hundreds of diseases then recognized, the best medical practise did not as yet know any certain cure for more than four or five." Gates' imagination was fired by the discoveries of Pasteur and Koch and the institutes established in their names; and by the profits accruing from the sale of antitoxins and sera. He also discerned the large profits derived directly and indirectly from medical schools. Here was a field closest to the hearts and purses of all men; for the desperately ill are generally willing to spend all that they have to recover their health, which for them is the most precious of all things. Gates was shrewd and hard enough to realize that the domination of medicine would inevitably prove profitable in many directions; but he was also cunning enough to invest his purposes with the sham cloak of philanthropy in the records. Gates states in his *Autobiography*: "Filled with these thoughts and enthusiasm, I returned from my vacation on July 24, 1897. I

103

brought my Osier book into the office at 26 Broadway, and I dictated for Mr. Rockefeller, who was summering, as usual, at Cleveland, a memorandum. It enumerated the infectious diseases, and pointed out how few germs had yet been discovered, and how great the field for discovery, how few specifics had been found and how appalling was the unremedied suffering and fatality. It pointed out the usefulness of the Koch Institute in Berlin and the success of the Pasteur Institute in France." (JDR, v. 2, p. 469) The Rockefellers, whose medical background paralleled that of Gates, as has been related, promptly recognized the value of Gates' suggestion. They delegated Starr J. Murphy, an attorney from Mont-clair and a neighbor of Gates, to make a survey to determine the best way to go about stimulating medical research in the country. He brought in a report that it would be most profitable to subsidize promising research workers engaged in various parts of the land, but that this procedure would not serve as well the purposes of controlling medicine that the Rockefeller-Gates team always had uppermost in mind, as would an institute which they were bent on setting up. In 1901 John D. Jr. offered a group of medical men, including Drs. L. Emmett Holt, Christian A. Herter, T. Mitchell Pruden, Hermann M. Biggs, William H. Welch, Theobald Smith and Simon Flexner, an average of \$20,000 a year for ten years, increased to a million dollars the following year, for the purpose of setting up the Rockefeller Institute for Medical Research. Simon Flexner and Abraham Flexner did "the most important work for Gates' fundamental idea".

Before considering the consequences to medical practise and advance of the Rockefeller Institute and the domination attained thereby, mention will be made of Gates' foray into the field of medical education, domination of which was essential for control of medicine. The "reorganization" of medical education along the lines Gates desired was launched by the General Education Board, in which Gates was boss. For this purpose Gates' hatchet man was Abraham Flexner, who had been employed by the Rockefeller-dominated Carnegie Foundation as an expert, and had written two books on medical education,—*Medical Education In The United States* and *Medical Education In Europe*. The

medico-political battle for the control of medical education, its prestige, its profits and its other advantages, that had raged furiously and often violently from the very beginnings of medical education in this country, was decided in the latter part of the 19th century, by Rockefeller millions, in favor of the Gates-Rockefeller team and their henchmen.

Abraham Flexner's study of medical schools, launched in 1910, was a joint venture of the Carnegie Foundation, the Rockefeller-Gates General Education Board and the American Medical Association. The American Medical Association was controlled at that time by an advertising quack abortionist by the name of "Doc" George H. Simmons, who had never had a day of medical education in his life but, after practising for decades had received his M.D. degree by mail from a diploma mill operated by the Rush Medical School. Rush later became the medical department of Rockefeller's University of Chicago. Simmons was a fit partner for the Gates-Rockefeller combine. He welcomed their cooperation in gaining monopolistic control of medicine, which was also one of the prime objects of his A.M.A. However, he reserved for himself the absolute control of the very lucrative medical advertising, in his medium, the Journal of the American Medical Association.

Competition in the medical-school business had become so keen that Simmons and his worthy associates were delighted to have the cooperation of Gates and Flexner and the support of Rockefeller in putting competitors out of business. The Rockefeller mob bought their way into control of the medical schools that they decided should survive, by "grants" from the General Education Board and the Rockefeller Foundation. Up to 1919, the Board paid out more than \$5,000,000 to Johns Hopkins, Yale and Washington medical schools; and on September 20, 1919, John D. turned over to his agents more than \$20,000,000 in securities "for the advancement of medical education in the United States". He earmarked additional sums at later dates for this worthy purpose.

These well-heeled forces launched a violent campaign of calumny and slander against medical schools in which the socially or religiously elect political bosses of medicine had no interest. The competing schools were represented as low-grade

and inferior. While it is true that the standards of some of them were low, few were lower in calibre than many of the schools sponsored by associates of the Rockefeller-Gates gang and approved by them for reasons of self-interest. Over half of the 165 medical schools in the country were forced to close their doors, and the Rockefeller-Gates-Flexner-Simmons-A.M.A. gang were left in control of medical education in the U.S. After Simmons retired, his worthy heir, Morris Fishbein, became the "red herring" and "hatchet man" for the gang, in much the same sense as President Truman correctly pointed out that Alger Hiss was their "red herring" in other activities.

The control of medical education gave the Rockefeller interests the scope that power-mad Rev. Frederick Taylor Gates sought. Through control of medical education, he and his sponsors gained control of the right to practise medicine and the power of medical licensing. They could dictate by whom medicine could be practised and how they must practise it. Such broad powers over the health and lives of the people, gained under the pretense of "philanthropy" and "benevolence", mark the worst aspects of the most menacing dictatorships. In Nazi Germany, under the inspiration and guidance of Rockefeller henchman Alexis Carrel, such powers were used to sterilize all enemies of the ruling gang and to murder millions of humans.

The device through which these powers are enforced today, is the power to dictate "good medical practise". This "good medical practise" does not imply that it is good for the patient. On the contrary, it may mean a death warrant for the patient.

One such instance is the use of radium in the treatment of cancer despite the fact that it often causes the victim so treated untold misery and that it frequently causes cancer. Another instance is the use of testosterone, marketed under patents which Rockefeller's Drug Trust controls, for the restoration of sex vigor. Testosterone is synthesized at a nominal cost but is sold at a retail price of almost one million dollars a pound. It has caused so much cancer among its users, who are lured by false advertising, that a warning against its use has been issued by the Federal Government.

However, the doctor who follows the "good medical practise" as dictated, is free to maim and

exterminate humans with absolute impunity and complete freedom from reprisals, even though it can be proved that he was aware in advance of the injury that would result from his "good practise". A case in point is the Lempert Fenestration Operation.

The Gates-Rockefeller-A.M.A. Medical Trust not only has the power to dictate how medicine shall be practised, and by whom, but it also has acquired the power to prescribe what drugs may be used in medical practise and to dictate that those drugs must be used in "good practise". This has enabled the conspirators to gain fabulous profits through their international Drug Trust, which they have been building up steadily since their organization of the I. G. Parbenindustrie. Every supposed discovery of a new remedy by their Rockefeller Institute or by agencies subsidized by the Rockefeller Foundation, and every discovery made by independent agencies of which they gain control, is promptly exploited, with or without patenting, and sensationally advertised in the best patent-medicine show tradition, hawked to the public through the entire publicity and propaganda machinery of the country, which they control, established as "good practise" and foisted upon the medical profession and the public as a "life saver", at outrageous prices that yield them enormous profits.

The entry of the Rockefeller interests into the field of medicine has materially retarded its advance. Except in the direction of the development of new drugs which they sell the public at exorbitant prices and tremendous profits through concerns owned or controlled by them, and which are marketed with all the advertising that their forces can muster without any regard as to whether they are injurious or beneficial,—with this striking exception, the advances that have been made in medicine in the past half century of their control, have taken place largely in spite of the baneful influence the Rockefeller "philanthropies" have exercised.

In the field of medical research, the Rockefellers and their agents have created the usual, unhealthy atmosphere that results from their predatory entry into any new field. Intensive commercialization and monopoly have become the keynotes of medicine and of medical research. Vested interests and frank rackets have been created or enhanced in

those fields. Institutional and personal jealousies and commercial rivalries have been intensified by the power acquired by small cliques with the funds of the Institute and of other Rockefeller controlled "philanthropies" and allied organizations.

This situation was well described in thinly masked fictional form by Sinclair Lewis in his *Arrow-smith*, which centered about a true story of Rockefeller Institute activities. A factual exposure of the evil influence of the Rockefeller medical "philanthropies" was published by Hans Zinnser, a brilliant bacteriologist, researcher and scholar, in the February 1927 issue of *Atlantic Monthly* magazine.

The medical research cliques thus subsidized seek to protect their reputations and jobs, as well as the prestige of their institutions upon which both are dependent, by setting up a monopolistic control of research. Manuscripts of research results are censored by them to make sure that no researcher can publish a discovery that will enhance his reputation to the detriment or overshadowing of their own, or that will jeopardize commercial interests with which they or their sponsors are allied. For this purpose they have reestablished medieval dogmatism in many medical fields and a monopoly of medical education. They conspire to dictate "accepted medical practice". They dictate the directions which research shall take and block research by capable, independent workers whenever they can. They undertake to protect their own mediocrity and ineptitude by the device of group medical research which enables them to take for themselves the credit for the work of others. Discoveries by independent research workers, no matter how important, are suppressed, or stolen, unless it serves their purposes to permit release or publication of them.

Thus one of the most important medical discoveries of the past two decades has been the discovery of a method of successfully treating with small doses of a cheap mineral, manganese, myasthenia gravis. The disease without the treatment is hopelessly fatal. The discovery has been completely barred from mention in medical literature and has been barred from use to save the lives of the victims in institutions and hospitals of the country, by the conspirators. This is done primarily for political purposes. But it also serves to protect the invest-

ment of the drug firm of Hoffman LaRoche, one of the licensees of the Rockefeller controlled German Drug Trust, in prostigmine, a costly drug which sometimes gives temporary relief to the victims in the early stages of the disease but hastens their death in the later stages. Medical literature permits the mention of prostigmine only in a favorably endorsed light, in the treatment of myasthenia gravis; and has established this finally lethal drug as "accepted practice" in the disease. Any mention of the cheap but effective manganese in the treatment of myasthenia gravis is barred in medical or popular literature despite the fact that the disease is growing more widespread. The newspapers report tragically needless deaths from it with increasing regularity, though there is no reason for death from the disease in the present state of medical knowledge.

Another instance of the endorsement as "accepted practice" of an injurious but lucrative treatment, is the Lempert Fenestration Operation for the supposed relief of deafness. In a large proportion of its victims, the hearing is destroyed by the inflammation of the inner ear caused by the injury of the operation; and in no case does the hearing, even if slightly improved temporarily in rare cases, survive the operation more than a few years. In contrast with these ugly results of operation, unoperated cases rarely lose their hearing completely. In every case the sense of equilibrium is destroyed by the operation and in many cases the victims are unable to live a normal life or engage in their vocations because of it; and often the sense of sight is impaired by the operation. So much damage is done by the operation that it can not be regarded as being anything short of mayhem. In spite of this it has been given the status of "accepted practice"; and numerous victims are maimed by it, because it serves the commercial interests of certain medical politicians, thanks to the monopolistic control of medicine and its publications which "philanthropy" has helped to create. The victims are lured by fake favorable publicity made possible by the monopoly thus created.

As might be expected under the circumstances and from the character of its sponsorship, few significant medical discoveries have emanated from the Rockefeller Institute. In an era that has been

signalized by vast strides in the chemistry of medicine, no basic discoveries and few significant ones have emanated from the Institute in spite of the vast interests of its sponsors in the chemical and drug monopolies, so detrimental has been the atmosphere of the Institute to medical discovery. Its chief accomplishments have been political.

Many so-called "medical discoveries", however, have been announced by the Rockefeller Institute. Among them have been the supposed "discoveries" of the organisms that cause infantile paralysis, smallpox, mumps, measles and yellow fever; and the "discovery" of preventive vaccines for pneumonia and yellow fever. All of these "discoveries" announced by the Institute have proved false. But most of them have served definite and profitable purposes and have been exploited commercially and intensively.

The Rockefeller Institute pretends to release its "discoveries" for the "free use of mankind". But there have come to light instances of its patenting discoveries and licensing them to specific drug firms, more especially those controlled by the Rockefeller interests. An example is the dangerous arsenical drug, tryparsamide. This drug is so poisonous that its use was virtually abandoned in the treatment of syphilis, except for animal experimentation, by its original discoverer, Paul Ehrlich, in favor of the relatively non-poisonous drug salvarsan. Tryparsamide causes permanent blindness or death in a high percentage of the victims on whom it is used. Clinically its use was regarded as justified only in hopeless cases of trypanosomiasis, or sleeping sickness, before the discovery of a less poisonous remedy.

An improvement in the commercial method of production of tryparsamide was developed by one of the employees of the Rockefeller Institute, which patented it. The Institute licensed the patent to Merck & Co., one of the German chain of drug concerns, which marketed it. At the time of the "social hygiene", anti-venereal campaign, launched in the early days of the "New Deal", that was sponsored by the Rockefeller and allied interests which control the chemical firms that produce salvarsan and the other anti-venereal drugs, orders were issued to the doctors engaged in the treatment of venereal diseases in clinics set up for the purpose, that a cer-

tain percentage of the victims had to be treated with the blinding tryparsamide. The clinics of the Health Department of the City of New York employed eye doctors to examine the victims for the damage and blindness caused by the drug. This was not done as a precautionary measure, because once the blindness had set in, nothing was known to stop its progress. It was done as a matter of commercial research on human guinea pigs.

The Rockefeller Institute licensee, Merck & Co., sold much tryparsamide for this purpose. Many victims of the treatment were blinded by it. But, as far as can be determined, Merck & Co. paid the Rockefeller interests the royalties due on the tryparsamide patents. Inquiries directed to the Institute elicited no answer from it on the royalties or the manner in which they were paid. The Institute, unlike most foundations, publishes no information on the stocks which it holds, so that it is not possible to state if it or its sponsors hold Merck stock. At any rate, it conferred on pathetic victims the "philanthropic" gift of blindness.

How many of the fake "discoveries" have been patented and exploited for the advantage of the Rockefeller Institute or its sponsors, has not been revealed by them. It is a matter of record, however, that the Lederle Laboratories, subsidiary of Rockefeller controlled American Cyanamid Co., intensively exploited the worthless "anti-pneumococcus" serum "discovery" by the Institute's workers; and though it was known in scientific circles to be worthless, enough of it was unloaded on the sucker public, at exorbitant prices, to make the Company and its stockholders a sizeable fortune.

Through similar exploitation of other products, Lederle has become one of the most profitable divisions of American Cyanamid, and one of the most profitable drug concerns in the country. Within the past year the stock has more than doubled in value on the basis of exploitation of drugs of supposed or real value, to sell at approximately one hundred dollars a share, and earnings have risen from a bit over \$2.00 per share on its 3,931,-000 shares of common stock in 1945 to an estimated \$12.00 per share in the current year. It required merely a rumor of its marketing of a supposed preventive of infantile paralysis to bring about a bull market in the stock, that raised its

price from a low of approximately \$72 a share to more than \$131 per share in the past nine months, so enormous have been the profits in drugs and antibiotics.

The Rockefeller interests have steadily expanded their holdings in the drug industry to the point at which they control the major drug concerns in the world, and are rapidly absorbing new ones by the process of merger. They have all been integrated into a cartel that maintains an absolute monopolistic control of the drug industry.

Control of the Food and Drug Administration, health departments and other government agencies have given the Rockefeller Drug Cartel a virtual monopoly of marketing of drugs, especially of new drugs. They are free to exploit any patent medicines they wish, in any manner they might choose to use. Thus the anti-histaminic fraud which would have landed any less powerful drug vendors in jail, they were able to exploit as crudely as any of the most vicious quack patent medicines of the past half century. The spurious claims made were known to be false from the start. The brief, high-pressure and cunning advertising campaign netted many millions of the sucker public's money in profits; and only a few of the victims died, fewer than are usually claimed by these quack medicine campaigns. The profits of these newer patent medicine monopolies are fabulous. Sulfanilamide tablets that cost a fraction of a cent, for instance, were sold as high as thirty cents a piece when they originally launched them on the market with a publicity release on their use by a Roosevelt. Generally the stunt of withholding the use of the drug from the rank and file of the medical profession under the guise of complying with F.D.A. regulations, together with intensive newspaper publicity worth millions of dollars, in which grossly exaggerated claims are made, for which they pay their controlled press nothing, serves to whip up a frenzied public demand. This permits them to exact exorbitant prices. In the case of cortisone, their overrated remedy and panacea for arthritis, for instance, they have even brought the government into the picture to give them millions of dollars of free advertising for their product. They have made it an excuse for another raid on the public treasury by way of ECA and Point 4 grants of tens of millions of dollars for

the supposed quest in Africa, which they are now beginning to exploit for oil and other products, of raw materials for the production of the drug, many of which are plentifully available on this continent. Fabulous prices have been paid for the drug by victims, as much as one hundred dollars a dose; and the current list price is one dollar a tablet. The direct and indirect profits to the Cartel from this patent-medicine exploit has run into the hundreds of millions of dollars. Also the political and oily business objectives of the Rockefeller Empire in Africa have been materially furthered by it. In the end it has proved that cortisone may do more harm than good for the victims of arthritis and other diseases, after an initial boost in some cases.

The Rockefeller subsidized "authorities" who established "good practise" in the use of sulfanilamide dictated such huge dosage in order to increase the sales of the vendors, that they poisoned their patients and in some cases killed them. These "authorities" who alone were decreed to be competent to observe the effects of the drug and advise on its use, made enormous incomes from its exclusive use for a long period. They also established as "good practise" the administration of the large and poisonous doses. When it was brought to light that the drug acts as a posion that interferes with the utilization of the essential vitamin, nicotinic acid, and precipitates pellagra in many victims, the discovery was barred from publication in medical journals in the U. S. and abroad; and it only appeared in the British scientific publication Nature because censorship in that direction had been overlooked. These instances could be multiplied indefinitely.

Thus ruthless exploitation of the public by the Cartel has become a fixed practise. Each year there are scheduled by it a number of new "wonder drugs" to be launched as a device for the merciless exploitation, mulcting and victimization of the sick, the halt, the lame and the blind. Following cortisone, for instance, came ACTH, an even more dangerous drug. When administered to young children, as has been done in some hospitals, it distorts the shape of the head and face by interference with growth; and makes the child victim "moon-faced". But these injuries are carefully hushed up by the Cartel with cooperative, complacent and unscrupulous medical

bosses. The fabulous profits roll in to the tune of millions of dollars. The Wall Street commentators seize upon each new patent medicine of the Cartel to bull the stock of the company that will market it. With the Cartel's control of the nation, enormous profits, high dividends and stock splits inevitably flow from the "benevolent" swindling of the nation's sick through the "philanthropy" dominated Drug Trust. The profits from it are even more fabulous than those that flow from oil. This tale is told at length in YOUR LIFE IS THEIR TOY.

It is reasonable to expect that an institution operating with the efficiency and spirit of the Rockefeller "philanthropies" would not be so unbusinesslike as to cast to the winds the large profits which devolve from drug and other products touching on the interests of the Institute. Gates, as Rockefeller discerned when he employed him, was indeed a "business genius" of the rarest foresight and discernment.

The extensive Rockefeller chemical and drug interests include American Home Products, Sterling Products, Winthrop Chemical, American Cyanamid and its subsidiary Lederle Laboratories, and many other companies. They are all highly profitable enterprises. They also have very large holdings in the German Dye Trust, the I. G. Farbenindustrie, on the directorate of which the Standard Oil of New Jersey was represented by its president, the late Walter Teagle. The Chase National Bank, which is controlled by the Rockefellers, has floated Dye Trust securities on the American market. Dillon Read & Co., of which former Secretary of War, and later Secretary of Defense James Forrestal was head, and General Wm. H. Draper Jr., head of the staff of General Lucius Clay, Military Governor of Occupied Germany, was an executive, joined the Rockefeller interests in floating I. G. Farbenindustrie securities in the American market.

Dillon Read & Co. floated the issue that financed the building of the I. G. skyscraper office-building in Frankfort, Germany, that by curious coincidence was the only building in Frankfort the American and Allied forces were ordered not to shell or bomb, and that came through the war practically intact. It was the executive office of the I. G. Farbenindustrie, one of the principal factors in the military might of Germany and her allies.

The legal representatives of the I. G. Farben-industrie in the U.S. are Rockefeller's attorneys. One firm is Sullivan & Cromwell, which is headed by kinsman John Foster Dulles, Trustee of the Rockefeller Foundation, who to all effects and purposes, is the State Department. Another is Milbank, Tweed, Hope, Hadley & McCloy, which is headed by A. G. Milbank, Chairman of the Board of the Borden Co. and President of the Milbank Memorial Fund. It also numbers among its partners John J. McCloy, Trustee of the Rockefeller Foundation, son-in-law of August Zinnser who was a factor in the German Dye Trust, and former Assistant Secretary of War; his appointment to the post of U. S. High Commissioner in Germany signaled the end of the Berlin Blockade simultaneously with the end of the dismantling of the I. G. Farbenindustrie plants, for which the Berlin Blockade served as an excuse, and it signaled the beginning of the return of the I. G. and its Nazi henchmen to power.

Five hundred thousand shares of the American I. G. Corp., the direct American subsidiary of the German holding company, I. G. Farbenindustrie, were issued in the name of Walter Teagle at the time of its formation by a merger of General Aniline works and the Agfa-Ansco Corp. When questioned by the Securities and Exchange Commission, Teagle denied that the stock that had been issued in his name was his stock. He refused to divulge the ownership of the stock by the Rockefeller interests, saying that he did not know who was the actual owner. In view of subsequent events there can be little doubt that the Rockefeller interests were the principals in the deal. It is a practice in which they regularly engage to hold control of corporations through dummies and nominees.

The deal was a part of the gigantic conspiracy of the German Dye Trust to recover property seized during World War I by the Alien Property Custodian, A. Mitchell Palmer, and of the preparation for throttling U.S. defenses in a future war. Through the aid of Earl I. McClintock, an attorney in the Alien Property Custodian's office, Sterling Products was enabled to start the reacquisition of the sequestered property for ultimate retransfer to the newly formed I. G. Farbenindustrie. So pleased was Sterling Products president, William E. Weiss, with McClintock's deal that he hired McClintock at

many times the salary he had earned in the APC's office.

Sterling Products organized Winthrop Chemical Co. Inc. and transferred half of the stock to the I. G. Farbenindustrie. It, in turn, was given I. G. representation in the U.S. They also brought the DuPont interests into the deal by selling them half of the stock of the Bayer-Semesan Co. With the money thus acquired, Sterling proceeded to buy up numerous nationally advertised remedies, including Fletcher's Castoria, Phillips' Milk of Magnesia, and others. With Louis L. Liggett, they formed Drug Inc., a holding company for Sterling, Bayer, Winthrop, United Drug Co. and the Rexall Liggett stores; and then proceeded to buy up Bristol Myers, makers of Sal Hepatica; Vicks Chemical Co.; Edward J. Noble's Life Savers Inc. and others. Numerous other chemical and drug firms were absorbed steadily over the years until the Cartel gained control of the entire fabulously rich and profitable drug and chemical industry of the nation.

Through Walter Teagle, the Rockefeller interests played a key role in building the I. G. Farbenindustrie and the Dye Trust. It was he who paved the way for the entente between I. G. and the resistive DuPont interests. In 1930, Dr. Bosch of the I. G. wrote Teagle to thank him for his assistance, as follows:

"... the deadlock in the negotiations between duPont and I. G. has now been overcome . . . thanks to your personal interest."

As a matter of record, Rockefeller's Standard Oil Co. of New Jersey had sat in at the birth of the I. G. Farbenindustrie in 1926. It then insured the combine of the success of their conspiracy by entering into an agreement with them as partners, and for an exchange of patents. This was stated in a letter by Frank A. Howard, head of the Standard Oil Development Co., as follows:

"The I. G. may be said to be our general partner in the chemical business as to its developments arising during the period beginning in 1929 and expiring in 1947." (Ambruster, Treason's Peace, p. 52)

The Cartel divided the chemical and drug market of the world amongst themselves and conspired to maintain prices that yielded them fabulous profits.

Later they took over control of the Federal Food and Drug Administration, as well as local food and drug agencies, through their control of the governments and political machines, as well as "by bribery and corruption of the officers of those agencies. For example, Dr. Theodore G. Klumpp was head of the Federal Food & Drug Administration in 1940, at the time that Winthrop Chemical Co. shipped 400, 000 tablets labelled as "sulfathiazole", that were found later to contain 5 grains of luminal each. They are known to have killed by poisoning 17 victims in various parts of the country. Winthrop Chemical Co. failed to notify the public immediately of the fatally poisonous character of the pills. Instead, the Company, with the aid or approval of the Council on Pharmacy and Chemistry of the American Medical Association and of intensive advertising in the Journal of the American Medical Association, ruthlessly pushed the sale of the "sulfathiazole" pills, thus increasing the number of fatalities. Dr. Klumpp, as Food and Drug Administrator, was very helpful to Winthrop Chemical Co. and very sympathetic toward them. Exercising his bureaucratic powers as head of that agency, he refrained from prosecution for the deaths, helped hush up the matter and merely revoked Winthrop's license to ship the "sulfathiazole" for three months, on April 22, 1941, after it had glutted the market with the product and overstocked the trade with it. The suspension of shipment for three months was an utterly meaningless gesture. Shortly thereafter, Dr. Klumpp became president of Winthrop Chemical at many times the salary that he had received from the Government. (Treason's Peace, p.23)

Since no real penalty had been imposed on the Winthrop Chemical Co. to induce it to exercise rudimentary caution to protect the lives of American "peasants", it is not surprising that the Company has made no effective effort to avoid recurrence of such fatal incidents, but has depended upon the political control of its bosses and its ability to "induce" public officials to overlook its criminal negligence and to suppress publicity with regard to it in the press. On June 15, 1951, physicians throughout the country received the following telegram from Winthrop-Stearns Inc., which is the name adopted by it since it has merged with Stearns, reading as follows:

"Until further notice, discontinue using sulfamy-lon hydrochloride solution one percent. Contamination with bacillus pyocyaneus found in some bottles. Advise patients for whom you prescribed to discontinue use and discard unused portions. Return for credit bottles of one percent you may have. All other forms of sulfamylon safe to use. Winthrop-Stearns Inc."

The story is entirely different when the manufacturer or marketer of a remedy is not a member of the Trust. The same Dr. Klumpp who saw no serious violation of the law or infraction of the regulations and arbitrary and dictatorial ukases of the Food & Drug Administration by the Winthrop Chemical Co., which subsequently provided him with a high salaried job, when it killed off humans with its gross negligence, expressed grave concern when the Iodobor Co. sought to label its product Iodine and Boric Acid Powder, as it is labelled in Johns Hopkins Hospital Formulary. The powder, which permits the use of finely dispersed iodine on even the most delicate tissues such as the ear and the urethra, and is an ideal and harmless antiseptic and prophylactic, contains 1% iodine and 99% anhydrated boric acid, as stated on the label. But Dr. Klumpp was gravely concerned with what he called the "misrepresentation" involved in the correct labeling of the product. He put every impediment in the way of its marketing. Iodobor Co. is not controlled by the Rockefeller interests and is not a part of the Drug Trust.

Dr. Louis Koch has undertaken to provide the profession with glyoxylide which, in the author's knowledge and experience, has never done anyone any harm or killed anyone. Many competent physicians state that they have obtained results with its use in conditions such as carcinoma, which had been pronounced to be hopeless. Certainly no humane individual would wish to deprive the victim of such a pathetic condition as hopeless cancer, of any ray of hope or possibility of relief. But the gang which we are describing are neither humane nor human. They do not regard Koch's remedy as "rational". They have undertaken to prosecute and persecute mercilessly Koch and all who use this harmless remedy, as has been pointed out rightly by Dr. G. B. Winrod, in preference to the remedies which Reverend Frederick Taylor Gates, his Rocke-

feller sponsors and their heirs and associates do regard as "rational", and which do yield them a profit, which is far more important.

The Food & Drug Administration was converted by the Drug Trust into a device that would leave them free to engage in any type of skulduggery with impunity, but would enable them to drive competitors out of business by hampering regulations and excessive expense involved in compliance with arbitrary rulings and harassments. Thus Winthrop Chemical Co. was permitted to market sulfathiazole in spite of the fact that it is a harmful drug that causes the formation of kidney stones in a large proportion of patients that take it. But many completely harmless, but useful, preparations that are produced by less powerful and wealthy firms are completely barred from sale by the arbitrary rulings of the Administration. The products of the Drug Trust, no matter how worthless and injurious they may be, invariably get by; and many of them, such as cortisone, are actually boosted by the Government. One of the officers of Schering Co., an affiliate of the Drug Trust, openly has stated that the maintenance of a drug monopoly is one of the objectives of the Food & Drug Administration.

The Standard Oil Co. of New Jersey and the I.G. entered into numerous agreements and formed the Joint American Study Co. (called Jasco Inc.). This later was proved to be nothing less than a conspiracy to paralyze the rearmament and defenses of the U.S. Dr. A. Mitchell Palmer, Alien Property Custodian, had warned the nation after World War I: "The next war . . . will be a chemists' war, and the country which has the best-developed dye and chemical industry is the country which is going to come out on top." (Treason's Peace, p. 36)

As will be related presently, the Rockefeller-Standard Oil - I. G. conspiracy was not only instrumental in precipitating World War II, but also undermined our national security and threatened us with defeat by denying the U.S. the use of synthetic rubber patents, and in other ways. In the first year of World War II, a series of criminal and civil actions for treasonous conspiracy with the I. G. Far-benindustrie were started by Assistant Attorney General Thurman Arnold against Rockefeller's Standard Oil Co. of New Jersey, especially in con-

nection with the direly needed synthetic rubber and chemical bases for munitions. Also, action was instituted against Sterling Products in connection with the use of its organization in South America, where Nelson Rockefeller was active as Co-Ordinator of Hemispheric Defense and the brother of Thomas Corcoran, high ranking Harvard New Dealer, represented it, for espionage and propo-ganda for Germany. The offenders pleaded nolo contendere, which was in reality an acknowledgement of guilt. The offenders were given small fines, and merely ordered to mend their ways. The penalties were surprisingly light in view of the fact that the offenses constituted treason in wartime, for which the usual penalty is death. It later was stated that the Rockefeller interests had acquiesced in these actions when the treasonous conspiracy became outrageously obvious and violent public reactions threatened, — in order to protect themselves and their fellow conspirators. It appears quite clear now that their old deal with I. G. Farbenindustrie still prevails and is being carried out by their agent and attorney, High Commissioner John Jay McCloy.

It is interesting to note in this connection that the law firm of John Foster Dulles and Allen Dulles, Sullivan & Cromwell, that is closely identified with the Rockefeller-I. G. interests and our Government, defended a criminal indictment of Ernest K. Halbach, one of the principals of the I. G. set-up in this country.

The I. G. situation is described in Howard Ambruster's book, *Treason's Peace*, published by the Beechhurst Press in 1947, an excellent book that should be read by every American.

This entire Rockefeller-Standard Oil-I. G. situation was aptly characterized by Senator Harry Shippe Truman, as chairman of the Senate Investigating Committee, as "TREASON". He said, correctly :

"YES IT IS TREASON.

"YOU CAN NOT TRANSLATE IT ANY OTHER

WAY." And the same group has provided oil, munitions and other material of war to the Russian and Chinese Communists and the North Koreans, practically entirely at the expense of the U.S. taxpayer.

IS THAT ANY LESS TREASON?

These are some of the outgrowths of Rockefeller 120

Institute's "philanthropies".

Public suspicion anent the Rockefellers was further allayed by establishment of the Rockefeller Sanitary Commission devoted to mass medicine—to spectacular cooperation with local health departments in a campaign on hookworm infestation, intended to demonstrate forcibly that Rockefeller's heart bled for the "Forgotten Man". The cost of this campaign was almost entirely borne by the victims, through the support of their local health departments. But the publicity released gave the Rockefellers credit for beneficence and a touching concern in the health and welfare of collaborator Walter Hines Page's "Forgotten Man". At the same time, it gave the Rockefeller interests entry into control of the health departments of the various sections of the country that in due time was developed into complete and absolute control of all of them from the Public Health Service of the U.S. Treasury Department to those of cities, towns, counties and, ultimately, of the smallest villages.

The control of health departments thus engineered later proved extremely profitable to the Rockefeller interests in many directions. For instance, it enabled them to gain a virtual monopoly of the production and distribution of milk throughout the nation, through health-department regulation of that industry, which was engineered by them on the pretense of protecting the public's health. Steadily, through decades, they drove independent milk distributors out of business by various devices, such as pasteurization, manipulation of milk sheds by their puppet health commissioners and dishonest and oppressive "regulation", and by numerous other devious devices. They are able, consequently, to indoctrinate the public, at its own expense, with the idea that milk is a perfect food and an absolutely essential element of the diet, which it is not. They progressively adulterated the milk distributed to the public until the bulk of it is, partly or wholly, a synthetic concoction, such as "homogenized" milk, of types that had previously been barred from sale for human consumption. Of the adulteration of milk, one can readily convince oneself by placing a bottle of milk on the window sill for a week. In olden days the milk would turn sour and curdle; but today it merely becomes putrid, slimy and stringy. The price of the adulterated milk was

progressively raised from an average of six cents a quart for real milk to an average of twenty-two cents a quart for watered, synthetic and adulterated milk.

Far from being a source of health and strength, milk has become a licensed spreader of disease and death. Milk transmits more diseases than any other one beverage or food. It carries tuberculosis, scarlet fever, such streptococcus infections as septic sore throat and acute kidney and heart disease, undulant fever, infantile paralysis and many other deadly diseases. Milk can be one of the most dangerous substances we put into our stomachs. Needless and excessive consumption of milk has been correlated to childhood ills, to hardening of the arteries, to premature senility and to cancer. But these facts have been suppressed and the public has been urged through official channels to drink ever more milk "for their health", in order to boost further the profits of the Milk Trust. (YOUR LIFE IS THEIR TOY, Rackets Social Service & Medical, pp. 93-120, Chedney Press, 1940)

Corruption of public health officers on a wholesale scale has been resorted to in connection with Milk Trust activities. Henry Wallace, was the first to launch a consistent attack on the milk cartel, in the Wallace Farmer, and named it the Milk Trust. He applied that name to the undercover combination between Borden Co. and National Dairy Products Co., that was later exposed in reports of the Department of Agriculture, but kept out of the press. The reports indicate that though the two companies pretend to be competing, they are actually working in concert, as a cartel. The Borden Co. is directly controlled by the Chase National Bank and the Rockefeller interests represented by the Milbanks. National Dairy Products is controlled by the Rockefellers, through Lehman Brothers.

Henry Wallace was silenced by an appointment as Secretary of Agriculture in Roosevelt's Cabinet; and he was later made Secretary of Commerce and Vice President. When denied the Vice-Presidential nomination in 1944, he was given the job of editor of the New Republic, with a salary reported to be \$75,000 a year, a greater sum than the magazine ever earned and largely paid by Nelson Rockefeller. Though Wallace has been closely identified with the Rockefellers, there is no published record

of the extent to which they backed his Progressive Party as a phase of the activities of their Rockefeller-Soviet Axis.

Control of the public-health activities of the nation was readily maneuvered by the Rockefeller interests by subsidizing the activities of the U.S. Public Health Association, the trade organization of the public-health officers of the country. Interlocking directorates were established from the start between that organization, through its officers (including as a rule the Health Commissioner of New York City), and one or another of the Rockefeller "philanthropies". Subsidies for these activities were arranged through various dominated organizations and foundations. Thus the Milbank Foundation, headed by Jeremiah Milbank and his son A. G. Milbank, a Rockefeller attorney and agent, and financed by 3% of the Borden (Milk) Co. stock, subsidized "public health" activities. The policyholders' moneys of controlled insurance companies, especially the Metropolitan Life Insurance Company, were diverted into these channels of corruption.

Domination of official health agencies also implies control of the food and drug industries which they "regulate", and of the enormous profits which they yield. Such control makes possible the sale, with impunity, of inferior products or, even, of products that are actually deleterious to health and life, but yield extraordinarily large profits. For instance, mineral oil, a product of petroleum oil, was marketed by a subsidiary of the Standard Oil Co. of New Jersey, as a remedy for constipation. In many cases it caused chronic malnutrition by robbing the body of fat-soluble vitamins. It was sold also as an ingredient of nose drops, and in many cases, caused lung abscesses. But the profits were enormous.

Far larger than the direct profits derived from domestic "health" activities and those gained in the international field through the International Health Commission, that was set up later to extend these activities abroad, were the indirect benefits derived from the good-will created by the pretense of benevolence, and by abuse of the powers vested in the public agencies thus taken over. The story has often been told how Colombia was blackmailed into permitting Standard Oil to develop the Barco concession by the establishment by the U.S. Public Health Service of a prolonged quarantine of Colom-

bian shipping for yellow fever.

The incubation period of yellow fever is about six days and the length of the voyage from Colombia generally was about two weeks. This meant that if anyone on board the vessels had been exposed to yellow fever, he would have developed the disease before coming into port and there was no justification for quarantining the vessels. Nevertheless, the vessels were quarantined for prolonged periods on their arrival at American ports. Perishable cargoes spoiled during the quarantine, threatening the Colombian merchants with ruin. This abuse of the powers of the U.S. Public Health Service was employed to force the Colombian government to relax its prohibition of development of the concession by Standard Oil interests. The Rockefeller Institute announced falsely at this juncture that its Hideyo Noguchi had discovered the cause, remedy and preventive of yellow fever. And the International Health Commission offered to Colombia the services of Noguchi in clearing up the yellow fever and lifting the unwarranted quarantine, with the implication that unless the Standard Oil interests had their way, the quarantine would not be lifted. The Colombian government was forced, in the interest of its merchants and its trade, to accede to this international blackmail. The Standard Oil Co. shared the concession with Gulf Oil Co., controlled by Andrew Mellon who, as U.S. Secretary of the Treasury, controlled the U.S. Public Health Service. Yellow fever is still endemic in Colombia, just as it was before the quarantine was imposed. But there is now no quarantine because the Rockefeller interests have their way in Colombia. The profits to the Rockefeller Empire of international "philanthropy" are great. The world cannot be blamed for mistaking Rockefeller imperialism for American imperialism.

## CHAPTER VII

### ROCKEFELLER'S GENERAL EDUCATION BOARD

#### Red Totalitarian Thought Control For Peasants

"... We work our own good will upon a grateful and responsive rural folk."— Rockefeller-Gates Occasional Letter No. 1 Rockefeller's "educational philanthropies" were an outgrowth of Baptist missionary zeal. To educate Negro co-religionists, the Baptists had organized the Southern Education Board. In a spirit of religious rivalry, they had also undertaken to build the University of Chicago. Reverend Strong, Rockefeller's in-law, made this religious educational rivalry quite clear in a memorandum to John D. Sr. cited by Nevins (JDR, v. 2, p. 203) :

" 'Now where are we Baptists?' Strong wrote. 'We have no university at all. . . we have to send our sons to other universities . . . Against Harvard's 1500, or Yale's 1200 students, our largest number is 300 at Brown. The only approach to professional instruction is our theological seminaries, and the largest of these numbers no more than 50 well-prepared students . . . while Union (Theological Seminary) and Princeton have their 150 each' ". At about the same time, Reverend Strong had admonished his in-law that he would be wise to act to allay public resentment against his brigandage by courting public opinion with philanthropies, if he desired to overcome the handicaps to his enterprises arising from the ill repute his ruthlessness had created. He missed no opportunity to urge him to give his support to the creation of a college for Baptist missionary propaganda that would engage in a crusade to get folks to think as Baptists wished them to think. Rockefeller's endowment of the University of Chicago crowned his efforts with a measure of success. But it is doubtful that the divine would be very happy to witness the present status of the university he inspired. It is a hotbed of anti-religious Communist propaganda that has even overwhelmed his church.

Rockefeller was too pragmatic to be content, however, with mere missionary zeal for the profit of the church. Personal profits and benefits have a

stronger appeal to a person of his acquisitive disposition. His experience with the influencing of public opinion, that he had been compelled to resort to on more than one occasion in connection with his Standard Oil activities, could not have failed to impress him with the value of molding public opinion. No doubt, the waste of effort involved in the repetition of isolated campaigns irked a man of his methodical, systematic thrift. It is inconceivable that he could fail to see the economy and the high ultimate return of permanently molding public opinion as he wished it molded, through domination of education that would make it possible to convert that process to thought control that would be entirely imperceptible to both its agents and its subjects. It would be permanent, would never have to be repeated wastefully, and would insure him of domination of the indoctrinated by their own subconscious reactions, for the rest of their lives.

After a dinner at his home on West Fifty-fourth Street, New York City, attended by John D. Rockefeller Jr., banker Morris K. Jesup, Wanamaker partner Robert C. Ogden, Baptist pastor J. L. M. Curry, banker George Foster Peabody, Walter Hines Page, the inventor of Roosevelt's "The Forgotten Man", William H. Baldwin, Albert Shaw, Dr. Wallace Buttrick, Johns Hopkins U. President, Daniel Coit Gilman and attorney Edward M. Shepard, John D. Sr. launched the General Education Board, with an offer of a million dollars over a period of ten years for the "noble" purpose of influencing all education as desired, "without regard to sex, race or creed". The assembled worthies leaped to the bait. Rockefeller acquired an educational front imbued with the odor of religion, that would be regarded as above suspicion. And it was all his own, to be used entirely for his purposes. For contrary to his "philanthropic principles" and his past practices, Rockefeller did not require, seek or permit the participation of others in this enterprise.

Rockefeller placed his "wonderful businessman", Reverend Frederick Taylor Gates, in charge of this new enterprise. Boldly they announced its true purpose at the very start, in Occasional Letter No. 1 of the General Education Board already quoted.

The letter is a frank and open statement of the basic totalitarian conspiracy that underlies all of the Rockefeller "philanthropies". Their avowed

scheme is to gain the confidence of the people by a show of sham "benevolence" and then, when they "yield themselves with perfect docility to our molding hands," to "work our own good will upon" them through a Rockefeller dictatorship. In this conspiracy they are largely succeeding. And their "good will" has proved to be the "will for conquest" that has cost tens of thousands of "peasants" lives. The letter is about as open an expression of contempt of the intelligence of the citizenry (the "peasants", they call them) as can be made. Their cunning grasp and contempt of human nature did not fail them. There were some few protests from alert citizens and on the floor of Congress. But in the main, they were lauded for their action, by the usual complement of fools and traitors.

The ambitious character of the scheme is revealed by what Nevins (JDR, v. 2, p. 485) terms the "extraordinary charter" that Shepard drew up, and that Rockefeller's henchman and in-law Senator Nelson Aldrich, promptly rushed through Congress. It is a perpetual charter that gives authority to hold limitless capital and to engage anywhere in the U.S., in any activities whatsoever that can be construed as remotely resembling education. Since the funds contributed to its endowment and the income thereon are tax-exempt, the moneys involved are actually public funds. But control of them is effectively held by the Rockefellers. It was a far more ideal propaganda machine than those provided at a later date by Rockefeller, through Ivy Lee, his publicity man, for either Stalin or Hitler. Nevins, a Rockefeller spokesman, states:

"Thus was founded an organization which shortly became THE MOST POWERFUL EDUCATIONAL FOUNDATION IN THE WORLD." The Rockefeller interests proceeded cautiously, as usual, put their their best foot forward and bided their time. Their initial activities were "window-dressing"—agricultural education, a fight on the boll weevil that was destroying the cotton crop in the South, and medical education activities—which allayed and disarmed public suspicion. The character and profits of the forays into the field of medical education have been described in connection with the Rockefeller Institute. The only error that the "planners" made in their estimate of the mentality and pervertibility of the American "peasant"

was in the imposition of Prohibition, for which the Rockefellers acknowledge their responsibility in their publicity by Morris in the Saturday Evening Post of January 6, 1951 (p.36). After a decade and a half, they bowed to public opinion and agreed to a revocation of the Volstead Act. But their only error sensed by the "peasants" proved highly profitable to them; and even in defeat, it served to gain them new victories through their New Deal program.

The Annual Report Of The General Education Board, 1928-1929, in a historic review of its activities makes clear the calculated deliberate approach adopted. It divides the development of the activities into three periods:

First period, 1902-1919, during which the Board appropriated more than \$15,000,000, mostly for increases of the endowments of 120 colleges.

Second period, 1919-1924, during which it contributed over \$50,000,000 for increasing teachers' salaries.

Third period, from 1924, during which it has undertaken to influence the character of scholarship and teaching. The extent of dissembling and oversimplification of this description of its activities is evident from contemporaneous comments.

At the start, Rockefeller entered into an entente with Andrew Carnegie to merge their "philanthropies". This gave Rockefeller effective control of the Carnegie Foundation For The Advancement Of Teaching, the most potent influence of which on teaching and teachers at university and college levels was exercised by its Retiring Allowances (for professors) and (Teacher) Widows' Pensions. This "security" scheme was highly effective in insuring that the staffs taught what was to the liking of the Carnegie-Rockefeller interests, and that any exercise of "academic freedom" would conform with their wishes.

On January 26, 1917, Senator Kenyon of Iowa reported that Rockefeller agents were examining the curricula of colleges that sought the aid of the Board; and that the Board refused aid unless the applicant colleges made their courses comply with the Board's dictates.

The General Education Board also dictated ap-128

pointments to the faculties of the colleges, packing them with their agents and henchmen, in preparation for future plans. Dr. W. J. Spillman, former chief of the Federal Farm Management Bureau of the Department of Agriculture, stated in a letter to the New York Globe of March 28, 1919:

"Nine years ago I was approached by an agent of Mr. Rockefeller with the statement that his object in establishing the General Education Board was to gain control of the educational institutions of the country so that all men employed in them might be 'right'. I was then informed that the Board has been successful with the smaller institutions but that the large institutions had refused to accept the Rockefeller money with strings tied to it. My information said that Mr. Rockefeller was going to add \$100,000,000 to the Foundation for the express purpose of forcing his money into the big institutions." This was exactly what might be expected from the statement of objectives in Occasional Letter No. 1 quoted above. The avowed objective of subverting the nation through its educational system and establishing a "new social order", required that the teaching staffs of its schools should enter into the conspiracy, wittingly or unwittingly. It made the chief requisite for obtaining or holding a teaching position, in any part of the educational system that was brought under their control, intellectual prostitution and adherence to subversive totalitarian doctrines that matched the objective of the Board.

At an early date, the Board began tampering with the public school system and the teachers colleges, experimenting to determine how best to succeed in indoctrinating future generations. It gave by 1929, \$500,000 to the School of Education at Harvard, \$1,000,000 to Teachers College of Columbia University, and \$3,177,231.43 to George Peabody College for Teachers, in addition to many other smaller grants. To Lincoln School, of Teachers College, Columbia University, for John Dewey's Marxist experiment in youthful libertinism that goes by the name of Progressive Education, was given \$5,923,747.62; and it was there that Laurance, Nelson, Winthrop and David Rockefeller were sent for training. As in the case of all the Rockefeller "philanthropies," the GEB and its grantees were made to serve the interests of the Rockefeller Em-

pire. When its plans of subversion were intensified after the Rockefeller Empire had entered into its entente with Communist Russia, the educational system of the country, which by then had come largely, if not completely, under its control, was converted to a huge "school for subversion". For this reason the proportion of exposed and convicted traitors is higher among the educated than among the uneducated; and it increases with the extent of education. After the 1926 Rockefeller-Soviet deal, the number of Communists and fellow travelers among the professors and teachers rose by leaps and bounds. Before a decade had elapsed, adherence to Marxism or membership in the Communist Party became a prerequisite for teaching appointments or for promotion in a large percentage of the schools, colleges and universities of the country, not merely in the "social sciences", but in all fields. Rockefeller, and dominated foundation, subsidy and endowment had a direct bearing on the degree of Communist infiltration; the greater the grant, the higher was the proportion of Communist faculty members. Special chairs and positions were created by the Rockefeller Foundation for notorious Red propagandists, as in the case of Hans Eisler at the New School for Social Research, of Dr. Henry Siegerist and Owen Lattimore, (Amerasia editor) at Johns Hopkins University, Harlow Shapley and Harold Laski at Harvard, William W. Lockwood, (Amerasia editor) at Princeton, and Rexford Tugwell and Harold Clayton Urey at Columbia and the University of Chicago, respectively.

Control of "social sciences" and their teachings automatically implies control of labor union activities. For though teachers of economics and labor relations, and of law, serve as fronts and mouthpieces for the labor unions that employ them, they also provide the pseudo-scientific doctrines and grounds for their demands. The "social science" program has served the Rockefeller Empire well in the regimentation of workers.

The plight of the patriotic professor—who rejects subversive doctrines and refuses to teach them, or to turn traitor and subvert his students—is not an enviable one in the Rockefeller-dominated educational system. This is well portrayed by Professor Harry Elmer Barnes, who had been sympathetic to their "liberalism," in his privately printed pam-

phlet, *The Struggle Against The Historical Blackout*, as follows:

"A state of abject terror and intimidation exists among the majority of professional American historians whose views accord with the facts on the question of responsibility for the second World War." (p.9)

Professor Charles Austin Beard, long heralded as a "liberal" historian, points to the responsibility of the Rockefellers for this condition by reference to the report of the Rockefeller Foundation of 1946, as follows:

"The Rockefeller Foundation . . . intend to prevent, if they can, a repetition of what they call in the vernacular 'the debunking' journalistic campaign following World War I." (id.) The lot of professors and teachers who shifted from a defense of American institutions and the Constitution to advocacy of Marxism, Communism and other forms of totalitarianism in time to serve the Rockefeller-Soviet Axis has been far happier. They are heralded as paragons of wisdom and learning and as leaders who are to be followed. Their prior Americanism is forgiven in proportion to the number of Communist and Communist front organizations they join; and they take their places at the sides of those who have adhered to the Communist Party "line" from the start. Their totalitarianism wins them rapid advancement and lucrative Government posts as "Brain Trusters", "advisers", bureaucrats, diplomats and any other posts where they can serve as pawns of the Rockefeller Empire. The "social scientists" among them are given employment as economists and statisticians at high salaries in labor unions, to serve as "front" men and "mouthpieces" for racketeering and subversive labor leaders. But they must be willing to let the labor leaders dictate or censor their writings and teachings. Unscrupulously, these same union-employed "economists" also serve as "neutral" arbitrators of labor disputes, often in cases involving the very unions that employ them. In any event, their decisions must outrageously favor the unions without fail and without regard to honesty, or else they lose their union position and are placed on a blacklist, never to be so employed again. If they play ball with the subversive and totalitarian elements, and serve the Rockefeller-Soviet Axis faith-

fully, their futures are assured and they are always provided for on a liberal, if not lavish, scale.

Zechariah Chafee Jr., professor of law at Harvard, made the error of writing, as a young instructor, an excellent, scholarly and American book entitled *Freedom of Speech*, published in 1920. But by 1927 he had mounted the Rockefeller Red bandwagon in the Communist-inspired Sacco Vanzetti affair, with Professor Felix Frankfurter. And he has remained on the pro-Communist side of the fence. He advanced rapidly to professorship and now represents the U.S. at the UN, after having served as vice-chairman of the "Commission on Freedom of the Press", of which more will be related. He is engaged in writing the section of the UN Constitution on the press that proposes to abridge for the press the Bill of Rights that he had defended so wisely and eloquently in his youth. For his distinguished services to the Rockefeller Empire, he has been accorded membership in the Council on Foreign Relations, the Foreign Office of that Empire, and the Rockefeller-dominated invisible world government. Professor Chafee prospered. From the viewpoint of the Rockefeller interests and the GEB, his about-face had made him "right" for the furtherance of their totalitarian and pro-Soviet plans.

As the university faculties about the country were packed with totalitarian professors of all varieties, it became increasingly difficult for students who refused to accept Marxism, that came to be regarded as synonymous with "liberalism", either to secure admission to colleges and universities, or to get degrees.

Columbia University, including its Teachers College, was particularly, directly and heavily subsidized and dominated by the Rockefeller interests because of the education of the Rockefeller youngsters at the "experimental" Lincoln School, its subsidiary. The relations between the Rockefellers and Columbia University have been very close. Rockefeller Center is built upon land in part given to Columbia by the Rockefellers and then leased back by them from the University for the purpose of avoiding the payment of taxes. Through the General Education Board, they have dictated Columbia's faculty, policies and curricula. Under their direction and that of their agents, the faculties

of philosophy and "social sciences" and of Teachers College have become completely Marxist. It is questionable whether there is a single member of the faculty who does not subscribe to some form of totalitarianism that is compatible with the Rockefeller objectives stated in the Occasional Letter No. 1 cited above, that states the policy and objective of all the Rockefeller "philanthropies". The majority of the members of the faculty are Marxists, and a large number of them are frankly Communists. The following are some of the members of the Columbia faculties who have been cited by various committees investigating un-American activities for membership in Communist and Communist front organizations, and the number of organizations with which they have been connected (Red-Ucator, National Council for American Education, 1 Maiden Lane, New York City) :

#### Philosophy And "Social Sciences"

Angell, James W.	3	Baker, Elizabeth F.	9

		Officers	
Carman, Dean, H. J.	4	Hacker, Dir. L. M.	3

This list contains only a small fraction of the Columbia staff who are totalitarian in their views, influence or teachings. But it contains much that illustrates the nature of the deliberate influence that Rockefeller's GEB has exerted on the educational system of the nation and the world. This influence has been accentuated considerably since the Rockefeller interests arrived at an entente with Stalin, and has shifted entirely in the direction of that form of Marxism that suits the purposes of the Rockefeller-Soviet Axis, most aptly designated as Rockefellerism.

It has been the consistent practise of the G.E.B. to dictate faculty appointments as one of the conditions for making requested grants. Deliberate selection of militant Marxists for college posts is clearly indicated by the appointment of Paul F. Brissenden to an assistant professorship at Columbia. Brissenden had earned a reputation as a militant left-wing labor agitator long before his Columbia appointment, in connection with his activities as special agent of the U.S. Commission of Industrial Relations and of the Bureau of Labor Statistics, and with the I.W.W. The theme of his Columbia U. Ph.D. thesis was The I.W.W., A Study of American Syndicalism, which quite clearly evinces his left-wing, Marxist attitude. His appointment to the post of assistant professor of economics at Rockefeller-dominated Columbia University School of Business, therefore, was made because of his radicalism. His I.W.W. thesis so delighted the Kremlin that it was translated and published in Russia. His pro-Communist attitude was a family affair; for both his mother and sister volunteered to help make a success of the Bolshevik revolution and migrated to Moscow where they were

employed by the Kremlin. Brissenden himself made no secret of his support of Communism. He is a member of the Board of Directors of the notoriously Red American Civil Liberties Union, and of the equally Red International Juridical Association and the International Rescue and Relief Committee. He was one of the signers of a letter to the Daily Worker of March 5, 1941, defending the Communist Party against the Hitler-Stalin Pact. His "liberalism" has been rewarded by many appointive government jobs in the field of labor; chairmanships of commissions and boards in many industries, including cloaks and suits, cap and cloth, millinery and others; statistician and economist on the payroll of a wide array of unions; "impartial" chairman under many labor agreements; member of the Industrial Tribunal of the American Arbitration Association; and numerous other lucrative, policymaking appointments. These rewards that arose out of the Rockefeller-GEB-dictated professorial appointment are the customary rewards of radical teachers who subscribe to the doctrines of Rockefellerism. As a member of the Columbia faculty, Professor Brissenden is in a position to reject any applicants for the higher degrees, that are a prerequisite for teaching positions, if they do not accept the doctrines to which he subscribes.

The case of Walter Gellhorn, professor of law, clearly demonstrates the extent to which the Rockefellers go in their support of pro-Communist activities. A product of Rockefeller's GEB-fostered Columbia totalitarianism of the post-Rockefeller-Soviet Axis era, he was given, in 1931, the post of secretary to Supreme Court Justice Harlan F. Stone, one of his indoctrinators. In 1932, on admission to the bar, he promptly became attorney in the office of the Solicitor General of the Department of Justice. In the following year he was appointed to the law faculty of Columbia and, in 1937, to the Department of Political Science. His long series of government appointments included Special Assistant to the Secretary of the Interior, in 1943, and Chairman of the National War Labor Board, 2nd Region, in 1945. During this period of rapid advancement he became increasingly identified with pro-Communist causes as a director of the American Civil Liberties Union, the International Juridical Association, the National Lawyers' Guild, and the

semi-official Soviet Open Road. He was in the forefront of attacks on legislation and investigations directed against Communism. There was a personal aspect to this fight because Gellhorn was himself under investigation by the House Committee on Un-American Activities.

To aid in this fight against the exposure of un-American activities and such treason as that of Alger Hiss, the Rockefeller Foundation in 1948, announced a grant of \$110,000 for a "Study of the relation of civil rights to the control of subversive activities in the United States." The grant was made to Cornell University, where Edmund E. Day, former Director of Social Sciences of the Rockefeller Foundation, had been planted as president of the University. Though Professor Robert E. Cushman, of Cornell, a Marxist New Dealer, was designated to head the "study", he turned over the job to Gellhorn. The money was used largely in a campaign to bring about abolition of the Un-American Activities Committee. The Cushman-Gellhorn-Rockefeller activities tied in with those of the Anti-Defamation League. Gellhorn was fittingly assigned the problem of security and loyalty requirements as applied to government scientists. His equivocal views were published in a Rockefeller subsidized book, *Security, Loyalty & Science*.

The high rewards and distinguished honors that were heaped upon Philip C. Jessup, Reverend Rein-hold Niebuhr and Reverend Henry Van Dusen for their services to the Rockefeller Empire and its Axis are discussed elsewhere.

Donald G. Tewksbury, professor of education at Columbia U., illustrates the security and promotion offered by the Rockefeller interests to their Red proteges who serve their Axis well. He is a product of their Red Chinese Yenching University, who had been subsidized by them through the Harvard-Yenching Foundation.

With the entire academic world from which to choose teachers to influence the minds of its students, Columbia University shares at least four of its instructors with the official school of the Communist Party, the Jefferson School of Social Sciences. They are:

Dorothy Brewster, Associate Professor of English

Abraham Edel, Lecturer on Philosophy 136

Corliss Lamont, Lecturer on Philosophy-Walter Rautenstrauch, Professor of Industrial Engineering

Numerous members of the faculty at Columbia U. are members and officers of the American Civil Liberties Union, the chief legal aid of Communist conspirators. Among them are:

Dr. Harry E. Barnes	Prof. Paul F. Brissenden
Prof. George S. Counts	Prof. Walter Gellhorn
Corliss Lamont	Prof. E. C. Lindeman

There they rub elbows with Rockefeller's minister, Reverend Harry Emerson Fosdick, Morris Ernst, Melvyn Douglas, Arthur Garfield Hays, Max Lerner, Carey McWilliams, Dorothy Kenyon, Elmer Rice, Raymond Swing and Oswald Garrison Villard.

Professors of law have been particularly handy agents of the Rockefeller-Soviet conspirators. Subversives planted on the faculties of universities which they control become endowed with the halo of unworldliness and public trust that attaches to the traditional, but absent-minded professor who is devoted to learning and pure science and is unapproachable. The Communist and other brands of totalitarians, and the Rockefeller interests, have exploited the public trust in the college professor to the full limit; and it has served them well. They have planted their utterly ruthless, traitorous agents in professorships that are often especially created for them, and build up their reputations for "erudition" and "wisdom" while they are engaged in the very process of eroding the law and Constitution of the land at the behest of their bosses. Then they plant them in the courts and rapidly advance them until, not infrequently, they are placed on the Supreme Court bench itself, where they dictate a revolution by law. The cases of Supreme Court Justices Holmes, Cardozo, Brandeis, Stone and many others come to mind in this connection. The conspirators, who are expert at propaganda and agitation, create for their agents in high posts, fictitious reputations for impartiality and learning. These judiciary agents have created for the conspirators a complete immunity for their treasonous activity by tortured perversion of the law. Thus a person participating no matter how indirectly in a

crime is an accomplice. But an associate or fellow traveller who participates in a Communist act of treason is regarded as blameless; and any charges made against him bring out the cry of "guilt by association". This is exactly for what the law holds other criminals accountable. For the status of the accomplice is guilt by association.

Subversive legal rulings have made it a crime to call a man a Communist unless he acknowledges himself under oath to be a Communist, or his Communist Party card can be produced and it can be proved beyond any doubt that it is his. So infiltrated are our courts and juries with subversives that it seldom has proved possible to have a man legally adjudged a Communist, even on the testimony of several witnesses and even though it can be demonstrated that he had followed every bend of the Communist Party line. The defense offered in these cases is that to call a man a Communist means to charge him with a crime and injure him. And there is always plenty of subversive legal talent at hand, endowed with plenty of foundation and other "civil rights" money, to crucify anyone who dares label a Communist.

But in defending their Communist clients against indictments charging them with subversion and attempts to overthrow the government, the self-same judges and legal talent plead that the Communist Party is legal, and to be a Communist is not a crime. If to be a Communist is not a crime, why have their solicitous agents on the bench ruled that it is a crime to call a man a Communist? Is it because the Rockefeller-Soviet Axis dictates it shall be so?

There appears to be no limit to the brazen distortion of the law and absurd pettifogging of these "jurists" on behalf of the Communist conspirators. In the first week of October 1951, the U. S. Supreme Court handed down two decisions designed to protect Communists in their treasonous efforts to destroy our Government, creating the impression of a desire to cooperate with them. The first decision, delivered by Chief Justice Fred M. Vinson, ruled that \$50,000 bail was "unusually high" in the cases of twelve Communists who were merely charged with advocating overthrow of the Government by violence, under the Smith Act, and whose colleagues have skipped bail in flocks when

convicted. The court ruled that the Government must produce evidence of a "really serious offense" to justify this "high bail", that was so "high" that four of their fellow conspirators skipped and forfeited the sums.

A second decision that was handed down on the same day ruled that anyone who patriotically reports a suspected Communist to the FBI may be sued for damages by the accused. This decision is designed to ably assist the Communists in their conspiracy by cutting off reports and clues regarding them from Government agencies. The Court appears to be more concerned with protecting the conspirators than in national security. In this it is serving the interests of the Axis. The decision was undoubtedly motivated by the desperate effort of the conspirators to protect the swarms of Communist and Axis agents planted in the government departments.

Not included in the above list is Philip Edward Mosely, totalitarian Professor of International Relations and head of the Russian Institute at Columbia U., and Assistant Director of the Rockefeller Foundation. After securing his Ph.D. at Harvard under the tutelage of Felix Frankfurter, in 1931, and subsequently instructing at Princeton, he was permitted, or rather invited, by the Bolsheviks to come to Moscow and stay for two years (a privilege never known to be accorded to any but avowed and trusted Communists) to engage in "historical researches." He was then assigned as fellow, by the Rockefeller-subsidized and dominated, Red Social Science Research Council, for "research in the Balkans." From 1942 to 1946, he joined Nelson Rockefeller, Dean Acheson, Alger Hiss and the rest of the pro-Soviet clique in the State Department, as chief of the division on political and territorial studies and was adviser to the U.S. delegation to the disastrous Moscow Conference, in 1943, to the European Advisory Commission in London in 1944, and to the tragic Potsdam Conference in 1945. He was also U.S. representative in 1946 on the Commission for the Investigation of the Yugoslav-Italian Border. In 1936 he was the sympathetic Soviet-authorized translator of V. M. Chernov's official history, *The Great Russian Revolution*. He has very concisely stated his and the Rockefeller Empire's totalitarian credo, as has been related, in

a Headline Series pamphlet issued by Rockefeller's Foreign Policy Association, repeated here for emphasis:

"Over the long run, great numbers of people will judge both the Soviet and American Systems, not by how much individual freedom they preserve, but by how much they contribute, in freedom or without it, to develop a better livelihood and a greater feeling of social fulfillment." This statement is a variation of the Communist propaganda theme: "What is freedom without bread?" This is the Rockefeller-Soviet sales talk for their brand of totalitarianism and slavery that contrasts so sharply with Patrick Henry's Americanism of: "Give me liberty or give me death". But American history and patriotism are both taboo in schools dominated by Rockefeller's GEB. Only Mosely's views are taught.

The situation is, if possible, even worse in Rockefeller's pet University of Chicago, the Red gehenna of all the Rockefeller-subsidized professors. A list of its faculty indicates that advancement on it appears to be almost entirely predicated on how Red the professor is and how many Communist fronts he joins. A partial list of professors and the Communist and Communist front organizations they have joined reveals the following::

Abbott, Edith	15	Adams, James Luther	10
Borgese, G. A.	6	Burgess, Ernest W.	8
Carlson, Anton J.	18	Douglas, Sen. Paul H.	22
Havighurst, Robert J.	7	Haydon, A. Eustace	6
Hutchins, Robert M.	2	Lange, Oscar	9
Lovett, R. M.	114	McMillen, Wayne	26
Sharp, Malcolm P.	9	Slye, Maud	8
Thompson, John B.	10	Tugwell, Rexford	7
Urey, Harold C.	15	Wieman, H. N.	20

The extent that subversion effected by "educational philanthropies" has attained at Yale University is portrayed by William F. Buckley Jr. in his book God And Man At Yale. Buckley, a recent graduate of Yale, lists the subversive teachers. They infest the School of Divinity as completely as the other faculties, and their religion is Marxist Rockefellerism. He also lists in the appendix, subversive textbooks that are widely used, and the schools that use them.

The fostering of totalitarian and Rockefeller Reds in all the schools, colleges and universities over which it could gain control, is the chief function of Rockefeller's General Education Board in the pursuit of its boss's objectives. When found, dependable agents are often planted in key positions in the Government in Washington. If by any chance they are exposed or apprehended in illegal or treasonous activities, they are usually protected and shifted to other positions.

In the Wilson Administration, the Government was loaded to the gunwales with them. Those that could not be made to fit into the Republican administrations that followed, by the "bipartisan" device, were put back in storage in the universities dominated by the Rockefeller interests, as a part of a well organized and disciplined machine for totalitarian subversion and erosion of the Constitution and the law of the land. They were well provided for and shifted about in the government and universities for diversity of experience, to prepare them for their roles in the gigantic conspiracy.

In the universities, they were protected in their subversive activities when exposed, by all the wealth and power of the Rockefeller Empire acting through such organizations as the ultra-Red American Civil Liberties Union, and other subsidized agencies. When, unavoidably, for a particularly heinous offense, one of them had to be ousted from his position, he was likewise merely shifted to another position either in the government, in a foundation or in one of the schools. Oaths of loyalty to the U.S. are fought bitterly by the GEB-subsidized agents of the Rockefeller Empire, with all the power at their command. The State of California, for instance, was compelled by them to revoke its rational requirement that all members of the faculty must sign loyalty oaths. The only loyalty that is required of them is loyalty to the Empire. Professor Edward C. Tolman, who was dismissed from the University of California as subversive, was given, after his dismissal, an honorary degree by Yale in 1951, as an example to encourage others.

It is an adequate commentary on the General Education Board and its domination of the educational system that the "traitor scientists" have become a serious problem and a menace to the security of the land, a situation that was dilated upon in

the New York Times of May 15, 1951.

When a change in the political climate had been effected and Franklin Delano Roosevelt had been put into the Presidency to head a "Popular Front" government in Washington, all of the subversive agents were taken out of their storage in the academic halls of the "educational" institutions, where they had bent their energies to producing new generations of vipers and traitors. They were put back into the government to carry out the subversive tasks for which they had been trained so well, not infrequently in Moscow, through the creation of what was sardonically labeled by the conspirators as the New Deal. Many of the agents occupied the same posts in the Wilson "War to Save Democracy" regime as they did two decades later in the New Deal and World War II, that was its crowning glory.

In the past several decades, it has also become an established practise of the Rockefeller interests to place their political hacks, warhorses and pawns in the position of university president. This serves to keep them in the public eye, invests them with an academic halo in the eyes of the "peasants", makes it possible for them to serve as unsuspected propagandists for subversive totalitarian causes, and to indoctrinate the emerging generation of voters with Rockefellerism, and to groom them as traitors; it also provides these agents with handsome incomes. This practise is illustrated by their planting General Dwight Eisenhower in Columbia University, Harold Stassen in the University of Pennsylvania, Edward Stettinius in the University of Virginia and many others.

There is no doubt that subversive professors, fostered and subsidized by the General Education Board and allied "philanthropies" rank as the nation's most menacing enemies. They have produced some of our most dangerous traitors. Thus Hunter College, under the aegis of Rockefeller henchman, George N. Shuster, its president, spewed forth, inculcated with his indiscriminate pro-Nazi and pro-Communist totalitarian sentiments, "Axis Sally" Gillars. Harvard University, crawling with Red professorial vermin, evacuated on the nation its Alger Hiss; Cornell, its Lee Pressman; Columbia, its Judy Coplon. They have all loosed upon the nation a horde of unapprehended and unsuspected traitors who

are persistently betraying the nation. What a sham it is to pretend to be fighting Communism abroad, while at home these breeders of traitors are turning the younger generation into a horde of dangerously muddled Marxists!

The most pathetic figures in the situation are the nation's youngsters. Several generations of them have been made human sacrifices to the very doctrines that they have been schooled to adore, victims of their teachers' witting or unwitting treachery. For their fate they owe thanks to the success of the General Education Board in infiltrating the public school system throughout the nation and converting it into a subversive agency of Rockefellerism. Their pro-Communist training leads them to betray their country in the interest of the Rockefeller-Soviet Axis. Then they themselves become the victims of their own betrayal, in wars whipped up by arrangement between the pawns of the Axis partners. In the Korean "police action", close to a hundred thousand of them have been injured, and almost 10,000 killed.

The General Education Board, mindful of the aphorism: "Give me a child till the age of nine, and you can have it for the rest of its life", began to infiltrate and take over the public school system at an early date. It has pursued this objective steadily and with even greater vigor than it manifests in the field of higher education. After initial hostility, National Education Association (NEA) joined forces with the GEB, thus giving it domination of the greatest power in the field of primary education. The Rockefeller group also took over local school boards directly through their associates and agents, and converted them into agencies of subversion. Thus in New York City they took over the school boards and control of the school system about 1915, during the mayoralty of their puppet, John Purroy Mitchell. At about the same time they took over the Gary, Indiana, school system for "experimentation". They placed in charge of it Dr. William A. Wirt, who proved to be a better American than they suspected and exposed their conspiracy to prolong the depression, destroy our government and replace it with their totalitarian, "managed" economy to a Congressional Committee in 1934 (H. R. 73 Congress, 2nd Session, H. S. 314). In Scarsdale, New York, Edmund E. Day, Director

for Social Sciences of the Rockefeller Foundation, took control for them of the local school board. The radical Progressive Education Association has been a Rockefeller GEB agency from its start.

The nature of the influence which Rockefeller's GEB exercised directly and indirectly through the NEA, is illustrated by a number of their deeds. In 1940 the GEB granted the Progressive Education Society \$1,635,941 and the NEA a total of \$706,100. In addition, the National Association of Secondary School Principals, allied with the NEA, received a total of \$122,600 for the purpose of "helping pupils gain a clearer understanding of problems involved in such fields as planning and public finance, public education, population, unemployment, health, personal security and self-development, democracy and dictatorship, free enterprise and collectivism . . ." (GEB Annual Report, 1940, p. 48). The money was used for the writing and publication of a series of booklets on "Problems in American Life", under the auspices of the NEA.

The pamphlet, *The American Way of Business*, that was prepared to introduce the junior-high-school grades to the subject, was entrusted by the conspirators to a notorious Communist, Oscar Lange, and Abba Lerner, an advocate of Communism, and both foreign born. Oscar Lange is the naturalized Polish-born professor of economics at the University of Chicago, whom Nelson Rockefeller chose as his mentor and adviser in the writing of his Ph. D. thesis, *Economic Waste*, which has been described; and in its introduction Nelson expresses his gratitude to Lange "for invaluable criticism and advice". One year after his book was published for distribution among school children, in 1945, Oscar Lange renounced his American citizenship and returned to Poland to become a Communist official in his conquered land. He is now Communist Polish representative in the UN.

True to expectation Lange's pamphlet, *The American Way of Business*, used in the public schools under the auspices of the Rockefeller-subsidized NEA, was a Communist tract that held up to ridicule American business, that has provided for Communist Russia well enough to save it from destruction at the hands of its confederates, the Nazis. It also lauded Marxist and Communist methods that have failed so utterly to provide the

barest necessities of life to the lands that have adopted them. It attacked private enterprise, endorsed government ownership of industry and advised that government bureaucrats be given the power to repeal acts of Congress. It was a polemic for the Rockefeller-Soviet brand of Marxism that goes by the name of New Deal, or Rockefellerism.

Proof that this undertaking to subvert the children was deliberate, is afforded by the examination of other pamphlets in the same series. They are all Communist tracts. Economic Problems of the Post-War World was written by Marxist, New Deal economist, Alvin H. Hansen, and endorses a Marxist program of taxation and deficit spending that will serve to force industry into the hands of the government, which he calls "compensatory spending." Another of the pamphlets of this series, International Organization After The War, was written by the avowed Marxist, Max Lerner, former associate editor of the Communist newspaper, PM.

For the subversion of seventh and eighth grade school children, the General Education Board made a grant of \$51,000, in 1938, to the NEA Association for Curriculum Development for the preparation of the "Building America" series of textbooks for use in the nation's primary schools. The title adopted displayed the usual use of semantics by the conspirators. The textbooks are entirely devoted to tearing down America. The texts and their illustrations subtly emphasize the unfavorable aspects of American life and breed a derogatory attitude towards the Constitution and American institutions. Communist Russia and its institutions, on the other hand, are presented in favorable contrast and in the rosiest light. The name of the series should be Building Soviet America.

The "Building America" series is endorsed as "excellent source material" by the committee on education of the National Committee on Soviet-American Friendship, according to the Report Of The Joint Fact-Finding Committee To the 1948 Regular California Legislature On Un-American Activities In California (pp.326-7), which also labels the Soviet-American Friendship outfit as "a direct agent of the Soviet Union". A sample of the authors of the Rockefeller-endowed textbook series for subversion of school children is Alain Locke, member of its editorial staff, who had a record of membership

in twelve Communist and front organizations.

The "Building America" series was barred from use in the public schools of California by the legislature, in an order cutting off funds for the "textbooks".

Thus does Rockefeller's "philanthropy", the General Education Board, seek to poison the minds of America with Communism and New Deal Rockefellerism from the cradle to the grave, and to convert the school system of the land to a hotbed of Communism and other forms of subversion. Its Communist friends are held largely responsible by Lait and Mortimer in their Washington Confidential for the drive to poison the bodies of school children with narcotics. They report that the sale of narcotics among our school children has been launched by the Communist Party and the Soviets, for the dual purpose of undermining the morale of the country and of providing a revenue for their propaganda. To what extent I. G. Far-benindustrie is encouraging this vile traffic through "Lucky" Luciano as their agent, is not definitely known.

The deliberate fostering and breeding of Communism in our school system emphasizes the sham of the pretense of the conspirators, of fighting Communism abroad. Of what avail is it to fight Communism in other lands, while breeding it at home? Obviously their pretended fight on Communism serves some other purpose.

The Rockefeller interests have been so successful in their plan to have the taxpayers take over, as an official agency, their thought control program launched by the Education Board, with their trained agents as its personnel, that they plan to liquidate the Board. This success is illustrated by the financing of their Institute of International Education, originally operated with Carnegie Corporation and Laura Spelman Rockefeller Memorial funds, by the Federal Government, with moneys derived from the sale of "surplus" war material overseas, under a bill introduced by their "internationalist" agent, Senator Fulbright. To insure further their subversive control, the Ford Foundation recently has been brought into the picture with a \$350,000 grant.

From the outset, the GEB engaged in its brand of agitation, that it calls "education," among the Negroes, especially for the F.E.P.C.

## CHAPTER VIII

### ROCKEFELLER'S FOUNDATION

"Internationalism", Totalitarianism, Treason &  
"Philanthropy."

Trevor Arnett, President of the General Education Board, stated in his introductory letter to its 1928 report (p.xi) :

"... the munificence of Mr. John D. Rockefeller cannot be understood unless these foundations are recognized as parts of a well ordered whole, in the planning of which his (Gates') thought, his imagination and his powers of vigorous and persuasive utterance were dominating factors. As he himself once said, the objects for which the several Boards were set up represented not an accidental succession of ideas but one logically developed scheme . . ." The object of the Rockefeller Foundation was to carry out in the international field the basic objective of the General Education Board, enslavement of mankind to serve the purpose of the Rockefeller Empire, and to enshroud Rockefeller with a toga of "philanthropy". There was also the more ambitious objective of further luring the United States and other nations into the international field to serve Rockefeller interests. This was clearly stated at a later date by the Foundation's President Vincent, as follows:

"The aim always kept in mind is not to assume governmental or social functions, but to show that certain things can be done successfully, and then as soon as may be, to turn these over to the community." (JDR, v. 2, p. 655) Nevins points out the need for the new charter: (JDR, v. 2, p. 645)

"The General Education Board was restricted by charter to the United States; this new organization should have the world as its field . . ." The basic terms of the charter sought for the Foundation were:

"To promote the well-being of mankind throughout the world."

A bill chartering the Rockefeller Foundation was introduced in Congress and was reported favorably from the Senate Committee on March 10, 1910. The nation, which had not yet been as extensively "edu-

cated", or indoctrinated, by the Rockefeller interests, still possessed sufficient native intelligence to discern the skulduggery that might be expected of their "philanthropy". Immediately a storm of protest broke out among intelligent, discerning folks. The only defenders of the bill were from among the Marxist elements, the Nation and the Survey. The bill was sidetracked.

A man whose generosity is spurned generally pockets his funds, and walks off,—unless that generosity has an ulterior purpose. Rockefeller's "philanthropy" obviously had an ulterior purpose, and that purpose obviously was extremely important for the one and only real interest of his life, his profits. For in the following year a powerful lobby was sent by him to Washington to force through Congress, at any cost, the charter for his "philanthropy", the Foundation. Nevins, his biographer, tries to explain away the persistent quest for a Federal charter on the ground that it would be "stronger, safer and more dignified than a state charter". But this is quite specious, because eventually Rockefeller was forced to be content with a New York State charter. For the U.S. Senate in 1913 blocked the charter though it was much amended and restricted, after it had passed the House, in spite of what some Western newspaper called "the most powerful lobby ever seen in Washington."

The New York State charter was put through the legislature for the Rockefellers by Senator Robert F. Wagner, their agent whom they had arranged to have elected by Tammany. This charter, in contrast with the one that the Rockefellers had been willing to accept from Congress, was unlimited in scope and provided a considerably higher capitalization.

The attacks made upon the Foundation on the floor of the U.S. Senate were peculiarly prophetic. It was predicted that the Rockefellers proposed to use the Foundation to seduce public opinion, to lobby and influence politics, to subvert American institutions, to evade the income tax which they were seeking to impose on the nation, to evade regulation by the government and to use the nation to further their private interests in complete disregard of national interests.

Launched in an atmosphere of suspicion and under fire of criticism, the Foundation adopted an

attitude of caution and courting of public opinion at the beginning. The Rockefeller Foundation patiently waited for more than a decade and a half before openly engaging in the totalitarian conspiracy which Gates and Rockefeller acknowledged at the start, in Occasional Letter No. 1 of the GEB, as the true purpose of all Rockefeller "philanthropies".

At the start, the Rockefellers put their best foot forward and stressed the "bleeding heart" activities of their Foundation, especially those that exposed to public gaze their pretended touching concern for the health of the "peasant," euphemistically and prophetically labelled "The Forgotten Man" by their associate, Walter Hines Page, whom they made wartime ambassador to England. Their first endeavors were the establishment of the International Health Commission and the China Medical Board.

The International Health Commission was designed to disarm public resentment against the Rockefellers and their Foundation, both at home and abroad. It undertook to agitate the problem of hookworm infestations of man and to high-pressure public health officers to launch spectacular campaigns, at the expense of the taxpayers, to purge the victim public for their health and the glory of Rockefeller. How effective it proved in establishing contacts with governmental officials in many lands for the Rockefeller interests is revealed by Dr. Victor Heiser, one of their agents, in *An American Doctor's Odyssey*. Later the range of Foundation activities was extended to medical research of the varieties described in connection with the Rockefeller Institute.

The China Medical Board activities added to the pose of interest in "The Forgotten Man", the sanctimonious aroma of missionary activity. It helped to redeem Rockefeller with the clergy and the churches, and to stop their attacks on him. But why did the Rockefeller Foundation specifically select China rather than India or other regions for their activities? The choice was a crafty one. It was dictated, as have been most of the activities of the Rockefeller "philanthropies", by either their immediate commercial or oil interests, or by their avowed totalitarian conspiracy, which is, in effect, their long-term commercial policy.

The China Medical Board was an important factor in the expansion and penetration of the Rocke-

feller Standard Oil interests in China and in the expansion of the Rockefeller Empire. The ruthlessness and the high profits involved in the split-penny market for "Oil for the Lamps of China" is related by Vera Teasdale, the wife of a Standard Oil official, in her book bearing that title. The Rockefeller interests more directly involved were the Vacuum Oil Co. (now the Socony Vacuum) and the Standard Oil Co. of New Jersey. The China Medical Board activities paved the way, together with a Standard Oil loan of fifteen million dollars, in 1914, for a partnership with the Chinese Government and the lease to Rockefeller's Standard Oil of mineral rights in Shensi and Chi Li provinces for a period of seventy-five years. These and other leases were the *causae belli* in the Japanese invasion of China. They were important factors in the train of events that led to Pearl Harbor, that cost the U.S. so heavily and profited the Rockefeller Empire so much.

In many quarters of the world, the Rockefeller Empire met with initial success in these Foundation and State Department spearheaded drives for commercial conquest and control of the oil and other resources of the world. In due time, however, they met with setbacks or were actually ousted by governments with which they had made deals or set up monopolies. The reason for these reverses varied in different locales. In some instances it was the utter ruthlessness of Rockefeller Imperialism. In others, it was resentment of local interests at being superseded, or of other world powers at being shut out. In line with the traditional Rockefeller "principle"—"if you can not lick your enemy, join him until you have a chance to stab him in the back"—temporary compromises were made frequently.

But the inevitable ultimate consequences of setbacks of the Rockefeller Empire in its march for world conquest, masked as a philanthropic crusade, were wars. Wars have been the outstanding Rockefeller "philanthropies". And wars have been the most profitable for them. To these wars they contributed nothing but incitement. For the oil and other material they supplied, they were paid well. Invariably they profited hugely from the waging of the wars. They invariably emerged as the real victors. No matter which powers waged the Rockefeller Crusades, the Rockefeller Empire emerged with all the spoils. The most consistent

banner bearer in the Rockefeller Crusades has been the government of the U.S.A., which they have converted into a minor bureau of their Empire. Americans have been "privileged" to shed their blood and dissipate their wealth in the oily Rockefeller Crusades.

To make possible these conquests by the Rockefeller Empire it was necessary, as indicated by Gates in his Occasional Letter No. 1, not merely to thought control the American people, whom they seek to reduce to the level of serfs and peasants, as was being done most efficiently by the General Education Board, but also to secure their submission and regimentation, by carrying out the essential features of the program that already had been launched by Bismarck, under the guise of "social science".

In 1914, Rockefeller had a demonstration close to home of the utter lack of docility of the American "peasant", in the violent strike of the workers of his Colorado Fuel and Iron Co. and in the refusal of the people to "yield themselves with perfect docility to our molding hands". The chairman of the board of the C.F.I. Co. was L. M. Bowers, a relative of Rockefeller's almoner, Reverend Gates, who wrote the above phrase as a statement of the purpose of Rockefeller's "philanthropies"; and was guided by that author of Rockefeller "benevolence" in his actions.

What happened in this case is a true guide to what the world might expect in the future of the "charity" of the Rockefeller clan. The employees of the C.F.I. Co. worked under conditions that Nevins, official Rockefeller family biographer, acknowledges were miserable. (JDR, v. 2, p. 667). They were forced to revolt, or strike, in order to survive. Their union bosses asked for improvement of working conditions, increased pay and union recognition, and a "closed shop". The union involved was the now all-powerful United Mine Workers.

Rockefeller owned 40% of the C.F.I. Co. stock, dominated the Company and was acknowledged leader of the local industry. He refused to recognize the dissatisfaction of the workers with his "philanthropy", or their other grievances. Rockefeller's "philanthropy" to these workers is strikingly stated by George P. West in his report of the

strike, made for the U.S. Commission on Industrial Relations:

"... two entire counties of Southern Colorado for years have been deprived of popular government, while large groups of their citizens have been stripped of their liberties, robbed of portions of their earnings, subjected to ruthless persecution and abuse, and reduced to a state of economic and political serfdom." (quoted by Nevins, JDR, v. 2, p. 667)

This pattern of Rockefeller "benevolence" should be borne in mind. For though its appearance has changed in the course of years, and the agency through which it is administered has now become the Government and the unions, both dummies, its basic spirit and substance still remain the same. The entire nation now is being accorded the same treatment. It is the avowed goal of all Rockefeller enterprises, both the frankly commercial and the sham "philanthropic".

It should also be borne in mind that it is the fixed policy of the Rockefeller Empire never to yield its ultimate objective permanently, however frequently it may swerve or compromise it temporarily. The basic policy of Rockefeller "philanthropy" and enterprise, dictatorship and serfdom, are put into practice from the start, everywhere the Rockefeller Empire extends its dominion, in all lands where it is feasible.

Occasional Paper No. 1 failed to reveal the treatment that was planned for the "peasants" who would not "yield themselves to our molding hands". The Colorado Fuel & Iron Co. affair furnished the answer. The Rockefeller interests hired armed guards to drive the workers from their Company-owned homes. When they continued their resistance to Rockefeller's "molding hands" and resorted to the usual, stupid pattern of strike violence, the militia was called out to protect Rockefeller's property. It was at this point that Rockefeller's "philanthropic" method of treatment of the "peasants" who would not yield to his "molding hands", was starkly demonstrated for all the world to see and admire.

The story is best told in the words of Rockefeller's official, family-appointed biographer, Professor Allan Nevins, as follows (JDR, v. 2, p. 666):

"On April 21, 1914, the country was shocked to learn that the previous day a conflict had broken out between militia and striking coal-miners at Ludlow, Colo.; that the workers had been routed with six men killed; and that when the guardsmen had fired the tents sheltering the strikers' families, two women and eleven children lying in pits underneath had been suffocated . . . For days afterward little battles raged through the coal-mining areas of the state ... it became clear that a virtual civil war was under way."

Forty-four men, women and children were "philanthropically" burned to death in this incident. Rockefeller's sickening "philanthropy" won out. The strike was lost, though later Rockefeller was forced, by aroused public sentiment, to make grudging concession to the miners. In retrospect, however, the price paid by the miners was small as compared with the pathetic costs to the nation of later "philanthropies" of the Rockefeller Empire, in World Wars I and II, the Korean "police action" and other events.

The same story was repeated in the case of the Rockefeller-controlled American Agricultural Chemical Co. of Roosevelt, New Jersey. The Foundation held half a million dollars worth of the securities of this company, and A. Barton Hepburn was interlocking director with the Foundation. The men were paid so little, an investigation revealed, that they could not afford to feed their families. The strike was violent and many men were shot down, again demonstrating the *modus operandi* of the Rockefeller-Gates brand of "philanthropy."

Public outrage, government investigation and threats of action pointed to urgent need of "philanthropic" camouflage. With this objective, the Rockefeller Foundation was used as a cover for instituting a program of "research" into industrial relations that was to pave the way for Rockefeller control of the labor unions and their bosses. The man selected to head this enterprise, W. L. Mackenzie King, had been trained in the "social sciences" and thought-controlled at universities subsidized by the General Education Board,—Toronto, Chicago and Harvard. He had proved that he had learned the meaning and value of "compromise" in the "liberal" sense so dear to Bismarck and Rockefeller, in his

activities as Minister of Labor in Canada, and in his authorship of the New York Industrial Disputes Act of 1907. The real objective of the task to which he was assigned was to take the curse off the Rockefeller name in connection with C.F.I. Co. affairs, to rub balm on the workers' wounds and soothe them into the "compromise" that would delude and "mold" them into acceptance of the "social security" pattern that would prepare the way for "docile" serfdom and dictatorship.

In the course of the investigation it was revealed that the Foundation itself held \$2,000,000 worth of securities of the Colorado Fuel and Iron Co. at the time of the strike, as well as securities of other companies by which workers were treated with murder and brutality when they undertook to strike for a living wage and improved working conditions.

Public resentment and fury against these shocking demonstrations of the Rockefeller program "to promote the well-being of mankind throughout the world", forced abandonment temporarily, in 1917, of the plan to use the Foundation to effect a regimentation of labor along lines desired by Rockefeller, published under his name in a booklet entitled The Colorado Plan, and once again published in an elaborated form under the title, The Personal Relation in Industry. Nevins reports (JDR, v. 2, p. 661) :

"Public suspicion and hostility developed; his program was made the subject of inquiry by the United States Commission on Industrial Relations under Frank P. Walsh; and so much public criticism arose that in 1917 the project was dropped. The Walsh investigation put a damper on foundation activities in the social sciences for some years."

But the Rockefellers never give up the fight for their ultimate objective and profit. Though they pretended to abandon their plan for regimentation of labor, they were merely biding their time and planning a more crafty approach to their goal. Little suspicion was aroused when, in the following year, Rockefeller "philanthropically" established the Laura Spelman Rockefeller Memorial dedicated to Mrs. John D. Sr. Its initially announced purpose was the support of charities or "welfare" organizations, of public health, of religious organizations and the championing of Negro causes, a course which it pursued for a period of four years. When

the Rockefeller interests entered into an entente with Communist Russia, Ivy L. Lee was assigned to create a favorable public attitude toward Russia and Communism, and began to set up Communist front organizations with Rockefeller funds. The Memorial was converted suddenly, under the leadership of Beardsley Rummler, to a continuation of the labor activities that had been started by John D. Jr. and Mackenzie King only to be abandoned to appease public resentment; and to the support of a host of Marxist, Communist and subversive causes. The details will be given in connection with an account of the Memorial. These activities were continued by the Memorial until 1928, when the General Education Board that had bred Rummler and his radical program, was merged into the Rockefeller Foundation.

With the 1928 merger, the Rockefeller Foundation entered, for the first time, into the world-wide "international" totalitarian activities, which, according to the report of the General Education Board that has been quoted, was the primary and unitary purpose of all Rockefeller "philanthropies" — "parts of a well ordered whole". (GEB Annual Report, 1928, p. xi)

The Rockefeller Foundation, together with the other foundations of import of which it seized control, became the spearhead of a world-wide drive for totalitarianism. Its vaunted "internationalism" implied a drive to crush competition and rival powers; world conquest by both indoctrination and force; and the ultimate welding of the world, thus conquered, into a united totalitarian world, "One World"—a Rockefeller World. For that, the United Nations organization was established as a forum and debating society, to give it the semblance of a representative organization, a "democracy", as they call it with their systematic, semantic perversion of language.

Following the 1928 merger, the Rockefeller Foundation's schedule was extended to include, in addition to medical sciences, natural sciences, the "social sciences" and the humanities. Work in the field of "education" at graduate levels and "research" was taken over from the General Education Board which was eventually to be terminated as having accomplished its task. All of the subversive "social science" activities designed to bring

about "a new social order" by a revolution, pre-ferrably by stealth and perversion, initiated by Laura Spelman Rockefeller Memorial, were assumed by the Foundation. Any pretense of charity, that is so repulsive to the Rockefeller mentality, was sloughed off, and abandoned.

The members of the Rockefeller Foundation in the year of the merger were the following:

John G. Agar	Frederick Strauss
David L. Edsall	George H. Whipple
Raymond B. Fosdick	Ray Lyman Wilbur
Vernon Kellogg	John W. Davis
Wickliffe Rose	Simon Flexner
Martin A. Ryerson	Charles Evans Hughes
George E. Vincent	John D. Rockefeller Jr.
William Allen White	Julius Rosenwald

The Chairman of the Finance Committee was, as always until 1950, a member of the Rockefeller family—at the beginning John D. Rockefeller Jr., and later, his brother-in-law, Winthrop Aldrich. In this manner they retained personal control of the securities and funds, and of the uses to which they were put, without paying taxes on them.

In the following decades the political complexion of the Board shifted to the left, with the inclusion of representatives and advocates of the Marxist "social sciences". At all times it has presaged or reflected the current political scene. Rockefeller kinsman, John Foster Dulles, became a member of the Foundation in the early 1930's and immediately emerged on the public scene as Rockefeller's agent dominating the State Department, the churches and the foundations. Lewis W. Douglas likewise became Ambassador to England after doing his stint on the Foundation Board; as did Walter S. Gifford, former president of the American Telegraph and Telephone Co. John J. McCloy graduated from membership in the Rockefeller Foundation to the position of High Commissioner of Germany, Robert A. Lovett, to the post of Secretary of Defense and Dean Rusk, to Assistant Secretary of State. In December, 1951 Rusk returned to Rockefeller employ as head of the Rockefeller Foundation.

The studied plan of domination of other philanthropies is indicated by the presence on the Board of the Rockefeller Foundation of Julius Rosenwald, founder of the extreme left-wing Rosenwald Foun-

dition that devoted the bulk of its funds to Communist activities under the directorship of Edwin R. Embree, who was former secretary of the Rockefeller Foundation; of Anson Phelps Stokes, who established the foundation of the same name, that devoted its activities almost exclusively to agitation among the Negroes; and Henry Allen Moe, director of the crimson Guggenheim Foundation. The manner in which the control of all important foundations was attained through interlocking trustees, directors and grants will be presented later.

In the field of medicine, its "window dressing", the record of the Rockefeller Foundation is much like that of the Institute. It has done a bit of good by granting aid to research workers in institutions, who had made discoveries that already had been confirmed and that generally had a high commercial value. Such was the case of the grant to Dr. Florey for studies on increasing the yield of penicillin. But usually it was work that could have been done and would have been done without its assistance which was merely a convenience.

The principal activities of the Foundation have been in the fields of the "social sciences" and the humanities. In accord with the basic "principle" of the Rockefeller "philanthropies", no cause has ever been sponsored, subsidized or supported that does not foster totalitarianism, by preference, the Marxist brand. Support has been given by it lavishly to all of the "made in Germany" Marxist "social sciences". The plan was to establish centers of propaganda, labeled "research centers", in every land of consequence that would permit. The 1932 report of the Foundation states: (pp. 263-5)

"The Rockefeller Foundation continued to support in 1932 the program in the social sciences which has been under way for several years.

"Four clearly defined types of activity feature the general program in the social sciences: (1) the support of inclusive advisory and planning bodies; (2) the provision of training and research fellowships; (3) the maintenance of grants in aid and small projects; and (4) the development of institutional centers of advanced training and research." The organization chosen by the Foundation as its top planning body is:

The Social Science Research Council that "has 157

operated in the field of social sciences since 1923, with three officials representatives from each of seven scientific societies." Needless to state all the societies and their representatives are Marxist, ranging through the entire gamut of Red. By 1947 the Rockefeller Foundation had granted it a total of \$6,361,500 and its subsidiary, the Carnegie Corporation, \$1,023,500. Eleven controlled foundations extended it grants. It is the chief agency of all the large foundations in the social service field. Characteristic of the grants made by Rockefeller's Social Science Research Council is that made in 1946 to John Victor Murra, an instructor in anthropology at the University of Chicago and protege of Professor Redfield, who will be mentioned later. Murra was denied citizenship by a U.S. District Court judge on the basis of introduced evidence on his subversive activities on the University campus and of additional data provided by the U.S. Army Intelligence. (Chicago Tribune, Jan. 18, 1947) It is this organization that was subsidized by the Rockefeller Foundation to prepare and supervise the New Deal "planned economy" for the nation. It provided the brand of training and research fellowship that the conspirators desired.

The grants-in-aid made by the Rockefeller Foundation give some insight into the range and breadth of their support of the Marxist "social sciences". They include:

Encyclopedia of Social Sciences, a monument of Marxist and Communist propaganda, that was heavily subsidized by the Rockefellers from its start in 1927. They contributed to it \$150,000 in 1932, and \$102,410.13 in the following year.

On the topic of institutional centers, the 1932 report states the following:

"In the United States four institutions are regarded as major centers: Brookings Institution . . . Columbia University . . . Harvard University . . . the University of Chicago.

"Sections of the country not directly represented by these institutions are being assisted . . . University of North Carolina . . . University of Virginia . . . University of Texas . . . Stanford University . . . McGill University.

"In addition there are seven institutional 158

centers in Europe . . . London School of Economics and Social Sciences . . . Institute of Social and Political Sciences, Heidelberg University, Germany . . . Institute of Economics and History, Copenhagen, Denmark . . . University of Stockholm, Sweden . . . Rumanian Institute of Social Science, Bucharest . . . International Institute of Public Law, Paris, France . . . University of Oslo, Norway, Institute of Economics . . . American University of Beirut, Syria . . . and two in Asia . . . Yenching University, Peiping, China . . . Nankai University, Tientsin, China, Institute of Economics.

"Of these the London School of Economics and Political Science is considered the most highly developed."

Thus did the Rockefellers take over Bismarck's plan of promulgation of Marxism around the world on a far grander scale than he could have conceived possible. The Rockefeller interests regard the London School of Economics and Political Science as the most important from the viewpoint of their designs on the British Empire. Those most fraught with grief for the U.S. and the world at large, were Yenching and Nankai Universities, that were more effective in paving the way for the Communizing of China and the consequences that have flowed there from it, than was the Soviet's Sun Yat Sen (Chinese) University at Moscow.

It is in the field of international relations that the activities of the Rockefeller Foundation have yielded the Rockefeller Empire the most outstanding successes in advancing the conspiracy, and the greatest profits. The leading institutions which it supported or subsidized in this field were the following:

Council on Foreign Relations, the top organization and Foreign Office of the Rockefeller Empire and the "Invisible U.S. and World Government" Institute of Pacific Relations, the top Soviet propaganda and espionage agency in Asia, established and maintained by the Rockefeller "philanthropy"

Royal Institute of International Affairs, London  
German School of Political Science, Berlin 159

Postgraduate Institute of International Studies, Geneva, Switzerland

Notgemeinschaft der Deutschen Wissenschaft, Berlin

League of Nations, Geneva, Switzerland, which among other matters made a study on taxation. It recommended elimination of taxes on foreign enterprises, that proved invaluable to the Rockefellers in inducing Congress to eliminate taxation of their enterprises in Saudi Arabia and other lands.

American Institute of Mining and Metallurgical Engineers

Harvard University and Radcliffe College Social Science Research Council In the field of community organization and planning, which was so valuable to the Rockefeller interests in gaining control of local municipal and state governments, the Rockefellers scattered grants about the world where they would serve their purposes best. Their key organizations are the Institute of Public Administration and a group of organizations that were financed by the Spelman Fund, that will be described.

Among the organizations receiving unclassified social science grants were the following:

American Historical Association, which was quite helpful in perverting history in a manner that suited the purpose of the Rockefeller Empire

Association for the Study of Negro Life & History, that is active in subversive Negro propaganda around the globe

In the field of the "Humanities", the Rockefellers subsidized their totalitarian propaganda on the pretense of fostering learning. Their chief agency in this direction is the American Council of Learned Societies, which will be described later in connection with the use of its Rockefeller Foundation grants for the translating under the guise of "learning", the Soviet publications that embody the latest Communist Party "line", for the convenience of American Communists. One of its subsidiaries received a large grant for the purpose of planting Communist agents and pro-Communists in the Government in all sections affecting the Far East and Chinese affairs.

Since the close of World War II several new 160

wrinkles have been added to the activities of the Rockefeller Foundation. It has gone beyond the point of merely propagandizing the Rockefeller brand of Communism. In a grant of \$110,000 made to Cornell University in 1948 (Report, p. 64) for the "Study of the relation of civil rights to the control of subversive activities in the United States," it has undertaken to rise openly to the defense of its subversive agents and to harass those who seek to expose them. In the same year it made a grant to the notorious Federal Council of Churches of Christ in America, for the purpose of fostering Marxism and its brand of totalitarianism in the churches. The Foundation is also contributing to the support of Rockefeller's United Nations. Under the guise of "humanities", the Foundation has undertaken to support left-wing penetration of the theatre, radio and television.

The principal function of the Rockefeller Foundation in the past decade has been furthering intensively the interests of the Rockefeller Empire: indirect control of the U.S., of other governments and of world affairs through such agencies as the Council on Foreign Relations and the Institute of Pacific Relations; imposition of the Marxist New Deal on the U.S. and other lands; to initiate, directly or indirectly, for the glory and enrichment of Rockefeller and the advancement of the Empire, "international" schemes such as "Lend-Lease", the Marshall Plan, the Point 4 program and the North Atlantic Treaty Organizations; to foster disastrous inflation in the U.S. by forcing exorbitant expenditures that will lead to ever increasing taxation and popular discontent that will serve to bring about the "new social order", totalitarianism, that is the avowed objective of all Rockefeller "philanthropies"; and to foment, indirectly, under the pretense of seeking peace, a series of wars which must eventually lead to exhaustion of the two chief powers in the world today who might contest the supremacy of the Rockefeller Empire, the U.S. and Russia.

But for emphasis, it must be repeated that the bitter irony of this ghastly foundation situation is that under the tax laws virtually all their funds, that are being used to injure public interests, are withheld from the public treasury by exemption features of tax laws the malefactors have written.

## CHAPTER IX

### ROCKEFELLER'S GOOD GOVERNMENT FOR AMERICAN "PEASANTS" Rockefeller, Kefauver & Rackets

The flagrant and wholesale law-breaking involved in the building up of the Standard Oil Co. necessarily required powerful political protection and control. Long before the beginning of the twentieth century, Rockefeller had established control of the local political machines in the oil districts, in Ohio and Pennsylvania. Especially helpful as agents or as lobbyists were the following:

Senator Boies Penrose, of Pennsylvania, who on his death in the early 1930's left a cache of over \$10,000,000 in gold bars in his vault. He was particularly helpful in influencing the report of the Congressional Industrial Commission appointed to investigate trusts, especially the Standard Oil Co., the "Oil Trust." Senator Matthew S. Quay, of Pennsylvania. Congressman Joseph C. Sibley, of Pennsylvania, who was labelled by the press, "Archhold's (Standard Oil Co's) jackal"; who gained his seat in Congress with Standard Oil Co. funds and support; and who was their frank lobbyist in Congress.

Senator Mark Hanna, of Ohio, political boss, who won his seat in the Senate with Standard Oil Co. support.

Senator Joseph Benson Foraker, former Governor of Ohio, who served the Standard Oil Co. as attorney and legislative agent, acting for bribes. Senator Nelson W. Aldrich, of Rhode Island, who was brought into the Rockefeller tribe by the marriage of John D. Rockefeller Jr. to Abby Greene Aldrich; the latter brought into the cold, calculating and ruthless Rockefeller tribe the hard, parsimonious Greene and Aldrich blood strains, noted for "thrift" in a super-thrifty New England. Aldrich and Hanna were bosses of the Senate and served the Rockefeller interests loyally and well. Aldrich introduced in the Senate a bill to charter the Rockefeller Foundation that later failed to pass the House. President William McKinley, of Ohio, was a Rockefeller-Hanna creature, representing the 162

emergence of the Rockefeller political domination in the national field. Since then every presidential nominee of every party with the exception of Theodore Roosevelt has been a Rockefeller puppet. Roosevelt resented the Rockefeller influence that had given the nomination to McKinley, which he demanded for himself but was forced to waive in return for the vice-presidential nomination. It is notable that McKinley did not live to enjoy his office long, but was mysteriously assassinated by a victim of mental disease, who was highly suggestible and a pliant tool. Roosevelt's antagonism toward the Rockefellers and subservience to the Morgan interests, however, did not stop him from seeking an increase in the \$125,000 contributed by the former to his 1904 campaign.

The list of public officers on the Rockefeller Standard Oil payroll is too long to detail. The nation was given the picture of their wholesale corruption of public officials by the Clapp Committee investigation. This investigation, plus seven Federal and six state indictments and suits against the Standard Oil and its subsidiaries, plus public reaction to the South Improvement Co. affair and other exposures forced the Rockefellers to migrate once again, from Cleveland to New York. Undoubtedly they served to impress on Rockefeller that mere bribery of public officials was not sufficient and was unsatisfactory in its results. It was the decree handed down by Judge Kenesaw Landis, ordering the dissolution of the Standard Oil Co. and imposing on it a fine of \$29,000,000, that served to convince the Rockefeller interests that they could carry out their plans only if they completely controlled the Government in Washington, as well as the local governments. It was then that government control through propaganda, or thought control, under the cover of "educational endowments", and manipulation of the government through the medium of super-lobbies parading as "philanthropic" foundations came into consideration.

At the same time, by various devices, the Rockefellers extended their political control of local governments in all sections of the country. This was engineered through one of the phoney Rockefeller "philanthropies," the Municipal Research

Bureau, set up for the ostensible purpose of guiding the "improvement" of local governments. "Improvement", like "internationalism", in Rockefeller parlance means invariably Rockefeller control domination and advantage—the more complete the advantage the greater the "improvement". The Municipal Research Bureau was later masked, to hide the identity of its Rockefeller control, by the adoption of an alias by which it is now known, the Institute of Public Administration. It is now located in New York City at 684 Park Avenue.

The methods and devices used by the Rockefellers in taking over control of a community is well illustrated by the experience of New York City. The Standard Oil Co. began its efforts to dominate New York City politics by the corruption of public officials in 1879. In that year several officials of the company were indicted by a Grand Jury in New York County. The indictment was quashed by New York City Corporation Counsel, William C. Whitney. Whitney rebuked the District Attorney for permitting the Grand Jury to bring in the indictment.

The Rockefellers were quick to realize the enormous profit possibilities of the highly concentrated, rapidly growing population of the New York area. With the Ryans and the Bradys, operating in the market through Bernard Baruch, they bought control of the local utilities and all essential facilities. They control the Consolidated Edison Co. that has a monopoly in the supply of gas and electricity to several boroughs of Greater New York, and Brooklyn Union Gas Co., among others.

The transit facilities of New York City were brought under their control through domination of the Manhattan Elevated R.R. Co., the Brooklyn Manhattan Transit Corp. and the Interborough Rapid Transit Co. They looted these roads, that have the greatest passenger density of any roads in the world and managed to pay enormous dividends on a five cent fare, to the point of bankruptcy. Then they engineered the scheme, through their Fusion puppet, Mayor Fiorello LaGuardia, to have the city's taxpayers take over, at their par value, the well nigh worthless securities of the rooked roads, in exchange for New York City bonds. They labelled this steal "unification".

Through the Transit Commission, which they dominate, they still retain control of the unified lines, with the objective of expansion, fare increase, and deliberate mismanagement until the public will be compelled to demand the return of the lines, that have been greatly extended at the expense of the taxpayers, to their private management. Within five years after unification, the rolling stock of the lines, even the newly purchased cars, show obvious signs of deterioration, rust and flaking paint. Overcrowding is worse than ever. Treatment of the passengers has become constantly more brutal to the point of actual murder. The safety devices on the doors of the cars that protected passengers from being caught in the doors and dragged by the trains, were removed by order of the Transit Commission and the Mayor, "in the interest of efficiency". Since then five passengers have been killed by being caught in closed train doors and dragged; and numerous passengers are injured in varying degrees in this manner. Life has little value to bureaucrats and dictators. With the cooperation of dominated labor unions, demanding constant increase in wages for ever less work, the fares have been increased from five cents to ten cents. But the roads are being looted more mercilessly than ever, under their management, and are showing a constantly increasing deficit. At this time a fifteen cent fare is under consideration, and there is no end in sight.

They control most of the important banks of New York, including the Chase National Bank, the National City Bank, Central Hanover Bank & Trust Co., New York Trust Co., J. Henry Schroeder Banking Corp., Manufacturers Trust Co. and others, to the extent that they practically completely control the Federal Reserve System. Through their holdings in the Borden Co. and National Dairy Products Co., that comprise what Henry Wallace labelled the Milk Trust, they control the milk supply of the city; and, through their control of city politics and the Health Department, they have raised the minimal price of milk from 6c a quart to over 20c a quart during a period of two decades. They are dominant or controlling factors in the railroads that enter New York City, and also in many other key enterprises essential for the life of the city. Every citizen in the metropolitan area pays them heavy

tribute every day of his life.

Henry H. Klein, who was First Deputy Commissioner of Accounts of New York City under the Hylan administration, reported in his *Rockefeller Or God* as follows:

"The Rockefellers have contributed hundreds of thousands of dollars to campaign funds in New York City during the past twenty-five years. They virtually financed the campaign of John Purroy Mitchell for mayor in 1913, and have led in financing political campaigns since. (p. 39)

"Rockefeller guaranteed Billy Sunday three hundred thousand dollars for his so-called religious revival in New York City in 1917, where John D. Jr. was trying to re-elect John Purroy Mitchell mayor, but Billy's eloquence failed to achieve this result though he collected more than three hundred thousand dollars from those who attended his revival meetings. Ivy Lee was his press agent. (p.46)

"Rockefeller cash has been used in local district primary fights to defeat or elect district leaders. . . "In 1937 the Rockefellers were behind all the mayoralty candidates, their Consolidated Edison Co. being behind Senator Copeland, and their B.M.T. and I.R.T. being behind Whalen and Mahoney, in the Democratic primary fight against Copeland. They stood to gain no matter who won the primaries or the election. It is doubtful if any candidates can be elected to high public office hereafter, without Rockefeller support, unless it be on an out and out anti-Rockefeller issue. Besides controlling political bosses, they control virtually all channels of publicity, including newspapers, magazines, movies, radios, and they finance most so-called civic, social service and 'reform' organizations in the city. In addition to this, they support and finance influential politicians by contracts through various corporations, and most so-called 'leading citizens' are on the Rockefeller payroll as attorneys, insurance agents or in some other capacity.

"They tried to elect LaGuardia mayor in 1929 . . . and they contributed heavily in 1933 and 1937 to elect and re-elect LaGuardia . . . the Rockefellers contributed heavily to elect Thomas E. Dewey District Attorney in 1937 . . .

"The same sort of influence is exercised by the 166

Rockefellers in most large cities and in most states, and many congressmen, senators and others in high public office are undoubtedly favored by them or their corporations, in business."

Operating through various "civic", "reform" and "fusion" organizations, often set up and largely financed by themselves, the Rockefellers and their publicity men and propagandists lobby and create a semblance of public support for their own enterprises. In order to give themselves a larger measure of direct control of the local governments, they have made it a practise to "amend", or rewrite the local basic law, as they have the Constitution of the U.S. Thus they have given New York City and the States of New Jersey and New York new charters, and are now in the process of doing the same in Connecticut. This is done under the cloak of an artificially engineered "popular demand", naturally in the interest of "good government" and "economy". The economies are chiefly or entirely for the Rockefellers and their interests; and the governments that they engineer are "good" only for them and their radical henchmen of the "social science" crowd. Their "new social order" turns out to be the same corrupt old order, infinitely intensified, with themselves as masters.

A favorite device of the "new social order" in frustrating the will of the people and gaining control for their crew, is "proportional representation". By trickery such as "bullet voting," it is possible for an infinitesimal minority to secure disproportionately high representation. This favorite device of theirs was written into the New York City Charter. It resulted in giving the Communist Party numerous seats on the City Council which its small minority of voters could not have gained otherwise. The cost of this betrayal of the citizenry was enormous, in both time and money. It was abandoned because of unwieldiness after endless, unheeded public protests.

The new Charter and Rockefeller control have made New York City virtually insolvent. Within less than a decade the City budget of five hundred million dollars, which was assailed by the Rockefeller "reformers" as padded and corrupt, was almost tripled. Tax rates have risen steadily and the caliber of services received by the citizens in

return, such as snow removal, street cleaning, hospitalization, schools and others, has steadily deteriorated under the Rockefeller - LaGuardia "reform" Fusion administration and its Rockefeller-controlled successors. Payrolls have been padded outrageously and an endless array of drones has been planted on it.

Thus, the Health Department of New York City has little or no reason for a separate existence. Most of the services that it is supposed to render are merely an inefficient duplication of services that could be efficiently rendered by the Hospital Department, with which it jealously competes. Such services are the treatment of venereal diseases, which not infrequently requires hospitalization for the safety of the patient and his contacts and for which the Health Department has no facilities. Nevertheless, under Rockefeller-dictated and controlled Health Commissioners, the facilities of the Health Department have been tremendously increased by the building of a score of so-called Health Centers which must go out and drag in victims in order to discharge their inefficient duplicate services. They are empty and idle nine-tenths of the time. The Hospital Department, on the other hand, is terrifically overcrowded and has patients suffering from serious diseases swarming in its often verminous wards and corridors under conditions that jeopardize their lives. It is constantly faced with a crying need for enlargement of its facilities that could be materially increased by the space and funds wasted on the idle Health Centers.

But the Health Department serves the Rockefellers and allied interests commercially. The Health Commissioner controls the milk business of the city and dictates the terms under which it is carried on. Rockefeller's Milk Trust seeks and is steadily attaining a monopoly of the milk business in our cities, through its Borden Co. and National Dairy Products Co. Therefore, the appointment of Health Commissioners is dictated by the Rockefellers and they are generally employees or former employees of their fake philanthropies. The low or moderately paid and experienced civil-service medical employees who had been with the Health Department for years were dismissed. They were replaced in the majority of instances by utterly inexperienced, freshly graduated physicians, and

often by laymen, from the payroll of the various Rockefeller "philanthropies" who are dependent on the Rockefellers for their livelihoods and futures, and can be depended on by the Rockefellers to do their bidding, no matter what it be. Their essential qualification is adherence to Marxist "social science". This replacement was accomplished by the favorite trick of the Rockefeller interests that they snidely call "reorganization".

These "reorganizations" are usually made to serve the interests of the Rockefeller-Soviet Axis. This is illustrated by the case of Dr. Leona Baumgartner, a "liberal" Rockefeller pawn, recipient of a Rockefeller Research Fellowship. When she had been graduated from medical school only five years and was practically inexperienced, she was imported in violation of municipal residence laws by the Rockefeller interests to take over the post of Director of Child Hygiene in their "reorganization" of the Health Department. She replaced one of the most widely experienced and illustrious men in the field, who did not happen to be a Rockefeller pawn or a Communist. Following her advent the Department abandoned tried rules regarding the isolation of victims of measles that had previously been in force to prevent the development of epidemics of the disease among schoolchildren and the danger to their health that it implied. The real motive underlying this abandonment was the effect that quarantine had on school attendance and the reduction of moneys allowed by the State of New York to the City of New York for the "educational system" on the basis of attendance. Less value was placed on the health and lives of the schoolchildren than on the funds for "education". The result has been annual epidemics of measles with a proportionate number of deaths and unrecorded injuries deliberately inflicted by the conspirators on tens of thousands of children. For them, the money was more important than the health and lives of the children. It is characteristic of the "liberals" in all their activities that they put little value on the lives of others.

It soon became apparent that Dr. Baumgartner was bent upon rendering an important service to her sponsors. Under the pretense of interest in the health of preschool children, Dr. Baumgartner's division usurped control of the educational program of

the play schools and kindergartens, which it undertook to direct into channels approved by the Communist Party and so-called "liberals"; it also undertook to dictate the selection of "approved" teaching personnel—a usurpation of the power of the Board of Education. Schools which failed to comply were put out of business for supposed violation of constantly changed Health Department regulations. Finally the Packard School courageously challenged the conspirators. It took the case to the courts, which ruled that the activities of Dr. Leona Baumgartner's department were illegal and enjoined them.

Dr. Leona Baumgartner was promoted for her service to the cause. She is constantly being built up in the press by her bosses with the objective of advancing her to the post of their Health Commissioner and further. Thus the New York Times of September 5, 1951, gives big headlines to some psychoanalytic buncombe of Dr. Baumgartner's that was part of a talk delivered to 250 overworked and miserably underpaid Health Department physicians who are required to "examine" millions of schoolchildren in the course of each year at the rate of one every several minutes. Dr. Baumgartner's exhortation to these drudges, that they "stress aid to emotionally disturbed children", was obvious humbug intended solely to make the headlines and dupe the "peasants", and for her own glorification in their eyes.

The "reorganized" Health Department, thus has become completely prostituted to the Rockefeller commercial interests. It advertises their brand of milk and urges the sucker public, the "peasants", to consume ever more and thus make even higher profits for the Rockefeller Milk Trust. Some of the Health Centers actually sell their milk. Most of it is "homogenized", synthetic and adulterated, of a grade that a conscientious health commissioner would bar from consumption. It bears little resemblance to the real article. When it is allowed to stand, it does not sour like real milk, but becomes putrid. Even if it were real, pure milk, it would not be the "perfect food" that the Department and its Commissioner dishonestly represent it to be in order to stimulate greater consumption and more business and profits for the Milk Trust. To avoid any damage to the business of their milk companies, the

Rockefeller-prostituted Health Commissioners no longer warn the public when the consumption of milk is dangerous because pollution with streptococci or with Bang bacilli are causing epidemics of septic sore throat and brucellosis. When the life of others is weighed in the balance against Milk Trust profits, it is the profits that win out.

Even the really essential function of the Health Department, vital statistics, is administered in such manner as to swindle the sucker public. The Health Centers serve as sales agencies for "industrial" insurance policies that are sold by such companies as Metropolitan Life Insurance Co., Prudential and others at exorbitant rates. These policies have been declared by some courts to be fraudulent because of devices included in them to permit the company to evade payment of benefits. By "fixing" vital statistics and by releasing "confidential" information which the unscrupulous, Rockefeller-dominated health officers now require of physicians in connection with death certificates, the Health Department aids the insurance companies in evading payments to the "beneficiaries" of its policies. Needless to say, the Rockefeller interests control the large, key insurance companies and use the policyholders' monies to finance the expansion of the "Empire".

Thirty years ago, the Health Department included in its scope a large part of the activities of the Hospital Department and the present Department of Sanitation. Now its largely useless activities comprise less than ten percent of its former functions. But the cost of operation of the Health Department is more than three times what it was thirty years ago. This means that for its present Rockefeller-dictated, racketeering functions, Health Department costs have increased approximately thirty times.

The same arrant wanton waste and disregard of public interest characterize every branch of New York City's government under the Rockefeller "reorganized" and "reformed" government. Under corrupt Tammany rule, the Department of Sanitation kept the streets clean and promptly removed the snow as it fell. Now, though the Department costs the taxpayer many times what it did under Tammany, the streets are dirty and snow is allowed to remain in the roadways to form icy sheets, until it melts. Under Tammany, respectable citizens

were afforded some measure of police protection and crimes were recorded even if some were not solved. Now, the Police Department is too busy divvying up loot and collecting "ice", or protection money, from gamblers and criminals; guarding racketeering unioners and pickets; playing nurse maid to the mobs at the fights and ball parks; wooing votes for the politicians in parades; and acting as royal guards for guests of the Rockefeller Empire from abroad and lining miles of streets along the line of parade through the city to Rockefeller's Union Club —they are far too busy with these activities even to make a record on the police blotter of such crimes as burglary and assault upon mere taxpayers and citizens, the "peasantry". For that reason the FBI has refused to accept the records of the Police Department of New York City, on major crime. The Kefauver Crime Investigation Committee merely dramatically presented to the public, facts that have been known to it for many years and have been repeatedly published; the indictment of several score police officers merely serves to cover up the activities of the tops of the criminal syndicate operating on a nation-wide scale.

The sole differences made by Rockefeller-instigated "reforms" and "reorganizations" is that the corruption becomes greater, more insolent and costlier, and that the graft goes to higher strata of society. How the Rockefellers benefit from such activities is clearly portrayed in the Saturday Evening Post publicity series by Joe Alex Morris on the Rockefellers in the issue of January 6, 1951, as follows:

"... when he (John D. Rockefeller Jr.) was approached with the idea — in which Nelson Rockefeller concurred — that the time had come for him to abandon his lifetime advocacy of prohibition, (Ed: which he was largely instrumental in imposing on the nation) Mr. Rockefeller felt that things were being carried too far. Liquor had never been and still is not served in the elder Rockefeller's household, and he argued that opponents of the Volstead Act had been guilty of gross exaggeration when they claimed that the speak-easy situation had become a greater evil than the saloon. This was a deep religious and moral conviction. . .

"A story has frequently been told that Nelson 172

persuaded his father to declare himself in favor of repeal of the Volstead Act by guiding him one evening on a quick tour of mid-Manhattan where he pointed out in the space of a few blocks more than a score of speak-easies, all running full blast and ignored by the (Rockefeller dominated) police.

" 'And pa,' Nelson was supposed to have said, 'they're all on your property.' " It is a Rockefeller tradition that nothing must interfere with business profits—and certainly not "deep religious and moral convictions", that serve so well to cover up ulterior purposes. It requires a lot of explaining to understand why it is that in a community so completely controlled and dominated by the Rockefellers, to the extent that virtually nothing can exist without their consent, there can exist, the putrid corruption, rampant crime and merciless looting of the citizenry through the device of taxation, that exist in New York City.

The Rockefeller interests have derived their greatest spoils from political control of New York City by evasion of taxation for themselves while benefiting from the wholesale looting of the rank and file of taxpayers through steadily increasing assessments and exorbitant, constantly rising taxes. The Rockefellers and the corporations which they control have enormous holdings in New York City. In 1938, when realty values were a fraction of present prices, their own holdings were estimated as worth "about \$600,000,000." (Rockefeller or God, p. 37). Title to the land on which Rockefeller Center is built is vested in Columbia University, and is tax exempt. The assessed value of the buildings and improvements is relatively very low even though the Rockefellers, through their political domination, have arranged to give it an enormously heightened value. This they effected by having their top Democratic agent in the U.S. Senate, Senator Robert F. Wagner, introduce and secure the passage by the 72nd Congress, in 1932, of Public Bill No. 296 which made Rockefeller Center the only freeport in the U.S.!

The implications of the free-port status of Rockefeller Center are many. And they throw an interesting light on the modus operandi of the Rockefeller "philanthropies". It means that merchants located in Rockefeller Center can import

merchandise and display it for sale without paying customs duty. They can do business with a small fraction of the capital required by their neighbors across the street. This implies discrimination against other property holders, discrimination against every other port in the country, and violation of the Constitution. It enabled the Rockefellers to lure tenants from other buildings with the inducement of lesser capital requirements. They went out of the way to offer additional inducements to inveigle tenants to desert other landlords and move into Rockefeller Center, such as deliberately lowered rents, payment of unexpired leases on premises occupied, and many others.

The vacancies resulting from the wholesale exodus of tenants into Rockefeller Center from other properties was equivalent in its effect to "short selling" of New York City property and sharply depressing the value of property throughout the country. As a result the depression that then prevailed in this country and the world was greatly intensified and prolonged. And the Rockefellers were enabled to grab up, at bankrupt prices, properties and industries thus depreciated, while millions were thrown out of work, had their properties and homes foreclosed, were forced on a dole, or starved. This sharp and highly profitable business deal has been represented to the public as a "philanthropic" depression enterprise by the Rockefeller Goebbels, otherwise known as publicity men. All this is quite characteristic of the Rockefeller "philanthropic" enterprises.

The tactics employed by the Rockefellers in their "benevolent philanthropy" at Rockefeller Center were the basis of at least one lawsuit against them that came to public attention. It was brought by August Heckscher and was settled out of court. Its disposition was never made public.

Rockefeller Center is today the business capital of the world. It numbers among its 1100 tenants many governments. Many hundreds of the tenants are corporations owned or controlled by the Rockefellers.

The Rockefellers are the largest holders of New York City municipal issues, which are tax exempt and a first lien on all the property in the city. Their tactics in driving the city to the verge of bankruptcy and in steadily and relentlessly increasing

the tax burden through their control of the government, parallels their tactics in the Federal Government. The objectives could be the same in both cases,—personal gains at the expense of the taxpayers, and a drive to gain direct ownership and control of everything through bankruptcy. That is the Lenin formula for Communism and dictatorship. Bankruptcy is in the offing for New York City and its property owners, with an annual budget of one billion three hundred million dollars, that represents an increase of 25%, for 1951.

Under Rockefeller control, New York City squanders on the single item of "welfare", which is their favorite enterprise with other people's money, as much as two hundred million dollars a year. This amounts to almost half the total city budget of the late twenties. Their "social service" appointees have used this vast boodle fund to maintain their puppet mayors and administrations in power by buying "relief" votes and to foster Communism, subversion, improvidence and worse in large sections of the citizenry. Prostitutes have been maintained by the Welfare Department, at the expense of the taxpayers, in luxury in hotels in which they plied their trade, with grants as high as six hundred dollars a month and payment of summer storage charges for their mink coats. Bigamists have been aided by "welfare" grants to both of their families. Relief families have been maintained for years in expensive hotels, in idleness enforced by "welfare" regulations, at a cost to the taxpayer of hundreds of dollars higher than the average monthly income of provident taxpayers. Carpetbagging Negroes and penniless Porto Ricans were imported by train-and plane-loads, colonized in the city, and immediately placed on relief, before each election of Rockefeller's puppet, Fiorello LaGuardia. Communist unions of social workers have staged strikes against reduction of welfare allowances or budgets, which are frankly used by them to foster Communism. In May, 1951, in the midst of war, with an actual shortage of labor prevailing, Welfare Commissioner Henry L. McCarthy proudly reported in the press that public assistance for the month of April, 1951, amounted to a mere \$12,854,729. The same newspaper issue that reported McCarthy's figures, also reported that a couple who had on deposit in a savings bank more than \$12,000,

had received another \$12,000 in public assistance in the preceding three years.

During the past two years, the Rockefellers have made a number of cautious moves to take over direct and open control of the finances of New York City. The story of the abandonment of Winthrop Rockefeller's proposed candidacy for Comptrollership of New York City has been related.

But the Rockefellers did not give up their scheme to gain direct control of the Comptroller's office. On April 11, 1951, Beardsley Ruml was appointed Special Deputy Comptroller by the Democratic regime. He is Rockefeller's agent who operated the Laura Spelman Rockefeller Memorial and through it launched the Marxist "social science" program for them, and the "tax expert" who is entrusted to draw up the tax bills that suit their purposes of looting the taxpayers while providing loop-holes to exempt themselves.

New York City is merely cited as a typical instance of the Rockefeller political control of local governments. The scheme of municipal government control was launched in the early part of the century by the Rockefeller subsidized Municipal Research Bureau. In time every significant community in the country, every state, county, city, town, and many villages came to be as completely dominated by them and their agents as New York City. Two agencies were set up for this purpose. The first is the permanently endowed Institute of Public Administration which is an outgrowth of the Municipal Research Bureau which maintains the pretense of being dissevered from Rockefeller control, but is truly the Department of the Interior of the Rockefeller Empire. The second is the group of agencies centering about the Public Administration Clearing House, which are designated by the number 1313 derived from the building which it put up at 1313 East 60th Street, in Chicago, the establishment and maintenance of which was the sole function of the Spelman Fund to which Rockefeller granted \$10,000,000 from the funds of the Laura Spelman Rockefeller Memorial at the time of its merger.

Originally launched as the Municipal Research Bureau, in 1906, the Institute of Public Administration became the agency through which the Rockefellers developed their political control of New York

City, in the guise of a "philanthropic" interest in "good government". It rapidly became the most corrupt political agency in the city, and therefore the dominant one. Its influence was expanded, with the collaboration of other controlled foundations and interested industrial organizations, such as the Metropolitan Life Insurance Co., to a national scope. In 1928 it was rechartered as the National Institute of Public Administration, but dropped the "National" from its name when its charter was made permanent in 1931, presumably because an "international" role was already schemed for it by its sponsors. At the same time, in order to mask its identity as one of their controlled agencies, the Rockefellers in collaboration with the Julius Rosenwald Foundation, which they dominated, and a group of associates, provided an endowment for the Institute. Its brochure states its purposes and functions as follows:

"The Institute of Public Administration is a research consulting, and educational organization concerned with improving public administration. It is incorporated under the Education Law of New York State, is supported by income from its endowment and from fees, and is independent of sectarian, partisan, or governmental control. The Institute is located in New York City where it was founded in 1906 as the New York Bureau of Municipal Research. Its training program was established in 1911 as the Training School for Public Service, the first of its kind in the United States.

"The range of Institute activities has widened considerably since 1906. In the early years attention was confined to such matters as the accounting and budgeting systems of local governments, personnel and salary standardization, zoning ordinances and real estate assessment, and the operating problems of police, fire, health, public works and other municipal departments. In the 'twenties and 'thirties emphasis was extended to a number of broader problems of administration including the formulation of charters and constitutions, the reorganization of state governments, and the lessening of conflict and duplication among different units."

Its personnel is listed as follows: TRUSTEES Richard S. Childs, Chairman Carl H. Pforzheimer, Vice Chairman

Henry Bruere, Treasurer

William Tudor Gardiner      George S. Van Schaick

E. Roland Harriman      Delos Walker

Herbert Hoover      John G. Winant

It is significant that the Truman appointment that brought ex-President Hoover out of retirement was made in order to conduct a survey preliminary to the "reorganization" of the Federal Government. Miss Audrey Davies reports that when a revised Constitution for New York State was submitted to the State Legislature in 1915, it was almost unanimously rejected. But during the regimes of Governor Alfred Smith it was resubmitted piecemeal with his support and was "put over". The New York City Charter, however, guided by Rockefeller puppets led by Judge Thomas D. Thacher of Rockefeller's Council On Foreign Relations as chairman, went through without a hitch, exactly as drawn up by Rockefeller's Institute.

The "1313," its objectives and attainments are clearly described in the Final Report of the Spelman Fund of New York, published in 1949. The trustees and officers of the Fund are listed in the Report, as follows:

Cleveland E. Dodge

Charles E. Merriam

Clarence A. Dykstra

John D. Rockefeller 3rd

Marshall Field

Laurance S. Rockefeller

William Tudor Gardiner Beardsley Ruml (Italicized-Council On Foreign Relations members) The Report relates that the Fund was created on December 27, 1928, with a capital of \$10,000,000 provided by the Laura Spelman Rockefeller Memorial, and received later grants of \$3,000,000 from the Rockefeller Foundation. It related as the ultimate objective of the Fund that it

"... assumed as its major responsibility an exploration of the possibilities of cooperation with public bodies for the improvement of public administration." (p. 3)

The modus operandi of the Fund is stated as follows:

"From the beginning it was determined by the Spelman Fund that grants would not be made for research purposes but in the main for the application of research. The principle was that research would normally be conducted by academic institutions, while the Fund's beneficiaries would carry on their practical operations ..." (p. 14) 178

Subsidy or bribery of public officials to adopt the Rockefeller-serving schemes dished up by Rockefeller-subsidized and dominated "academic institutions" could fall into this description. The Report states:

"To facilitate this purpose, an agency known as the Public Administration Clearing House was set up." (p. 7) The Board of Trustees of the Clearing House

included :

Paul H. Appleby	William Tudor Gardiner
Sewell L. Avery	Paul G. Hoffman
Newton D. Baker	Robert M. Hutchins
Louis Brownlow	William L. Levis
Ralph Budd	Frank O. Lowden
Harry F. Byrd	George Fort Milton
Richard S. Childs	John Lord O'Brian
Frederick M. Davenport	John G. Pollard
Charles G. Dawes	Chester H. Rowell
Marshall Field	John G. Winant

(Italicized-Council On Foreign Relations members)

In "1313" there are housed a multitude of Rockefeller front organizations in the governmental field, including the Public Administration Service, successor to the Municipal Administration Service, that acts in "advisory" capacity to other front organizations or to unsuspecting independent communities. It has also reached out into the international field through "cooperation" with the International Union of Local Authorities of Brussels and the International Institute of Administrative Science. The Spelman Fund made contributions to those and to special conferences on governmental planning for conservation and utilization of national resources (including oil, naturally) in the principal countries of the world, held at Ardennes, Belgium, in September 1937. In November 1938, negotiations for domination of the Pan-American field were furthered by the First Pan-American Congress of Municipalities at Havana. It organized in 1939 the American Society for Public Administration and launched its quarterly publication, the Public Review. These are a few of the endless array of Rockefeller front governmental agencies, two of the most significant of which are the Rockefeller-inspired and subsidized National Resources Planning Board and the Office of Government Reports, which have been characterized by Representative John Taber

of New York as follows: (C. R., v. 86. Part I. pp. 419-20)

"I want to call the attention of the Congress to an operation which is going on and which the Executive, according to his statement in last night's paper, is still trying to put across, notwithstanding the Congress has failed to provide any legislative authority for it—two schemes known as the National Resources Planning Board and the Office of Government Reports.

"The first of these outfits is a propaganda outfit, designed to embark the Government on all kinds of programs which have never been regarded as Federal functions; to embark the Government on all sorts of things that will bankrupt the United States.

"The second of these outfits is an outfit which has been designed to establish the Executive in great power and to build up his authority, and increase the trend toward dictatorship.

"The planning of this Office of Government Reports came largely through the direction and operation of one, Louis Brownlow, who was chairman of this so-called outfit. This Louis Brownlow has a great lot of organizations. I am going to put them in the Record in detail. Charles Merriam, a professor who formerly served at the Chicago University, is a member of this National Resources Planning Board and one of the moving spirits behind it. He is the head of the Spelman Foundation (Ed: Fund) which has contributed, in the last six or seven years, a total of \$3,953,000 to these different Brownlow outfits.

"As a result of the recent proposal of the reorganization of the Federal Government proposed by none other than Charles E. Merriam and Louis Brownlow, the National Resources Planning Board has been moved directly into the Office of the White House.

"I do realize that both of these organizations are a menace to the welfare of the American people, and they are a menace to Constitutional government. I feel that the Subcommittee on Independent Offices of the Appropriations Committee are to be complimented on cutting out all appropriations for the National Resources Planning Board and the Office of Government Reports."

Professor Charles E. Merriam boasts (p. 19):

"An important agency largely due to the public administration group (set up by the Fund) is the Division of Administrative Management under the Federal Bureau of the Budget. This Division carries on continuously the detailed study of the ways and means of administration in the federal service and constitutes a permanent center and activity in public administration.

"Another gain is the developing status of important consultants available for public service. It is not by accident that Louis Brownlow was called in by President Roosevelt as chairman of his Committee on Administration and Management; or that Herbert Emmerich and Don K. Price have been called upon by former President Hoover to assist in the work of the Commission on Organization of the Executive Branch of the Government; or that Mrs. Emmerich has been asked by President Truman to help implement the whole plan of the Commission during the next two years; or that Donald C. Stone, first director of the Public Administration Service in Chicago, became the head of the Division of Administrative Management in the Bureau of the Budget and later Chief Administrator for the Economic Cooperation Administration; or that Frank Bane became the first executive secretary of the Social Security Board. These are but a few examples." Thus do the conspirators brazenly boast of the success of their conspiracy. But the Report was not expected to attain wide circulation and was intended to flatter the ego of the Fund's sponsor, John D. Rockefeller Jr.

The sum total of the consequences to the community of these Rockefeller "philanthropic" endeavors for "improving" our governmental administration is most dramatically epitomized in the report of the Senate Committee for the Investigation of Crime that was headed by New Dealer and Rockefeller henchman, Senator Estes Kefauver. The report indicated that the government at all levels, national, state and local, is dominated by a syndicate of crime. Rockefeller's Spelman Fund boasts, in the words of Professor Merriam, that it has "reformed" and controls our government at all levels. Can it be that the criminal syndicate that the Kefauver report states controls our government, and the Rocke-

feller interests that the Merriam report boasts as in control, are one and the same?

This question is pointed up by several facts. One is the rewarding of Murray I. Gurfein with "knighthood" in the Rockefeller Empire, membership in their Foreign Office, the Council On Foreign Relations, following his role in the release of the Mafia boss, gangster, white slaver and dope-ring overlord, "Lucky" Luciano, through successful intercession with Rockefeller puppet, Governor Thomas E. Dewey. Immediately following Luciano's release, the Internal Revenue agents reported the flooding of the U.S. with narcotics directly traced to Luciano. A second is the report made by Italy's Public Health Commissioner, Giovanni Battista Migliori that U. S. Communist leaders control the traffic of narcotics from Europe to the United States, thru Eastern, Germany.

After four decades of Rockefeller "reform", our government presents the spectacle of rule by criminal overlords who have free entry into the White House and associate intimately with the members of the President's family, as in the cases of the Roosevelts, Hardings and Trumans. Traitors and subversive elements persecute and prosecute patriotic citizens who undertake to expose them, as in the cases of Martin Dies and Senator Joseph McCarthy. The latter's ousting from the Senate is demanded by a colleague, Senator Benton, because he had dared to make an effort to do his duty and to protect the nation and its security against traitors, and has manifested loyalty to his country. The brand of "good government" that Rockefeller has so heavily subsidized, and Professor Merriam states is "no accident", has reached the point in Louisiana where the criminal element have so wholly taken the law into their hands that they have indicted and threatened with jailing the law-abiding elements who expose and fight them.

This we can not help but agree with Professor Merriam, is "no accident", but a nefarious conspiracy that threatens an early end to government by Constitution, law and order. If this is the situation that he boasts has been brought about through the activities of the Spelman Fund, as its report claims, its sponsors have much to answer for to the nation.

## CHAPTER X

### THE ROCKEFELLER "CRUSADES" AND THE "OIL WAR"

"What an opportunity! What a privilege! What a duty!"  
(John D. Rockefeller Jr. The Christian Church, What Of  
Its Future? January 31, 1945)

The twentieth century, to date, has been a continuous era of intensive war between the rival Rockefeller Standard Oil and the British oil interests. This war has only focused public attention at intervals. But periodically, it erupts into physical warfare in the battlefield; and it has twice involved the entire world in wars in the past half century,— World Wars I and II , with World War III in the making.

The Rockefeller Empire does not engage in the wars directly. It merely engineers, plans and plots the wars and then tricks and inveigles nations, or other groups, to fight as its pawns and mercenaries. Invariably these wars prove fabulously profitable to the Rockefeller Standard Oil interests. For they regularly supply oil and other material of war to all the belligerents indiscriminately; and modern war requires much oil. Among the nations that have been impressed as mercenaries in the wars of the Rockefeller Empire are Germany, France, Italy, Belgium, Zionist Palestine, China, Korea, Canada, Bolivia, Mexico, Soviet Russia and many others. Outstanding mercenary of the Rockefeller Empire, and highly useful and profitable to it, has been the United States and its "peasants".

John D. Rockefeller Jr. has undertaken to represent these wars as Crusades in his address delivered on January 31, 1945 at a dinner given by the Protestant Council of the City of New York, entitled The Christian Church, What of Its Future?, in the following words:

"Not many weeks or months had elapsed after this World War began before there was presented to our vision a picture so horrible it hardly seemed that it could be true.

"It appeared that hell had broken loose and that millions of evil spirits had become incarnate in human form and were going about the earth com-183

mitting atrocities and acts of cruelty beyond belief.

"But there is another picture which the war has painted. In it we see millions of men and women who are exemplifying in their daily lives, in the commonplace fashion, unselfishness, generosity, loyalty, self-sacrifice and other characteristics and qualities which command the admiration of the world. Unconsciously these people are reflecting Christ's spirit. Whether they know it or not, their inspiration comes from the God of all good deeds." He stated further (id. p. 11) : "What I have said thus far is the substance of an address which I made during the first World War." In short, those who fought, shed their blood and lost their lives for his oil in the World Wars were "Crusaders" serving in a Christ-like manner in the "Church of the Living God," Rockefeller. "What an opportunity! What a privilege! What a duty!" said John D. Rockefeller Jr. (id.p.11) Millions of dead and tens of millions of mutilated and maimed would have been glad to have been spared the "opportunity . . . privilege . . . duty" offered them by pious hypocrisy.

The process whereby the U.S. government, and more especially the State Department, was converted into a minor bureau of the Rockefeller Empire at the very beginning of the century, was cunning, crafty and unscrupulous play on public gullibility and pristine American patriotism. This has become its systematic practise. Rockefeller publicity men, supported by prostituted "scientists" and "educators", represented to the public through all avenues of publicity, that the U.S. supply of oil faced imminent exhaustion. They pointed to the heavy and steadily rising export of petroleum products since the 1860's (for even in the midst of the Civil War the slogan of the Standard Oil principals was the same as it is now in the course of modern wars: "Business as usual"). They alleged then, as they have repeatedly since, that the oil reserves of the nation would not suffice for a decade more at the current rate of use. How false, absurd and designing these representations were, is apparent from the fact that after each of those "predictions" our rate of production and our ac-

knowledge reserves of oil rose by leaps and bounds. On the basis of these deliberately and designedly false "predictions", their oil "experts", supported by the Standard Oil Co. and allied interests, have insisted that our country must seek to gain control of foreign oilfields,—naturally, "in our national interest". These "predictions" served as an excuse for the corrupt political officials, agents of the Rockefeller-Standard Oil group to openly turn over to it control of our government, and more particularly of the State Department and of the nation's international policies. Since 1900, every President, with the possible exception of Theodore Roosevelt, who was subservient to the rival Morgan interests, and every Secretary of State of the U.S., has been openly an agent and spokesman for the Rockefeller Empire. The subservience of the U.S. Government to the Rockefeller and allied interests, and especially of the State Department, since the turn of the century, was acknowledged in the Federal Trade Commission Report On Foreign Ownership In The Petroleum Industry, 1923 (p. 39) and was clearly stated in the instructions sent out by the State Department to its consuls and agents on August 16, 1919, reading as follows:

"Gentlemen: The vital importance of securing adequate supplies of mineral oil both for the present and future needs of the United States has been forcibly brought to the attention of the Department. The development of proven fields and the exploration of new areas is being aggressively conducted in many parts of the world by nationals of various countries, and concessions for mineral rights are being actively sought. It is desired to have the most complete and recent information regarding such activities either by United States citizens or by others.

"You are accordingly instructed to obtain and forward promptly from time to time information regarding mineral oil concessions either proposed or granted, sale or transfer of such concessions, change of ownership of oil property or important changes in ownership of corporate companies concerned with oil production or distribution. Information regarding development of new oil fields or increased output of producing areas should also be forwarded. Comprehensive data are desired and reports should not be limited to points 185

specifically mentioned above, but should include information regarding all matters of interest affecting the mineral oil industry which may arise from time to time.

"You are instructed to lend all legitimate aid to reliable and responsible United States citizens or interests which are seeking mineral oil concessions or rights. Care should be taken, however, to distinguish between United States citizens representing United States capital and United States citizens representing foreign capital; also between corporations incorporated in the United States and actually controlled by United States capital and those companies which are merely incorporated under United States laws but dominated by foreign capital." (66th Congress, 2nd Session, Document o. 272, p. 17) Not infrequently in the course of the diplomatic exchanges in the "Oil War" the Rockefeller domination of the State Department found open expression. Thus U.S. Ambassador to Britain, Walter Hines Page, an associate of the Rockefellers, as are most of our envoys to St. James, reported the following exchange between Secretary of State William Jennings Bryan and Sir William Tyrrell, the special envoy of the British Foreign Office:

" 'The Foreign Office has simply handed its Mexican policy over to the oil barons for predatory purposes', Bryan charged in his talk with Tyrrell.

"Mr. Secretary' Sir William replied, 'you are talking just like a Standard Oil man . . . you are pursuing the policy which they have decided on.' "

(B. J. Hendrickson, *The Life & Letters of Walter Page*, v. 1, p. 203)

The State Department has served the Rockefeller Standard Oil interest with complete and undivided loyalty and without regard to the interests of the United States and its citizenry, during the past half century. It can be said with absolute assurance that whatever occurs in the State Department does so at the behest of the Rockefeller interests. Thus if the State Department is filled with Communists and fellow travelers, one can be certain they are there because the Rockefeller interests want them there; if records are removed from State Department files in volume, the same conclusion can be drawn. This was especially true during the past dec-

ade, because the Rockefellers are directly represented in the State Department in the person of Nelson Rockefeller, as well as indirectly, through their agents.

The British were not slow to recognize the importance of oil, in the imperial game. For this realization they did not require Clemenceau's plea to President Wilson, when in 1917 Great Britain came close to an oil shortage, when he wrote (Note of December 15, 1917):

"A failure in petroleum supply would cause the immediate paralysis of our armies and might compel us to a peace unfavorable to the allies. Now the minimum supply of petroleum computed for the French armies by their Commander-in-Chief must be 44,000 tons, and the monthly consumption is 35,000 tons. This indispensable stock has fallen today to 28,000 tons and threatens to fall almost to nothing if immediate and exceptional measures are not undertaken and carried out by the United States. These measures must be taken without a day's delay for the common safety of the Allies, the essential condition being that President Wilson shall obtain permanently from the American oil companies tankers with supplementary tonnage of 10,000 tons ... If the Allies do not wish to lose the war, . . . they must not let France lack the petroleum that is as necessary as blood in the battles of tomorrow." Nor did they need the assurance of Lord Curzon that "the allies floated to victory on waves of oil", American oil provided to both the Allies and to their enemies indiscriminately by Rockefeller's Standard Oil Co.

As early as 1882 Admiral Lord Fisher had sought to impress upon the British government the importance of oil as a fuel for the British Navy and merchant marine. He constantly reiterated the statements :

"The use of oil adds 50% to the value of any fleet that uses it."

"The use of oil fuel would increase the strength of the British Navy 33%, because it can refuel off the enemy's harbours. Coal necessitates about one third of the fleet being absent refueling at a base . . . With two similar dreadnoughts, oil gives three knots more speed, and speed is every-187

thing. Oil for steamraising reduces the engine and boiler-room personnel over 60%. At any moment during refueling the oil-engine ship can fight—the coal-burning ship cannot ... Oil does not deteriorate by keeping. Coal does ... It is criminal folly to allow another pound of coal on board a fighting ship." (Davenport & Cooke, *The Oil Trusts And Anglo-American Relations*, p. 5) The action of the British Government in the matter of acquiring oil reserves contrasts sharply with that taken by the U.S. Reflecting British cupidity and acquisitiveness, traits that they erroneously attribute to the Scotch, they held undeveloped the oil resources of their own Empire, and with dog-in-the-manger attitude refused to develop them and refused to permit others to develop them, and sought to acquire the oil reserves of other lands. Reflecting a higher level of official ethics, instead of using the wealth of the nation to roll up tremendous holdings for private groups, such as the Rockefeller Empire, the British Government entered into the oil business as an agent of the citizens whose wealth was being used for their theoretical advantage. It took actual partnerships in various oil enterprises, including Royal Dutch-Shell and Anglo Persian, which amounted to control. British Controlled Oil-fields Ltd. is entirely owned by the British Government. They erred gravely in permitting their cupidity to bring them into direct conflict with the Rockefeller Empire, and in dissipating the wealth that they gained from their lucrative oil ventures in Rockefeller fostered, Bismarxian "social service" activities. They were badly tripped up by the Rockefeller "philanthropies" and betrayed themselves into the hands of their mortal adversary, with whom they entered into direct and bitter conflict.

The battle with the Rockefeller Empire was gen-er-aled on the British side by Sir Henri W. A. Deterding of the Royal Dutch Co., who was popularly known as the oil "Napoleon". Rockefeller was nicknamed "Oil King". Deterding rescued the Royal Dutch Co. from bankruptcy in a fierce price war with Rockefeller's Standard Oil Co. in the export field, by inducing the Paris Rothschilds to make a loan to his company in 1898, in return for a minority interest. The price war was continued until 1902, with the new financing and with the aid of the Shell Transport and Trading Co. and the

heavy Russian oil production of the Nobel-Rothschild interests. This eventually led to a merger of the Royal Dutch and Shell interests in 1907.

Lord Fisher joined forces with Deterding, and the two enlisted E. G. Pretymann, Civil Lord of the Admiralty, and later, Winston Churchill, First Lord of the Admiralty, in effecting the entry and later expansion of the British government in the oil business. Churchill reported to the House of Commons in 1913:

"Our ultimate policy is that the Admiralty should become independent owner and producer of its own supplies of liquid fuel, first by building up an oil reserve in this country sufficient to make us safe in war and able to override price fluctuations in peace; secondly, by acquiring the power to deal in crude oils as they come cheaply into the market . . . The third aspect of our ultimate policy is that we must become the owners, or at any rate, the controllers at the source, of at least a proportion of the supply of natural oil which we require."

The Oil War was waged in every part of the world where oilfields were known to exist or were suspected.

The Mexican war was the first shift in the 20th century of the Oil War to the battlefield, in which the United States Armed Forces were drafted into fighting an oily Rockefeller Crusade. The British had carried their assault on the Rockefeller Standard Oil interests into home territory, the Western Hemisphere. Lord Cowdray's Mexican Eagle Co. had acquired more than half of the oil production of Mexico by 1910, in competition with the Doheny and Standard Oil interests. Diaz, dictator of Mexico for thirty five years, was overthrown because he supported the British by a revolution financed by the Standard Oil interests (Senate Foreign Relations Committee Hearings 1913, *Revolutions in Mexico*, pp. 104, 146)

Madero, who had sold his lands in Mexico to Rockefeller in February, 1912, staged the revolution. Oil concessions for the Standard Oil Co. were part of the deal. Two years later Madero was ousted by a revolution led by General Huerta, who was financed by British money. President Woodrow Wilson rose to the support of his masters, the Rockefeller interests, and refused to recognize the Huerta

regime. The Rockefeller dominated State Department openly issued orders for the ousting of Huerta and even threatened war. (We Fight For Oil, p. 50) Sir William Tyrell and Secretary of State Bryan accused each other of acting respectively for the Royal Dutch and the Standard Oil Co.

The Wilson administration openly fostered revolution against Huerta by facilitating exportation of arms and munitions for the rebels Carranza and Villa, while a financial and munitions blockade was established against the government. Panama tolls were used as a device for exerting political pressure on the British to force them to abandon Huerta. Vera Cruz was occupied by the U.S. Army and Navy. Every conceivable device was brought to bear by the Wilson regime to secure and protect the control of Mexican oil for the Standard Oil interests. Finally Huerta was ousted and replaced by Carranza.

The breaking of the hold of the British interests in the Mexican oilfields was solved by the expropriation of all of the companies, that at the same time solved the problem of the glutting of the oil market with Mexican oil. Josephus Daniels and Franklin Delano Roosevelt, as Secretary of the Navy and Assistant Secretary, played a role in engineering this arrangement. Several decades later, the Rockefeller interests recovered the Mexican concessions which they desired by a decision of the Mexican Supreme Court that was influenced by the funds of the Committee for Coordination of Hemispheric Defense administered by Nelson Rockefeller. In the meantime the Rockefeller interests received the bulk of the \$28,000,000 paid by the Mexican government for the expropriated properties.

In the Near East at the turn of the century there was laid the foundation of one of the most fateful phases of both World Wars, by William K. D'Arcy, an Australian, and American Admiral Colby M. Chester. D'Arcy obtained from the Shah of Persia in 1901 a concession for all but the northern section of Persia. He promptly organized the Anglo-Persian (later the Anglo Iranian) Oil Co. with British capital for the exploitation of the concession. The controlling interest in Anglo Iranian Oil Co. was purchased for the British Government, after D'Arcy had arranged to sell it to foreign interests, in order to prevent loss of control by the British. The con-

trol was openly sold to the British Government several years later.

Admiral Chester unsuccessfully sought to gain control of the Turkish oilfields. Sultan Abdul Hamid first gave the oil concession to the Germans together with one for the Anatolian Railway Co.; and then reversed himself and offered to give the concession to D'Arcy's Anglo Persian Co. Before the Sultan could grant the concession, "liberal" forces were well financed from abroad to revolt against the Sultan and depose him. This gave the American Standard Oil interests another chance to bid for the concession. This time Chester got it, in return for the financing of the revolution. But before he could develop the fields, the British Government blocked the ratification of the deal by forcing the Turkish to recognize the concessions which Sultan Abdul Hamid had given to the German interests. The German concession had been taken over by the Turkish Petroleum Co. which was 75% controlled by the British Government through the Royal Dutch Shell group and the Anglo-Persian Co. The Germans had been outmaneuvered by the British and retained only 25% of their concession when the deal was consummated in the early part of 1914.

The Rockefeller interests had been completely shut out and defeated. But they did not take their defeat lying down. They fanned German resentment at being outmaneuvered by the British and given the short end of the deal. They aided and abetted the German plan to seize control of the entire Turkish concession through the device of construction of the Berlin to Bagdad railroad. The Germans were so confident of the success of this "Drang nach Osten" that they opened the terminus in Bagdad before the road was built.

In anticipation of the war which they were instigating in order to seize victory from defeat in the battle for Turkish oil, the Rockefeller Oil interests made a deal with the German Government, under which their holdings in Germany were taken over by the Reich with full compensation. The deal was made to appear in press reports as an act of confiscation. The same sort of deal was consummated by the same principals before World War II, as a sort of established practice between them, and constituted the basis of a charge of treason, made against Standard Oil by Sen. Harry S. Truman.

The Germans were materially aided in their waging of World War I by the Rockefeller Standard Oil interests. They supplied the Germans with the oil required for the conduct of the war and enabled them to come within reach of victory. But trusting neither of their rivals, the Rockefeller interests aimed at "balance of power" by playing the Germans against the British. The plan was to let them fight until they had exhausted each other and then step in and "rescue" the weaker of the two for a price, using the Rockefeller Empire's satellite, the U.S., for the purpose. The price was Saudi Arabian oil and other concessions for the Rockefeller interests.

The manner in which the U.S. was forced into the War was a masterpiece of craftiness, cunning and deceit, that would do credit to "Doc" William Rockefeller's best moments. Ludwell Denny points out in his *We Fight For Oil* (p.32) :

"Standard met Dutch-Shell expansion in the United States by stirring up the Washington Government and by loosing the 'British Peril' propaganda . . .

"The situation was reaching a critical point in 1917. But the United States entered the Great War. On Washington's orders anti-British propaganda was suddenly turned into pro-British propaganda . . . There followed an Anglo-American oil truce, with Yankee wells and tankers furnishing 80 per cent of the 'blood of battle which won the war'."

Behind this change of front in policy and propaganda was a deal for the surrender by the British of a share in the Near East and other oilfields, particularly Saudi Arabia, to the Rockefeller interests in return for their drafting the United States into the war to fight and pay for it. President Woodrow Wilson was a slavish puppet of the Rockefeller-Ryan-Brady clique, and an intimate and agent of Rockefeller's in-law munition king, Cleveland H. Dodge, and was dependent on their pin-money bribes. (*Strange Death Of F. D. Roosevelt*, pp.103-4; *Lundberg, America's 60 Families*, pp. 120-8) His campaign for reelection at this time, 1916, had as its principal platform the slogan "Keep the U.S. out of the war". As in the case of Roosevelt twenty three years later Woodrow Wilson and his bosses already had made the deal with England to enter the war as an ally. Then within a short time after he

was reelected by the duped electorate, their propaganda was changed to a martial note, and the U.S. was drafted by them into another, oily Rockefeller Crusade, that was palmed off on the "peasantry" as the "War To Save Democracy". Rockefeller's acquisition of the Saudi Arabian concession cost the U.S. 333,734 dead and injured and more than fifty billion dollars.

Stewart Alsop in his Saturday Evening Post article, dated July 14, 1951, entitled Stalin's Plans for the U.S.A. quotes the former Secretary General of the Czech Foreign Office, in the Communized Gottwald regime, as follows:

"Heidrick sensed that Stalin believed deeply that the American Government was not really master in its own house . . . partly . . . because of the ease with which American opinion could be manipulated." (p. 108) None should know this better than Stalin and the Politburo, who have dealt with the Rockefeller Empire so long and served it so well.

The very planting in Russia of Communism, in the midst of World War I, through the German General Staff as agents of the German associates of the Rockefeller Empire, was a signal service to the latter. For it broke the stranglehold of Royal Dutch, Nobel-Rothschild and other interests on the Russian oilfields and cut off the dangerous flow of cheap oil from that source. It opened the way for possible acquisition of those fields by the Rockefeller Standard Oil interests.

At the conclusion of World War I, the British with the aid of Denikin and the White Russians, seized the Russian oilfields in the Caucasus and sought to set up independent republics in Georgia and Azerbaijan, (which were immediately given recognition by the Allied Supreme Council), that would give them control of Baku oilfield and the Batum-Baku pipeline. But the State Department refused them recognition. As Ludwell Denny reports, in *We Fight For Oil* (p. 33, footnote 10) :

"The American attitude is easily explained by the fear of the Standard Oil that the two British vassals in the Caucasus would close the door to the Rockefeller firm. . ." The French newspapers wrote of these projected republics as the "Oil State", and suggested that they operate under the aegis of the League of Nations.

The Rockefeller Foundation-subsidized Labor Party in England served the Rockefeller Empire well by raising an insistent demand for the withdrawal of British troops from the Caucasus, and prepared the way for its recapture by the Communists.

At the Genoa and Hague Conferences the Rockefeller interests demonstrated their mastery of the technique of the "balance of power" and the extent of their control among the world powers. They sought primarily to prevent their rivals regaining control of the Russian oilfields. They did this by forcing a united stand of the conferring nations against Russia and for denationalizing the oilfields of Russia. They were served faithfully by the State Department, with the help of France and of Belgium which were pawns in the game. In the meantime, behind the backs of the conferees, the Rockefeller interests sought to make deals with Russia for monopolistic control of its oil, while berating their competitors the Royal Dutch Shell interests, for doing the same.

In the end the Rockefeller Standard Oil interests won out with a deal described in detail in the chapter on the Rockefeller Soviet Axis which gave them a large measure of control, or influence, over Russia and her oilfields. These deals protected their valuable concessions in Saudi Arabia at the cost of the security of the United States and the rest of the world.

In the meantime, the Rockefeller interests also were instrumental in obtaining the use of U.S. military forces in blocking the invasion of Russia and the taking over of the Trans-Siberian railway by the Japs. They smashed Harry F. Sinclair and his associates, in the Teapot Dome affair, after he had secured concessions which they sought in Russia and in the Russian sphere of influence in North Persia.

The British learned nothing from their experience and jeopardy in World War I. No sooner was it over than they started once again to wage a more intensive commercial oil war on the Rockefeller Standard Oil interests and to offer them strenuous competition and opposition in the quest for world monopoly of oil. Despite the fact that World War I had been fought and won largely with oil provided by the Rockefeller interests from American oilfields, Sir Edward Mackay Edgar, Trustee of BCO

who represented Great Britain, stupidly boasted in an article in Sperling's Journal, September 1919:

"The British position is impregnable. All known oil fields, all the likely or probable oil fields, outside of the United States itself, are in British hands or under British management or control, or financed by British capital".

Treacherously the British undertook to block the Rockefeller interests from developing the Saudi Arabian and other Near Eastern concessions that had been surrendered to them as the price of the entry of the U.S. into the war, the objective of the British-French San Remo agreement for monopoly of the Turkish and Near East oilfields.

The significance of the oil war was pointed up by the Federal Trade Commission Report On Owner' ship In The Petroleum Industry of 1923. The findings were summarized as follows:

"1. The Royal Dutch-Shell group, a combination of the Royal Dutch Co. and the Shell Transport and Trading Co. of London has world-wide oil investments, including numerous refineries, an immense fleet of tank ships, and petroleum production in many lands, which in 1921, was less than 11% of the world output.

"2. The Royal Dutch Shell group in February 1922 consummated a merger of the principal properties and investments of the Union Oil Co. (Del.) with its chief American subsidiaries in a new company, the Shell Union Oil Corp.

"3. The Shell Union Oil Corp. now controls over 240,000 acres of oil lands in the United States; has about 3.5 per cent of the total of crude petroleum; owns extensive properties in refineries, pipelines, tank-cars, and marketing equipment; and is one of the larger companies in the domestic petroleum industry.

"4. The Union Oil Co. (Del.) owned about 26 per cent of the stock of the Union Oil Co. of California, but, to prevent the Royal Dutch Shell group from gaining control, certain stockholders of the Union of California organized an American controlled holding company, which now owns more than half of its issued stock.

"5. The most important instances of discrimination by foreign governments against citizens of this country are the exclusive policies of the Governments of Great Britain and the Nether-

lands in respect to the oil fields of India and the Dutch East Indies, and the San Remo Agreement of Great Britain and France covering the undeveloped oil fields of Mesopotamia and of the British and French colonies.

"6. Denial of reciprocity of treatment to citizens of this country appears to exist with respect to the petroleum industries of Australia, British Borneo, certain African colonies, British Honduras, British Guiana and Trinidad; France and French possessions; Italy, and the Netherlands and its dependencies.

"7. Thus forced to modify its historic policy, Congress in 1920 enacted a mineral leasing law for public lands which forbids the acquisition of properties by nationals of any foreign country that denies reciprocity to Americans, in consequence of which certain applications for petroleum leaseholds have been denied to the Royal Dutch-Shell group.

"What further efforts may be made by this combination to acquire privately-owned petroleum lands or competing oil companies it is of course impossible to predict, or how far anti-trust laws may be effective in preventing them.

"The supply of crude petroleum in this country is being rapidly depleted to meet the requirements of a growing domestic consumption and foreign trade. The sources of supply of the domestic industry are concentrated within its own borders and in Mexico, while those of its principal competitors are widely distributed throughout the world. It appears obvious that a nation having widely distributed supply and storage facilities and owning means of distribution will have certain advantages in world trade against one having concentrated supply." At the very moment that the American doughboys were laying down their lives and the wealth of the people of the U.S. was being squandered for the salvation of the British Empire and the expansion of the Rockefeller Empire, the British were making preparations to wage a devastating commercial and military war on the U.S. and the Rockefeller Empire. The irony of the situation was intensified by the fact that the British were financing this Oil War with the money provided them by the U.S. at

the expense of its taxpayers, and by American investors.

For the purpose of promoting this war the British organized in 1918 the Government owned British Controlled Oilfields Ltd. (BCO Ltd.) for the specific object of smashing Rockefeller's Standard Oil Co. In collaboration with the Royal Dutch and Shell group, BCO Ltd. undertook to gain control of the Central and South American lands bordering the U.S. to the south and surrounding the Panama Canal, which it was openly suggested could then be seized in a British-American war with or without the help of Japan. M. Pierre l'Espagnol de la Tramerye in his book *World Struggle For Oil*, published in 1923, under the chapter heading "An American Balkanism", described the objectives of the British, as follows:

"The Anglo-Persian Oil is no longer sufficient for Great Britain, which founded a new company in 1918, the 'British Controlled Oilfields', specially commissioned to fight the Standard Oil . . . Like the Anglo-Persian, it is entirely in the hands of the British Government under a system of the Voting Trust. It seems that an immense tract of oil bearing territory exists from Mexico to Argentine ... Of these deposits the BCO Ltd. wishes to gain possession on behalf of the British Government, thus completing the work of the Royal Dutch-Shell in Venezuela and in the neighborhood of the Panama Canal. Its concessions actually surround two-thirds of the Caribbean Sea: they are situated in the States of Guatemala, Honduras, Nicaragua, Costa Rica, Panama, British Guiana, Colombia, Venezuela, Peru, Ecuador and the Island of Trinidad. The concessions of the BCO are nearly always on the sea coast—or rather in close proximity to the sea—which is a considerable advantage. It has expressly chosen them, on both the Atlantic and Pacific, as a precaution in case war should break out between Great Britain and the United States; for even with the help of the Japanese fleet, the British navy might not be able to seize the Panama Canal. All its units must be in a position to replenish their stores of fuel without being obliged to make the long detour round the Magellan Straits . . . In order to obtain Costa Rican concessions, Great Britain did not hesitate to foment revolution in 1917

this little Republic. Unable to obtain anything from the established Government, it helped to place in power the revolutionary Pres. Tinoco, from whom it got what it wanted; more than 60,000 square miles were granted to BCO. Unfortunately Tinoco has been overthrown; the regular Government restored to power, hastened to annul these concessions. Great Britain, to compel it to ratify these concessions stirred up a war between Costa Rica and Panama, while she sent the cruiser Cambrian to the coast of Costa Rica in order to increase the pressure. Events went against her. Costa Rican troops invaded Panama. A landing took place on February 28, 1921, on the Pacific Coast, south of the Dulce Gulf, the eastern shore of which is common to both countries, and another less important one on the Atlantic towards Bocas de la Toro. Panama lost the territory of Coto. Mr. Alves, chairman of the BCO, set out in March 1921 for Costa Rica, to study the question at issue. But the United States stepped in; and Judge White, as arbitrator, pronounced in favor of Costa Rica. On August 26, 1921, an American naval detachment assisted the Costa Rican forces to take definite possession of the contested territory, in spite of the indignant protests of the Government of Panama against the violent measures of which it was a victim. The imbroglio of British and American affairs around the Gulf of Mexico and the Caribbean Sea (BCO, Mexican Eagle, Royal Dutch-Shell, Mexican Petroleum, Standard Oil) makes this region the Balkans of the oil world."

BCO, Anglo Persian and Royal Dutch and Shell companies obtained concessions throughout Latin America. Sir Edward Mackay Edgar exulted in his article in *Sperling's Journal*, in 1919:

"I should say that two-thirds of the improved fields of Central and South America are in British hands. In Guatemala, Honduras, Nicaragua, Costa Rica, Panama, Colombia, Venezuela and Ecuador, a decisive and really overwhelming majority of the petroleum concessions are held by British subjects. The Alves group (BCO) whose holdings encircle practically two-thirds of the Caribbean Sea, is wholly British, working under an arrangement which insures that perpe-198

tual control of its undertakings shall remain in British hands. No American citizen and no American group has acquired, or even could acquire any such position in Central America as that which enterprise and personality have acquired for Mr. Alves . . . Unfortunately for them — and fortunately for us—their eyes have been opened too late."

Sir Edward's Growings proved absurdly premature. The State Department, ever ready to defend the Rockefeller interests, rose nobly to their defenses. Fortunately for the U.S. its interests and defense happened to coincide with those of the Rockefeller Empire. By diplomatic pressure, force and the happy accident of threatened insolvency of BCO Ltd., many of its important holdings were acquired by Rockefeller's Standard Oil Co., including the Costa Rican, through Doheny, and Colombian, directly. In the case of the Chaco, the grip of British interests was loosened or broken by a war in which the Paraguayan Government, financed by the British, openly charged that Rockefeller's Standard Oil Co. was financing Bolivia, a charge that was later given substance by an increase of Bolivian concessions to the Standard Oil Co. of more than two million acres, announced on July 13, 1934.

In the meantime the League of Nations and its mandates were set up as instruments of the Oil War. The primary consideration of the series of conferences held at Genoa, the Hague and elsewhere was oil reserves—of Russia, Turkey, Persia and all sections of the globe. Rockefeller's Standard Oil was devotedly represented by the State Department as well as by the Foreign Office of the Rockefeller Empire. When Great Britain undertook in its San Remo Agreement with France to set up a monopoly of Turkish and Near Eastern oil reserves through their Near East mandates and arrange for their "permanent British control", (State Dept. Note 11/20/20) Standard Oil (N.J.) protests voiced by Bedford, its president, were insistently echoed by the State Department. England was violently denounced on the floor of Senate with some open threats of retaliation, and even of war. When the Foreign Office, in reply to Standard Oil protests, replied that the U.S. was entitled to no voice in the disposition of the mandated areas and their resources, because of failure to join the League of

Nations the State Department replied that the U.S. "should not be dissociated in the rights of peace from the usual consequences of association in war". The inconsistency of the State Department's "noble, Christain" pose and attitude of spurning all advantages of the victory for the U.S. other than the oil reserves sought by the Rockefeller Empire, elicited from the British the taunt of "hypocrites", which was wholly justified. As Davenport and Cooke wrote in their *The Oil Trusts and Anglo-American Relations* (p.112)

"One observes that the high-sounding note of the principle of economic equality (the American "principle" of the Open Door) has now sunk into the lower note of the principle of 'sharing the swag'. How the mighty have fallen! The United States had originally set a fine example by virtuously declining to take a mark of German reparations or a square mile of German colonies, but after four years was found making an exception to its self-denying ordinance in the case of oil in Mesopotamia".

The protests of the State Department on behalf of the Rockefeller interests were effective. Through Sir John Cadman, negotiator of the San Remo Agreement and official of the Anglo-Persian Co., as envoy to Washington, and the Rockefeller Empire, a deal was made compromising the matter. Rockefeller's Standard Oil was given control of Palestine and the right to continue to explore it, subject to a mandate that was to be given to the British. This constitutes the background of the subsequent partition of Palestine and the ousting of British rule in favor of the Zionists, who might be expected to be more amenable than the British.

Despite this uneasy compromise, the Oil War continued more bitterly than ever. As Davenport and Cooke stated in their book, above quoted:

"For the betterment of Anglo-American relations the British Government fell to bribing Standard Oil: the bribes were to be paid in the oil of Persia and Mesopotamia . . . Did anyone suppose that Standard Oil could be silenced by sops from two of the world's oil fields as long as it did not control the rest?" How well they understood the character of the Rockefellers and their Empire is borne out in the newspaper headlines of succeeding years:

9/6/22 Englebert Graff announces that rivalry of money kings will cause a war; and that the Rockefeller interests control three Paris newspapers—Figaro, Matin and L'Eclair—for the purpose of warping public opinion on the Continent.

9/2/23 World politics are oil politics says Premier Briand of France.

3/5/24 See Standard Oil Co. dominating the world.

8/2/24 Big oil drama involves world peace.

9/7/24 World's future depends on oil.

9/14/24 America smeared with oil in Near East.

1/29/25 Tchitcherin says Standard Oil and Royal Dutch dominate world politics.

2/26/29 France protests world Oil Trust.

11/28/34 Secret war over oil.

Rockefeller's Standard Oil Co. steadily pressed its advantages in the Oil War in other sections of the globe than those from which it was barred by Great Britain. This is made clear from a perusal of newspaper headlines of the period. France and the Rockefeller Empire: 5/20/20 U.S. protests to France for the Standard

Oil Co. 10/16/20 Standard Oil merges with French oil company to form a government monopoly. (Bedford Petroleum Co.) 10/30/20 Standard Oil monopoly is disputed. 4/5/21 Standard Oil Co. monopoly upheld. 6/7/21 Standard Oil Co. spends six million francs

to influence press. France served as catspaw of Rockefeller Empire at Genoa Conference:

3/15/22 "Standard Oil interests are reported to be preparing to make a fight at Genoa to protect the company's old concessions, held in the name of Russian Standard Oil Co. and are seeking French assistance against their French rivals". (N.Y. Herald)

5/6/22 Secretary of State Hughes assures Standard Oil Co. that United States would tolerate no agreement which would exclude it from Russian oil concessions. (N.Y. Herald) 5/7/22 The press is full of oil to-day. (London Times)

5/9/22 "As regards the Standard Oil Co., which 201

wields great influence in the United States, it must be remembered that its acquisition of the oil rights of the Nobel Brothers in South Russia some time ago, gives it a distinct status in Russian oil negotiations. This status clearly lends point to the support given by the United States to the French and Belgian attitude in regard to private property in Russia ..." (London Times)

5/11/51 Standard Oil interests stiffen opposition of French and Belgians to Rapallo Treaty . . . "consider the present moment of financial stringency of the Soviet government . . . favorable to enable them finally to arrive at some co-ownership of Russian petroleum deposits . . . Without this support from America, France, which furnishes the Pretorian guard for this Trust (Standard Oil Co.) would hardly dare oppose Great Britain in this manner." (Berlin Lokal Anzeiger) 5/15/22 America intervened at Genoa in a sense hostile to the Soviets". . . . the plan proposed by (Ambassador) Child, with the support of Vander-lip and 'Observers' of the Standard Oil now at Genoa ... represents the ... basis on which it will participate in a commission to be set up at the Hague ..." (London Daily Herald)

The story of the Ethiopian War is that of another oily Rockefeller Crusade. It began on July 1, 1923, when the press announced that the Anglo-American Oil Co. a Standard Oil subsidiary, had obtained an exclusive oil concession in the northern half of the Harrar Province of Abyssinia. Nothing more was heard of this concession for more than a decade despite the urgent need of the Rockefeller interests for a source of oil for the Mediterranean basin that was close at hand and did not require costly haulage by tankers, from the far-off Gulf and Venezuelan ports, or from East India. Behind the scenes there raged a fierce diplomatic battle. For Ethiopia holds the source of the Nile and was regarded by the British Empire as one of its critical spheres of influence. It vigorously opposed permitting its deadly rival, the Rockefeller Empire, to gain a foothold there. Under pressure of the British, Haile Selassie denied permission to the Rockefeller interests to proceed with the development of the concession that had been given them.

Following negotiations of Sir Francis Rickett, a director of Rockefeller's Socony Vacuum Oil Co., with Mussolini, in which it is apparent that the Rockefeller interests assured Il Duce of supplies of oil for a war on Abyssinia in exchange for a thirty year monopoly of the Italian oil market and the ratification of their Ethiopian concessions, as well as other considerations, border incidents on December 9, 1934, between Italian and Ethiopian troops, in connection with a dispute over the Italian Somali-land frontier, served as a pretext for the waging by Italy of an undeclared war. In the midst of the war, on September 1, 1935, the press announced the text of an Ethiopian concession, negotiated by Sir Francis Rickett, to the African Exploration & Development Co., organized in 1933 as a subsidiary of the Socony Vacuum. The names of Mellon, Mitchell and Teagle were mentioned in connection with the deal, and in the following month, October 15, the press linked an Ethiopian arms order to the Rickett deal. This followed the traditional practise of the Rockefeller Empire, of playing all ends against center. Shortly thereafter the British, acting on behalf of the League of Nations offered Haile Selassie a negotiated peace for surrender to the Italians of the oil-rich Fafan Valley in the Harrar Province—the original 1923 concession to the Rockefeller interests. This was rejected on December 12, 1935.

In the meantime belated economic sanctions were ordered by the League of Nations to go into effect November 18, 1935, and continued until July 15, 1936, after termination of the war. The Rockefeller Empire, which had assured Mussolini in advance that no effective sanctions would be applied in respect to that absolute essential of modern war, — oil—made good on its assurance. On December 4, 1935, the press announced that the Rockefeller interests would defy the League and supply Mussolini with oil from the Roumanian fields; on December 12, Socony Vacuum announced the building of two refineries for Mussolini in Naples; and on January 8, 1936, it was announced that Italy might get oil from Germany. The Ethiopian oilfields are now controlled by the Rockefeller interests through Sinclair Oil Corporation. The red that tints their end product, ethyl gasoline, might well be Italian and Ethiopian blood.

## CHAPTER XI

THE ROCKEFELLER-SOVIET AXIS "... we want to trade with Russia." Ivy Lee

The Russian Communist Revolution posed a major threat to world oil monopoly and to the worldwide expansion of the rapidly growing Rockefeller Empire. By the precipitation of World War I and by undermining the power and prestige of the mighty British Empire, the Standard Oil Co. had acquired the concession to the fabulous oil domain of Saudi Arabia. But the whole of the Near East and control of Caucasus oil fields and of Saudi Arabia, lay within the grasp of the Communists.

The situation presented the horns of a dilemma. It did contain some elements of good from the viewpoint of the Rockefeller Standard Oil interests. For the Caucasian and Persian oil fields had been controlled by Rockefellers' mortal enemy in the international field, the British-Royal Dutch-Shell group. Since the turn of the century their bitter rivalry has meant incessant strife, bloodshed and war for the lands involved. The Russian Revolution of 1905-06 had been precipitated with the aid of financing by Rockefeller's banker, Kuhn Loeb & Co., with an eye to the oil of the Caucasus and adjacent lands; and its most intense activities had centered around the Baku oilfields. They had engineered Mexican revolutions and the Mexican War to oust the Royal Dutch and other rivals from Mexico.

Through World War I, the Saudi Arabian oilfields had been wrested from British control. Now Communist Russia offered the opportunity to oust the British-Royal Dutch-Shell also from the Caucasus, Persia, the rest of the Near East and India. But the moot question was: "Would not the Communists prove to be more dangerous and more difficult to deal with than even the British?" The pros and cons were many, but the possibilities of playing British against Communists were great.

The British, needless to say, likewise were intrigued by the possibilities of seizing control of the Caucasian oilfields. They attempted to do this in 1918 by an expedition of officers, headed by General Dunsterville, that combined forces with a

White Russian brigade led by General Bitcherakov. They occupied Baku when the Bolsheviks withdrew, but were in turn ousted by Turkish forces led by German officers. Following the Armistice in November, 1918, the British moved in and took over the oilfields. The British were able to boast: "In the Caucasus from Batum on the Black Sea to Baku on the Caspian and from Vladikavkaz southward to Tiflis, Asia Minor, Mesopotamia and Persia, British Forces have made their appearance . . . Never in the history of these islands was there such an opportunity for the peaceful penetration of British influence and British trade, for the creation of a second India . . ." (London Financial News, Dec. 24, 1918) But they were oversanguine and reckoned without the Rockefeller Standard Oil interests in Caucasian oil. The British labor movement, which the Rockefellers had fostered, opposed further military occupation of the Caucasus, and forced withdrawal of the troops. Denikin took over, with British support, in August 1919. Two British vassal states, Georgia and Azerbaijan, were set up and recognized by the Allied Supreme Council. The Rockefeller-dominated U.S. State Department, however, refused to recognize them and blocked the turning over of the Caucasian oilfields to Royal Dutch and Shell. In February, 1920, the Bolsheviks entered Baku, and in the following year Georgia turned Bolshevik. It by no means chagrined the Rockefeller interests to see Royal Dutch thus shut out, even though it did mean control of the fields by the Russians.

To establish a semblance of legal title to the Caucasian fields, the Rockefeller Standard Oil group, in 1920, bought a half-interest in Nobel & Co.'s production in Baku. This amounted to approximately 40% of the yield of the field. The title was a mere mirage, unless the Bolsheviks could be forced to restore to the owners their properties that had been expropriated, or "nationalized", in 1918. Shortly thereafter, the Rockefeller interests also acquired from the Persian government a concession to the North Persian oilfields for a period of fifty years, in conflict with the British interests and with Soviet treaty claims. A concession had been granted to Russian interests during the Czarist regime and had been sold by them on May 8, 1920,

to the Anglo-Persian Co., the majority stockholder of which is the British government.

Both the Russian and the British governments objected strenuously to the North Persian concessions to the Rockefeller interests. Thereafter, the Rockefeller Empire's game has been to play the British-Royal Dutch interests against the Communists until they could dispose of first one and then the other. Their's is a chess game, with mankind and the wealth of nations as pawns. The prize, that they cherish more highly than the blood and wealth of others, is OIL and world dominion.

The Rockefeller-dictated State Department policy in regard to Russia at Genoa was aimed at compelling the restoration to them of the "nationalized" oilfields. Hughes made it the condition for recognition. They sought to put Russia into the position where she would be forced to make restitution, while at the same time blocking the granting of concessions to their competitors. It can be said in praise of that policy that it had the semblance of being in favor of the U.S., even though it did serve the Rockefeller Standard Oil interests more particularly, or exclusively. The Royal Dutch Oil Co. had already begun negotiations with Russia for a monopolistic oil concession, which Standard Oil Co. was able to block with the aid of its handmaiden, the U.S. State Department.

At the Hague Conference in June 1922, the same tactics were successfully repeated. In the following September, a blockade of Russian oil was organized under the auspices of the Standard Oil Co. and others through the Groupement International des Societes Naphthieres en Russie. Behind this sham front that was designed to hamstring competitors, the Royal Dutch and Shell interests purchased 70,000 tons of oil from Russia, and Dodge, an official of the Standard Oil Co., went to Moscow to seek concessions.

Two things happened that served to bring about a change of front among the oil companies. Russia began exporting oil—330,000 tons in 1922, 771,000 tons in 1923 and 1,360,000 in 1924—through its Naptha Syndicate. And she undersold the oil companies. The Russian Oil Products Co. was retailing benzine, kerosene and other products in Great Britain at one to three pennies below the market price. Far more disturbing than this threat to the price

structure of the oil market, from the viewpoint of Rockefeller's Standard Oil companies, were the activities of Harry F. Sinclair. Sinclair was a close personal friend of President Harding, in whose campaign he and his associates had played a part. He numbered among his business associates many top political figures, including Will H. Hays, his attorney and Morgan-allied National Republican Committee chairman, as well as Archibald B. Roosevelt and Theodore Roosevelt Jr. The latter was a director of the Sinclair Refinery Co. At Theodore Jr.'s request, in 1919, Archibald had been made vice-president of the Sinclair Co. In the following year Theodore Jr. resigned his post to become Assistant Secretary of the Navy in the Harding Administration.

Rockefeller's Midwest Oil Co., a subsidiary of the Standard Oil Co. of Indiana, and the Sinclair and Doheny oil interests conspired to gain control of the Teapot Dome structure adjoining the fabulous Salt Creek oil field in Wyoming, that had been made a Naval Oil Reserve. This required an executive order, made on the approval of the Navy Department and recommended by the Secretary of the Interior. Admiral Griffith, on behalf of the Navy personnel in charge, forwarded a recommendation that leases of Naval Reserve oil lands should be permitted only with the approval of the Navy Department. This was transmitted to Secretary of the Navy Denby through Assistant Secretary of the Navy, Theodore Roosevelt Jr., former Sinclair Refining Co. director, who in turn took it to Secretary of the Interior Albert B. Fall. Fall, who, it was later revealed, had received a total of nearly half a million dollars for his "services", and Sinclair, acting for themselves and the other interests involved, "subtly modified the clause (requiring Navy Department approval) to give the Secretary of the Interior full authority to dispose of naval oil land. Secretary Denby and Assistant Secretary Theodore Roosevelt Jr. acquiesced in this unusual arrangement." (Lundberg, *America's 60 Families*, p. 205)

Fall issued the lease to the conspirators. Rockefeller's Midwest Oil Co. relinquished its share to Sinclair and Doheny for the sum of one million dollars. The Mammoth Oil Co. was organized to take over the Teapot Dome lease. The Continental

Trading Co. was incorporated in Canada by James O'Neil, president of Rockefeller's Prairie Oil & Gas Co., Col. Robert W. Stewart, president of Rockefeller's Standard Oil Co. of Indiana, and Harry F. Sinclair, as a secret dummy corporation to purchase more than thirty million barrels of oil from the Mexia field at \$1.50 and to resell it to the organizers' companies at a profit of 25c a barrel, or a total profit of more than eight million dollars. These profits were used in part for the bribery of the public officials involved in the Teapot Dome case. The complicity of Rockefeller's Standard Oil Co. in the Teapot Dome scandal is further revealed by the conversation between Harry Sinclair, James O'Neil and two other persons at the Bankers Club of New York in 1922. One of them asked:

"Suppose there was some future trouble to come up afterwards, who would take care of it?" "The Sinclair Oil Co. is big enough to take care of that", answered Sinclair.

"If the Sinclair Oil Co. is not big enough to take care of it, Standard Oil is big enough to take care of it," O'Neill said. The Rockefeller interests cunningly avoided, however, any direct involvement in turning over the bribes. They thus prepared the way for their subsequent maneuver that was to destroy Sinclair as a competitor.

John D. Rockefeller Jr. testified before the Senate Committee that investigated Teapot Dome, on behalf of Col. Robert W. Stewart, as a character witness, bestowing on him the effulgence of his "philanthropic" odor of sanctimony in order to impress the "peasants". Subsequently, when it was brought to light that Stewart had withheld from his company the profits of the Continental Trading deal. John D. Jr. professed indignation for the benefit of the gullible "peasantry", retired Col. Stewart on a meager pension of \$75,000 a year and promoted two of his sons to highly paid Standard Oil executive positions, to show his "disapproval" of the Colonel's acts. One wonders what might have been the fabulous rewards if he had "approved" of Stewart's deeds.

With the Teapot Dome deal in the bag, Sinclair went after bigger game. Using his influence with the Harding Administration and recognition by the U.S., that he represented he could obtain, as a bait,

he set out to gain the Near, Middle and Far Eastern concessions from Soviet Russia and Iran that the oil titans, Standard Oil and Royal Dutch, had sought in vain. In this quest, he had the advantages over them of having no prior claims and of starting with a clean slate.

After Secretary of the Interior Fall had resigned under fire, Sinclair gave him \$35,000 to go to Russia to negotiate oil leases. (Lundberg, *America's 60 Families*, p. 206) In June 1923, a party consisting of Harry F. Sinclair, Albert Fall, Archibald B. Roosevelt, Mason Day, Robert Law Jr., Wm. Dewey Loucks, E. R. Tinker, Elisha Walker and Grattan T. Stanford, with some engineers, went to Moscow to seek a concession for all the Caucasian oilfields that Rockefeller considered his property and over which he and Royal Dutch were battling fiercely. In November 1923, a provisional agreement for the exploitation of the Baku and Grosni oilfields by a company in which Sinclair and the Russian government had equal shares, was signed in Moscow by Mason Day. Final ratification was to be effected in ninety days. (Fisher, *Oil Imperialism*, pp. 156-161) On December 20, 1923, Sinclair got from the Persian government a provisional agreement on a concession for the North Persian oilfields in the Russian sphere of influence, for which the Rockefeller Standard interests had received a concession in 1921, which had not been ratified. The circumstances under which Sinclair obtained this concession are concisely stated in a letter dated May 3, 1922, sent by Mr. A. C. Veatch, vice-president of the Sinclair Exploration Co., to the Federal Trade Commission, as follows:

"Gentlemen: In July of 1921, following up a suggestion of the Secretary of Commerce (Herbert H. Hoover), the Sinclair Company began its negotiations with the Persian authorities for an oil concession over the five northern provinces, which are stated by the Persian government to be free of any prior claims.

"These negotiations have been continued up to the present date, during which period the Sinclair Company has had active opposition from a combination of interests of the Standard Oil Co. of New Jersey and the Anglo-Persian Company of London.

"To refer again to the competition the Sinclair 209

Company has encountered in endeavoring to obtain the concession, we wish to state that early in 1921 an oil concession over the area referred to was signed between the Persian government and the Standard Oil Company, but in order to become legal this required the ratification of the Persian Parliament.

"While this ratification was pending, Sir John Cadman, a director of the Anglo-Persian Co. of London, came to the United States and while there, entered into an agreement with the Standard Oil Company of New Jersey to share on a 50-50 basis with the latter company, the Persian concession when obtained." On August 16, 1923, Sinclair was given a monopolistic concession of the oilfields of Northern Sakhalin Island by Soviet Russia. It was then occupied by the Japanese, who were exploiting the fields. The concession was implicitly conditioned on the recognition of Russia by the U.S. before 1927, which Sinclair and his colleagues had assured; and on the good offices of the U.S. State Department in inducing the Japanese to withdraw from Sakhalin Island. The State Department and its Secretary, Charles Evans Hughes, a Rockefeller attorney, never got around to bringing pressure to bear on the Japanese to withdraw from Sinclair's concession, despite the fact that Sinclair was the only American interest involved and that the State Department directives had ordered its agents to do their utmost to help American interests in their quests for oil abroad. Obviously, the directives meant "certain interests only"—the Rockefeller interests.

Shortly after the granting of these concessions to Sinclair, there began to occur a series of incidents that were of the utmost value and importance to the Rockefeller Standard Oil interests in their struggle for the concessions. First, was the death of President Warren G. Harding, suddenly and under strange and highly suspicious circumstances that were never exhaustively investigated. This meant that Sinclair had lost control of the government which enabled him to assure Russia of recognition in return for his concessions. President Calvin Coolidge, who succeeded Harding, favored the Rockefeller interests and was keenly alert to the significance of their oil and Empire.

Then, at a time most opportune for the Rockefeller interests in their rivalry with Sinclair, the Teapot Dome affair, which had never been a secret and had been common knowledge from the start, but had never been regarded as worthy of exposure by the Rockefeller-controlled press, suddenly and for reasons not difficult to surmise, began to stir its interest. The Denver Post attacked the Teapot Dome lease, but dropped the matter when its owners, Bonfils and Tammen, were paid \$250,000 by Sinclair. (Lundberg, America's 60 Families, p.205) Then the St. Louis Post-Dispatch began to publicize the case editorially. A Senate investigation was demanded by Senator Burton K. Wheeler, a Rockefeller warhorse, and by Senator Thomas J. Walsh. As a result of the investigation, Sinclair's friends, Attorney General Daugherty and Secretary of the Navy Denby were ousted. (Assistant Secretary of the Navy, Theodore Roosevelt Jr. who had played a dominant role in the affair, was whisked off to a Philippine post, so as to preserve the halo that clung to the Roosevelt name in the minds of the "peasants".) Fall, Sinclair and Doheny were indicted. Fall was found guilty. Sinclair and Doheny won acquittals; but Sinclair went to jail for six months for contempt. The Rockefeller interests, that had been involved and had profited from the deal to the extent of a million dollars paid them by Sinclair, were never indicted, for reasons that can be surmised.

The Teapot Dome scandal robbed Sinclair of the influence which he needed to make good on his Russian deals that required early recognition of the Soviet Communist regime. It also impaired his credit, so that he was not in a position to raise the hundreds of millions that his deals required. Rumors got around that the Sinclair companies had fallen into the hands of the Rockefellers, which they did subsequently. The results were that all of Sinclair's Asiatic concessions were cancelled and the Rockefeller Standard Oil interests were rid of their most dangerous rival.

The Russian oil situation had become menacing to Rockefeller's plans for world monopoly. It became obvious that the Bolshevik regime was not going to collapse and that it would be impossible to force it, by boycott or other forms of pressure, to return expropriated property. It was also evident

that there would not be the expected delay in resumption of Russian oil production. On the contrary, Russian exports of oil were rising to large proportions and constituted formidable competition, especially through price-cutting. In 1925 Russia was providing all of Italy's fuel oil and was rapidly cutting off Standard Oil from that market. The navies of Great Britain, France, Italy and Greece were being supplied with oil by Russia. By April 1925, Standard Oil itself, now allied with Royal Dutch and Shell, had purchased 290,000 tons of kerosene and gasoline from Russia and had become a regular customer. The Rockefeller Standard Oil interests had even proposed the purchase of the entire output of all the Russian fields for a period of three to five years.

The Rockefeller interests were most concerned about the control of Turkey, which was then rapidly being penetrated by the Russians. For, control of Turkey and its dependencies meant control of Saudi Arabia, the prize for which World War I had been engineered. The Rockefeller interests were frantic in their anxiety to get Turkey under their control and keep it there. They could secure that control and hold it only with the acquiescence and cooperation of Soviet Russia. The Rockefeller group then proposed to pool their interests in Turkey with the Soviet Naphtha Syndicate in a partnership monopoly, and to sell there only Russian oil. So anxious had they become to effect a deal, that they were now willing to accede to any terms; and they went out of the way to court the favor of the Communists.

In March 1926, Vacuum Oil Co. entered into an agreement with the Russian government monopoly, the Naphtha Syndicate, for the purchase of 800,000 tons of crude oil and 100,000 tons of kerosene, primarily in order to ingratiate itself with the Russians. This was the first direct, commercial postwar transaction between the Soviet Government and the Rockefeller Standard Oil interests. The terms of this agreement and of the subsequent agreements entered into by the Rockefeller interests and Soviet Russia have never been published. It was well known, however, that the monetary price paid by Standard Oil for the oil was most favorable and low. Price was no object to the Communists.

World conquest on the basis of the plans laid down by Lenin was for them the prime consideration, and the oil deals were, for the Soviets, merely bait and the means to that end. Bearing in mind this fact and the subsequent course of events, however, it is not difficult to arrive at reliable conclusions concerning the terms that were demanded by the Soviets and accepted by the Rockefeller interests.

Recognition of Soviet Russia by the United States, implicit in the Sinclair deals, was obviously a fundamental term and the basis of negotiations. By crushing Sinclair and throwing him into jail, the Rockefellers had proved to Russia their complete and absolute control of the U.S. Government and their ability to make good their agreements involving recognition, so eagerly sought by the Bolsheviks.

Recognition implied an acceptance or tolerance of the Marxist ideology and of Communism in the U.S. But inevitably the cunning and scheming Communist bosses, from Stalin down, would and did seek with singular devotion to purpose, to further the forcing of Communist propaganda and rule, wherever and whenever they could. Surrender to their terms would mean to engage in intensively fostering Communist propaganda, the second condition.

Recognition, however, was sought only as the first step toward Communist world conquest. It was the open sesame to industrialization of Russia, the third condition imposed. For world conquest Russia must master the best and most modern technology. Where could that be found except in the U.S.?

A regular demand of the Soviets in any deal they make or alliance they enter into, is that they dominate and eventually take over. Recognition and propaganda are merely steps in the direction of infiltration and control of the government of the allying power. Surrender to Soviet terms means, as a consequence, to become a satellite through the device of a "Popular Front". A "Popular Front" in Communist language means a Communist government. The setting up of a Communist-controlled government in the United States is the ultimate Soviet purpose of any deal that the Rockefeller Standard Oil interests could have entered into on

the basis of surrender to the Soviets in exchange for control of their oil.

Money for their purchases and propaganda was directly needed by the Bolsheviks. The opening of the American market to their exports of raw materials, in addition to oil, was implied in the desire for recognition,

The major part of the benefits and returns of any deal, to begin with, and eventually outright ownership, are the best terms that anyone can expect of the Communist leaders, or brigands. They regard every contract as a temporary expedient, as a "scrap of paper" that must be torn up as soon as they are in a position to do so. In any deal on Turkish and dominated Arabian oilfields, for instance, the Soviets certainly demanded that all the oil produced must eventually be theirs.

Such demands by the Kremlin would be expected by the suppliant Rockefeller Standard Oil interests. For they are exactly the same terms which they themselves would have laid down had the roles been reversed. And their intent would be equally treacherous. They invariably plan to ravish anyone who yields to them. Such is the philosophy of the force majeure.

Finally, since both of the contracting interests aimed at world conquest and dominion, there was undoubtedly an initial agreement to divide the world between them, as a beginning. The initial division of the world required by Lenin's formula for world conquest, epitomized by him in his dictum—"Who rules Asia, rules the world",—would give Asia and the Eastern Hemisphere to the Soviets and leave to the Rockefellers the Western Hemisphere. It might also be expected that such a world partition would respect the demands of Pan Slavism, Russia's traditional goal.

Bearing in mind the terms which the Kremlin, holding the upper hand, would be expected to demand a priori, it is interesting to see how fully such demands have been met by the Rockefeller Standard Oil agencies and their "philanthropies", industries, dependencies and the lands dominated by them, in short, by the Rockefeller Empire; to observe what loyal allies they have been in the Rockefeller-Soviet Axis; and to study how they have compelled us, the United States, to pay the

costs of their commitments with our lives and fortunes.

As soon as the ink had become dry on the Standard Oil contract for the purchase of Communist oil, the entire Rockefeller propaganda machine was put to work to twist public opinion to conform with Rockefeller purposes. All of the tremendous power, which had been exerted to damn the Communists and stir hatred against them, was turned overnight to the task of building up in the U.S. a love of Communism and Russia for the purpose of creating a favorable atmosphere for recognition of the Soviets. Rockefeller profits are always a "holy cause", and a basis for a Crusade. On March 27, 1926, the New York Times announced under a Paris dateline:

"The Standard Oil Company of New York and the Vacuum Oil Company have just completed negotiations with the Soviet Government of Russia for the purchase of 190,000 tons of refined oil at \$17 a ton, or a total of more than \$3,200,000." On the following day its front page announced:

### "IVY LEE MOVE TO AID THE SOVIETS

"Ivy L. Lee, the best-known and most expensive of publicity agents, who among other activities is the 'adviser on public relations' of the Standard Oil Company, has begun to display keen interest in the recognition of the Soviet Government of Russia by the United States. Mr. Lee, it was learned yesterday, is so greatly interested that he has sent out a series of 'confidential letters' to prominent men in relation to the matter, among them to the former Secretary of State Elihu Root".

The letter to Root, who had served faithfully and indiscriminately both the Morgan and Rockefeller interests, like the balance of Ivy Lee's voluminous correspondence on the theme, was obviously merely a sounding board for the publicity campaign under way. His pleas were many and varied. But one of them is outstanding because it has become the keynote of Rockefeller Empire dogma: "the advantages of 'internationalism' vs. the disadvantages of 'isolationism'", as seen, of course, from the view-

point of his masters. He frankly stated on their behalf:

"From our point of view, we want to trade with Russia".

"Internationalism For Profit" and "Love Those Communists" became the theme songs of every activity of the Rockefeller Empire. Like Bismarck before them, the Rockefeller interests had come to recognize in Marxist Communism and Socialism, power patterns which could be used to delude the "peasants" and made to serve their own imperial ambitions. Communist fronts were given their support and Rockefeller-controlled "philanthropies", social-service agencies and "educational" institutions were converted to Communist propaganda outlets. New fronts, hundreds of them, were created and sponsored, fostered and financed by the Rockefellers, their associates and allies, in order to build up sentiment in favor of Soviet Russia and recognition of the Bolshevik regime.

Ivy L. Lee took seriously the assignment he was given by his employer, John D. Rockefeller Jr. and his Standard Oil Co., to manage pro-Bolshevik propaganda and to teach the Communists all that he knew of the art of propaganda and public relations. The Soviets, and Hitler in the following decade, learned so much that made their poisonous propaganda effective, from Rockefeller's agent, wily Ivy Lee, that there can be only one explanation for their failure to set up memorials to him— ingratitude.

Following a two-week trip to Russia in May, 1927, as representative of the Rockefeller Empire, Lee was the first of a steady stream of its emissaries who, in the following decade, travelled to Russia as their guests or as guests of the Soviets, to return as agents of Red propaganda. After his return from Russia, Ivy Lee wrote and published a masterpiece of propaganda in favor of Russian recognition. The first edition was privately printed and circulated under the title, *The USSR, An Enigma*. And six months later a revised edition was published by the MacMillan Co. under the title, *Present Day Russia*.

In the preface of the book, Lee states that the purpose of his "mission to Moscow" was to get first-hand information on the state of mind of the

rulers of Russia and to survey their propaganda methods. (pp. vi and vii) He pretends that he made his trip with an open mind in regard to the wisdom of trading with Russia. But it is a matter of record that his employers had made their deal with the Soviets and were trading with them on a vast scale at the time; and that he had already committed himself in favor of trading with Russia and aiding the Communist regime. The only purpose of this trip and his book therefore, was to serve the interests of his employers' allies, the interests of the Rockefeller-Soviet Axis.

He reports that he gathered from his interview with Karl Radek, master of Communist propaganda and President of the Sun Yat-Sen (Chinese) University in Moscow, a number of important points to guide him in fulfilling the assignment given him by his employers—to serve the Soviets as consulting propagandist, in much the same manner as they later assigned him as consulting propagandist to Hitler and the Nazis. He learned from Radek that the latter despaired of succeeding in Communist propaganda in the U.S. because of the prosperity that prevailed among the working classes; and that only in case of a depression did he hope to make any headway. (p. 123) He also was told that it was the object of the Communists to gain control of the hordes of Asia and China as the first step in their conquest of the world. (p. 125) But he found that the "Bolshevik propaganda was, in itself, perfectly futile" (p. 124) and was largely confined to "training a very large number of people in the philosophy and technique of revolution." These were his guides in harnessing the Rockefeller fortune and "philanthropies" to the service of their allies, and in facilitating the progress of Communism. Naively, for the record, he describes his object as the defeat of the purpose of his clients. He points to the menace of alignment by Bolshevik Russia with the distressed hordes of Asia as the potent reason for attracting Russia to the West, with trade. Quoting President Wilson's statement at Turin—"The men who do the business of the world now shape the destinies of the world", he points to Russia as the supreme challenge to the business man, and the failure of diplomacy. He poses the question: Is not business as usual the best road back to "normalcy" and the elimination

of the menace of a Bolshevik alliance with Asia?

The book was obviously written with tongue in cheek, to delude the public into accepting recognition and trade with Russia, while the conspirators proceeded with their plan to make good the terms of their deal with Russia and to precipitate the very menace which he pretended to be seeking to avert. The Laura Spelman Rockefeller Memorial had already begun to finance the Institute of Pacific Relations, a Communist espionage agency dedicated to the carrying out of Russia's plan to attain world conquest through control of China, India and ultimately the balance of Asia. The depression, which Radek envisaged as essential if Communism was to make any headway among American workers, was engineered and already in preparation.

The Memorial had undertaken, under the aegis of Beardsley Ruml, to foster the spread of Marxism, Communism and Socialism in the U.S. and the world, by financing numerous agencies devoted to the Red objective of bringing about a "new social order" through the so-called "social sciences". Among these agencies, the financing of which by Rockefeller got under way only after the deal with the Soviets for their oil, are the following:

Russian Student Fund  
Institute of Pacific Re-  
lations  
American Council of  
Learned Societies  
Conference of Social  
Sciences  
International School of

Spelman Fund of New  
York

Ivy Lee's process of creating a favorable sentiment for the recognition of Russia, as required by the Rockefeller-Soviet deal, involved fulfillment of another condition of the deal,—fostering the spread of Communism in the U.S. This required no break in the avowed policies of the Rockefeller Empire

and "philanthropies", as laid down by Rockefeller and Reverend Gates in the General Education Board Occasional Letter No. 1—totalitarianism. How perfect a totalitarian state was Communist Russia and how uncomplicated was the process of doing business with Moscow, was admirably clear. Ivy Lee dilates upon it in his book. He points out in the preface that Soviet Russia is a dictatorship controlled by a few men, which makes it possible to come to an understanding of, and with, the nation even in so brief a period as the ten days he spent in the country to qualify as an expert on its affairs and write his book. In fact, the Rockefeller support of Communist totalitarianism was the natural outcome of the confluence of two streams of development of totalitarian thought and activity. One was that of Bismarck and Germany. Bismarck had fostered Marxism, the recrudescence of the primitive remedy of need since the days of primordial man, as a device for promoting the vast-scale crime he contemplated, conquest of the world. The second confluent development was the equally vast-scale crime contemplated by Rockefeller and Reverend Gates through the use of the same device in the guise of religion and sham "benevolence" and "philanthropy".

The conversion of our educational system to Marxist propaganda, as in Germany where it had been launched originally by Bismarck through the German government and its universities, as "social science", had made considerable headway. Harvard University, where the influence of German Marxist propaganda had appeared earliest, prior to the end of the 19th century, had advanced so far in the conversion of education to unadulterated subversive propaganda that its class of 1927 alone, included three now notorious Reds: Frederick Vanderbilt Field, now in jail for contempt of court in connection with traitorous Communist activities, and Joseph Fels Barnes, both editors of the traitorous Amerasia magazine and members of the equally treasonous Institute of Pacific Relations, as well as policy-making members of Rockefeller's Council on Foreign Relations; and Lawrence Duggan, former colleague of Nelson Rockefeller and Alger Hiss in the State Department, of Rockefeller's Institute of International Education and of his Council on Foreign Relations. Subsidized by the Rocke-

feller philanthropies, Professor Felix Frankfurter of Harvard made a cause celebre of the Sacco-Vanzetti case, one of the first popularly exploited, frankly Communist causes. The Rockefeller interests and their "philanthropies" found ready to hand a host of subversives bred by their own and Bismarck's program, and merely took over and merged the various schools of subversives into a vast treacherous machine for carrying out the purposes of the Rockefeller-Soviet Axis, under the leadership of their Council on Foreign Relations, that became in effect the Foreign Office of the Rockefeller Empire.

In China at the same time, the Rockefeller interests were doing their utmost to further the objectives of their Axis partner, the Soviets, by intensively propagandizing Communism in China itself, supplementing the efforts of Radek's Chinese University in Moscow. The Rockefeller interests and "philanthropies" have controlled education in China since their initial activities about 1913 in connection with their quest for concessions for oil. The major part of some \$35,000,000 of Rockefeller "benevolences", that China received, flowed into propaganda that was called "education". The prize educational institution financed by the Rockefellers in China was the missionary Yenching University in Peiping, rightly regarded as the Harvard of China. It is a true counterpart of Harvard in its Marxist Communist character.

The president of Yenching U. was Dr. John Leighton Stuart, a staunch advocate of the policy of the State Department Communists of betraying the Chinese Nationalist Government by forcing Chiang Kai-shek to include Communists in his government in a "coalition" that so regularly precedes complete Kremlin control. He was recommended by Rockefeller to his State Department agents as American Ambassador to China, and was dutifully appointed by General Marshall. (Headlines, v. III, no. 2, p. 8) This act, as well as the entirety of Rockefeller-directed, sponsored and financed China activities, clearly indicates direct personal responsibility for the policy of turning over China to the Soviets in compliance with the Rockefeller-Soviet Axis accord.

Rockefeller's Yenching University staff is loaded

with Reds and pro-Communists, including the following:

Dr. Randolph Sailor, who frequently addresses pro-Red Chinese meetings arranged by Communist front organizations, and his wife, who has nothing but praise for the Communists.

Dr. Lucius Porter, who frankly favors the Chinese Communists and, in company with Mrs. Paul Robeson, was a keynote speaker at a Communist conference at the Hotel Brevoort in N. Y. C. called to demand recognition of the Chinese Communist Government and its seating at the United Nations.

Dr. William Dryden Phelps, who contributed to Soviet Russia Today a letter praising and supporting the Chinese Communists.

Donald G. Tewksbury, who is a frequent speaker at meetings favoring recognition of Chinese Communists, and is active in the Committee For A Democratic Far Eastern Policy, organized by Red Frederick Vanderbilt Field.

Dr. T. C. Chao, dean of the School of Religion, who heads the movement to "reform" Christianity in China and to ally the Christian Church with the Communist Government, in much the manner as was done, with Rockefeller support, by the Federal Council of Churches of Christ in America.

Thomas A. Bisson, who was formerly editor of Amerasia and is a champion of the Chinese Communist cause. The College of Public Affairs of the University, that is liberally supported with Rockefeller funds, had on its faculty the following Reds:

Dr. George E. Taylor, who is co-author of the play, The Phoenix And The Dwarf, that glorified the Chinese Communists, and was employed in the U.S. State Department and the OWL

Michael Lindsay, British Communist, who became public-relations officer of the Chinese Communists at Yen-an.

Maxwell S. Stewart, who was formerly a teacher at the Moscow Institute, and an editor of the Moscow Daily News, and is a founder of the Communist Party front, Friends of the Chinese People, and a notorious Communist fronter. The Harvard-Yenching Foundation, that receives Rockefeller Foundation support, provided for the

following champions of the Red cause:

Owen Lattimore, who represented it in Peiping in 1930-31. John K. Fairbanks, who championed Lattimore in the McCarthy expose, and advocated the Chinese Communist cause. Theodore H. White, pro-Chinese Communist author of *Thunder Over China*.

There can be no serious question of the fact that Rockefeller's Institute of Pacific Relations was a very effective espionage agency of the Soviet government, the only government officially an adherent of the organization, that served the Kremlin loyally and well, especially in China and India. Among the organizers of the Russian Council of the IPR was A. S. Swandze, brother-in-law of Joseph Stalin. Many persons, including Alexander Barmine, former brigadier general in the Soviet military intelligence service, Louis F. Budenz, former editor of the U.S. Communist Daily Worker, Elizabeth Bentley, former Communist spy, and Freda Utey, former British Communist author, who was employed in the Russian Council of the IPR itself, have attested to the service that the Institute and its editors, including Owen Lattimore, Philip C. Jessup, Thomas A. Bisson and others, have rendered the Soviets, and to the completely Communist character of the IPR. It is a matter of record that Sorge and his fellow spies of the IPR knew in the summer of 1941 that the Japanese planned to attack Pearl Harbor, but they were quite careful to withhold the fact from the American public so that their employers' plans would not be upset.

The officers and personnel of the IPR's dominant "American" Council have been most effective agents in carrying out the policies and conspiracies of the Kremlin in Asia. Prominent among them have been Alger Hiss, now in jail for perjury in connection with treason on behalf of the Rockefeller-Soviet Axis (though his mentor and adviser, John Foster Dulles, top statesman of this Axis, is still dominant in the State Department as "Special Adviser" to— or boss of—the Secretary) ; Owen Lattimore, labelled "top Communist agent" by Senator Joseph McCarthy; and Philip C. Jessup, U.S. Ambassador at Large and top representative of the State Department, especially in Far Eastern affairs, now

appropriately appointed American delegate to the UN. All of these men have been ranking members of Rockefeller's Foreign Office, the Council on Foreign Relations. To their number has been added, officially in the past year, though he has been their agent from the start, General George Catlett Marshall, formerly Chief of Staff and Secretary of State, and then anomalous Secretary of "Defense". Dean Acheson collaborates with them fully, and John Stewart Service," political adviser to Chiang Kai-shek from the State Department, was one of their number.

Freda Utley, in her *Last Chance In China* (p.193) has described how the top officers of the Institute of Pacific Relations, Lattimore and Carter, went to Moscow "for help and advice". She comments:

"To hear these Americans submit themselves to our (the Kremlin's) dictates on theory and policy was amusing, if not sad."

The traitorous officers of Rockefeller's Institute of Pacific Relations had served the Rockefeller-Soviet Axis extraordinarily well. This was made perfectly clear in the testimony before the House Un-American Activities Committee given by Mitsusada Yoshikawa, special investigations chief of the Japanese Attorney General's Office, and by Major General Charles A. Willoughby, Allied Intelligence Chief at Tokyo, attached to General MacArthur's staff, as reported in the *New York Times* in a special dispatch by John D. Morris on Aug. 9, 1951. Yoshikawa testified that Richard Sorge and his spy ring, comprising several members of the Institute of Pacific Relations, "acted in 'dual capacity', as spy and as active propagandist for a Japanese strike southward, so that Russia could withdraw defense troops from Siberia" and the Japanese military machine would be turned against the U.S.

Major General Willoughby testified that the collaborators of the executed Red spy, Sorge, from the ranks of Rockefeller's Institute of Pacific Relations had been "hired in the (United) States and unloaded on Tokyo", or, in other words, specifically hired by the IPR and its bosses for their treason. These agents included the following:

Agnes Smedley, a notorious American Communist agent and propagandist, about whom Willoughby released a special intelligence report which the Communists in the State Department 223

disavowed, following an insolent threat to sue for libel, made by her. Yoshikawa also identified Smedley as a member of Sorge's spy ring.

Gunther Stein, a German Communist, Chungking correspondent of the Christian Science Monitor and London Daily Telegraph, who wrote regularly for the IPR's publications, Pacific Affairs, Far Eastern Survey, and Amerasia. He was arrested in France, November 14, 1950, for espionage. His writings, according to the testimony introduced into the records, were widely promulgated by the OWL

Kinkazu Saionji, the adopted grandson of a Japanese prince.

Horsumi Ozaki, No. 2 man in the Sorge spy ring, who was executed with him. With Saionji, Ozaki represented Japan at the Yosemite National Park conference of the IPR in 1936. In the same manner there had been planted by the IPR in General MacArthur's headquarters a number of its agents, including the following:

Thomas A. Bisson, Yenching U. pro-Communist associate of Owen Lattimore, who later became editor of Amerasia. He was identified by Dr. Karl Wittfogel, an erstwhile German Communist, before the Committee, as a Communist.

Miriam S. Farley, who wrote to her superiors in the IPR:

"I have been put to work doing the political section of MacArthur's monthly report. There will be a certain sporting interest in seeing how much I can get by with."

Andrew Grazdenzev.

This treachery suited the purpose of the Rockefeller-Soviet Axis perfectly. In the first place it turned the Japanese from attacking their natural and vulnerable enemy, Russia, and from seizing the Russian oil fields. Directly after World War I, U.S. and Allied troops had been used in conjunction with White Russian forces to shut the Japanese out of Siberia at the instance of the same Standard Oil interests, as their avowed policy, that was once again served by the activities of their IPR espionage agents. Secondly, by precipitating the attack on Pearl Harbor, these plotters had brought about the war between the U.S. and Japan that they had sought, through their agent Henry L. Stimson with-

out success of President Hoover but with perfect success, of Franklin Delano Roosevelt. They succeeded in getting American troops to rescue the Standard Oil property in China that was being despoiled by the Japanese. They also insured the delivery of China and Asia to their Soviet ally, by eliminating Japan, the only power in the Orient that could block the way.

It might appear that in so doing the Rockefeller Empire would lose oil-concessions and reserves in the territories turned over to the Soviets. But there is considerable evidence that the long-standing a-greement on the subject of oil between the members of the Rockefeller-Soviet Axis is the strongest bond that ties them together. The Kremlin took over the Standard Oil concessions from China, after it had been betrayed to the Chinese Communists by the activities of the IPR and other agents of the Rockefeller Empire, in and out of the State Department and the U.S. Government. The Kremlin specifically required that the terms of the concessions that it received from the Chinese should be absolutely identical with those given the Standard Oil companies. This makes it hard to escape the conclusion that the Kremlin was acting as an agent of the Rockefeller Empire in taking over the concessions, and that such action is one of the basic terms of the Rockefeller-Soviet Axis accord.

At home, in the U.S., the Rockefeller Foundation took over from the General Education Board and the Laura Spelman Rockefeller Memorial the assignment of promoting Communism under the cover of "social science" and "humanities". The country's educational system, every important vehicle for transmission of information and eventually even the Federal Government itself became parts of a huge conspiracy of betrayal. Our schools, colleges and universities, especially those supported by the Rockefeller Foundation, became "schools for treason" that turned out an army of traitors who have not hesitated to betray our country at every possible opportunity. Each of the tens of thousands of graduates in the "social sciences", became an added pressure for a "managed", or Marxist, economy. For their training is designed to enable them to earn a living only in "managing" the lives and affairs of others! This implies elimination of Constitution and our republic. They are the most

powerful lobby and pressure group for a Marxist regime, which they camouflage with the name "New Deal" and "Fair Deal"; for only under such a regime can they earn a livelihood, and only under a frankly Communist and totalitarian regime can they hope to attain the full development and power for which their training was designed.

Ivy Lee and his employers turned their energies in earnest to "creating in the U.S. an atmosphere favorable to the recognition of Russia". This became the principal function of the Foundation, that always sails the course dictated by Rockefeller interests. Stalin could have no occasion to find fault with the Rockefeller Standard Oil group for failing to live up to the very letter of their agreement. With the support of Rockefeller-dominated "philanthropies", some of the most dangerous Communist fronts were set up for the subversion of the American "peasants". The more "educated" they were in the Rockefeller-supervised thought-control machine, the more readily they succumbed; which accounts for the far higher percentage of traitors exposed among the "educated" than among the rank and file. No accredited Communist agent or dangerous subversive failed to secure support from the foundations, no matter how remote the bearing on the Marxist cause.

No activity that serves Soviet Russia's interests has been regarded as too minor for Rockefeller support, no Communist agent beyond its pale. This is illustrated by the case of Hanns Eisler, brother of Gerhardt Eisler, top Communist agent in the U.S. until he jumped bail and fled the country to Germany, where he became a high Communist official in the Soviet zone and one of the chief antagonists of the American Occupation officials. When Hanns Eisler was ordered deported from the U.S. by immigration authorities as a Communist, at the expiration of his visa, obtained as a "visiting lecturer", Alva S. Johnson, director of the Marxist New School For Social Research, and Eleanor Roosevelt interceded with James L. Houghteling, Roosevelt cousin and Commissioner of Immigration, to stay Hanns Eisler's deportation indefinitely. The Rockefeller henchman arranged to have the Foundation provide for Eisler with a \$20,160 grant. The Rockefeller Foundation announced this grant in the 1940 report as follows:

## "NEW SCHOOL FOR SOCIAL RESEARCH

### "Music In Film Production

"The Foundation made a grant of \$20,160 to the New School for Social Research for experimental studies of music in film production during the two year period beginning February 1, 1940. These studies are under the direction of Dr. Hanns Eisler, a member of the School's faculty and a well-known composer of music for motion pictures. His studies will deal with the possibility of utilizing new types of musical material in film production .

"The work will culminate in the preparation and recording of different musical scores for various types of visual content. These recordings will be deposited in the Film Library of the Museum of Modern Art (Ed.: Rockefeller Museum) where they will be available to producers and students of the motion picture." The "new type of musical material" to which the report refers were the works of Communist composers of the breed of Eisler himself, composer of such edifying Communist popular songs as We Must Be Ready To Take Over, and of other "composers" who turn out the brand of sound effects dictated by Stalin and the Politburo as conducive to the cause of revolution and "proletarian" rule. A number of purposes are served by these activities, aside from compliance with the entente of the Rockefeller-Soviet Axis. First, they serve to pervert American taste and to enjoin submission and regimentation, even of taste, as part of the process of poisoning the "peasant" minds. Second, they flatter Communist "kultur" in the same manner as Nelson Rockefeller did Latin American through his Museum of Modern Art. Third, they provide a source of income for the Soviets to pay for their propaganda and their all-out war on us, through a steady stream of royalties paid to their licensing agency.

For the purpose of grooming their traitorous Communist agents for service in the U.S. Government and planting them in key posts, where they could work their treason as bureaucrats and masters of the American people, many Rockefeller-controlled agencies collaborated. Top Rockefeller agency, the

Communist-riddled Council on Foreign Relations, openly boasts, as stated in the chapter on that organization, in its annual reports, that it has planted innumerable agents in policy-making Federal posts, for which it trains them.

The Rockefeller Foundation allocated considerable sums to its heavily subsidized Council of Learned Societies for the specific purpose of compiling lists of "specialists" for appointment to various Government posts. Of these sums, \$31,000 was earmarked for assembling data and drawing up recommendations on personnel in the humanistic fields. As might be expected of the Rockefeller "philanthropies", the man selected to head this activity, Mortimer Graves, had a long, Red, pro-Communist record.

During the war it was common knowledge that Graves was responsible for planting in key, Far East policy positions in the Government large numbers of Reds, especially those from the Institute of Pacific Relations.

It was through agencies of these types that the Rockefeller Empire was able to build up the New Deal and Fair Deal Administrations as "Popular Front" Communist regimes that complied with their deal with Soviet Russia. Even during the period of the Korean War, their complete cooperation continues under the sham pretense of opposition to Communism, that has become the Party line since Communism has grown unpopular because of the Korean War.

The attainment of the ultimate goal sought by the totalitarian conspirators of the Rockefeller-Soviet Axis, their complete domination of the U.S. and ultimately of the world, all gained at the expense of the American taxpayer, has been the true purpose of the New and Fair Deals. Their treacherous and seemingly "crazy" pattern can be understood fully only when examined from this viewpoint. In a letter to Elihu Root, protesting his opposition to recognition of Russia, Ivy L. Lee stated:

"What I would like to see, however, is a condition brought about under which you, and men like you, would think it wise to accord such recognition". Lee recognized prevailing prosperity, especially among the workers, as one of the chief obstacles to

fulfillment of the conditions laid down by the Soviets. He expresses the idea succinctly in his interview with Radek on the topic of Bolshevik propaganda in the U.S.A., published in his *Present Day Russia* (p.123). He pointed out that Communist propaganda could not make headway against the high wages and the automobiles of the American workers; but better results could be expected if there were depression and trouble in the land.

It was not long before the conditions for which Lee wished, were brought about. The stock-market crash of 1929 was skillfully engineered by huge withdrawals of gold from the Treasury. The first shipment of gold, by the Chase National Bank to France, preceding the break, was reported to be \$500,000,000 in gold bars, withdrawn at the prevailing rate of \$20 an ounce. The Rockefeller-dominated banks reimported it in 1934 and redeemed it at \$35 an ounce after they had profited hugely from currency manipulation in France and England and had arranged its revaluation here.

The depression that was such a horror for the country and the capitalist world was an era that was tremendously profitable for the Rockefeller-Soviet Axis, in many directions; and they did their utmost to prolong it and profit from it in the fullest measure. The misery and grinding poverty of the period, as Radek and Ivy Lee had foreseen, turned the unthinking to acceptance of the quack remedy of Marxism and its progressive slavery, that parades as "managed economy", and that was offered them by the Rockefeller-subsidized "social scientists". The relatively unknown consequences of Communism, equal poverty for all except the overlords, that were misrepresented to the people through every avenue of Rockefeller Red propaganda, through numerous agencies and "philanthropies" and later through the Government itself, lured the moronic mob. The mob lacked the intellectual capacity to discern that both the prevailing order and Communist totalitarianism are identical, both of them scarcity economies; that for the rank and file it merely meant jumping from the frying pan of depression and deflation into the fire of war and inflation. It became a simple matter to sell the "peasants" on recognition of the Soviets abroad and a "Popular Front", New Deal, "progressive" dictatorship at home.

All moves were planned well in advance by the conspirators. They made no effort to disguise the fact that "they planned it that way". Thus the Rockefeller Foundation report of 1935 announced the setting up of planning agencies designed to be taken over and incorporated into the Government. The report noted (p. 218) : "increased reliance upon the expert and technical adviser (in the field of international relations) by governmental authorities is the most significant development of the past decade. The Foundation has been in a position to make such services available in a number of instances, and there have been some notable results .."

Symbolic of the Rockefeller-Soviet Axis is the juxtaposition of the Foreign Office of the Rockefeller Empire, the Council on Foreign Relations, and the building that houses the Soviet UN delegation headed by Nelson Rockefeller's friend, Andrei Gromyko. They are located on opposite sides of the west corner of Park Avenue at 68th Street, New York City, a short distance from Rockefeller's home. On the southwest corner stands the Harold Pratt home, built by a scion of Rockefeller's partner. After his death, it was turned over to Rockefeller's Council by the widow, to avoid payment of taxes. On the second-floor front, facing 68th Street, is a large council room in which stands an immense horseshoe table covered with green cloth. On the far side of its center stands a huge armchair that serves in the capacity of a throne. It is there that are held the conferences that determine the fate of nations and the world; that plot and dictate the policies adopted by Washington and the State Department to Dean Acheson or anyone who happens to be the Empire's puppet Secretary of State, who sits at the foot of the table to receive his instructions. It was the scene of Alger Hiss' most glorious moments as premier of the Rockefeller Empire, before his office was transferred to the Lewisburg Federal Penitentiary as jailbird No. 19137 for perjury in connection with his treasonous activities on behalf of the Rockefeller Empire, that placed him in a position from which all its wealth and power could not extricate him though the policies he advocated are carried on by others of his associates. No flag has ever been seen by us hanging in front of the building. This may symbolize its "internationalism". Or it may mean

that the Rockefeller Empire is not yet ready to break out its banner, which we humbly suggest very well might be the flying Pegasus flag of the Socony Vacuum Oil Co., or the Esso emblem.

Directly opposite the headquarters of the Rockefeller Empire, on the northwest corner, stands the mansion build by Percy Pyne, of the National City Bank. It was purchased, according to rumor, by Rockefeller interests and turned over to the UN Soviet delegation, to house Gromyko and his staff. It is constantly surrounded by dozens of cars bearing UN plates, provided at the expense of American taxpayers. Over the huge fireplace at the end of the immense reception hall, hangs a portrait of Lenin. The hall has been the scene of celebrations following the bloody retreat of American forces in Korea, and also after the dismissal of General MacArthur. On festive occasions the Red hammer-and-sickle flag flies from its flagpole; but never an American flag. That is one corner of the land where nothing patriotic or American is tolerated. It is the hub of the Rockefeller-Soviet Axis.

#### LAURA SPELMAN ROCKEFELLER MEMORIAL FUND APPROPRIATIONS

	1919	1920	1921	1922

## CHAPTER XII

### THE LAURA SPELMAN ROCKEFELLER MEMORIAL

#### Rockefeller Speeds Marxist "Science" & Internationalism

To emphasize the synchronization of the reversal of the attitude of the Rockefeller Empire toward Soviet Russia, the origin of the Rockefeller-Soviet Axis, and the undercover speeding up of its support and dissemination of the Marxist, or so-called "social", sciences, consideration of the Laura Spelman Rockefeller Memorial has been deferred to this point.

It has been related how Rockefeller, in connection with the Colorado Fuel & Iron strike, undertook to rehabilitate himself in public opinion by engaging the Rockefeller Foundation in the field of labor relations to carry out his plans of regimentation of workers under the guidance of W. L. Mackenzie King; but that instead of allaying, it merely stirred up public resentment. In 1917, as a consequence, the Rockefeller Foundation dropped its "social science" plans. But this move was merely a temporary expedient to disarm suspicion. Rockefeller established the Laura Spelman Rockefeller Memorial shortly thereafter. Its true purpose proved to be the carrying out of his labor relations and "social science" program. During the first years of its existence, the intent to use the Memorial to seduce and take over control of labor organization was masked by a "charity" front. During the years when the spotlight of publicity rested on it, the Memorial operated as a strictly "charitable" device and merely contributed to various organized charities that Rockefeller dominated or sought to take over. This pose of "charity" is well illustrated in the list of principal grants made by the Memorial in the years 1919-1922. (p. 231)

In 1923, when its activities were no longer front page news, the Memorial began to divert its funds to the support of Marxist and Communist causes, and the "social sciences." In 1923, it granted \$50,-000 for the support of the Russian Student Fund Inc., that was renewed annually until 1927. In

1924, \$85,940 was appropriated for fellowships in the "social sciences", \$115,000 for the London School of Economics and Political Science, \$490,000 for the Robert Brookings School of Economics and Government, and \$445,000 for the Social Science Research Council Inc. The diversion began in earnest in 1926, in which year the Memorial began its support of the newly formed Institute of Pacific Relations and of the Council On Foreign Relations, simultaneously with the consummation by the Standard Oil companies of their deals with Russia, when the Rockefeller-Soviet Axis got under way. How rapidly the grants for the "social science" propaganda subsidy grew can be seen in the table below, listing some of the more important ones, for the years 1923-1928.

In 1928 the Memorial was merged with the Rockefeller Foundation completely, except for a grant of ten millions to establish the Spelman Fund, which has been described. The organizations supported or established with the Memorial funds became the key agencies, the social science centers, of the Rockefeller Empire's totalitarian conspiracy, as has been related in connection with the Rockefeller Foundation. So it was that the Foundation sneaked into the field of political propaganda, through the Memorial, in spite of the provisions of the law denying tax exemption to foundations thus engaged, circumventing enlightened public resentment; and it set about effectuating the Empire's deal with the Soviets.

The Marxist complexion of the Memorial's activities is clearly indicated by its substantial grants to Harold Laski's London School of Economics and Political Science. This was the haven of the Fabian Socialists and of Marxists ranging further to the left, including the Communists; and it was their principal forum and propaganda agency in the

English-speaking world. The initial grant made in 1924 was \$115,000. This was supplemented by an additional \$875,000 grant in 1927 and by another of \$100,000 in the following year. The total support of this hotbed of Communism and Socialism amounted to more than a million dollars by 1929. Since the staff of the school comprises the leaders of the British Labor Party, it is apparent the Rockefeller interests were buying control of the Laborites with the Memorial grants.

When the Memorial was merged with the Rockefeller Foundation, in 1928, the latter continued to support the School. The grants listed in the Foundation reports are as follows:

Laura Spelman Rockefeller	
	Memorial ..... \$1,090,000.00
1929	Building extension ..... 15,594.69
	Research Fund ..... 20,000.00
1930	Research Fund ..... 19,438.75
1932	Building ..... 55,806.81
	Research Fund ..... 21,054.69
1933	Research ..... 39,094.65
	Building ..... 241,351.99
1934	Research ..... 26,494.41
	Building ..... 33,274.04
1935	Departmental Development ..... 12,477.84
	Research ..... 9,082.50
1939	General Expense ..... 51,250.00
1949	General Expense ..... 50,900.00
	Total ..... \$1,685,820.37

By 1926, the Memorial was launched on an intensive program of fostering the Marxist "social sciences" in both the educational and political spheres throughout the world. It subsidized the Institute for International Studies at Geneva with \$100,000 in 1926; the Social Science Research Council with \$1,834,500 in 1927 and \$165,000 in 1928; the American Council of Learned Societies with \$15,000; the Fellowship Program of Social Sciences with \$250,000; and the Institute of International Education with \$240,000.

In charge of this phase of their activities the Rockefellers placed Beardsley Ruml, who had garnered his Ph.D. from the University of Chicago, after a year with the Carnegie Corporation of New York. Following the merger of the Memorial with the Foundation Ruml was made Dean of the Social

Science Division of his master's University of Chicago and Professor of Education. In 1934, he became treasurer of R. H. Macy and Co. Inc. and in 1945 became chairman of its board of directors. He is a director of Muzak Corp. and of a number of thought-control enterprises controlled by Senator William B. Benton of the firm of Benton & Bowles, which has been closely identified with Rockefeller and New Deal activities. These include Encyclopedia Britannica Films and Encyclopedia Britan-nica Co. He is trustee of Rockefeller's Museum of Modern Art; director of the Rockefeller subsidized National Bureau of Economic Research that so strongly influences the policies of our government from behind the scenes; and director of the General American Investors Co. that is headed by Rockefeller's former son-in-law, David M. Milton. Both Ruml and Benton are members of the Foreign Office of the Rockefeller Empire, the Council On Foreign Relations, in which Alger Hiss and his associate, Owen Lattimore, play key roles.

Ruml is also the author of tax bills that are so helpful to his masters. He conceived the withholding device whereby the taxes are exacted from pay envelopes, which throws the onus of collection on the employer. Oil producers pay taxes on only a small fraction of their earnings; and they pay nothing on overseas earnings. From 1928 to 1933 Ruml was a trustee of the Rosenwald Fund, acting with its head, Embree, former vice-president of the Rockefeller Foundation, during a period when the Rosenwald Fund became as notorious for its support of left wing and outright Communist organizations as is the Rockefeller Foundation. Ruml was associated with Hutchins, Benton, Shuster and Nie-buhr, all of Rockefeller's Council On Foreign Relations, and with MacLeish in the "Commission On Freedom Of The Press." This Commission has advocated the adoption of complete thought control, by censorship of the press on behalf of the totalitarian conspirators. Ruml was a member of a group of Rockefeller associates, that seized upon atom-bomb hysteria as an excuse for a "Committee to Frame a World Constitution". Ruml and his Rockefeller subsidized associates, have been the guiding "geniuses" of the New Deal and Fair Deal. Their activities have been directly supervised, as in the United Nations, by the Rockefellers.

## CHAPTER XIII

THE COUNCIL ON FOREIGN RELATIONS "FOREIGN OFFICE" OF THE ROCKEFELLER EMPIRE The "Invisible Government" After the Rockefeller Empire had entered into its accord with Stalin and the Soviets, it required an agency that would not be suspect to serve in carrying out the terms of the Rockefeller Soviet pact, and to supplement and support the drive launched for it by Ivy Lee. For this purpose the Rockefeller interests selected the Council on Foreign Relations, an organization of which some of their group were members, notably, Ivy Lee, John Foster Dulles, Henry Harkness Flagler and the Pratts.

The Council on Foreign Relations was launched in 1919 at the Paris Peace Conference. The Rockefeller Empire had emerged tremendously wealthier and more powerful from the war which had been engineered and launched at a cost to us of tens of thousands of lives, hundreds of thousands of maimed and tens of billions of dollars of our wealth, and at even greater sacrifice to other lands. They had attained the objective for which had been incited the holocaust, control of the Near East and ownership of the Saudi Arabian concession. The situation was aptly summed up by Harold Nicholson in his book PEACE MAKING (p. 352-61) in passages cited by the director of the council in its twenty-fifth year report, as follows: "Friday May 30, (1919) A dinner ... to discuss formation ... of an Anglo-American Institute of Foreign Affairs. Bob Cecil supports it. He said 'There is no single person in this room who is not disappointed with the terms we have drafted. Yet England and America have got all they want and more; far more. Our disappointment is an excellent symptom; let us perpetuate it.' "

The report tells the following story of the origin of the Council:

"In Spring 1919, a group of men at the Peace Conference in Paris concluded that facilities were badly needed in their respective countries for the continuous study of international relations.

"Conversations between Gen. Tasker H. Bliss, Col. E. M. House, Prof. Archibald Cary Coolidge, Whitney H. Shepardson, Dr. James T. Shotwell and others of the American delegation, and British officials such as Sir Robert Cecil, Lionel Curtis, Sir Valentine Chirol, Lord Eustace Percy and Harold Temperley, led to a dinner meeting at the Majestic Hotel, Paris, on May 30, 1919.

"It was formally agreed that an organization should be created for the study of international affairs. The first two resolutions set forth the proposed form and substance of the undertaking:

"RESOLVED

"That those present undertake to form an Institute entitled The Institute of International Affairs Founded at Paris in 1919 comprised at the outset of two branches, one in the United Kingdom and one in the U.S.

"That the purpose of this Institute should be to keep its members in touch with the international situation and enable them to study the relation between national politics and the interests of society as a whole.'

". . . it seemed unwise to set up a single institute with branches. One group therefore established the British (now Royal) Institute of International Affairs, London; and the other group, returning to the U.S., merged with an informal body already in existence (Union Club), which was known as the Council on Foreign Relations. The Council had been organized in 1918 in New York City and welcomed on a number of occasions, distinguished foreigners coming to America in connection with the conduct of the war.

"The purposes of the Council are set forth as follows:

"to afford a continuous conference on international questions affecting the U.S. by bringing together experts in statecraft, finance, industry, education and science.

"to create and stimulate international thought among the people of the U.S., and to this end,

"to co-operate with the government of the U.S. and with international agencies coordinating international activities by eliminating, in so far as possible, duplication of effort, to create new bodies and to employ such other and further 238

means as from time to time may seem wise and proper." (The Council on Foreign Relations. A Record of 25 Years.)

The report describes the Council's financing as follows: (id. pp. 60-1)

"... no endowment. .. Derives financial support from four sources:

1. Dues and contributions \$1,698,400
2. Proceeds from sale of publications 1,287,850
3. Grants from Foundations for research 1,134,700
4. Interest on investments 172,650"

Approximately one third of the income of the Council was derived from foundations, all of it devoted to "research". With the exception of approximately \$200,000 obtained from the Rockefeller dominated Carnegie foundations, all of these grants were derived from the Laura Spelman Rockefeller Memorial and the Rockefeller Foundation in the form of a steady annual stream of grants, as follows:

1927	Laura Spelman Memorial	\$150,000
1929	Research American Foreign policy	30,000
1930	" " " "	30,000
1931	" " " "	30,000
1932	" " " "	30,000
1933	" " " "	25,000
1934	" " " "	25,000
1935	" " " "	25,000
1936		30,000
1938		99,000
1939		44,500
1940		73,375
1941		57,000
1942	War & Peace Studies	70,700
1943	" " "	60,800
1944		74,908.90
1945		60,000
1946	Preparation of History of World War II (to prevent debunking)	139,000
1947		60,000
1949	Study of problems of aid to Europe	50,000
Total		\$1,164,283.90

It is notable that the Laura Spelman Rockefeller

Memorial grant followed hard on the heels of the Rockefeller Stalin pact, and that the subsequent support assumed the form of annual grants instead of endowment. Obviously, annual grants provide a more direct and continuous method of control of a subsidiary organization than does endowment. Thus did the Rockefeller interests gain and hold domination over the organization that they proceeded to make their top political agency, their Foreign Office, without creating any suspicion of this situation. For such an agency is far more effective if it is regarded as independent. The Rockefeller interests, therefore, avoided publicizing their control of the Council. On the other hand, the Rockefellers deviated from their practise of requiring contributions from others as the price of their support. They did not wish to share their control of the Council with others. The Council, like its subsidiary Institute of Pacific Relations, is peculiarly a Rockefeller agency.

Membership in the Council on Foreign Relations has been attainable from the start, only by invitation. Originally it had included leaders of American industry, commerce, banking, politics and the press, as can be seen in the 1925 membership list. In 1925, the membership was weighted in favor of internationalism. It contained a sprinkling of Marxist "liberals", such as Bruce Bliven, Walter Lippmann and Simeon Strunsky, of the leftist press; bankers of the same leaning, such as the Kuhn Loeb group who were identified with the Rockefeller interests, and acted for them, including Otto Kahn, Mortimer L. Schiff, Felix M. Warburg and Paul M. Warburg, and William Averell Harriman of Brown Bros. Harriman Co., as well as more conservative and American Walter E. Frew; and the J. P. Morgan & Co. crowd, sitting on both sides of the fence, with "liberal" Thos. W. Lamont, R. C. Leffingwell, Dwight W. Morrow, Edward R. Stettinius and the Davisons, side by side with Albert H. Wiggin, George B. Baker and Herbert H. Lehman. The Wilsonian Democrats were represented by Col. Edward M. House, the agent for the powers behind the throne in the Wilson regime, John W. Davis, Wall Street and Rockefeller attorney who was defeated presidential candidate, James W. Gerard, former ambassador to Germany; and the Republican regime by Ogden L. Mills, Secretary of the Treas-

ury, Elihu Root, Secretary of State in the T. Roosevelt regime, Henry W. Taft and George W. Wick-ersham, U.S. Attorney General in the Taft regime. The legal fraternity and the bench were represented by the Chadbournes, Frederick R. Coudert, Paul D. Cravath, Judge Learned Hand, and Archibald G. Thacher; Wall Street, by Jules B. Bache, Clarence Dillon, Samuel Goldman and Sam A. Lewisohn and E. R. A. Seligman; trade and industry by George Blumenthal, Newcomb Carlton, president of Western Union, T. Coleman DuPont, leftish Edward A. Filene, Arthur Curtiss James, the Strauses and the Strausses, Gerard Swope, Myron C. Taylor, Wm. H. Woodin and Owen D. Young. The Rockefellers were represented directly by their publicity man Ivy L. Lee, their kinsman John Foster Dulles, and the Standard Oil Co. by Henry Harkness Flagler and the Pratts. Such an organization could prove to be an invaluable front.

With assumption of control of the Council by the Rockefellers, the character of the membership changed sharply and strangely.

Communist agents, pro-Communist proteges of the Rockefeller interests, Reds of all complexions, "liberals" and frank, subversive high priests of the Marxist "social sciences", and New Dealers swelled the membership list, assumed key roles in the Council's activities and filled its conferences and publications with pro-Communist propaganda and the Party "line". The ringleaders of the Rockefeller financed Communist espionage agency, the Institute of Pacific Relations, including its former, Soviet-decorated Secretary, Edward Clark Carter, Philip C. Jessup, and the editors of its publications, including the notorious Amerasia magazine, Owen Lattimore, William W. Lockwood, Joseph Barnes and self-proclaimed Communist "leader", Frederick Vanderbilt Field, who was justly retired to a Federal penitentiary for his activities, became the leading spirits of the Council and filled its forums and its publication, Foreign Affairs, with their propaganda.

It was Alger Hiss, however, who became the outstanding member and leading spirit in the Council on Foreign Relations. His role was virtually that of Prime Minister of the Rockefeller Empire and the head of its Foreign Office. His services to the Rockefeller-Soviet Axis earned him the accolade of

both the Rockefellers and Stalin. With it went, ex officio, the policy making role of the U.S. State Department in the Roosevelt regime, the power to dictate the foreign policy of the U.S. (a mere subsidiary of the Rockefeller Empire) and, with the approval of Stalin, the authorship of the Yalta pacts and the United Nations charter.

The rabidly pro-Communist members of the State Department and of other Government services are honored for their distinguished services to the Rockefeller Empire and the Axis, by membership in the Council. Outstanding among these are Dean Acheson, the late Edward Stettinius, Philip C. Jessup, W. Averell Harriman, Ralph J. Bunche, Senator William B. Benton, Justice Felix Frankfurter and many others. These take their place with the Amerasia galaxy, beside the Rockefellers, Nelson A., John D. 3d and David, and such luminaries as Marshall Field, Harold Stassen and General Dwight D. Eisenhower, as indoctrinators of the Council's membership and dictators of its policies.

In effect the Council on Foreign Relations has become an assembly of the top Rockefeller agents, associates, and collaborators in business, industry, banking, politics and other less creditable activities, who have served the Empire or the Axis or both, well and loyally. It bears the same relation to the Rockefeller Empire as do the higher orders of knighthood to the British Empire—an accolade for distinguished service. Its membership, by invitation, can be regarded as equivalent to decoration.

Many of the members of the Council were claimed openly as their agents by the Rockefellers in the publicity that they released through William S. Dutton to Collier's in the issue of April 28, 1951, (p. 78) as a build-up. Among these are: Karl T. Compton, Robert G. Sproul, Harold W. Dodds, Owen D. Young, Walter S. Gifford, former Chief Justice Charles Evans Hughes, former Ambassador to Great Britain, Lewis W. Douglas, John Foster Dulles, Dr. Thomas Parran, U.S. High Commissioner John J. McCloy, Douglas S. Freeman and Times publisher, Arthur Hays Sulzberger.

It is obviously the function of the Rockefeller dominated Council to establish contact of the radical and subversive elements with the State Department and with the highest officials for the purpose of indoctrinating them, influencing their policies in the

totalitarian sense required by the objectives of the Rockefeller Empire, and gaining entry into the government to directly further those objectives. This scheme met with complete success.

Pretense is made of study and research in all phases of international relations that especially interested the Rockefeller Empire. They were undertaken with Rockefeller grants. The leaders of the research were generally puppets who could be depended upon to guide the "study" and "research" to the desired and predetermined conclusion, and at the same time to brief the membership and the participating public officials in the manner desired by their sponsors. Foreign Relations Committees in as many as twenty-four cities, also subsidized by the Rockefeller Foundation and Carnegie Corporation, were used in the same manner to indoctrinate and brief local agents and unsuspecting accomplices. The Council, with its Committees and allied and subsidiary organizations thus constituted a gigantic lobby and pressure group serving to influence and warp the nation's policies. It is a lobby, however, that boasts that Secretary of State Cordell Hull himself and other high government officials participated in its activities; that holds in its membership Secretary of State Dean Acheson.

It vaunts the fact that top government officials come to it for "guidance and advice". And it relates in its Annual Report of the Executive Director, 1949-1950 (pp. 40-41): "At 10 :a.m. on June 9, some thirty-five men took their places at the horse-shoe table in the large meeting room of the Council . . . During the morning, afternoon and evening, they devoted themselves to consideration of the advantages and disadvantages of bipartisan collaboration in American foreign policy. To provide expert testimony at their daytime discussions they had as guests Ernest A. Gross, Deputy Representative of the United States to the United Nations, and former Assistant Secretary of State for Congressional Relations; Benjamin Cohen, former Presidential Assistant at the White House; Francis O. Wilcox, Chief of Staff of the Senate Foreign Relations Committee . . . "At their dinner session they were joined by a score of Council members for an informal 'seminar' on the conference theme (bipartisan

collaboration) with the Honorable Thomas E. Dewey, Governor of New York, serving as discussion leader. Honorable Thomas K. Finletter, Secretary of the Air Force, presided."

It is a lobby that stands above the law and actually boasts of its lobbying activities with impunity. It boasts about its shady lobbying tricks and of its control of the foreign policy of the United States, in its annual reports. Thus in his annual report for 1948-1949, its executive director crows (p. 36) :

"The front page of the New York Times on February 16, 1949, carried the familiar index: 'WORLD NEWS SUMMARIZED'. One of its items read as follows: 'Sixty percent of "leading citizens" independently polled felt that the country had a 'moral commitment to give help to the free nations of Europe.'

"Who were those 'leading citizens'? Who sought their views and for what purpose?

"Answers to these and other questions were found in the 'Times' accompanying dispatch. It was a story that figured on the front pages here and abroad, the recapitulation of the findings of a Council (on Foreign Relations) publication, 'Military Cooperation with Western Europe'!

"In October, 1948, the Council had begun work on an inquiry addressed to the members of the twenty-two Foreign Relations Committees. Previous inquiries, resulting in printed reports 'American Policy Toward Germany' and 'The Marshall Plan As An American Policy', had been widely circulated and had received favorable comment.

"For its new study, the Council again wanted to sound out Committee members on an important problem of American foreign policy. The issue of American military aid for Western Europe was selected, and the resulting survey set forth the views of Committee members on the relation of the United States to the Brussels Treaty Powers and to other European nations, the implementation of the Vandenberg Resolution, and on the nature and extent of American military aid. FROM PRIVATE AND OFFICIAL SOURCES THE COUNCIL CONTINUES TO ACQUIRE EVIDENCE OF THE REACH AND USEFULNESS OF THESE INQUIRIES."

The Council further brags, in the report of its

executive director for the year 1949-1950, of its success in infiltrating our government with its members and agents, as follows (pp. 39-40) :

"The primary purpose of Council discussion groups is to keep members informed of the course of events in the field in which they are particularly interested, and to give them an opportunity to deepen their knowledge. But very often the groups serve, as well, as training ground for members called upon to serve the government in important positions. SUCH INSTANCES ARE TOO NUMEROUS TO RECORD HERE, but members who have recently undertaken official posts include: Thomas K. Finletter, a director of the Council who has been active in various discussion groups and who became Secretary of the Air Force on April 14, 1950; Philip C. Jessup, a former Group Chairman, who was named Senior Adviser to the Secretary of State on March 9, 1950; Charles M. Spofford, for two years Chairman of the Council's group on Western Europe, who was appointed Deputy U.S. Representative on the North Atlantic Treaty Council on June 22, 1950; and George N. Shuster, a member of the Committee on Studies, who became State Commissioner for Bavaria on April 17, 1950." The director was over-modest in stating the distinction and qualifications of the distinguished, or shall one say notorious, members of Council appointed to these posts.

The executive director of the Council was also guilty of understatement when he wrote: "Such instances (of Council members being appointed to high government positions) are too numerous to record here." So consistently have high, policy-making positions in the government been filled from the ranks of Rockefeller's Council that it can be called the invisible government of the United States. This is strikingly illustrated by the Office of Price Stabilization. Its original head was Alan Valentine, a Rockefeller Foundation subsidized professor and non-resident member of Rockefeller's Council. When he was ousted in response to public dissatisfaction with inaction of his office, Washington went no further than Eric Johnston, a resident member of the Council, for his replacement.

Within the months preceding the publication of 245

this book, four policy-making appointments were made by Truman: General Dwight D. Eisenhower, as head of SHAPE, Robert A. Lovett, as Secretary of Defense, Edwin A. Locke Jr., as Administrator for the Point 4 program in the Near East, and George F. Kennan as interim Ambassador to Russia. All of them with the exception of Lovett are members of Rockefeller's Council on Foreign Relations. Lovett is a Trustee of the paramount agency, the Rockefeller Foundation. Kennan was president of the East European Fund of the Ford Foundation, that also is dominated by the Rockefeller interests.

The membership of Rockefeller's Council on Foreign Relations interlock it with the control of every important "philanthropic" foundation, and a host of Rockefeller agencies and fronts that serve as a huge propaganda agency and lobby that promote the cause of the Rockefeller Empire and the Axis. Though the same group of their agents, members of the CFR, constitute the core of all of these organizations, their controlled press represents their propaganda as the considered views of the nation at large. On April 19, 1951, for example, their official gazette, the New York Times, reported under the headline Survey Confirms Policy On Soviet, that 765 prominent citizens (all members of local Committees on Foreign Relations subsidiary to the CFR and financed by the Rockefeller interests) in twenty-four of the nation's largest cities "approved the broad policy of 'containment' of Soviet Russia, even at the risk of war with that nation" and urged that "we should not change our attitude on issues abroad, just to lessen our commitments . . . essential to the security of America as to other free nations." This report was "edited", according to the Times, by Joseph Barber, R. C. Leffingwell, Hamilton Fish Armstrong, John W. Davis, Lewis W. Douglas, Thomas K. Finletter, W. Averell Harriman, Philip D. Reed and Myron C. Taylor, for the CFR.

William Fulton, in a series of articles in the Chicago Tribune in January, 1951, described how the multitude of organizations headed by the Council on Foreign Relations, including the Carnegie Endowment For International Peace, the English Speaking Union, the Foreign Policy Association, the American Association for the United Nations, Freedom House, the Institute of Pacific Relations

and a host of others, cooperate through their interlocking directorates and supplement each other's "internationalist" propaganda. The Washington Times Herald, another newspaper of the patriotic, McCormick chain commented editorially on Fulton's series in its issue of January 10, 1951, as follows:

"These organizations cultivate a pious pretense of existing to 'study' foreign relations. This function is easily stretched into advocacy of the Administration's foreign policy in detail and in general. These old-line interventionist agencies are backed up from time to time by newly created propaganda fronts when it is thought that additional heat must be generated to put over some particular world-saving enterprise. The Committee To Defend America By Aiding The Allies was typical of this sort of activity when the effort was under way to put the United States into World War II.

"The Administration's present hysteria concerning Russia has led to the formation of two new committees, one called the Committee On The Present Danger and the other The Crisis Committee. The formula is to gather together a group of windbags who have publicity value through corporate, banking, legal or academic connections and to assail the public with manifestos . . .

"The efforts of these propaganda media are to raise sufficient noise so that legitimate public opinion will be blanketed by highly organized clamor from the other direction. A relatively few people, speaking through a considerable number of microphones, can create a fictitious impression that there is a 'public demand' for policies which lack appeal to the great body of people, who have no such convenient propaganda organs to make their desires heard.

"Some of the cruder smear jobs are left to letterhead organizations which specialize in character assassination at a price, while volunteers can always be counted on to step forward from among the professional union bosses to do the same job ...

" ... If misery and ruin of the Republic were the avowed objectives of these ENEMIES WITHIN THE GATES, they could not have adopted 247

doctrines and methods better calculated to achieve that disloyal purpose . . ."

On December 9, 1950, courageous, patriotic and American Chicago Tribune, one of the few newspapers that has dared attack and expose the Council on Foreign Relations (though it has omitted to point out its Rockefeller control) in an editorial entitled BLOOD ON THEIR HANDS, replied to a release made by the Council locally through its Chicago subsidiary, that sought to throw the blame on their opponents for the situation revealed by General MacArthur's statement that in Korea "we face an entirely new war", as follows:

"There is not a word in all this to suggest that what has happened in Korea is the direct consequence of a line of policy (often spoken of as internationalism or interventionism) which has had the support of the Council on Foreign Relations . . .

"Thanks to these policies, 300,000 American boys lost their lives in the 1941-45 war and 5,600 more have been listed as killed thus far in Korea. All that the members of the Council can show in Europe in return for the sacrifices is the substitution of Russian for German tyranny and menace; and all that has happened in Asia is the substitution of Russian domination of all of China for Japanese domination of a part of it.

"... The decision to send Americans to fight in Korea was taken ... by Harry S. Truman pursuing a policy of intervention strongly favored in principle by most of the members of the Council.

"The members of the Council are persons of much more than average influence in the community. They have used the prestige that their wealth, their social position, and their education have given them to lead their country toward bankruptcy and military debacle. They should look at their hands. There is blood on them—the dried blood of the last war and the fresh blood of the present one." A more true, more eloquent and more patriotically American editorial it would be hard to find. It supplements the equally plain-spoken statement in the same tenor made by Senator Harry Shippe Truman in 1942 in regard to the activities of another key Rockefeller agency: "YES IT IS TREASON".

## CHAPTER XIV

### SOME ROCKEFELLER CFR STARS

#### And State Department Agents

"I will not turn my back on Hiss. . ."

Secretary of State Dean Acheson's Loyalty Pledge

Lack of space precludes the possibility of even listing the endless array of agents of the Rockefeller Empire and of the Rockefeller Soviet Axis in Government posts. Therefore only a few of the most outstanding of them can be given in any detail.

#### ALGER HISS

Alger Hiss was born in Baltimore, Md., November 11, 1904. He was graduated in 1926 from Johns Hopkins with an A.B. degree and obtained his legal education in that outstanding school for treason, Rockefeller-subsidized Harvard Law School; he received his LL.B. in 1929 as a classmate of that "bleeding heart", callously self-confessed Communist, Lee Pressman. As in the case of so many of the subversive or traitorous Harvard products, he was placed by his subversive propagandist teachers, including Felix Frankfurter, in the post of secretary to Supreme Court Justice Oliver Wendell Holmes.

Hiss then was employed by the firms of Choate, Hall & Stewart in Boston, and Cotton & Franklin in New York City. In 1932 Hiss joined the International Juridical Association, a legal seminary for the Communist Party's International Labor Defense, headed at that time by Mrs. Carol Weiss, later attorney for Gerhart Eisler and other top Communists. In 1933 Hiss was lured to Washington to participate in the New Deal Popular Front government, built up by the cunning activities of Rockefeller's Ivy Ledbetter Lee, with all of the wealth and power of the Rockefeller enterprises and "philanthropies" behind him. In Washington, Hiss joined the many agents that had been produced in the schools and universities of the country by the Laura Spelman Rockefeller Memorial, the General Education Board and the Rockefeller Foundation through the "social sciences" that were nothing more or less than straight Marxist propaganda twisted to serve the purposes of the totalitarian conspirators. Among these agents were Lee Pressman, who was primarily responsible for inducing

Hiss to enter government service, Tommy Corcoran, Jerome Frank, Nathan Witt, Gardner Jackson, Charles Kramer, John Abt, Gregory Silvermaster and Hal Ware.

Already a left-wing Marxist, Hiss promptly found his way into a Communist cell set up in the government by Hal Ware, an agent of the Comintern. Hiss rapidly came to the fore in the Roosevelt Popular Front. While serving as Assistant General Counsel of Wallace's Agricultural Adjustment Administration, 1933-35, he was simultaneously planted and served as legal assistant to the special Senate Committee investigating the munitions industry in 1934-35. This assignment was obtained for him by Gardner Jackson. When the Communist cell in the Department of Agriculture was ousted for political expediency, Hiss alone was left behind by arrangement of Lee Pressman, as a "feeder and pipeline". This earned for him the reputation of being a renegade Communist among the uninformed members of his cell and in the Party, which undoubtedly paved the way for his eventual denouncement and conviction.

From the AAA, Hiss was transferred, at the request of Solicitor General (later Supreme Court Justice) Stanley Reed, to the Department of Justice; and in 1936 he was invited by Assistant Secretary of State Francis B. Sayre, son-in-law of President Woodrow Wilson, one of Hiss' law professors at Harvard, to come over to the State Department as Sayre's assistant. By this time Hiss was deeply involved in espionage, as was amply attested by witnesses at his later trials. In 1939, Hiss was promoted in the State Department to the post of assistant adviser on political relations.

This promotion came at about the time that Whittaker Chambers, former Communist underground courier, and Isaac Don Levine exposed Hiss as a Communist spy. The exposure was made indirectly to President Franklin Delano Roosevelt through many channels, including Marvin H. McIntyre, Presidential secretary. McIntyre was so well aware of the Popular Front character of the Roosevelt regime that he refused to transmit the information to Roosevelt. He amusedly suggested that it be given to the Assistant Secretary of State in charge of State Department security and personal adviser to the President, Adolph A. Berle. When Berle

passed this gratuitous information to the President, the fact was so well known to him that instead of being alarmed at the presence of Communist spies and agents in the State Department at the critical period of the Hitler-Stalin alliance, Roosevelt told Berle "to go jump in the lake, only in coarser language". (Seeds of Treason, Toledano & Lasky, p. 83).

Likewise, William C. Bullitt, former Ambassador to Soviet Russia, undertook to inform Roosevelt of the dangerous Communist espionage ring in the State Department. Roosevelt was so well aware of the situation that he "laughed and told him not to worry". Walter Winchell, who, in view of his vaunted intelligence service, was naive indeed, to believe that the President was not aware of the Communist character of his Popular Front "New Deal" and the oily deal that had provided for its set-up, met with a similar brush-off when he undertook to warn Roosevelt of the dangerous espionage.

President Roosevelt was fully aware of the Communist character of his entourage, that had been dictated by the Rockefeller agents of the Rockefeller-Soviet Axis. The leaders of the fake opposition were equally aware of it. Senator Warren Austin and Governor Thomas E. Dewey, the latter a perennial Rockefeller puppet candidate, were both informed of the situation but refused to act to expose the traitors.

In 1941, pro-Communist Dean Acheson, then newly appointed Assistant Secretary of State, was warned by the Department's security officer, Adolph A. Berle, about the known Communist connections of Donald Hiss, brother of Alger, a member of the Acheson firm, requested by Acheson as his assistant; and he had been informed of Alger's connection with the Hal Ware cell. But it is obvious that he approved of it.

John Foster Dulles, Rockefeller's kinsman and State Department boss, Hiss informed the Senate investigating committee, had been his adviser and mentor throughout his Communist career. Hiss was rewarded for his treacherous work in support of the Communist cause and Rockefellerism by rapid promotion to key posts in the Department that handled matters vital to the success of the Rockefeller-Soviet Axis. In 1944, Hiss was rapidly promoted, first to the post of Special Assistant to

the Director of the Office of Far Eastern Affairs, so vital for Lenin's plot for world conquest by Communism through control of Asia and China; then he was made Special Assistant to the Director, and Deputy Director, of the Office of Special Political Affairs, and executive secretary to the Dumbarton Oaks Conference. This prepared the way for his "mission for Moscow" as adviser to Secretary of State Stettinius and President Roosevelt, or his double, at the Yalta Conference in the sell-out of Asia to Stalin in return for Saudi Arabian oil for the Rockefeller Empire.

With the approval of both parties of the Rockefeller-Soviet Axis, Hiss was chosen Secretary General of the United Nations Conference on International Organization at San Francisco, where concrete form was given to the sell-out initiated at Yalta. At San Francisco, he worked directly under the eyes of Nelson Rockefeller and John Foster Dulles, representing the Rockefeller Empire as he placed the mechanism of world domination in the hands of his masters and betrayed the destinies of the U.S. into their hands. To make sure that the people of the U.S. would have no voice in deciding their fate, he wrote into the rules of the UN a provision that gave its Secretary General absolute power to appoint all UN employees from the peoples of the member nations, thus robbing our nation of what little protection a loyal body of representatives might afford.

Never at any time during his career in the State Department was there any doubt of Hiss' notoriety as a Communist. The FBI had a complete dossier on his Communist activities and all his superiors in the Department had been put on notice of his affiliation with the Party. Confirmation of this came even from abroad in the form of the confessions of Igor Gouzenko, Soviet code clerk in the Ottawa office of Col. Nikolai Zabotin, Soviet military attache to Canada, and in statements made directly to an FBI operative, to the effect that the Soviets had an espionage agent in 1945, who was an Assistant Secretary of State of the U.S. A fifty-one page report of these findings was submitted to President Truman and amusedly circulated among the agents and queers of the State Department by its "security" officers. The State Department traitors were so arrogantly confident of their con-

trol that they made no effort to suppress the report.

During this time, Alger Hiss was one of the key members and indoctrinators of Rockefeller's Foreign Office, the Council On Foreign Relations, virtual Premier of the Rockefeller Empire and key man of the Rockefeller-Soviet Axis. For his service to that Axis, he was rewarded by John Foster Dulles, David Rockefeller and their associates with the position of president of the Carnegie Endowment For International Peace, which was made a special berth for him in 1947 by the provision of a \$20,000 annual salary and a large expense account. At that very time he was under investigation by the FBI and under fire in the State Department. Probably it was hoped that in this manner his prestige would be so enhanced that he would be placed beyond the reach of the U.S. authorities, even though he was marked by the Communist Party for one of its periodic purges. Confidently, John Foster Dulles brushed aside the charges of Larry S. Davidow and Alfred Kohlberg of Hiss' "probable Communist record". The conspirators might have carried the day with perfect effrontery, if Hiss had not perjured himself. For ironically, Hiss was convicted for perjury, not for treason.

Frantic efforts were made by the conspirators to save their key man. Hundreds of thousands of dollars were spent by the Empire in his defense. His attorney in the first trial, Lloyd Paul Stryker, is reported to have been paid more than \$100,000 as a retainer. John Foster Dulles and Supreme Court Justices Felix Frankfurter and Stanley Reed appeared as character witnesses for him in the first trial, when it appeared that the prosecution could not muster adequate proof. However, discretion became the better part of valor when it became apparent in the second trial that the charges could be sustained, and it was manifestly unwise for Dulles and his Rockefeller Imperial bosses to become too closely identified with a perjured traitor; and Dulles modified his original testimony.

At the time of his conviction Alger Hiss was still top man in Rockefeller's Council On Foreign Relations and Institute of Pacific Relations, president, on leave, of the Carnegie Endowment For International Peace, member and director of the executive committee of the Association For The United Nations, chairman of the executive committee of

the Citizens Committee For Reciprocal World Trade, and trustee of the Woodrow Wilson Foundation and the World Peace Foundation. In those capacities he was intimately associated with Nelson A. Rockefeller, David Rockefeller, John D. Rockefeller 3rd., Owen Lattimore, Philip Jessup, Thomas K. Fin-letter and many other "notables", whose names were carefully kept out of the trial.

The source of the hundreds of thousands of dollars spent in the legal defense of Hiss, in the employment of the same wiretappers who were later employed by Clendening Ryan on behalf of Winthrop Rockefeller's "Fusion" candidacy in New York City and on the successive appeals made by Hiss, need not be asked. It is quite apparent that the bosses whom he served so well with his treason, could not afford to let him down. His services were needed in carrying out their plans. His enforced "retirement" as Jailbird No. 19137 in the Federal Penitentiary at Lewisburg, however, has not defeated those plans. His assistant in the State Department, Joseph E. Johnson, a member of Rockefeller's Council On Foreign Relations who had resigned when a leak to Russia of top secret information was traced to the Division of International Security Affairs, is carrying on in his place as president of the Carnegie Endowment for International Peace.

**FREDERICK VANDERBILT FIELD** Frederick Vanderbilt Field is another highly significant cog in the Rockefeller Red organization, has played a useful role as an agent of the Rockefeller Soviet Axis Far Eastern conspiracy. Like Alger Hiss, he is now a martyr of Rockefellerism, temporarily "retired" to a jail cell, not for treason against the U.S. but for contempt of court for refusing to reveal the obvious source of the collateral furnished by the Civil Rights Congress as bail for four, fugitive, convicted, top Communist agents.

Field is a star product of Bismarck's Marxist propaganda drive merged with Rockefeller "educational philanthropies". He graduated from Harvard, a muddled Marxist, in the class of 1927, with two other Rockefeller Red stars, who followed the same career, Laurence Duggan and Joseph Barnes. Duggan paid the death penalty for his "deviation", after testifying before the House Un-American Activities Committee on the Rockefeller sponsorship

and direction of the Red Institute of International Education, of which he was director, by a mysterious plunge from his sixteenth story office window. Barnes accompanied Field when he went to extend his Marxist muddling under Harold Laski at the Rockefeller subsidized London School of Economics and Political Science. Barnes later married Field's first wife.

On their return from Europe, both Field and Barnes found employment promptly with the Rockefeller Soviet Axis Institute of Pacific Relations. They had been prepared for their jobs by their training in the Rockefeller subsidized schools, under Felix Frankfurter and Harold Laski, and fitted perfectly. Field boasted:

"My job there (the IPR) was something I am proud of; it was actually a job on which I could have supported my family on my own." Rockefeller agents are well paid. Not needing the salary, Field returned it, \$100,000 in all, to the IPR. The job carried with it membership and dominance in Rockefeller's Council on Foreign Relations.

In the following year he married and took his honeymoon on an extended trip to Europe and Russia, as secretary to the American delegation to the Kyoto conference of the IPR. He went in company with John D. Rockefeller 3d who was secretary to James G. MacDonald, chairman of Rockefeller's Foreign Policy Association, one of the members of the delegation. In the atmosphere of the Rockefeller-Soviet Axis, all of Field's muddling cleared up, and he adopted the power pattern of Communism and the Axis as his creed. In his executive post and his editorial activities in the IPR, at the side of John D. 3rd and Owen Lattimore, Field became one of the key Rockefeller Empire Far Eastern agents, doubly valuable because of his acceptance by the Communists.

Field followed closely each bend in the Communist Party "line", supported many Communist organizations, and served as emissary for Communist spy, Whittaker Chambers. Jointly with the Kremlin, he financed through his American People's Fund the Jefferson School of Social Science, the official Communist Party "school for traitors" in New York City. With Owen Lattimore and other Rockefeller subsidized members of the editorial staff of the IPR publications, he organized Amer-

asia, and published from the IPR office that Communist, espionage publication "front". During the period of the Hitler Stalin Pact, he resigned his staff position in the IPR and organized the American Peace Mobilization, to agitate against American entry into the war. He picketed the White House until, immediately after Hitler's invasion of Russia, he made an about face to follow the Party "line" and stridently propagandized for our entry into the war as a champion of the Soviets. Though he resigned as trustee of the IPR in 1947, he still continues to implement its Far Eastern policy as a key member of the Foreign Office of the Rockefeller Empire, the Council on Foreign Relations. It is not difficult to discern whom he protected when he refused to name the contributors to the Civil Rights Congress bail fund for the top Communist conspirators and traitors.

### OWEN LATTIMORE

Owen Lattimore, an English-schooled Tientsin newspaper man who, according to affidavits in the hands of the FBI, led several pro-Communist student uprisings there, was launched on his career with the support of the Rockefeller dominated, Red Social Science Research Bureau, Harvard-Yenching Institute and J. S. Guggenheim Memorial Foundation. He devoted himself to the cause of the Soviets in Mongolia and other sections. He was then brought back to spearhead the Far Eastern activities of the Rockefeller Soviet Axis thru the Institute of Pacific Relations and the Council on Foreign Relations. He was a member of the Red cell that operated the IPR for the Axis according to Budenz, and became editor of its Pacific Relations, and founding editor of its Soviet espionage front, Amerasia. In effect he became the undersecretary of the Foreign Office of the Rockefeller Empire on Eastern Affairs, and one of the top indoctrinators of their agents in the CFR, the IPR and the State Department. His numerous publications consistently pursued the line of the Rockefeller Soviet Axis, or led it.

Budenz testified Lattimore was assigned by the Politburo to misrepresenting the Chinese Communists as "agrarians" who had no interest in Marxism, and to other key assignments. These involved appointment to ostensibly minor official State Department posts, including: Roosevelt-appointed per-

sonal advisor to Chiang Kai-shek in which post he was in excellent position to accomplish the betrayal of China to the Communists; Deputy Director of Pacific Operations of the Office of War Information, where he furthered the cause of the Chinese Communists by packing his division with Communist Chinese personnel from the New China Daily News; "adviser" to Vice-President Henry A. Wallace on his mission to China; and UN Point 4 representative to Afghanistan.

Lattimore's interest in Tibet, involving the entertainment of a Lama in his Baltimore home, was followed shortly by betrayal of Tibet to the Chinese Communists. It will be interesting to watch what his interest in Afghanistan, coupled with the sending of Standard Oil experts there, will evolve.

As is usual for Rockefeller Soviet agents, Lattimore was planted in a university post in the Walter Hines Page School of Diplomacy, at Johns Hopkins, where he indoctrinated, or "trained", embryo diplomats for R. S. Axis assignments in the State Department. With his star pupil, John Stewart Service, according to affidavits produced by Sen. McCarthy, Lattimore was accomplice in the Amer-asia espionage case that involved the theft from the State Department and other Government offices, of seventeen hundred secret documents (for transmission to Communist agents) that jeopardized the secrecy of our codes and endangered the lives of tens of thousands of GIs. As is so often the case of Rockefeller-protected agents, neither Lattimore nor Service were even indicted for the crime. Instead, Service was promoted immediately after his arraignment, and Joseph Grew, the State Department official who demanded the prosecution of the malefactors, was ousted. Six years later after numerous phoney "investigations", as a result of aroused public sentiment, Service was discharged in December, 1951, as a "security risk".

As an officer of the IPR, Lattimore made Red "pilgrimages": to Moscow, in 1937, with Stalin-decorated Edward C. Carter, where they "were obviously receiving instruction from the Soviet Government regarding the line which the Institute ought to follow"; and to Chinese Communist headquarters at Yenan, in 1937, in the company of the Red fellow editors of Amerasia, where "they were greeted by Communist spy, Agnes Smedley" of the

Richard Sorge ring. And he was addressee subsequently of correspondence directly from Red spy Sorge, whose ring operated out of the IPR in precipitating the Pearl Harbor attack.

In view of his record, it is difficult to understand what objection Lattimore could offer to Sen. McCarthy's charge that he was a top "Soviet agent", unless it is now the Communist Party line for its agents to deny their affiliation. Certainly no avowed Soviet agent could have served the Communists to better advantage.

When Sen. McCarthy's charges finally did come to a hearing before the packed Tydings Committee, tremendous pressure was brought to bear to protect Lattimore from exposure. None of the above stated record and other data which McCarthy turned over to the Committee and to the FBI to prove that Lattimore "was or had been a Communist" was permitted in evidence. At no point was there brought out the intimate association of Lattimore with Alger Hiss, with the Amerasia, crowd, including Philip J. Jaffe and Frederick V. Field, or his membership and influence in Rockefeller's Council on Foreign Relations and Institute of Pacific Relations. Instead he was permitted by Tydings to use all his vast skill in the peculiarly Communist art of "smearing" and befuddling with dialectics, against his accuser, McCarthy, and to convert the hearings to placing the latter on trial instead of himself answering the serious and well substantiated charges brought against him. The substance of his meagre reply to the charges was the same as that always advanced when one of the agents of the Rockefeller Empire comes under fire: the cry of "witch hunt", "guilt by association" and "smear".

All of the wealth and influence of the Rockefeller Empire and its Council on Foreign Relations, with their control of the press and all other avenues of communication and publication were brought to bear to protect Lattimore and to discredit McCarthy.

### GENERAL DWIGHT DAVID EISENHOWER

Dwight David Eisenhower was born at Denni-son, Texas, October 14, 1890. He graduated from the U.S. Military Academy with a B.S. degree in 1915 and served as a lieutenant colonel in the Tank Corps, in World War I. He graduated successively from the Army Tank School, in 1921; the Command and General Staff School, in 1926; from the War

College, in 1929; and from the Army Industrial School, in 1932. On June 24, 1942, through influence the source of which is now apparent, he was jumped many points by President Roosevelt and made his "yes-man", "Commanding" General in the European Theatre of Operations. On November 8, 1942 he became Allied Commander-in-Chief in North Africa; and on December 31, 1943, he was appointed Commanding General of Allied Forces in the European Theatre of Operations. In 1945 he became Commander of U.S. Forces in Germany.

Eisenhower consented to the encirclement of his command by potentially hostile Russian forces in Berlin, where they could be trapped and held as hostages at the will of the Soviets. It is hard to understand any loyal officer so betraying his command.

Inactivated, Eisenhower, like other Rockefeller political hacks, was retired to the presidency of a university, Columbia. There he did nothing to clean out the Communists on the faculty that make it a hotbed of subversion. Instead, he chose, in 1949, to associate with the exposed Communist agents and traitors of Rockefeller's Council on Foreign Relations. There is truth in the adage: "A man is known by the company that he chooses".

Eisenhower was the natural choice of the Rockefeller interests to head their UN forces in Europe to carry out their program. A loyal American would not be a party to withholding idle reinforcements and supplies, by shipment to Europe, from troops under fire in Korea.

Eisenhower is being groomed as the conspirators' "bipartisan", or Fusion, presidential candidate in their move to rob the nation of any voice in the Government and to set up a military dictatorship, as forecast in their "Hopley Plan", a prelude to their final "1984" program.

As early as June 7, 1947, Drew Pearson announced that Eisenhower conferred with Paley, of Columbia Broadcasting Co., Watson, of International Business Machines and John D. Rockefeller Jr., in regard to the Presidential nomination in 1948. I pointed out in my *Strange Death of Franklin Delano Roosevelt* (p. 310) :

"This confirms the indication of his appointment, with the support of the General Education (Board) to the post of president of Columbia University—

that he is planned as an entry from the Rockefeller stables in the Presidential Sweepstakes."

Though Eisenhower creditably, or possibly as a disarming maneuver, pointed out the menace to a republic of a military man as President, it might be expected that he will take his orders from his Rockefeller bosses and subversive agents, and accept the nomination, to rob the nation of any choice other than acceptance of Rockefellerism.

DEAN GOODERHAM ACHESON "... betrayer of America . ." (Sen. Jenner)

Dean Gooderham Acheson, after serving as secretary to Supreme Court Justice Louis D. Brandeis, following training at Harvard under Felix Frankfurter, was sponsored by Sen. Millard Tydings (son-in-law of pro-Communist Rockefeller henchman, Joseph E. Davies), for the post of Solicitor General, but was given by Roosevelt the Under-Secretary of the Treasury appointment in the Popular Front "New Deal". As set forth in the Congressional Record of May 16, 1933, p. 3483, Senator Couzens of Michigan opposed Acheson's confirmation on the ground that his firm had many clients, including the Standard Oil and Rockefeller interests, who would have income tax refund cases that would come up before him, and he questioned that Acheson could be impartial.

By way of rebuttal and defense of Acheson, Tyding revealed his ties with Communists, saying:

"It has not been said, but should be said that Mr. Acheson has represented the Union of Soviet Socialist Republics. It might be contended that because he represented modern Russia, that because the Soviets have been his clients, therefore he is a 'Red' or 'radical' or unfitted to hold the office to which he has been nominated."

Acheson, a member of Rockefeller's Council on Foreign Relations, belied Tydings' statement by becoming, in the eyes of the Soviets, according to a repentant spy courier, the ringleader of the Rockefeller Empire agents in the Department, acting on behalf of the Rockefeller Soviet Axis in the furtherance of the Lenin program for the Soviet conquest of China and Asia. He championed the Hisses—Donald who was his law partner, and Alger

who later became his superior in the Rockefeller Foreign Office—and disdained the advice of the Department's security officer Adolph Berle, that they were Communists and security risks. He surrounded himself with champions of Communism and Rock-efellerism. From Rockefeller's CFR and IPR, he drew Owen Lattimore, John Carter Vincent, Lauchlin Currie (named by Communist spy courier Elizabeth Bentley as "feeder" of confidential and top secret information directly from the White House, where he was assistant to Roosevelt) and Philip C. Jessup, Chairman of the Pacific Council of the IPR, champion of Frederick Vanderbilt Field and Alger Hiss, sponsor of the American Russian Institute and other Communist and front agencies and Acheson's "adviser" and Ambassador-at-large; and others of the same breed.

In 1950, Earl Browder formerly head of the Communist Party in the U.S. revealed in his testimony before the Tydings Committee, that he and his adjutant, Robert Minor, had been invited on October 12, 1942, to the State Department by Acheson to confer with him, Lauchlin Currie and others; and that he had been asked by them to render service as a State Department courier in the transmission to Chinese Communist leader Mao Tse-tung through Madame Sun Yat Sen, of the information that they had changed the policy of the U. S. and would no longer support Chiang Kai-shek in his fight on the Communists, but that instead, they viewed the Chinese Communist cause with favor, and they intimated that support for it would be forthcoming. This was one of the first overt steps in the betrayal of American interests in China that is now costing us so heavily in lives and fortunes.

After the Amerasia case was "fixed", Grew who had forced its prosecution, was dismissed; and Acheson, whose associates were the guilty parties, was promoted. PM, the Communist propaganda sheet, exulted over Acheson's appointment:

"Now the State Department policy has a better appreciation of what the Soviet Union wants." It was true. Acheson, with the aid of his associates, Lattimore, Vincent, Hiss, Currie and others, hastened to deliver China and Japan to the Communists. In Japan, they were blocked by MacArthur in spite of their planting of Communist agents on his staff, where some of them still remain. This miscarriage

of their plans probably will be corrected, by the "peace" activities of the Rockefeller overlord of the State Department Reds, John Foster Dulles.

In bold pursuit of his policy of betrayal to the Rockefeller Soviet Axis, Acheson on June 19, 1946 urged the Senate Foreign Relations Committee to set up a ten-year "Lend-Lease" program for arming and supplying the Chinese Communist Army. Failing in this, he and his fellow conspirators undertook to circumvent Congress, and through General George Marshall, as their agent, to accomplish the supplying of the Communists and the betrayal of the Nationalists, as is related elsewhere. This is the purpose for which they suppressed General Wedemeyer's report. All the plans that Acheson originated in the State Department, "Lend-Lease", UNRRA, the Marshall Plan, the Atlantic Pact and the Point 4 program, were designed for that same purpose. This was also the purpose of the shipment of a gift of a hundred million bushels of wheat to India for transshipment to her Soviet ally and Communist China. As a reward therefor, Rockefeller's Standard Oil Co. (N. J.) has been given a virtual monopoly of the oil market in India, with the acquiescence of the Soviets, who will be supplied with their oil through that channel.

Acheson has never tired of serving the Rockefeller-Soviet cause. As Under-Secretary of State, he approved a loan to the Polish Communist government headed by David Rockefeller's teacher and friend, Oskar Lange. Acheson's law firm, Covington, Burling, Acheson & Shorb, whose partners Burling and Donald Hiss were registered as agents of Communist Poland, handled the loan.

Sen. McCarthy's exposure of treason and perversion in the State Department created an emergency for Acheson and his Red clique, that threatened their control of the Government. It was met by reversal of Acheson's announced policy of abandoning South Korea, that deliberately launched us on the Korean "police action". The Korean betrayal has firmly resaddled the conspirators in office. The tens of thousands of GIs lost in the process mean nothing to the sadistic plotters. The crushing taxation which it has served to excuse, hastens their attainment of a U.S. and world-wide dictatorship.

Acheson has matched Gen. George Marshall as the best Secretary of State and collaborator

that the Soviets and the Rockefeller Empire have ever had. He has persistently protected Soviet spies and agents; and his refusal to turn his back on his convicted superior, Alger Hiss, is now proverbial. For that reason the demands for his dismissal by Congress, by the nation and by the veterans organizations, the American Legion and the Veterans of Foreign Wars, are futile.

The American veteran has not yet awakened to the realization that he is regarded by the conspirators as "peasant" and mere cannon fodder to be expended in Rockefeller Crusades. Not even his vote gives him any weight in their consideration, so completely have they corrupted the electorate and engineered the theft of elections. He is a mere robot who has been disfranchised and is beneath their contempt. Consequently it is natural that his demand for Acheson's dismissal has gone as unheeded as the demand of large sections of the press and of the people at large. "Fixes" that involve the lives and wealth of the citizenry have assumed the status of unimportance, as contrasted with "fixes" of so-called "sport events", that have been whipped up to satisfy the public's entire capacity for indignation.

#### JOHN FOSTER DULLES

"For democracy is, of course, a luxury. It involves inefficiencies and weaknesses, and it is incompatible with the attainment of maximum national effort."

This statement, made by John Foster Dulles, (Rockefeller kinsman, married to Janet Pomeroy Avery, cousin of John D. Jr., Grand Vizier of the Rockefeller Empire, its "bipartisan" gift to the nation and Senior Statesman assigned to supervision of the State Department) before the Foreign Policy Association on March 18, 1930, aptly describes the totalitarian bent of his clan. Chairman of the Board of Rockefeller's Foundation, he has devoted his life to their service, as their top agent and counsel.

Starting at the top of the international diplomatic scale as secretary of the Hague Peace Conference, when a nineteen year old Princeton student, he consistently has represented the Empire in "top drawer" capacity. In the years following World War I, he became identified with their I. G. Far-benindustrie and German banking interests, from

the start. And from the start he participated in the dealings of the Rockefeller Soviet Axis.

His indiscriminately totalitarian bent and faithful adherence to the interests of the Rockefeller Empire are attested to by his organization and support of America First and his intense isolationism prior to Dunkirk and Hitler's invasion of Russia, and his pro-Communism. It is evinced in his book War, Peace, And Change published in 1940, in which he undertook to justify, on behalf of the Rockefeller Empire, the "expansion" of their Nazi and Fascist collaborators, and even of the Japanese.

This book by Dulles offers the public a word of caution in regard to his activities. In it he assumed a role that has been assigned to him repeatedly. He undertook to throw our country off guard by assuring us that there was no danger and no reason for alarm, at the very time the conspirators were planning an attack upon us. He wrote:

"There is no reason to believe that any totalitarian states separately or collectively, would attempt to attack the United States . . . Only hysteria entertains the idea that Germany, Italy, or Japan contemplates war on us." Again in 1950, Dulles repeated the performance by appearing at Seoul to throw the South Koreans off guard by assuring them that there was no danger of an invasion from the north, at the very time that the conspirators had launched the invasion. Once again, in a special article written by him and distributed by the NEA Service, on Friday, December 14, 1951, that is an outline of one that is scheduled to appear in Foreign Affairs the official publication of Rockefeller's Foreign Office, the CFR, Dulles reassures us that we can stop the Russian Imperialism that his crowd have done so much to foster, by adopting some new methods that he proposes. Under the circumstances, a natural reaction is "Beware of the Greeks bearing gifts!" and "Where are they planning to hit us next?"

Dulles is regarded as the Rockefeller Empire's dispenser of patronage and guardian of the subversive, pro-Communist cell in the State Department. The New York Times quoted Dulles on July 25, 1950, as acknowledging to a group of Republican Senators that he was well aware of the existence of a group of Communists in the State Department who

were working to betray China, and incidentally the U.S., to the Soviets. He said:

" . . I do admit that at one time there was a group that felt a dose of Communism would do some countries good." Alger Hiss informed the Senate Investigating Committee that his sponsor, adviser and mentor throughout his career had been John Foster Dulles. The entire Dulles family, including his brother Allen, his sister Eleanor, and Rhea Foster, have been extremely active in the Rockefeller Soviet Institute of Pacific Relations. Dulles and David Rockefeller, as Trustees of the Carnegie Endowment For International Peace were acknowledged to have made Hiss president of that organization.

Despite all shows of conflict between the U.S. and the USSR that have been staged for the diversion of the "peasants", there has never been any rift in the lute of Rockefeller-Soviet relations, thanks to the "diplomacy" of Dulles. He has always been most punctilious in discussing with Soviet representatives all moves planned, and arranging for their collaboration. He makes no secret of it. This is startlingly demonstrated by the contemptuous report made by Dulles in his maiden address in the Senate (to which he had been appointed by Rockefeller puppet Gov. Thomas E. Dewey, to whom he dictated his "bipartisan" foreign policy, as supposed "adviser"), on July 12, 1949 (Congressional Record, p. 9276). Dulles stated that he had attended the Paris Conference of Foreign Ministers, in company with Philip C. Jessup, as "adviser" to Dean Acheson; and that there he had discussed with Andrei Vishinsky, among others, the matter of a let-up of the "Cold War". It had been decided by them that such a let-up must not occur because it would not be wise on the ground that:

"Some fear that any relaxation of the East-West tension would bring a corresponding relaxation on the part of the American people, and therefore they needed to be artificially alarmed." On July 15, 1949, Sen. William E. Jenner, of Indiana, was reported by the N.Y. Times (7/16/49, p. 4, col. 3) to have

"... strongly and personally challenged Sen. Foster Dulles and called upon Sen. Dulles ... to rise and give an explanation of his remarks at 269

the Big 4 Foreign Ministers Conference in Paris that the U.S. public be kept artificially alarmed. The suggestion was rejected, and Sen. Dulles sat silent and smiling. Dulles later told reporters that it was suggested at the conference, but would not tell who offered the suggestion. He just chuckled and made no reply." Needless to say, the remark was merely a contemptuous restatement of the policy of the Rockefeller Empire, made by its agent, which Sen. Jenner aptly summed up as follows:

"In other words . . . they take the position: 'Tell the American people only what you want them to know; but lead them down the road to bankruptcy . . . Keep them living from crisis to crisis, from emergency to emergency.' " An emergency in 1950, the conviction of Alger Hiss for perjury in connection with treason and the consequent intensification of the warranted distrust of Dean Acheson and his betrayal of China to the Communists, required some action. John Foster Dulles was put back into the State Department in official capacity as "bipartisan" and "Republican" to neutralize the criticism from Republican quarters. This was done under the most extraordinary circumstances.

On April 6, 1950, the New York Times, the official gazette of the Rockefeller Empire announced on page 1 that President Truman would appoint John Foster Dulles "as top policy adviser in the State Department probably with the rank of Ambassador at Large". Simultaneous announcement appeared on page 4 of the Times of Dulles' appointment as the Chairman of the Board of Trustees of kinsman Rockefeller's Foundation. The vein of the reports indicated that John Foster Dulles had served the Rockefeller Empire so loyally since 1935 that he was being rewarded with a promotion in one of its subsidiaries, the State Department. A special dispatch to the New York Times made it clear, however, that the order for this promotion had come from powers above and behind the Government. It was apparent that President Truman, wintering at Key West, had not yet received his orders from his Rockefeller Empire bosses; for he denied any intention of appointing Dulles to the State Department, Ambassador at Large or any other appointment.

On the following day, Truman had received his orders, and the appointment of Dulles as Foreign Policy Adviser was announced by the State Department, not by Truman. Dulles' activities since that appointment make it quite clear that he, and not Acheson, is the boss of the State Department, acting in his capacity of top agent of the Rockefeller Empire and its Foreign Office, the Council on Foreign Relations.

In line with his policy of keeping the nation "artificially alarmed", Dulles presented it with the wholly unwarranted Korean war that was deliberately precipitated by pre-arrangement and with full premeditation. It was no coincidence that John Foster Dulles, Foreign Policy Adviser of the State Department, was present in Seoul in his customary role of putting the South Koreans off guard with false assurances of "security", at the very time that the North Korean Communist and Chinese Communist Armies were invading South Korea. How little faith he had in his own treacherous assurances is indicated by the fact that he hurriedly fled by plane, without awaiting the Communist cohorts for whom he and his confederates, of the State Department and the Rockefeller Empire, had eased the way and "opened the gates". The Korean "police action" relieved the most dreaded "emergency" for the conspirators, their ousting.

The harmony that Dulles maintains with the Soviets for the Rockefeller Empire is further illustrated by the Japanese "peace" negotiations. Dulles, acting as a one man State Department, arranged a treaty of peace with Japan that will serve the purposes of the Empire. Before he left for Japan, the New York Times of January 15, 1951, reported that Dulles had conferred with Jacob A. Malik, Soviet delegate to the United Nations. Acting on behalf of the Rockefeller Empire, and completely mindful of the agreements of the Rockefeller-Soviet Axis, Dulles, according to the Times, sought to advise Russia that the object of his visit to Japan was wholly exploratory.

Despite loud and widely publicized threats of a fight on the treaty by the Soviets, to divert the "peasants", the Russian delegation made merely a token demonstration at its signing so as to prevent popular appreciation of how well satisfied they were with it. The Rockefeller Empire is equally

well satisfied with it, making the sentiment in the Rockefeller Soviet Axis unanimous. But we "peasants" might well ask ourselves, after this Dulles deal as after the others: "What disaster does it forebode for us?"

Dulles, son of a Watertown, New York, minister, has been one of the principal agents of the Rockefeller Empire on the religious front, and one of the "leaders" of the subversive Federal (alias National) Council of Churches of Christ in the U.S. (alias America). The totalitarian nature of this "leadership" was aptly described by George Dugan of the American Council of Christian Churches, a truly American organization, at its meeting in Philadelphia reported in the New York Times of October 30, 1948, that charged that John Foster Dulles: "Has been for fifteen years 'an effective tool of extremely radical and pacifist' church leaders associated with the Federal Council and World Council.

"These he labeled . . . 'cooperative fronts for world Socialism.'" In conclusion, Dugan and the Council vigorously attacked Dulles personally, as stated in the Times article:

"The Council also called on its adherents to oppose the appointment of John Foster Dulles to either the position of Secretary of State or representative of the United States in the United Nations."

Dulles, in collaboration with Alger Hiss and Nelson Rockefeller, was one of the active principals, representing the Rockefeller Empire in the creation of the United Nations. Dulles subscribes to any and every form of subversion of the sovereignty of the U.S., or its surrender to any foreign power or agency. It is understandable that the direct or indirect control of such powers and agencies by the Rockefeller Empire would naturally imply complete and absolute surrender of U.S. sovereignty to the Rockefeller Empire. In line with this policy, Dulles advocates and supports the "Union Now" scheme advocated by Streit and other British agents and Anglophiles. Originally it merely demanded return to England as a colony, and sought to make of George Washington a traitor and of Benedict Arnold a patriot. In its more recently evolved form it has propagandized, in addition, for an Atlantic Pact

as a device to attain its objectives. John Foster Dulles wrote a laudatory introduction for an exposition of the latter form, written by Justice Owen J. Roberts, John Schmidt and Clarence Streit, and published under the title of *The New Federalist* by Federal Union Inc. with the support of such patriots as Senator Estes Kefauver, J. William Fulbright, and Edward J. Thye, and Representatives James Wadsworth, Walter B. Judd, and Thomas E. Burke. Their names are listed in a full page advertisement of Federal Union Inc., its publication *Freedom & Union*, and *The New Federalist* that appeared in the *New York Times*, August 29, 1950. The advertisement has the effrontery to represent George Washington as advocating the plans of these schemers and propagandists for Union Now, a return of the U.S. to Britain as a colony.

The true character of the "Union Now" program was dramatically emphasized by a quotation read by Walter Trohan, of the *Chicago Tribune*, to Sen. Estes Kefauver, one of the conspirators' Presidential candidates, on the American Forum TV program on December 23, 1951, as follows:

"I am now led to devote my life to the reunion of the British Empire ..." It was written in 1780 by Benedict Arnold. Trohan slyly suggested that Kefauver's platform is identical with that of Benedict Arnold. And it is also the platform of all of the conspirators' puppet candidates.

All this makes one marvel at the strange people that undertake to represent true, patriotic Americans. With John Foster Dulles, a kinsman, attorney and agent of the Rockefeller Empire as the "bipartisan" dictator of the policies of our government, strange things have come about, and even stranger things can be expected.

As senior member of the law firm of Sullivan and Cromwell, that has played a stellar role in "dollar imperialism", Dulles, and his brother, have profited handsomely from these foreign entanglements.

The roles played in the Rockefeller Empire by the rest of the members of the CFR would make quite as interesting reading, but that will take another book.

## CHAPTER XV

### ROCKEFELLER'S INSTITUTE OF PACIFIC RELATIONS

Soviet Espionage & Propaganda Agency "Who controls Asia, controls the world."—LENIN

The Institute of Pacific Relations is a most vital propaganda agency for the Communist conspiracy of world conquest. One of the basic tenets expressed by Lenin was: "Who controls Asia, controls the world". For Asia holds more than half the population of the world and is rich in resources. Lenin's conspiracy is identical with that of Hitler's Professor Haushofer,—conquest of the world through domination of the Eurasian land mass.

The negotiation of the deal entered into by Standard Oil companies with the Communists for surplus Russian oil, which constitutes the charter of the Rockefeller-Soviet Axis, was under way in 1925-26. The virtually simultaneous organization of the Institute of Pacific Relations (IPR) for the purpose of carrying out the most important and basic aspect of the Communist conspiracy, the conquest of Asia, under Rockefeller auspices and with the financing of the Rockefeller Foundation, might well have been an important element in the deal. For no one propaganda agency has contributed more to the success of Lenin's Asiatic conquest plot than has the IPR. When the House Committee listed the American Council of the Institute of Pacific Relations as subversive and Communist, it put the case most mildly.

The dependence of the IPR on Rockefeller is made clear by the appended list of grants to it which total more than \$2,000,000 over a period of 25 years.

As in the case of the Council on Foreign Relations, the Rockefeller interests insured subservience of the Institute of Pacific Relations to them by the device of annual grants, instead of endowment, that could be varied in accord with how well the Institute served them.

The IPR American Council was represented in 1927 at the signing of the constitution of the IPR by Ray Lyman Wilbur, then president of Leland Stanford University, later Cabinet officer under Hoover and member of Rockefeller's Foreign Office, the Council on Foreign Relations. Associated

with him were Henry S. Pritchett, of the Carnegie Foundation for the Improvement of Teaching and member of the Council on Foreign Relations; Leo Wolman, Director of Research of the Amalgamated Clothing Workers' Union and member of Rockefeller's Council on Foreign Relations; Stephen P. Duggan, Director of the Rockefeller-subsidized Institute of International Education and member of Rockefeller's Council on Foreign Relations; Edward Clark Carter, secretary of the Y.M.C.A., and of THE INQUIRY, later Director of the subversive Russian American Institute that has been labeled a direct agency of the Kremlin, decorated for his treacherous services for the Soviets with the Order of the Red Banner of Labor by Stalin in person, President of the Russian Relief, and secretary general of the IPR, and member of Rockefeller's Council on Foreign Relations. It was Carter who, with the full weight of Rockefeller influence behind him, acted to found the Institute at a Honolulu conference in 1925. But he was soon joined by other Imperial agents and dupes who served to disguise the subversive character of the enterprise.

In its 1930 Report (p.228) the Rockefeller Foundation acknowledged its key and dominant role in setting up the Institute:

"These (IPR) activities were first given substantial assistance through a grant by the Laura Spelman Rockefeller Memorial." Though Rockefellers launched the IPR, for obvious propaganda purposes they preferred to represent (R.F. 1930 Report, p. 252) that "It was established by the peoples of the Pacific area to promote cooperative study of their mutual relations and is an unofficial body centering its activities in biennial conferences. An International Secretariat is maintained at Honolulu to coordinate studies and researches undertaken by various national groups in preparation for the conferences. The governing body, called the Pacific Council, consists of one representative from each national organization or council. A monthly journal, Pacific Affairs, is published in addition to the proceedings of the conferences. Though the organization operates entirely in an unofficial capacity, it has become an effective mechanism for promoting 275

international understanding by competent and expert discussion." In its 1933 report (p. 263) Rockefeller expatiates further on the glories of his IPR, as follows: "The Institute of Pacific Relations seeks to advance international understanding, particularly in the Pacific area. Its work is carried out through the Pacific Council and through the national councils in the nine countries contributing to its general budget, namely the United States, Australia, Canada, China, Great Britain, Japan, the Netherlands, New Zealand and the Philippine Islands." Though the U.S.S.R. did not join the Institute until a later date, she was amply represented from the very start by Communists and fellow travellers who comprised the bulk of the membership of the American Council, of which the 1935 Rockefeller Foundation report boasts: (p. 222)

"It is the strongest of the national groups making up the membership of the Institute of Pacific Relations, and assumes the responsibility of leadership in financing the secretariat of the Institute and the biennial conference, and in stimulating research and publication. The American Council works closely with universities and other research and educational organizations." It is understandable, however, that the Rockefeller reports claim no credit for support of the notorious pro-Communist AMERASIA magazine, the editors of which were arrested on charges of wholesale misappropriation of secret government documents. As chief supporters of the American Council of the IPR the Rockefellers inevitably gave support to AMERASIA. For as Sen. Joseph McCarthy pointed out (C.R., March 30, 1950, p. 4453)

"... Far Eastern Survey, the publication of the American Council of the Institute of Pacific Relations for a long time occupied offices adjoining the official offices of AMERASIA ; ... in order to get into one office, one went through the other—almost a sort of joint venture". As a matter of fact, AMERASIA occupied the offices of the Institute of Pacific Relations with its official publications, FAR EASTERN SURVEY and PACIFIC RELATIONS. The offices were located in

a row of brownstone buildings owned by Carter's Y.M.C.A., extending from 121 to 129 E. 52 Street, New York City, reputedly donated by the Rockefellers. The partitions and walls of the buildings had been knocked out so that they all communicated, in order to mask the identity of control, an act that is so characteristic of the Rockefeller propaganda setups. And to create an appearance of independence, the magazines used the different street numbers of the same building as their addresses.

"Joint ventures", quoting McCarthy, they were indeed. AMERASIA was in reality an unofficial publication of the IPR that served as a semi-official outlet for its Russian Council. Aside from enjoying the offices provided with Rockefeller funds, the magazines shared an array of Red editors and authors in common. In matters controversial, they were all written in the same vein, the policy of the Rockefeller-Soviet Axis.

PACIFIC AFFAIRS listed Frederick Vanderbilt Field as editor in 1933 and in 1934 Owen Lattimore became editor, with W. L. Holland, Bruno Lasker, F. N. Petroff of Moscow, Norman Cooper, Sidney, Arnold Toynbee of London, G de T Glazebrook of Toronto, Roger L. Levy of Paris, Samitato Uramotsi of Tokyo, J. H. Boeke of Holland and D. K. Lieu of Shanghai as associate editors. In December 1936, the foreign associate editors were dropped and Owen Lattimore became sole editor with Catherine Porter as managing editor. The frontispiece carried the notation:

"Articles in PACIFIC AFFAIRS do not represent views of either the Institute of Pacific Relations or the National Councils of which it is composed. The Editor of PACIFIC AFFAIRS is responsible for the selection of authors and the acceptance of articles." The address of the PACIFIC AFFAIRS editorial office is given as 129 East 52 Street, whereas that of AMERASIA was 125 East 52 Street. But the manuscripts of the editors of AMERASIA found their way into the office of PACIFIC AFFAIRS even before Lattimore took over exclusive control. Thus its pages were graced with articles from the pens of AMERASIA editors Lattimore, Field, Cyrus H. Peake, Ch'ao Ting-chi and Harriet Moore prior to 1936. The AMERASIA editors were also listed as staff members of the American Council of

IPR. But when Lattimore took over, the editors of AMERASIA really "went to town" in the pages of PACIFIC AFFAIRS and their articles occupied ever more space. Staff members of the American Council of the IPR and editors of AMERASIA, William W. Lockwood who at the same time was acting editor of FAR EASTERN SURVEY, David H. Popper who was also Research Assistant for the FOREIGN POLICY ASSOCIATION, and Kate L. Mitchell swarmed in its pages. The marriage of AMERASIA and PACIFIC AFFAIRS was complete. The same AMERASIA editors managed to secure steady publication for their propaganda output in FAR EASTERN SURVEY even when their associate, William W. Lockwood, was not its acting editor. Eleanor Lattimore made the grade in 1948, and in 1943, Frederick Vanderbilt Field reported on the IPR's Mont Tremblant Conference. The difference in address did not constitute any barrier to an identity of ideology of the three publications of the IPR financed so liberally by Rockefeller.

Their "protection" would serve to explain the failure of the Department of Justice to prosecute the persons involved as spies and traitors in the AMERASIA case that was called by J. Edgar Hoover and the FBI "a one hundred percent airtight case". (C.R. March 30, 1950, p. 4437)

Soviet Russia is the only government that is a member of Rockefeller's Institute of Pacific Relations. Russia joined in 1931. George Sokolsky reported (N.Y. Journal American, 3/14/51): "It was announced that the Russian Council of the Institute had been formed, (at the time of the Hangchow-Shanghai conference of the IPR, held between October 2 and November 2, 1931) with Dr. Fedor N. Petrov as chairman. This is the beginning of active and direct Soviet participation in the affairs of the Institute of Pacific Relations". By curious chance the Rockefeller Foundation reports omit mention of this incident that made the Rockefellers the principal sponsor of another official Communist agency, the IPR. Nor do they boast of the fact that A. S. Swandze, brother-in-law of Joseph Stalin, was one of the organizers of the Russian Council.

In the report of the Banff Conference of the IPR, held August 14 to 26, 1933, which Russia did not

attend, the following explanation was offered: "... lack of recognition of the Soviet Government by the Government of Canada and the United States, and passport regulations that fall short of according visitors from the Soviet Union complete equality with representatives of other countries, prevented this proffered co-operation from materializing. The Pacific Council, in taking cognizance of this situation, not only expressed deep regret but determined to make sure that the time and place for the next conference, in 1935, should be chosen with full regard for the wishes of this important member group." (Journal American, April 10, 1951)

Laurance S. Rockefeller represented the family interests at the conference, as secretary of the American Council of the IPR, in company with Frederick Vanderbilt Field, Benjamin H. Kizer, Harriet Moore, Kate Mitchell and Owen Lattimore, editors of AMERASIA, and Joseph Barnes, Mrs. F. V. Field, Philip Jessup and Henry R. Luce. Newton D. Baker was chairman of the American Council. John D. Rockefeller 3d attended the Kyoto IPR conference as secretary to James G. MacDonald of Rockefeller's Foreign Policy Association.

Freda Utley, who was formerly a member of the British Communist Party, was employed by the Russian Council of the Institute of Foreign Relations in Moscow. She reported to Senator McCarthy (CR, 3/30/50, p. 4446) that she met Owen Lattimore in Moscow in 1936, when he was there in company of E. C. Carter as delegate of the IPR for the purpose of briefing by the Politburo. She stated that she was not admitted to the secret meetings between the Russian Communist leaders and the IPR delegates. But she stated that it was common knowledge at the Moscow Institute "that the Soviet government was paying a large sum as its contribution to the Institute of Pacific Relations".

The evidence of Freda Utley in regard to Lattimore and Carter was confirmed by another affidavit, as follows:

"I met and got to know Owen Lattimore in the spring of 1936 in Moscow when he and E. C. Carter were very obviously receiving instructions from the Soviet Government con-279

cerning the line which the Institute of Pacific Relations ought to follow". Under these circumstances it is scarcely surprising to find that the IPR served as agents, spies and agents provocateurs for its principal supporters, the Rockefeller Empire and Soviet Russia. Proverbially, "the man who pays the piper calls the tune". The Soviets called the tune mightily insistently, as is evidenced by the pilgrimage of Owen Lattimore, editor of IPR publications, and Roosevelt's and the New Deal State Department's "top authority on the Far East," to Chinese Communist headquarters in Yen-an. This was reported, quoting Senator McCarthy's report to Congress (C.R. 3/30/50, p. 4446), in

"... an article by Philip J. Jaffe entitled 'CHINESE COMMUNISTS TOLD ME' which appeared in the NEW MASSES of October 12, 1937. "In this article Jaffe gives considerable detail about his travels in China with T. A. Bisson and Owen Lattimore, giving details as to their stay at the Communist Foreign Office at Yen-an, and being greeted on their arrival at Communist headquarters by Agnes Smedley." This devotion of the IPR to the interests of the Rockefeller-Soviet Axis, however, did not preclude its serving also as an espionage agency in other directions, especially when it served the interests of its masters. Correspondence of the IPR seized in the barn of E. C. Carter's country home at Lee, Mass., throws interesting light on such espionage. The records make it clear that the IPR was the center of a vast espionage ring, serving the interests of its masters, as they might vary, following each twist and turn of the Party line. Orders were issued disposing of a vast number of agents, from Owen Lattimore and Philip Jessup up and down the line. They indicate that the IPR played its part, in the network of Rockefeller agencies, in engineering the precipitation of World War II and our involvement in it.

Thus in a letter from E. C. Carter, secretary general of the IPR, to William W. Lockwood, one of the editors of Amerasia who was active in numerous Communist fronts, including the National People's Committee Against Hearst and the Amer-

ican Committee for International Studies, and Director of the Woodrow Wilson Institute, Princeton University, is a discussion of "basic work (by) many groups and individuals" in the international field that clearly is a combination of espionage and propaganda, which it is suggested could be enhanced by the following assignments:

"Bring over R. H. Tawney so that he may appraise, criticize and interpret the Corbett project, contribute to it and at the same time make a critique of the plans of other serious groups on this continent. "Bring Ushiba, Saionji or Yokota in order that we may have someone from the very insides of Japan closely in touch with current thought in the Japanese army, the bureaucracies and the universities. "Bring von Trott from Berlin to be associated with Corbett, Sansom, Tawney and others and hold him here until a week before America enters the war ..."

Saionji was a key member of Sorge's Red spy ring. These letters make it clear that Rockefeller's IPR controlled the spy ring that instigated the attack on Pearl Harbor, and that they knew in advance, to the very day, when it would occur and involve us in the war.

Von Trott is more adequately identified by Carter in a letter to Owen Lattimore on October 29, 1940, as one of their agents, as follows:

"Adam von Trott has found that the best way of advancing the interests of the IPR these difficult days in Germany has been to join the staff of the Foreign Office to promote Far Eastern studies. As a member of the Foreign Office, therefore, he is ineligible to be a member of the international secretariat and his name should be deleted from the last pages of Pacific Affairs." The treatment that Carter suggested extending to

Russia was entirely different:

"Send Harriet Moore to the USSR to go through all government party writing on postwar problems and supplement this by interviewing party and Politburo chiefs."

In the case of Russia it was not a matter of espionage-

age but conferring and receiving instructions and orders through a trusted war horse of the Party. The regard in which the Kremlin held the IPR espionage activities was related by a former Communist general on the basis of conversations in 1935-1936 with a top general in the Soviet intelligence, in an affidavit that Sen. Joseph McCarthy gave the FBI and Congress (CR, 3/30/51, p. 4445) : "The thing that particularly disturbed Russian intelligence was that they had difficulty in getting Russian agents into the Far East because of the suspicion of the Japanese and the Chinese at that time . . . the head of the Russian intelligence told . . . that they were having excellent success through the Institute of Pacific Relations, which the Soviet intelligence, through Communists in the United States, had taken over. In connection with this he particularly mentioned Owen Lattimore and another individual... The (latter) individual has not been connected with the State Department, but did spend some time with Lattimore in the OWI . . . "The former Red army general('s) . . . testimony will further be that in the course of visits to other European capitals, he had received approximately the same information about the IPR and also about Lattimore . . . " When it served the interests of its masters, the IPR did not hesitate to act for other foreign powers, as in the preparation of Japan for its attack on Pearl Harbor. It served the conspirators well by forcing the U.S. into World War II without a declaration of war by Congress. This story is well told in an article entitled IPR-TOKYO AXIS by Shep-pard Marley, that appeared in the December 1946 issue of PLAIN TALK and is quoted from the Congressional Record of March 30, 1950. (p. 4462) : "The Japan Council of the IPR served the interests of aggression. A dispatch of December 7, 1945, by Frank Kelley, then in Tokyo as correspondent for the New York Herald Tribune, describes how in Japan the IPR was used as a front for imperialist purposes. Prince Fumimaro Konoye, who was Premier of Japan during much of the crucial period between the renewed war on China in 1937 and the attack upon Pearl Harbor 4 1/2 years 282

later, took a deep interest in his country's IPR chapter. He put his personal trusted aides into the key posts in the Japanese IPR, which was supported largely with funds contributed by the very industrialists who helped the militarists plan and carry out wars of aggression throughout the Pacific area. It was Konoye who had ordered the preparation of a report explaining Japan's need for expansion because of population pressure. This report was read to the IPR international conference of 1936, which was held in Yose-mite National Park, in California.

"The chief secretary of the Japan Council of the IPR, according to Mr. Kelley in the Herald Tribune, was Tomohiko Ushiba, Konoye's private secretary. Through Ushiba, Prince Konoye kept in touch with Edward C. Carter, then chief of the IPR's international secretariat, so that he could keep watch on American State Department policies. Far-Eastern experts, such as abound in the IPR, must surely have known that Prince Konoye was among the leading exponents of Japanese aggression for many years before Pearl Harbor. Yet there is no evidence that the Institute ever took any steps to prevent its use as a front for the dissemination of propaganda in the United States and for the gathering of inside political and military information about this country.

"Considering the semiofficial status which the IPR has acquired in the policy-making branches of the Federal Government, the Congress owes it to the country to investigate the history of the organization, its obscure foreign links, its unduly complex administrative set-up, and its alliances with pro-Soviet and pro-Communist elements both at home and abroad.

"The intricate nature of the administrative set-up of the Institute makes it ideal for control by a few well placed persons. Small wonder then that many of its leading and most prolific writers are dependable fellow travelers who faithfully follow the tortuous path Stalin sets—even if they have to slow down around the sharp turns of Soviet policy.

"The Institute's activity seldom reaches any large section of the public directly, and few persons know that it exists. It is doubtful if 1 out of 1,000 of the parents of boys who fought their way across the Pacific, from Guadalcanal to Okinawa, has ever heard of this organization. Yet in Government circles, including those where America's high policy in the Pacific is determined, the influence of the Institute of Pacific Relations has been enormous and is apparently growing.

"During the recent war, the Institute supplied many agencies with experts on the Far East. Four IPR staff members worked for the China section of the UNRRA. Three others did research for MacArthur's headquarters on Japanese reconstruction. William L. Holland was the head of the OWI in China. Owen Lattimore was President Roosevelt's gift to Chiang Kai-shek for a time and President Truman's special adviser to Mac-Arthur as well as Far Eastern head of OWI. The IPR supplied lesser lights to the OWI, OSS, and the State Department. Not all of these workers who joined Government agencies were Communists or fellow travelers. The IPR, however, frequently provided research specialists who were interested mainly in the furthering of Stalin's aims in the Far East.

"Many IPR trustees reached positions of considerable importance. In 1941, Lauchlin Currie was President Roosevelt's special emissary to China. William C. Johnstone worked on a special assignment for the State Department. George E. Taylor was director of the OWI's Far Eastern Section and later in the State Department's Office of International Information and Cultural Affairs. Benjamin Kizer, (former editor of AMER-ASIA) a Spokane lawyer, headed the UNRRA in China.

"The Institute's aid to the Government was not limited to supplying experts of varying degrees, for the Government bought 750,000 IPR pamphlets for soldiers in the Pacific and Asiatic theatres. Schools, too, have been influenced by IPR publications, especially the 284

series published jointly with the Webster Co. of St. Louis, designed for a 14-year-old reading level. In three and a half years this series sold over a million copies.

"Another way in which the IPR influences public opinion is through the newspapers and periodical press. As the IPR itself does not tire of saying, no one seems to know anything about the Far East. The harried editorial writer is immeasurably pleased, then, when he sees on his desk a neat publicity release and a copy of an article on some aspect of Chinese politics which he can now proceed to discuss.

"Like most associations into which the Communists and fellow travelers have moved, the IPR reveals certain inconsistencies and peculiarities of policy that can be explained only by the ideological affiliations of its most important figures.

"Operating more cleverly in IPR than in most groups they have entered, the Communists and their friends have been able to keep the reputation of this outfit pretty clean. But evidence of their work is easily noted when one takes the IPR material in bulk and breaks it down into two types—the controversial and noncontroversial. What has buffaloeed most readers of IPR books, pamphlets, and periodicals is that so much of the stuff is of a very scholarly nature, not at all on subjects that arouse the emotions any more readily than do articles on Chinese pottery. Yet in the last decade or so at least two out of every three articles in IPR's two journals—Pacific Affairs, quarterly, and Far Eastern Survey, biweekly—on such hot subjects as Chinese politics, the Soviet Union, and the general political situation in the Far East, with respect to those two countries and the United States, have been written by such staunch defenders of Stalin as T. A. Bisson, Owen Lattimore, Harriet Moore, Laurence Salisbury, and others not too numerous to mention in due time.

"It may be claimed that by selecting excerpts and quoting out of context any writer can be shown to believe almost anything. This is 285

frequently true. Yet the weight of the evidence that links the IPR to the Communist line is too great to pass off with such platitudes. The writings of the fellow travelers and outright Communists in IPR publications constitute only a small part of the total IPR material—but they constitute its most vital part, and they deal with the subjects that are most significant for American foreign policy, international relations, and public education." The key personnel of the American Council of the IPR who are represented as giving leadership to the entire organization, comprised what Louis F. Budenz exposed as a Communist cell. This cell constituted the backbone of AMERASIA, which in reality was one of the subsidiary publications of the IPR. This cell, according to Budenz, included Frederick Vanderbilt Field who, he stated, was to his knowledge a "Soviet espionage agent", and Owen Lattimore, both members of Rockefeller's Council on Foreign Relations. Lattimore, according to Budenz's testimony, was

"... commended (at a meeting of the American Politburo) by Frederick Vanderbilt Field and Earl Browder for the fact that he had been responsible for placing a number of Communist writers in the organs of the Institute of Pacific Relations of which he was then editor.

"In 1937 ... at a meeting called by Earl Browder, it was brought forward that we were now under instructions not to name the Chinese Communists as Red Communists, but we were to begin to represent them, as Browder said, as 'North Dakota Non-Par-tTsan Leaguers'. "Field was present at that meeting and made a report, at which he commended Mr. Lattimore's zeal in seeing that Communists were placed as writers in 'Pacific Affairs'. Mr. Browder also referred to that, and it was agreed that Mr. Lattimore should be given general direction for organizing the writers representing the Chinese Communists as agrarian reformers . . . "..."... at a regular meeting of the Politburo, at which Mr. Browder was present (in 1943) it was officially reported that Mr. 286

Lattimore, through Mr. Field, had received word from the apparatus that there was to be a change of line on Chiang Kai-shek. "It was decided that the line was to attack Chiang Kai-shek. As a matter of fact, an article was discussed to be put in one of the organs of the Institute of Pacific Relations—and it did so appear—by T. A. Bisson, declaring that Nationalist China was feudal China, and that Red China was democratic China." Other subversives and fellow travellers identified with the Rockefeller-Soviet Axis and associated with Lattimore, Field, Carter, Bisson, all of Rockefeller's Council on Foreign Relations, include:

Alger Hiss, now in jail (instead of executed) where he ought to be joined by his sponsors and accomplices, convicted of perjury in connection with treason; and a member of Rockefeller's Council on Foreign Relations.

Philip C. Jessup, who was chairman of the Pacific Council of the IPR in the years 1938-42, when the scheme was hatched for turning over China and Asia to the Soviets in accord with the purposes of the Rockefeller-Soviet Axis; who as Senior Adviser to the Secretary of State and as Ambassador-at-Large has played a stellar role in carrying out the conspiracy; and who is a member of Rockefeller's Council on Foreign Relations.

Lauchlin Currie, who as assistant and adviser to President Roosevelt, played the important role that has been recounted, has been named by ex-Communist spy courier Elizabeth Bentley as one of her sources of important espionage data; and who is a member of Rockefeller's Council on Foreign Relations, and employed as "adviser" to the Republic of Colombia.

Philip Jaffe, Lattimore's fellow editor of Amerasia, who pleaded guilty to charges regarding secret records and was fined a mere \$2500; uncle of the wife of one of China's top rank Communists, who was Lattimore's IPR confidential secretary; and himself labelled a Communist agent by Budenz.

Lt. Andrew Roth, a liaison officer at the 287

State Department from Naval Intelligence, who was associated with Jaffe in the AMER-ASIA case, but was never prosecuted therefor. Subsequently he was provided by the State Department with an American passport and went to Asia to engage in pro-Communist, anti-American propaganda.

John Stewart Service, pupil of Owen Lattimore, pro-Communist aid to General Stilwell, who in 1945 was ordered out by Ambassador Patrick J. Hurley; who on his return was arrested for complicity in the Amerasia affair anent secret documents together with Jaffe and Roth, but was never prosecuted therefor; who was subsequently assigned to a post of strategic value to the conspirators, State Department Foreign Service officer in India, merely to be recalled for a rehearing of his case, on the basis of charges made by Senator McCarthy, by the Loyalty Review Board in 1950, cleared by it once again, but relieved of his post in 1951 and finally ousted.

John Carter Vincent, State Department intimate of Dean Acheson, Lauchlin Currie and Owen Lattimore, who as head of the Interdepartmental Committee on Japan Policy, played his part in the conspiracy; who subsequently was appointed Ambassador to Switzerland but was relieved of his post in 1951 by Truman.

Laurence Duggan who was associated with Alger Hiss and Sumner Welles in the State Department and then became Director of the Rockefeller-subsidized propaganda agency, the Institute of International Education; who died, as have so many others associated in this conspiracy, in a highly suspicious plunge from the window of his sixteenth-floor office, after being questioned about his activities by the House Un-American Activities Committee; and who was a member of Rockefeller's Council on Foreign Relations.

Agnes Smedley, author, who was accused of being a Soviet spy by General MacArthur's intelligence officers, denied the charges, but on her recent death in 1950, left her entire fortune to the Communist Party.

Harry Dexter White, top adviser to 288

Secretary of the Treasury Henry Morgen-thau, who like Duggan, died mysteriously after being questioned by the House Un-American Activities Committee.

The report of the Rockefeller Foundation for 1936 makes it clear that the role of the Institute of Pacific Relations is to serve as ringleader and master conspirator in Far Eastern activities for the large group of organizations, schools, colleges, universities and other institutions subsidized by it for the avowed purpose of creating a "new ('internationalist') social order" and world-wide "managed economy" required, by the Marx-inspired "social sciences". It reports a Foundation grant of \$30,000 for the purpose of setting up an AMERICAN CO-ORDINATING COMMITTEE, the function of which is to make the conspiracy and propaganda of the IPR a part and parcel of the activities of the balance of the agencies and lobbies maintained or supported by Rockefeller "philanthropy". The key agencies specified are the following:

Council on Foreign Relations

Social Science Research Council

Foreign Policy Association

American Council of Learned Societies

American Council on Intellectual Cooperation These organizations all interlock membership and officers with the IPR and dominate the wide array of Rockefeller controlled, subsidized or influenced agencies that serve as "internationalist" fronts. Indeed it would be difficult to say which had the wider array of fronts, the Rockefellers or the Soviets. And the difficulty is further enhanced because so many of both have been Rockefeller subsidized and controlled. They all serve as IPR "transmission belts", and many overlap.

The Institute of Pacific Relations propagandists have responded to exposure of the subversive character of the organization by protests alleging that they have cleaned house, eliminated the acknowledged subversives and changed their officers. Thus on March 23, 1951, the IPR released to the press a story that was published in the New York Times of that date about the election of new trustees. These included Joseph E. Johnson, president of the Carnegie Endowment for International Peace; Sidney D. Gamble, president of the Princeton Yenching

Foundation; and J. E. Wallace Sterling, president of Leland Stanford University. Joseph E. Johnson was Alger Hiss's assistant and "alter ego" in the State Department.

This statement was obviously issued with tongue in cheek. For all of them are Rockefeller puppets and members of Rockefeller's Council on Foreign Relations where they are indoctrinated by Owen Lattimore, Frederick Vanderbilt Field, T. A. Bisson, William W. Lockwood and others of the AMERASIA crew, who still preach the Rockefeller-Soviet-Axis program, and dominate the IPR and the entire web of Rockefeller propaganda agencies by remote control from the master agency, the Council. Furthermore two of them, Owen Lattimore, dignified with the post of Director of the Johns Hopkins School of International Relations, and William W. Lockwood, dignified with the post of Assistant Director of the Woodrow Wilson School of Public and International Affairs,—in which posts they have unique opportunities to implant their subversions and treachery in youngsters who are in training for State Department and Government posts,—are still members of the Board of Trustees of the IPR, as can be seen in the list of trustees published in the March 1950 issue of NEWS OF THE IPR. There is no public record of either one of these former editors of the pro-Soviet espionage and propaganda agency, AMERASIA, and associates of self-confessed spies and traitors, ever having renounced their earlier associations and convictions. The moral of the story seems to be that if you are a good Rockefeller Red you need fear no harm; but eventually you will be made a top educator and be given opportunity to subvert rising generations, train them for betrayal and lure them on to self destruction as victims of their own treason and mercenaries in Rockefeller Crusades.

ROCKEFELLER GRANTS TO  
THE INSTITUTE OF PACIFIC RELATIONS  
Laura Spelman Rockefeller Memorial

		Grants
1926	IPR	\$10,000
1927	IPR	110,000
Rockefeller Foundation		
1929	IPR Honolulu For general program.....	\$35,000
	IPR Honolulu For research in social sciences.....	20,000

It is quite fitting that General George Catlett Marshall, Secretary of Defense, should be a member of the Board of Trustees of the subversive Institute of Pacific Relations even though he has not made the grade of the Empire's top policy-making organization, the Council on Foreign Relations. For without the support of its bosses Marshall would never have obtained his promotion; and without his blind execution of their treacherous orders, they never could have fulfilled the Rockefeller-Soviet

Axis's agreement to deliver China to the Soviets.

The story of Marshall's promotion is well told by Walter Trohan in the March, 1951, issue of the AMERICAN MERCURY magazine.

"After the war Pershing made Marshall his aide-de-camp while Pershing was Chief of Staff.

"Up to the early thirties Marshall's career was one of slow but steady progress . . . Pershing, a retired but influential old dog of war had promised to have him made a brigadier general. But here Marshall met his first failure.

"True to his promise, Pershing called upon Douglas MacArthur, then Chief of Staff, and asked that his protege be made a general. MacArthur was ready to oblige, but insisted that the promotion go through regular channels. Pershing agreed, confident Marshall could clear the hurdles. Friendly examination of the Marshall record showed what his superiors regarded as insufficient time with troops. MacArthur proposed to remedy this by giving him command of the Eighth Regiment at Fort Screven, Ga., one of the finest regiments in the Army.

"Marshall was moved up from lieutenant-colonel to colonel, but his way to a general's stars appeared to be blocked forever when the Inspector General reported that under one year of Marshall's command the Eighth Regiment had dropped from one of the best regiments in the Army to one of the worst. MacArthur regretfully informed Pershing that the report made promotion impossible. To this day Marshall is uneasy in the presence of MacArthur.

"In 1936, after MacArthur had been succeeded by General Marlin Craig, Pershing tried again. But this time, knowing that the Army would never make Marshall a general, Pershing went directly to the White House. He persuaded Roosevelt to promote Marshall; and three years later when Roosevelt was looking for an agreeable Chief of Staff, he chose Marshall over twenty senior major generals and fourteen senior brigadiers.

"Marshall is, therefore, a 'political general'..." 292

Marshall served as a pliant tool of the conspirators in engineering the betrayal of our country into involvement in World War II without a declaration of war by Congress, and in the tragedy of Pearl Harbor. He has acknowledged that he deliberately withheld from the commanders at Pearl Harbor intelligence, that was available well in advance, of Japan's plans to attack it, and that he had ordered them to alert only for sabotage. In other words, Marshall has confessed to sabotage of the defenses of the nation in time of war. Men have been executed as traitors for lesser offenses and derelictions. Twenty-five hundred men and a fleet were sacrificed in the Pearl Harbor deal. The role played by the crew of the Institute of Pacific Relations in this has yet to be revealed in its entirety.

Strange indeed was the tale that Marshall told Congress of not knowing where he was on the eve of the attack on Pearl Harbor, at a time when he knew that the nation was in grave danger. But this defection obviously suited the purposes of the conspirators.

In 1943, it is reported, he was more anxious to arm Russia than to equip our own troops. At Teheran he agreed to the sell-out to the Communists of Poland and Czechoslovakia. He agreed to giving Russia control of the country to the west of Berlin and marooning American forces in that city in a strategically untenable position, with their supply lines running through territory held by the Communists. This act runs counter to all dictates of intelligence, aside from considerations of elementary military tactics. It virtually has placed American troops in a position where they can be held as hostages by the Communists, a situation that can be created as readily by the Russians as was the Berlin Blockade, whenever they are ready to cut loose. No paid Russian agent or avowed traitor could have rendered greater aid to the Soviet forces.

At Yalta Marshall collaborated with Alger Hiss in delivering Asia to the Communists after Japan was about ready to surrender. Despite the refusal of the Soviets to aid our forces in the Pacific, Marshall's anxiety to "cooperate with the Russians" was so intense that he approved of giving to Russia every strategic point, including Manchuria, Port Arthur, Darien, the Kurile Islands and southern Sakhalin. Following the close of the war, in Decem-

ber 1945, Marshall was sent to China by the agents of the Rockefeller-Soviet Axis in the State Department with instructions drawn up by John Carter Vincent and Dean Acheson, to compel the Chinese Nationalists to yield to the Communists, whom they had on the run and were defeating badly. In spite of the warning of Col. Ivan D. Yeaton, who was assigned to the Communist headquarters at Yen-an, that the Chinese Communists were collaborating with the Kremlin and controlled by it, Marshall forced upon the Nationalists a truce, under the threat of withholding American aid. He compelled Chiang Kai-shek to cut his forces down to fifty divisions.

To get around Congress's refusal to accept the program for arming the Chinese Communist Army by "lend lease", proposed by Dean Acheson, Marshall served as recruiting agent for the Red Army and ordered the transfer of Nationalist troops to the Communist forces so that they could be paid and fed with funds appropriated by Congress for the support of the Nationalist Army. He also promoted "an agreement . . . under which American officers would be training and equipping rebel Chinese Communists units at the very time they were ambushing our marines and when Communists the world over were waging a war of nerves upon the United States . . ." (C.R. March 30, 1950, p. 4438).

Marshall dictated the prolongation of the Nationalist-Communist truce, that he had ordered, for a period of fourteen months, giving the Communists a chance to reorganize their Army with U.S. funds and supplies. Then Marshall compelled Chiang to allow a force of 500,000 Communists to move through the impregnable Kalgan Pass to approach Peking; and repeated the treachery to permit the approach of the Communist Armies to Hankow.

In the meantime, the Soviet agents in the State and Commerce Departments withheld delivery of military supplies and equipment assigned to the Nationalists. The dumping of the Army surplus intended for the Nationalists into the Indian Ocean at the order of Lauchlin Currie, assistant to President Roosevelt, member of Rockefeller's Council on Foreign Relations and the IPR, and named by Elizabeth Bentley as a feeder of Communist spy channels, who is now carrying on in the Republic of

Colombia (N.Y. Times, April 9, 1951) as an "adviser," has been mentioned. The supply to the Communists of essential war materiel has flowed continuously through such devices as "lend-lease", UNRRA, the Marshall Plan, the Atlantic Pact and the Point IV program. The situation parallels the arming of the Germans and the Japs prior to World War II, by the same principals.

As a reward for delivering China to the Communists, that has proved so costly and disastrous for the U.S., Marshall was promoted to the post of Secretary of State; for he served the Rockefeller-Soviet Axis well. His first official act was to appoint his masters' agent, who had previously directed his treacherous mission to China, Dean Acheson, his chief of staff with "complete authority to cleanse the Department", presumably of non-Communists.

Marshall sent General Albert C. Wedemeyer to China to report on the situation in 1947. Wedemeyer courageously reported the truth and urged blocking the advance of Communism in China. This report was not to the satisfaction of Marshall and the Rockefeller-Soviet Axis. It was suppressed and Wedemeyer shelved.

The so-called "Marshall" Plan was written by Rockefeller Reds, promoted and propagandized by Rockefeller's Council on Foreign Relations and its subsidiary agencies, and actively pushed in Congress by the Rockefellers personally. It was another tap on the U.S. Treasury and a device for looting the American people for the benefit of the Rockefeller Empire and its allies, on the pretense of aid to Europe, while at the same time leading the nation further on the road to bankruptcy and dictatorship. Marshall who was a mere pawn, as usual, knew little of its nature.

It is in connection with the Korean affair that Marshall has rendered the Rockefeller-Soviet Axis a most signal service that has brought the plottings and plannings of the Institute of Pacific Relations to its most advanced state of fruition. The conviction of Alger Hiss, attacks on Acheson and other pro-Communists in the government and insistent demands for the reopening of the AMERASIA case and the consequences it involved, had created a very real "emergency" for the conspirators that threatened their entire program. Resentment also ran high

throughout the country at the delivery of China to the Reds by the State Department. Elections were in the offing. It was imperative that, in the words of John Foster Dulles, the American public be kept "artificially alarmed", if the scheme to attain dictatorship through looting by taxation, bankruptcy, defeat and confusion of the nation was to succeed, —and at the same time the deals with the Kremlin carried out. Korea served the purpose. Marshall furthered the scheme by advising Truman to send troops to Korea.

To promote their plot, Marshall was appointed Secretary of Defense. A more incongruous appointment could not be conceived; but so completely is the public duped that it met with little public protest or indignation. Marshall's first act was to rush to regiment the nation, under the cover of this emergency deliberately created for the purpose, into a military dictatorship, in the pattern of the Hopley plan. Anna Rosenberg, Rockefeller employed and subsidized "labor relations counsellor" and agent, with a record of appointment to the NRA dictatorship plot by self-confessed Communist agent and CIO attorney, Lee Pressman, was appointed by Marshall to the great delight of all subversives and Communists, to head the new totalitarian drive. When her appointment came under attack Nelson Rockefeller offered to appear in person before the Senate committee considering the appointment, on behalf of his minion.

The Institute of Pacific Relations can boast with even more justification than can any of the units that comprise the vast spiderweb of Rockefeller-Soviet intrigue, even the Council on Foreign Relations, that the present sad plight of our country is what it is, because "they planned it that way." For though the CFR planned and directed the intrigues and betrayals, the IPR executed them. It played a stellar role in making a success of Japan's rearmament and its attack on Pearl Harbor. At the cost of a quarter of million casualties and hundreds of billions of dollars to our country it insured to its masters control of Eurasia. And the fulfilment of Lenin's plans, they speeded up by infiltrating our Government and effected them through the agency of our State Department and the traitorous activities of their agents.

Wherever the Institute of Pacific Relations has 296

turned its activities in the Orient it has stirred up unrest and subversion, and has paved the way for Soviet intrigue. In Mongolia, China, Philippines, Indonesia, Burma, India, Indo-China, Thailand, Pakistan, Tibet and Iran, the story has been monotonously the same. Owen Lattimore's Joint U.N.-IPR mission to Afghanistan likewise forbodes its betrayal to the Soviets as did his traffic with Tibet. The Institute paces the schedule of the Soviets in the Far East, adopted by the Asiatic Com-minform of May 1949, which is as follows:

1. Conquer China, Hainan and Formosa.
2. Infiltrate and conquer Indochina and Burma.
3. Infiltration and riots in India, Pakistan and Philippines.
4. Infiltration and riots in Japan with the eventual purpose of taking Japan out of the American sphere, for which the way was being prepared by Dulles' peace parley with Japan and the suggested withdrawal of American troops, and by MacArthur's dismissal.
5. Win over Afghanistan. Owen Lattimore, who has expressed himself as being entirely in sympathy with the Soviet plans for Afghanistan was nevertheless recommended to the United Nations by the State Department for a joint mission with the IPR for working out the program of Rockefeller's Point IV program in Afghanistan. Apparently the plan, as usual, is to make Afghanistan a richer plum for the Soviets.
6. Infiltration and riots in Iran with the objective of taking it over with its oil. To facilitate this, pro-Soviet Ministers were to be appointed.

Due to its sponsors' control of our Government and State Department, the IPR has been completely successful in fulfilling their agreements and delivering over to the Soviets, China and much of Asia.

The Institute of Pacific Relations and its allied web of Rockefeller subsidized organizations are merely agencies of a vast conspiracy. The agencies could not have continued to exist and to carry on their work without the subsidy of the Rockefellers and their fake "philanthropies". In most cases they could not have come into existence without their financial support and cooperation. The Rockefellers cannot plead ignorance of the traitorous activities of these organizations that they have so lavishly

supported. For it is spread all over the public records where anyone who has an iota of intelligence can not fail to recognize it. Any plea of lack of control over the agencies which they established and financed is obviously sham. For there is nothing in their charter or in the law which bars them from stepping in and taking over control of them. The sham is further confirmed by the personal and active participation in those activities by the Rockefellers themselves and the record of their sympathy with the subversive causes in question.

It is equally a sham to pretend to investigate and expose these traitorous organizations and their agents but to omit any mention of the principals and the financiers who make possible their existence and activities with financial, political and moral support ; to imprison or execute traitors and spies who were propagandized, groomed and trained for their treason in the schools, colleges and universities; and to permit to roam at large as honored citizens the arch-conspirators and masterminds who subverted the educational system of the land and of the world, and used as pawns, the deluded fools and venal traitors spawned thereby; or to pillory and occasionally imprison gamblers and fixers in so-called sports for the manipulation of fixes that involve only the money of those who voluntarily choose to gamble while holding in high honor the criminal master conspirators who gamble in an atrociously fixed game with the lives and fortunes of other people and jeopardize the very existence of the the nation.

Unless these conspirators are rapidly and relentlessly exposed and apprehended and prosecuted to the full extent of the laws on treason, and their traitorous conspiracy scotched, this country is faced with extinction, and it and the world are doomed to untold centuries of serfdom.

AMERICAN COUNCIL INSTITUTE OF PACIFIC RELATIONS NATIONAL  
OFFICERS AND TRUSTEES At the Annual Meeting of Members held on February 21,  
1960.

OFFICERS

Chairman	—Gerard Swope 1	Treasurer	—Donald B. Straus

## CHAPTER XVI

### ROCKEFELLER AND RELIGION

Federal (alias National) Council of Churches of Christ in America (alias, U.S.A.) "The Christian Church. What of its future? It would be the Church of the living God—John D. Rockefeller

The role of religion in clothing the ruthless activities of John D. with sanctity and enhancing his reputation as a worthy citizen, anteceded that of "philanthropy" by several decades. For pious hypocrites a religious pose was in America of the latter part of the 19th century as important a business asset as is now a Dun and Bradstreet rating. The pose of "a God-fearing man" bolstered credit and repute. In addition, churches were in those days almost the only social organizations in the primitive communities, and rare diversions in an otherwise drab, hand-to-mouth existence. Church-going afforded those who sought them social and business contacts that were enhanced by active participation in church affairs. Nevins, in his biography of Rockefeller reports:

"... still another preoccupation was religion. Cleveland was a highly religious community, full of churches . . . Evangelistic emotion pervaded the public schools of Cleveland. Prayer meetings were frequently held in the schoolroom after hours and were led by ministers and teachers . . . "Perhaps John D. Rockefeller had his share in some such wave of revivalism. At any rate, he and Will continued the steady churchgoing which they had begun in Owego, becoming regular attendants at the Erie Street Baptist Church. "And vigorously did John give himself to its work . . . John was publicly baptized in the fall of 1854 . . . "Not long after John was made clerk of the church, an unusual responsibility for a mere youth, and indicative of the impression of maturity and responsibility that he gave to others. Before many years passed he was teaching one of the largest classes in the Sunday school." (JDR, v. 1., pp. 88-89)

"As a bright high-school graduate, a faithful 300

attendant, a most staid and responsible young man, John soon took a prominent part in all church activities. He threw himself into them with characteristic single-mindedness. As we have said, the church offered this unemotional youth an outlet . . . while it also offered his mother, brothers and sisters the best part of what social life they enjoyed. "Indeed it is difficult now for many Americans to realize how important a social institution the church—with its two Sunday services, its midweek service, its suppers, men's societies, sewing clubs—then was in most towns of thirty thousand." (id. p. 119) However, as Nevins relates, despite the devotion, the tithes-giving and the intense church activity, John D.'s character cleaved sharply into the temporal and the spiritual; and he did not permit the charity of the latter to spill over into the former, a characteristic that distinguishes the family. It is probably erroneous to assume that his religiosity played any role in his "philanthropic" activities, which were largely business ventures profitably engaged in for the specific purpose of redeeming an evil reputation acquired in spite of religious pose. John D. Rockefeller Jr. followed in his father's footsteps in the field of religion. He likewise taught Sunday school to the accompaniment of considerable publicity. But he came under the influence of the school of "higher criticism" of the Bible at Brown University and veered away from the Fundamentalist faith of his father. About 1919 he shifted "in religious attitude toward the 'new' or 'liberal' theology which pragmatically decried fundamentalism and sectarianism in Protestantism. Fundamentalist ministers such as John Roach Stratton accused him of seeking to standardize education and religion through GERMAN RATIONALIZATION". (Your Life Is Their Toy, Chedney Press, 1940, pp. 75-76) Stratton was shrewd and discerning, and perceived the influence of Bismarck's Germany, and of the Marxism which he fostered, as a dominant factor in John D. Rockefeller Jr.'s thinking and action. John D. Jr. had come under the influence of the made-in-Germany "social sciences," and became a powerful factor in swinging both churches and community to the left, both through subsidy of lay and religious education, and through grants to

political organizations and movements.

It is notable that with the exception of grants to mission colleges, more particularly in China, and a hundred thousand dollar grant to Riverside Church in N. Y. C. Rockefeller Foundation made no grants for religious purposes until 1947. This contrasts sharply with the steady flow of large sums into the subsidy of the Marxist "social sciences" and "internationalism". Indeed all grants given since 1947 have been either for the support of "higher criticism of the Bible," or for the promotion of "internationalism" and the "social sciences" in church circles. They are reported in the Rockefeller Foundation annual Reviews as follows:

Rockefeller Foundation Appropriations For  
Church Affairs

- 1947 Commission of the Churches on International Affairs, New York. Expenses of preparing for holding international conferences, \$15,000
- 1948 Federal Council of the Churches of Christ in America. Program of its Department of Church and Economic Life, \$100,000
- 1949 Society of Biblical Literature and Exegesis, Philadelphia, Pennsylvania. Expenses involved in organizing a cooperative Critical Apparatus of the New Testament, \$12,500

The Federal Council of Churches of Christ in America has been used most regularly by the Rockefellers personally to further their interests in church circles. John Foster Dulles, their kinsman and Number 1 agent, for many years has dominated the Council, as is attested in the resolution adopted by the Executive Committee on September 20, 1949.

The same FCCCA report lists a grant of \$30,000 from the Rockefeller Foundation "for the Study Project of the Department of the Church and Economic Life"; a \$500 grant from the Rockefeller Brothers Fund Inc. for general purposes and another \$500 for "International JUSTICE AND GOOD WILL-COMMITTEE ON POLICY"; and a \$500 grant from the Anti-Defamation League of B'nai Brith "for general purposes".

The extent of personal activity of the Rockefellers in the FCCCA is out of proportion to their meagre personal financial contribution. For many years no conference or meeting of the Council was complete without an address by Dulles or one of the Rockefellers. In one such address before the Protestant

Council, New York City, on January 31, 1935, John D. Jr. suggested that the future of the Christian Church is the Buddhist and Roman concept of "the Church of the Living God", with an intimation that he would make a good god.

But few of the matters advocated by the Rockefellers in the Federal Council were of the religious category. Most of them have been political and characterized by efforts to shield with a cloak of sanctimony, and to convert to holy causes and "Crusades" current political and commercial ventures extending the realm of the Rockefeller Empire; or to further the interests of the Rockefeller-Soviet Axis. Thus under the Rockefeller-Dulles domination, the FCCCA slavishly endorsed their New Deal, their World Wars I and II Crusades, higher taxes, their United Nations, their UNRRA, their Marshall Plan, the use of the atom bomb, the support of the Korean War, and their program of appeasement of Soviet Russia. Dulles has openly advocated submission to Russia and bowing to Stalin's dictates in addresses to the Council's meetings and to the Rockefeller Foundation subsidized International Church Conferences.

Most recently, on April 25, 1951, Nelson A Rockefeller addressed the Buck Hills Falls conference of the Council, as chairman of the International Development Advisory Board, in support of the Rockefeller Empire's latest scheme for looting the American taxpayer and the U.S. Treasury for its commercial and political interests, the Point 4 Program. He presented this commercial device as a "Crusade," an attack "on the global scourges of hunger and disease".

"Hunger poverty, disease and ignorance", he said, "constitute a far more lasting threat than the aggression of Soviet imperialism."

The Council adopted a resolution advocating the program.

The Rockefeller Empire is an old hand at using religion and missions in promoting its commercial interests. It was highly successful in so doing, for instance, in China. Religion is merely another, but very powerful, propaganda device that can be used to delude the "peasants" and to profit themselves.

It really matters not what is the religion, provided that it has a sufficient following. At a special thanksgiving convocation of the Jewish Theological

Seminary, on October 21, 1950, Nelson Rockefeller, Attorney General J. Howard McGrath and Roger W. Straus, co-chairmen of the National Conference of Christians and Jews, received honorary Doctor of Laws degrees. Rockefeller called on religious and educational leaders to supply the moral urge for the peace drive and to support the UN. (N. Y. Times, Nov. 22, 1950)

Like Rockefeller's Institute of Pacific Relations and most other Rockefeller dominated organizations Rockefeller's Federal Council of Churches of Christ in America has been branded repeatedly by government agencies, subversive and a Communist front. Thus the Intelligence Department of the U.S. Navy reported on April 1, 1935, as follows: "From a comprehensive survey of Communist activities in the United States at the present time, a classification of organizations active for the Communist cause is as follows: . . . "C. Organizations which while not openly advocating the 'force and violence' principles of the Communists give aid and comfort to the Communist movement and party. Among the strongest of these are: . . . " (b) The Federal Council of Churches of Christ in America: This is a large radical, pacifist organization. It probably represents 20,000,000 Protestants in the United States. However, its leadership consists of a small radical group which dictates its policies. It is always very active in any matter against national defense." (C. R., Aug. 17, 1935, p. 13053) At about the same time the following sworn testimony was given before the Dies Committee: "The radical affiliation of the Federal Council of Churches of Christ is a subject of extensive discussion. Apparently, in lieu of primarily promoting Christianity among its several members it more represents a huge political machine and appears to meddle in radical politics. Its directorate indicates that it interlocks with many of the most radical organizations". How mild and charitable this testimony was, is indicated by the appended chart of officers and leaders of the Council, and the following quotations from publications and literature.

The views expressed and published by many of the past presidents of the Council have been far

to the Left. Thus Rev. Albert W. Beaven, in 1933, signed with 44 others the letter of the National Religion and Labor Foundation to President Roosevelt urging him to socialize America. It read: "We hold that there can be no recovery so long as the nation depends on palliative legislation inside the capitalistic system". He also sponsored the Emergency Peace Campaign.

Dr. Ivan Lee Holt, in 1936, earned the commendation of the official Communist paper, the Daily Worker, in the following terms: (Daily Worker, Jan. 7, 1936, Memphis headline) "The Methodist Young People's Conference, with 5000 delegates in attendance, took a sharp turn to the Left in its closing sessions. The Soviet Union was highly praised by Ivan Lee Holt, president of the Federal Council of Churches of Christ in America. "Dr. Kirby Page, noted fighter for peace, told the convention that young people should resist the compulsory Reserve Officers Training Corps— even if it means expulsion from college. "Dr. Holt defended the Soviet Union from attack. He declared that the aim of the dictatorship of the proletariat in Russia was the establishment of a better life. The Russian government does not purport to do this through exploiting someone else, but through raising the general level of all. It is difficult to find youth anywhere in this world more devoted to the cause of Christ than you'll find in Russia devoted to 'Stalin and his new social order'.

"He warned the older generation that 'amongst most of the youth of the world today there is a desire for a change, many preferring revolution. Youth is willing to die for a new order. We adults have made our mistakes. We have given youth a broken-down machine and no tools'."

In many official pronouncements, the Federal Council has attacked free enterprise, capitalism and the American way of life, and has baldly advocated Socialism.

A large number of the clergy affiliated with the Federal Council constantly preach that Communism is an advanced form of democracy; that it is the desirable next step in the forward progress of our society; that Communism and Socialism are the "new social order" and express more nearly

than capitalism the true brotherhood of man; that they bring us closer to the realization of the ideals expressed by Christ in the Sermon on the Mount; that Russia is the land where all social and economic problems have been solved, where inequality, poverty and want have been abolished.

While some affiliated with the Federal Council are undoubtedly members of the Communist Party, most of those who have been actively aiding and abetting Socialism and Communism are fellow travelers rather than actual members of the party.

However, it must be remembered that fellow travelers are more dangerous to America than outright Communists. It is generally they who lend an air of respectability to the vicious, debased movement that is Communism, and it is they who bring into Communist fronts the innocents and dupes without whose aid, encouragement and financial support the front could not exist. It has been well said that a fellow traveler is a Communist without courage—one who believes in the principles of Marxism but lacks the intestinal fortitude publicly to join the party.

Under our code of laws one who aids and abets a criminal is just as guilty as the one who commits an overt crime. Any one, be he minister or layman, who knowingly aids and abets the God-hating enemies of America and Christianity is just as guilty and just as un-American as a Communist.

The following are representative views expressed by FCCCA leaders:

"Is it not probable that the greatest event of the 20th Century thus far is the Soviet Revolution and all it has meant to human welfare?" (Prof. Jerome Davis, long-time member of the Federal Council inner circle.)

"When the Western world was floundering in an unjust and competitive order . . . God reached out and put his hand on the Russian Communists to produce a juster order and to show a recumbent church what it has missed in its own gospel." (E. Stanley Jones, Federal Council-sponsored preacher and speaker.)

"The Christian religion is not a suitable religion for today." (Eduard C. Lindeman, Federal Council Commission on Research, and editor 1939 and 1940.)

"The Soviet Union is progressing and growing up economically and politically since the time of the

Czars, while capitalist society is starving and going down." (Harry F. Ward, broadcast May 21, 1946.)

"Denominationally, I am a Presbyterian; religiously a Unitarian; and politically, I'm a Communist. I'm not preaching to make people good or anything of the sort. I'm in the church because I can reach people easier that way and get them organized for Communism." (Rev. Claude C. Williams, a confessed Communist Party member, Director of People's Institute of Applied Religion, and intimate of prominent Federal Council personalities.)

Rev. Harry F. Ward is an outstanding exception among the ministry of the FCCCA. He has the full courage of his convictions. He has been a steady contributor to the columns of the official newspaper of the Communist Party in the U.S., the Daily Worker, and has hewed close to the Party line, and has been claimed by them as one of their own crew. In his position of Professor of Christian Ethics of the Union Theological Seminary, New York, he was in a position to subvert several generations of the American ministry with his pro-Soviet teachings.

A sample of the "religion" of the minister of the gospel who accepts Marxism as his creed, is Thomas A. Bisson cited by Sen. Joseph McCarthy (CR. 3/30/51, p. 4454) as follows:

"He writes to the head of a Protestant missionary council advising against giving aid in . . . 'rehabilitating the Red-ravaged districts'."

"In a postscript he wrote, 'I would strongly advise every prospective missionary to China to read Chinese Destinies by Agnes Smedley' (notorious Communist agent and spy)."

So notorious have the Communist activities of the Federal Council of Churches of Christ in America become that the organization and its membership found mistrust rendered their propaganda ineffective. Following the habit of the Communists, who adopt aliases and change the names of their organizations when they are exposed, on November 28, 1950, the FCCCA changed its name to the National Council of Churches of Christ in the U.S.A. and issued a false statement to the effect that a new-organization had been formed. Unfortunately, it is a case of "a rose by any other name."

The \$100,000 grant made by the Rockefeller Foundation to the FCCCA for its Department of Church and Economic Life, coupled with the previous

\$15,000 grant for international church conferences, were designed to carry the churches involved even further into politics and to the Left. Under the tutelage of Nelson Rockefeller and John Foster Dulles it has served that purpose. This is made clear by the press release of The American Council of Christian Churches—an organization of Protestant churches that seeks "to offset the modernist socialist influence of the FCCCA", headed by Rev. William Harlee Bordeaux—on the second conference on the Church and Economic Life held, with Rockefeller financial support, at Detroit in the spring of 1950. It read as follows: "Radicals among churchmen and labor leaders had their way at the second conference on the Church and Economic Life sponsored recently in Detroit by the Federal Council of the Churches of Christ in America. Conservatives, who constituted a very small minority among the 460 delegates attending, battled against the powerful drive of those who would take us closer and closer toward a 'Welfare State', but after four days of futile struggle they abjectly surrendered—without even bringing in a minority report. "Economic proposals which came out of the study section were approved in plenary session by a vote of 202 to 15. Few voted against Welfare State proposals as: 1. Federal aid to public education everywhere in the U.S. 2. Socialized medicine. 3. An increase in Social Security payments. 4. Tax regulation as a major measure to achieve equitable division of income. Strong sympathy was shown for Cooperatives, and it was further approved: 'We also suggest the study of such government cooperatives as TVA, as one method of utilization of our national resources'."

The FCCCA presents the usual pattern that prevails wherever Rockefeller influence gains predominance, i.e. interlocking with the Foreign Office of the Rockefeller Empire—the Council on Foreign Relations. Only three of their number are dignified with membership in that top agency. They are:

Rev. Reinhold Niebuhr, Professor of Applied Christianity and Dean of the Union Theological Seminary; and editor of the periodicals Christianity And Society and Christianity And Crisis. Rev. Henry P. Van Dusen, Professor of System-308

atic Theology and President of Union Theological Seminary, of Associated Board of Christian Colleges in China, of American Association of Theological Schools and of Union Settlement Association; chairman, Study Committee of World Council of Churches; Trustee, Princeton University, Ginling College, Nanking Theologic Seminary, Yenching University, Milbrook School, Smith College, Little School; director, United China Relief, Freedom House, Council For Democracy and many others of the same brand.

Rev. Walter Van Kirk, Federal Council Secretary, radio commentator on Religion and the News, consultant to American Delegation to United Nations Conference, San Francisco. Though Rockefellers' religious activities have been largely or exclusively in the field of fostering in religious circles the very Marxist and Communist causes that aim to destroy religion, they are nevertheless regarded as "good Christians". This reputation for religiosity which they have intensively fostered, has served to shield them completely from exposure and condemnation for their anti-religious work in fostering Communism and for their other malodorous activities. This has happened despite the fact that they have made no effort to hide their support and sponsorship of subversive agencies and their complete aversion to patriotic, nationalist activities, as contrasted with their wholehearted endorsement of "internationalism". Thus Elizabeth Dilling pointed out the Rockefeller Red activities in the 30's in her books, *The Red Network* and *Roosevelt Red Record and Its Background*. In the latter volume she reported:

"Because of its sinister activities and close connections with the Roosevelt regime, the Socialist-Communist League for Industrial Democracy, of which the Worker's Alliance is a section, is of interest . . . "The L.I.D. National Advisory Council on Radio and Education is financed according to the current report of the Council by John D. Rockefeller Jr. and by the Carnegie Foundation." (pp. 21-22) But her attitude toward Rockefeller's key activities in the support of Marxism, Communism and other subversive movements is revealed on page 166 in her discussion of subversive activities in Interna-

tional House, which reads, it was "donated by 'sap' John D. Rockefeller Jr.". She fails to list Rockefeller among her key supporters of Communism in America. If Rockefeller is merely a "sap" for financing and fostering the rise and spread of Communism, why stigmatize and prosecute Hiss and other agents of his as traitors? Under the law, an accomplice before the fact is as guilty as the perpetrator of a crime. Rightly President Truman labelled Hiss a "red herring". Senator Truman once had the courage to label the Rockefeller-Standard Oil crowd as traitors; and he well knows that Alger Hiss was merely their agent.

It is unfortunate that too many folks who pretend to defend the Constitution, and human freedom that is bound up in it, are more interested in venting religious bigotry, and profiting from it, than they are in the great cause to which they render lip service. For otherwise their forces would not be diverted by the cry of "good Christian" and a display of religiosity, to the mere chasing of "red herrings". The battle for Constitution and Republic can only be won if the cloak of pious sham and hypocrisy assumed by the conspirators is torn aside, and the arch-traitors are exposed, divested of their powers, and prosecuted to the full limit for their nefarious activities. Many tens of thousands of lives and endless human misery would be spared thereby.

#### THE CHURCH BODIES WHICH CONSTITUTE THE FEDERAL COUNCIL OF CHURCHES

National Baptist Convention  
Northern Baptist Convention  
Church of the Brethren  
General Council of Congregational Christian Churches  
Czech-Moravian Brethren  
International Convention of Disciples of Christ  
Evangelical and Reformed Church  
Evangelical United Brethren Church  
Five Years Meeting of the Friends in America  
Religious Society of Friends of Philadelphia and Vicinity  
The Methodist Church  
African M. E. Church  
African M. E. Zion Church  
Colored M. E. Church in America  
Moravian Church  
Presbyterian Church in U. S. A.  
Presbyterian Church in U. S.  
Protestant Episcopal Church  
Reformed Church in America  
Romanian Orthodox Church of America  
Russian Orthodox Church of North America  
Seventh Day Baptist General Conference  
Syrian Antiochian Orthodox Church of North America  
Ukrainian Orthodox Church of America  
United Lutheran Church (Consultative Body)  
United Presbyterian Church  
United Church of Canada

# FEDERAL COUNCIL LEADERS WHO HAVE HELPED COMMUNIST ORGANIZATIONS

- Henry A. Atkinson—4, 9, 10, 29, 39, 40, 45  
 Genl. Secy., World Alliance for Int. Friendship thru Rel. Roswell P. Barnes—10, 15, 23, 24, 86, 87, 39, 42, 46  
 Federal Council Secretary John C. Bennett—34, 36, 45  
 Prof., Union Theological Seminary, New York W. Russell Bowie—3, 4, 11, 13, 14, 15, 19, 24, 26, 34, 37, 41, 44, 45, 46  
 Prof., Union Theological Seminary, New York Hugh Chamberlain Burr—24, 37, 39, 42  
 Secy., Rochester (N. Y.) Federation of Churches George A. Buttrick—23, 24, 37, 40  
 Minister, Madison Ave. Presbyterian Church, New York J. Henry Carpenter—17, 21, 28, 40, 46  
 Federal Council Secretary Samuel McCrea Cavert—24, 87, 40, 36  
 Federal Council Secretary Allan Knight Chalmers—1, 11, 15, 23, 24, 26, 86, 87, 40, 42, 45, 46  
 Minister, B'way Tabernacle Congregaational Church, N. Y. C. Winifred Chappell—3, 7, 8, 10, 18, 24, 80, 38  
 Secy., Methodist Federation for Social Action Jerome Davis—1, 2, 6, 7, 10, 15, 18, 19, 20, 22, 23, 24, 26, 28, 29, 86,  
 Former Prof., Yale Divinity School 37, 39, 40, 42, 43, 46  
 Mark A. Dawber—9, 14, 38, 40  
 Secy., Home Missions Council, New York Harold E. Fey—1, 23, 24, 36, 42, 48  
 Assoc. Editor, The Christian Century, Chicago Harry Emerson Fosdick—1, 23, 24, 26, 29, 45  
 Ret. Former Prof. Union Theological Seminary, New York J. H. Franklin—40, 45  
 Pres. Emertius Crozer Theological Seminary, Chester, Pa. Charles K. Gilbert—11, 19, 28, 40, 44  
 Protestant Episcopal Bishop of New York L. O. Hartman—1, 5, 7, 8, 19, 80, 86, 87, 40, 44  
 Methodist Bishop Ivan Lee Holt—19, 23, 87, 44  
 Methodist Bishop, Former Pres. Federal Council Walter M. Horton—82, 86, 40  
 Prof., Oberlin (Ohio) Divinity School William Lloyd Imes—7, 8, 10, 16, 17, 20, 25, 26, 34, 36, 37, 40  
 Secy., New York State Council of Churches  
 F. Ernest Johnson—17, 28  
 Federal Council Secretary  
 Edgar DeWitt Jones—7, 23, 81, 37  
 Minister Emeritus, Woodward Christian Church, Detroit E. Stanley Jones—7, 45  
 Federal Council Preacher and Missionary John Paul Jones—12, 25, 38, 43  
 Minister, Union Church of Bay Ridge Benson Y. Landis—17  
 Federal Council Secretary Henry Smith Leiper—1, 4, 10, 26, 38  
 Secy., World Council of Churches, New York Eduard C. Lindeman—1, 7, 8, 10, 13, 15, 19, 28, 24, 26, 27, 29, 83, 87,  
 Prof., Columbia University 39, 46  
 Halford E. Luccock—2, 15, 16, 19, 24, 30, 34, 86, 87, 40, 42, 44, 46  
 Prof., Yale Divinity School Francis J. McConnell—1, 2, 3, 4, 5, 7, 8, 11, 13, 14, 15, 19, 28, 29, 80,  
 31, 32, 88, 36, 87, 88, 40, 42, 43, 45, 46  
 Methodist Bishop, Former Pres. Federal Council J. Howard Melish—3, 7, 11, 12, 32, 87, 42  
 Suspended Rector P. E. Church of the Holy Trinity, B'klyn. Abraham J. Muste—1, 13, 15, 17, 24, 26, 28, 36, 46  
 Secy., Fellowship of Reconciliation James Myers—1, 11, 17, 24, 38, 39, 43  
 Federal Council Secretary Reinhold Niebuhr—5, 7, 15, 17, 23, 24, 28, 86, 87, 89, 42, 43, 45, 46  
 Prof., Union Theological Seminary, New York  
 G. Bromley Oxnam—1, 9, 15, 24, 30, 32, 84, 36, 37, 40, 46  
 Methodist Bishop, former Pres. of Federal Council  
 Kirby Page—1, 6, 15, 23, 24, 28, 36, 42, 46  
 Author Lecturer, former Minister, Disciples of Christ Edward L. Parsons—1, 3, 4, 5, 9, 11, 13, 14, 15, 23, 27, 32, 33, 34, 37,  
 Prot., Episc. Bishop of Calif. (Ret.) 40, 44, 45  
 Edw. McNeill Poteat—14, 23, 32, 84, 86, 38, 40, 41, 45  
 Former President, Colgate-Rochester Divinity School William Scarlett—1, 11, 16, 86, 40  
 Protestant Episcopal Bishop of Missouri

- Robert W. Searle—17, 23, 24, 26, 36, 37  
 Director, Protestant Council of New York City Guy Emery Shieler—2, 3, 4, 5, 7, 11, 14, 19, 22, 25, 86, 37  
 Editor, "The Churchman" Ralph W. Sockman—10, 23, 24, 45  
 Minister, Christ Church (Methodist) New York William B. Spofford—1, 3, 5, 7, 8, 11, 12, 13, 14, 16, 19, 21, 23, 24, 26, 82, 34, 87, 40, 42, 48  
 For 25 yrs. Exec. Secy., Church Lea. for Ind. Demcy. (Ret.) Worth M. Tippy—7, 19, 30  
 Former Secy. Of Federal Council Channing Tobias—3, 4, 9, 16, 21, 32, 34, 38, 40  
 Director, Phelps-Stokes Fund, New York City Willard E. Uphaus—5, 10, 12, 14, 34, 36, 38  
 Exec. Secy., Natl. Religion & Labor Foundation Henry P. Van Dusen—3, 15, 36, 42, 46  
 President, Union Theological Seminary, New York Walter Van Kirk—10, 15, 23, 46  
 Federal Council Secretary Harry F. Ward—1, 3, 5, 6, 7, 8, 10, 13, 14, 19, 20, 22, 23, 24, 27, 28, 29, 30, 32, 34, 35, 37, 38, 40, 41, 43, 44  
 Prof., Union Theological Seminary, New York (Ret'd.) Luther A. Weigle—15, 19, 36, 37, 45, 46  
 Dean, Yale Divinity School

## CHAPTER XVII

### ROCKEFELLER "FREES" THE PRESS COMMISSION ON "FREEDOM" OF THE PRESS

"The Council On Foreign Relations is concerned that the debunking campaign following World War I shall not be repeated"—Rockefeller Foundation Report, 1946.

Once Rockefeller had learned the unwisdom of expressing his contempt of the American "peasants" and had discovered the necessity of courting their goodwill in order to carry through his imperial schemes, every means of publicity, propaganda, and thought-control was impressed into service. Initially, dependence for press coverage was placed in the contacts of Ivy Ledbetter Lee, who was recommended to Rockefeller for the purpose by Arthur Brisbane. The complete reliance and dependence of John D. Jr. on Ivy Lee is graphically portrayed by the fact that the story of his recent second marriage, to Mrs. Allen, was released by Lee's firm.

In line with the Rockefeller policy of controlling directly all agencies on which they place dependence, it was merely a matter of time and opportunity when the Rockefeller interests would gain control over all important channels of publicity.

In 1922, Englebert Graff announced that the Rockefeller interests had taken over three Parisian dailies—*Le Matin*, *Figaro*, and *L'Eclair*—in connection with their deal for monopoly of the French oil market and their purpose of controlling French oil diplomacy.

The optimum opportunity for seizing control of the American press, as well as of many other industries, was created by the financial crash of 1929 and the purposefully prolonged panic and depression of the 1930's. Contracted advertising expenditures brought about a slump of advertising revenues and reduced the leading publications in the country to the verge of bankruptcy. Thus, Curtis Publishing Co. stock went begging at about a nickel a share; and hundreds of thousands of shares changed hands at that level. Crowell Collier's stock sold for little more. Control of most of the leading publishing houses was purchased for a mere pittance. The Hearst publications, the International News Syndicate, King Features, and other organizations of the chain were taken over for reorganization at about

the same time by Rockefeller's Chase National Bank.

Rumor has it that control of the New York Times, in which Rockefeller's henchman George Foster Peabody, already had an interest, was taken over by the Rockefeller interests in the names of nominees, for a consideration of \$17,000,000 when the death of its proprietor, Julius Ochs, necessitated raising funds for inheritance-tax and other payments. The New York Times is now the official organ of the Rockefeller Empire, in much the same sense as the London Times is the official organ of the British Empire.

There exists a curious interlocking of the Rockefeller "philanthropies" and their subsidiary agencies with the Times. Thus since 1939, Arthur Hays Sulzberger, publisher of the Times, has been a trustee of the Rockefeller Foundation. An array of the editorial staff of the Times are members of the Foreign Office of the Rockefeller Empire, the Council on Foreign Relations. These include Arthur Hays Sulzberger, Julius Ochs Adler, Charles Merz (editor in chief, former editor of the radical New Republic, and foreign correspondent of Collier's) Hanson W. Baldwin (military editor), Shepard Stone (Sunday staff), Henry R. Lieberman (correspondent in China who was awarded a Council fellowship financed by the Carnegie Corporation), the late Simeon Strunsky, Lester Markel (Sunday editor), W. H. Lawrence, John B. Oakes and James B. Reston. Lester Markel and John E. Kenton are officers of the International Press Institute set up by the Rockefeller Foundation with its satellite Ford Foundation.

The Communist cell in the Times had its own publication, Hard Times.

A sufficiently large number of dailies, members of the Associated Press, have come under their control to assure domination. Significantly, the AP offices occupy a building in Rockefeller Center.

The Communist PM was financed by Marshall Field, trustee of Rockefeller's Spelman Fund, and by the Payne Whitney's. Rockefeller's kinfolks, the Harknesses, financed Time Inc., assuring their domination of the publications Time, Life and Fortune. Whittaker Chambers, the former Communist agent who exposed the treason of Alger Hiss, is by no means the only Communist, past or present, on the

staffs of those publications. It has long been a topic of conversation that one of the prime qualifications for a position with Time Inc. was membership in the Communist Party; and that it was a sine qua non for employment on Fortune. How important a role a position on the staff might play in Communist commercial espionage is discernible from the fact that industrial firms valued a write-up in Fortune so highly that they were willing to reveal to it their most secret and confidential data.

Ralph McAllister Ingersoll resigned his post as publisher of Time, to which he had been promoted after serving as associate editor of Fortune and general manager of Time, Life, Fortune, Architectural Forum, and The March Of Time, to become associated with Marshall Field and others, as publisher of the Communist newspaper PM. He relates in his autobiography published in Who's Who, as his claim to honor:

"... resigned (from Time Inc.) to organize and finance company subsequently to publish PM (New York daily evening newspaper); founded the Newspaper PM and editor since 1940 . . . interviewing Marshal Stalin, 1941 ..."

Ingersoll so insistently demanded of his readers that they volunteer to fight in defense of Stalin and the Soviets, that an irate reader challenged him to do so himself and "needled" him into doing it. He announces in his biographic sketch that he returned to resume publication of PM. Ingersoll exemplifies the spirit that prevailed on the staffs of Time Inc. during his tenure there, and that has persisted since.

Russell Wheeler Davenport, of Fortune and Life, spearheaded another aspect of the Rockefeller-Soviet Axis political activities, fake opposition to their New Deal. He reports himself to have been the coordinator of the extraordinary pre-convention campaign that made New Deal Democrat, Rockefeller puppet, "One World" (Rockefeller's) Wendell Willkie the "me-too", fake opposition, Republican candidate in the 1940 presidential election, with the object of ensuring the U.S. entry into World War II that had already been pledged to England. In this maneuver they attained the superlative in thumbing their noses at the American "peasantry".

Henry Robinson Luce, China-born son of a missionary, product of Yale and Oxford Univer-

sities, who, with Briton Hadden, founded Time Inc. with Harkness Standard Oil money and became editor and publisher of Time, is, as might be expected, in the ranks of the key agencies of the Rockefeller Empire—its Foreign Office, the Council on Foreign Relations, the Institute of Pacific Relations, Yenching University of which he is a director, Encyclopedia Britannica Inc. and others. He was the front through whom they financed the Commission on Freedom of the Press, that proposed to abolish the unalienable human rights assured by the Constitution and the Bill of Rights and advocated the same type of freedom of the press as is enjoyed by Pravda in Russia and La Prensa in Argentina, a press that would be "responsible"—to the rulers of the Rockefeller Empire.

The same situation prevails in the only other news magazine upon which the bulk of the nation is dependent for its contact with world news—the New Deal sponsored Newsweek.

Rockefeller thought-control apparatus has been particularly cunning in maintaining in the press, as in politics, a semblance of opposition and rivalry. But even a casual examination of the situation reveals that the "opponents" represent the two sides of the same side; their two parties are one party made to appear as two; and their "bipartisanship" is a completely transparent device for promoting the interests of the Rockefeller Empire. Consequently, there never emerges to public notice the question: "Is it constitutional, or desirable to scatter American troops about the world to serve other lands?" The controversy that comes to public ken is: "Shall we send one army or ten armies to Europe?"

The Rockefeller interests have been careful to cover up their trail in the ownership and control of publications by a maze of nominees, dummy corporations, and interlocking directorates. Thus, Collier's lists three corporations as owners, while a fourth, unlisted corporation actually owns and operates the publication. A E. Winger, director of Crowell Collier, interlocks it with Rockefeller's Chase National Bank, of which he is chairman of the board of directors. Thomas E. Beck, chairman of the board of Crowell Collier, interlocks its directorate with the Rockefeller-dominated Metropolitan Life Insurance Company.

The conspirators arrange subsidy of publications that carry their propaganda line through the ECA, the Marshall Plan, and other devices. Hundreds of thousands of dollars of those funds are spent for the purchase of Time, Life, Fortune, Collier's and other magazines for free distribution in Eurasia. The New York Times special airmail edition that costs 25c a copy is mailed daily, at the expense of the taxpayers, to every member of Parliament and every high British official, as well as to the officials of other lands.

The influence of the tremendous amount of advertising of concerns dominated by Rockefeller on the publications not directly controlled by them, cannot be overemphasized.

The highly laudatory articles on the Rockefellers that have appeared in numerous magazines during the past year, in Collier's magazine, the Saturday Evening Post, the Police Gazette (Feb. 1951) and many others, present the amusing spectacle of the Rockefellers telling the world how good they are. No doubt they believe with Ivy Lee and his pupil, Joseph Goebbels, that if a lie is repeated often enough, the "peasants" eventually will believe it.

During the same period the Rockefellers seized control of all important media of mass communication. In connection with the construction of Rockefeller Center, they acquired a controlling block of the stock of Radio Corporation of America, as well as of Radio Keith Orpheum. By such deals and through domination of such New Deal agencies as the Federal Communications Commission, they gained control of the key radio networks; their control is exercised directly, and through agents and associates. Through American Telephone and Telegraph Co. and its subsidiaries—Bell Telephone Laboratories and Electrical Research Products—and a patent pool with General Electric Co., RCA, and others, that effected a monopoly of motion-picture sound devices, the movie producers were mercilessly tied up, looted to the point of virtual bankruptcy, and then taken over by the Rockefeller interests.

Public-opinion polls and public-opinion researches are highly effective propaganda devices. There exists among the less intellectual and moronic elements, that preponderate in every community, a powerful desire to conform. This has

been especially highly intensified in communities that have known the doubtful blessings of Rockefeller's "educational philanthropies", which have well served the original purposes of its founder— of teaching the "peasants" to do "perfectly", from the viewpoint of the Rockefellers, the things that previously they did "imperfectly" from the same viewpoint. Let the public know that Nincompoop Dummy is the candidate chosen by the majority of folks polled, and they will generally rush to vote for him unless they have been conditioned to resist the suggestive force. For it is human to like to pick a winner and to ride him to victory. The presence among the pawns and puppets of Rockefeller's Council On Foreign Relations of George Horace Gallup, founder of the British and the American Institutes of Public Opinion which operate the polls that so often influence profoundly the sentiments and votes of the public, is of great significance.

Unionization plays an important role in warping both press and theatre to the purpose of the conspirators, and in silencing opposition more effectively than any open censorship. Thus the wholly subversive and Communist Newspaper Guild took over the press of the nation through unionization of its editors, reporters, and other help. By steadily higher and exorbitant wage demands, and other preposterous exactions, the Guild forced a large proportion of the press that opposed Rockefeller's "New Deal" or exposed Communist henchmen and conspirators, either out of existence or into submission.

In New York City the Sun, one of the oldest, best, and most fearless newspapers, was forced to close its doors after campaigns of exposure of Communist infiltration of the national government and exposure of water-front union racketeering and murder. Numerous of its employees, Guild members, lost irreplaceable lifetime positions; but the expose was stopped and the conspirators protected. The New York World-Telegram and The Sun that had taken over the Sun after it was shut down and merged, campaigned strenuously, under the courageous editorship of Lee Wood for a thorough investigation and prosecution of the conspirators in the treason of the Rockefeller-subsidized Institute of Pacific Relations publication, Amerasia. The Guild struck and threw its members out of work,

during a trying period of inflation, for two months and risked throwing them out of work permanently. It did so for the ostensible purpose of securing a relatively minor salary increase that never could repay their strike losses, but for the actual purpose of protecting the conspirators and serving the Rockefeller-Soviet Axis. But when the official Communist daily, the Daily Worker, began to totter, the Newspaper Guild virtually forced its members there employed to give it financial assistance and support by returning to the publication a large part of their salaries, which was, to all effects and purposes, dues to the Communist Party.

It is seriously open to question whether the Newspaper Guild, that controls the editorial writers and reporters of the nation, has not served Soviet Russia and the Communist cause more loyally than have even the employees of the Soviet news service, Tass, who infest Washington and the nation and openly carry on their espionage activities.

Major General C. A. Willoughby, former chief of intelligence under Gen. MacArthur, accused a group of Guild members, including Drew Pearson, Hal Boyle, Joseph Alsop, Christopher Ran, and Hanson Baldwin and Time, Newsweek, and U. S. News and World Report of injuring our national interests by "inaccurate, biased and prejudiced" reporting of the Korean War. He charged that their versions of high command strategy gave aid comfort to the Reds. The conspirators' pressure for MacArthur's dismissal was exerted thru these agents.

The Equity Actors Association and stage and motion-picture unions and racketeers and rackets associated with them, have played a parallel role in the legitimate stage and in the motion-picture field. They have imposed such utterly unwarranted and absurd restrictions and unconscionably high costs as to restrict productions solely to those conspirators that undertake to produce for their own propaganda purposes.

The great majority of plays that have been produced on Broadway in the past two decades have been outright Communist, New Deal propaganda, written by Communists, produced by Communists, acted by Communists, reviewed by Communists, but financed by wealthy conspirators and, in some instances, by the New Deal with taxpayers' moneys.

Thus, "Goodbye My Fancy", written by crimson Garson, produced by fellow-traveler Sam Wana-maker, and acted in by him and Madeleine Carroll, was pure and unadulterated, party-line propaganda and part of the Communist phoney "peace drive". The Newspaper Guild critics, pro-Communist, with exceptions, lauded it to the skies, lured in the gullible public and made a financial success of it.

When I sued to recover the price paid for tickets, on the ground that Communist propaganda was misrepresented as entertainment and comedy, the court ruled that I had to prove the Communist intent of a Sam Wanmaker, though it refused to order him to appear in court in response to a summons issued by the court. The Guild reporters made the unwarranted dismissal of the complaint, on technical grounds, the occasion for boosting the popularity of the play. Likewise the stupid, costly musical, "Brigadoon", which was frankly Communist and labor-union propaganda, with a labor organizer as its hero, and Irish mythology as a vehicle, was built up by the critics, as a masterpiece of art and theatre, and made a huge financial success of forcing Communist propaganda on the audience in the guise of "theatre". The foundations have aided and abetted in this perversion of art to Communist propaganda.

The control of book publication has been a relatively simple matter. For few houses account for the output of books, and even fewer for their large-scale distribution. A vertical set-up, involving editors and publishers, jobbers and distributors, reviewers and retail booksellers and clerks, made possible the suppression of almost all books that failed to hew close to the line laid down by the conspirators.

But these methods of purchase, subsidy and perversion fall short of perfection and absolute control. They are relatively inefficient and fail to eliminate completely the possibility of release of material disturbing or menacing to the conspirators and their plans. The Rockefeller Foundation made a number of clumsy stabs at solving this problem of censorship by financing the publication of encyclopedic works that were intended to stand as defini-fields that would blanket out dissenters.

The Rockefeller Foundation, jointly with its sub-

sidiary Carnegie Foundation, subsidized the Encyclopedia of the Social Sciences. Edited by Alva S. Johnson, president of the Rockefeller-subsidized, Red, New School For Social Research that gave haven to such notorious Communist agents as Hanns Eisler, the Encyclopedia is largely, if not entirely, written by such notorious Marxists as Max Beer, Oscar Jaszi and Harold Laski. It defines the "social sciences" so largely, or exclusively, in terms of Marxism as to be a Marxist, Socialist, or Communist tract.

The rewriting of encyclopedias and works of reference along Marxist, Communist "liberal" lines has been undertaken on a vast and systematic scale. Thus Encyclopedia Britannica has been turned over for that purpose to Rockefeller's University of Chicago, under joint ownership or tutelage of Rockefeller's associate, Senator William Benton. Likewise, dictionaries are being systematically revised along lines of Marxist dialectics, to conform with the semantics prescribed by the Communist "party line".

Even more striking in the frankness of the expression of intent of censorship, suppression, and thought control is the instance of History Of World War II, the subsidy for which by the Rockefeller Foundation is reported in its Annual Report of 1946 (pp. 188-9) as follows:

"The Committee on Studies of the Council on Foreign Relations is concerned that the debunking journalistic campaign following World War I should not be repeated and believes that the American public deserves a clear and competent statement of our basic aims and activities during the second World War. What is contemplated is not a nationalistic treatment, but rather a history, with the issues and problems presented by an American historian for an American public.

"The author, Professor William Langer of Harvard University, during the war was the Director of Research and Analysis Section of the Office of Strategic Services, where he had exceptional access bearing on foreign relations. On a leave of absence, Professor Langer will establish headquarters at Cambridge, Massachusetts. He will go to England to consult with Professor Arnold Toynbee, who is presently writing a history of 321

the war and peace settlements based primarily on records available in Britain.

"The Rockefeller Foundation provided \$139,000 for expenses over a four-year period for the preparation of this history."

The History, essentially a study of our relations with other nations and with world problems altered or developed by the war, will subordinate actual operations and military aspects.

Needless to say this "history", which is candidly intended to be internationalist propaganda that will shun all aspects that might foster patriotism to serve Rockefeller interests, will prescribe the line to be followed by textbooks used in the Rockefeller-controlled "educational" system and press.

The true significance and full purport of this "history" grant is made clear by Professor Harry Elmer Barnes in his pamphlet, entitled *The Struggle Against the Historical Blackout*, published by himself and distributed from his home, Stonewold, Cooperstown, New York. This pamphlet is all the more significant because Professor Barnes was once, a "fair haired child" of the conspirators he exposes, and he taught in most of the leading universities in the country that are dominated by their "educational philanthropies". This distinguished historian says of his erstwhile sponsors:

"It may be said, with great restraint, that never since the Dark and Middle Ages, have there been so many powerful forces organized and alerted against the assertion and acceptance of historical truth as are active today to prevent the facts about the responsibility for the second World War and its results from being made generally accessible to the American public. Even the great Rockefeller Foundation frankly admits (Annual Report, 1946, p. 188) the subsidizing of a corps of historians to anticipate and frustrate the development of neo-Revisionism [Ed.: meaning the publication of the truth] in our time. And the only difference between this Foundation and several others is that it has been more candid and forthright about its policies. Charles Austin Beard summarized the implications of such efforts with characteristic vigor:

'The Rockefeller Foundation and the Council on Foreign Relations . . . intend to prevent, if they can, a repetition of what they call in the 322

vernacular the debunking journalistic campaign following World War I. Translated into precise English this means that the Foundation and the Council [Ed.: or the Rockefellers] do not want journalists or any other persons to examine too closely and criticize too freely the official propaganda and official statements relative to "our basic aims and activities" during World War II. (PP. 8-9)

"In bringing about the sad state of the world today, the entry of the United States into two World Wars played a larger role than any other single factor. (p. 4)

"While the first World War headed the United States and the world toward international disaster, the second World War was an even more calamitous turning-point in the history of mankind. It may indeed have brought us—and the whole world—into the terminal episode of human experience. It certainly marks a transition from social optimism and technical rationalism into the 'Nineteen Eighty-four' pattern of life, in which aggressive international policies and war scares have become the guiding factor, not only in world affairs, but also in the domestic political and economic strategy of every leading country of the world. The police state has emerged as the dominant political pattern of our times, and military socialism is engulfing both democracy and liberty. (p. 5)

"In all essential features, the United States has moved along into the 'Nineteen Eighty-four' pattern of intellectual life. In Nineteen Eighty-four, the author implies that historians in that regime have to be hired by the government and forced to falsify facts. In this country, and it is also true of other nations, many professional historians gladly falsify history quite voluntarily, and with no direct cost to the government. The ultimate and indirect cost may, of course, be a potent contribution to incalculable calamity. (p. 8)

"A state of abject terror and intimidation exists among the majority of professional American historians whose views accord with the facts on the question of responsibility for the second World War ... It is no exaggeration to say that the American Smearbund, operating through 323

newspaper editors and columnists, "hatchetmen" book reviewers, radio commentators, pressure group intrigue and espionage, and academic pressures and fears, has accomplished about as much in the way of intimidating honest intellectuals in this country as Hitler, Goebbels, Himmler, the Gestapo, and the concentration camps were able to do in Nazi Germany.

"Moreover the gullibility of many 'educated' Americans has been as notable as the mendacity of the 'educators'. In Communist Russia and Nazi Germany, as well as in Fascist Italy and China, the tyrannical rulers found it necessary to suppress all opposition thought in order to induce the majority of the people to accept the material fed them by official propaganda. But in the United States, with almost complete freedom of the press, speech and information down to the end of 1941, great numbers of Americans followed the official propaganda line with no compulsion whatever. This is a remarkable and ominous contrast, especially significant because it has been the 'educated' element which has been the most gullible, taking the population as a whole. [Editor's note: It is interesting to note that the educator recognizes that "education" has become thought-control but being too close to the picture, fails to recognize the forest for the trees, fails to discern that the Rockefeller, and other, "educational philanthropies" were designed to bring this about.]

"The opposition to Revisionism—that is, to truth in the premises—stems in part from emotional fixation on the mythology built up after 1937, and in part from personal loyalty to President Roosevelt and the naturally resulting desire to preserve the impeccability of the Roosevelt legend . . . There is of course a powerful vested political interest in perpetuating the accepted mythology about the causes, issues, and results of the second World War, for much of the public policy of the victorious United Nations since 1945 can only make sense and be justified on the basis of this mythology.

"In the United States it has been made the ideological basis of the political strategy of the party in power and has also been accepted by many outstanding leaders of the opposition party.

It has been essential to gain support for the economic policies which have been used to ward off a depression, with its probably disastrous political reverberations. Powerful pressure groups have also found the mythology helpful in diverting attention from their own role in national and world calamity.

"In addition to the opposition of public groups to the truth about responsibility for the second World War, many professional historians and other social scientists have a personal interest in perpetuating the pre-war and wartime mythology. One reason why historians opposed the truth relative to responsibility for the first World War and the main issues therein was that so many of them had taken an active part in spreading the wartime propaganda and had also worked for Colonel House's Committee in preparing material for the peace-making. A considerable number of them went to Paris with President Wilson on his ill-fated adventure. Naturally, they were loath to admit that the enterprise in which they had played so prominent a part proved to be both a fraud and a failure.

"Today, this situation has been multiplied many fold. Historians and other social scientists veritably swarmed into the various wartime agencies after 1941, especially the Office of War Information and the Office of Strategic Services. They were intimately associated with the war effort and with the shaping of public opinion to conform to the thesis of the pure and limpid idealism and ethereal innocence of the United States and our exclusive devotion to self-defense and world betterment through the sword. Hence, the opposition of historians and social scientists to truth about war responsibility and the obvious results of the War is many times greater today than it was in the years following the close of the first World War.

"The 'blackout boys' have not rested content with smearing those who have sought to tell the truth about the causes of the second World War. They have now advanced to the point where they are seeking to smear those who told the truth about the causes of the first World War. At the meeting of the American Historical Association in Boston in December, 1949, two papers were 325

read that endeavored to undermine the established revisionist writings regarding the prelude to that conflict. Arthur M. Schlesinger Jr., in an article in the *Partisan Review*, has even gone so far as to attack those who have written in a revisionist tone on the causes of the Civil War. The next logical step will be to attack the revision of historical opinion relative to the causes of the American Revolution and to find that, after all, 'Big Bill' Thompson was right in his views of that conflict and his threat to throw George V into the Chicago Ship Canal. In other words, Revisionism, which only means bringing history into accord with facts, now seems to be rejected by the 'blackout boys' as a mortal sin against Clio, the Muse of their subject. HOW THE HISTORICAL BLACKOUT OPERATES

"The methods followed by the various groups interested in blacking out the truth about world affairs since 1933 are numerous and ingenious, but, aside from subterranean persecution of individuals, they fall mainly into the following patterns or categories: (1) excluding scholars suspected of Revisionist views from access to public documents which are freely opened to 'court historians' and apologists for the foreign policy of President Roosevelt; (2) intimidating publishers of books and periodicals, so that even those who might wish to publish books and articles setting forth the Revisionist point of view do not dare to do so; (3) ignoring or obscuring published material which embodies Revisionist facts and arguments; (4) smearing Revisionist authors; (5) contending that, whatever the devious deceptions practiced by President Roosevelt and his supporters from 1937 to 1941, all this was more than justified in the interest of veritable national self-preservation; (6) contending that the Revisionism after 1918 undermined peace and that any revival of it after 1945 will prevent peace in our time; and (7) maintaining that successful deception of the populace is the cornerstone of sagacious statecraft under our present system of government." The conspirators have materially improved upon the technique recommended by Machiavelli for the maintenance of power in *The Prince* by supplementing it with thought-control by "educational philan-

thropies" that render the "peasants" incapable of thinking except as their rulers wish them to think. Like their Communist associates, they spurn morality and ethics as absurd signs of weakness and for them the Ten Commandments are ridiculous rules intended merely to enslave the "peasantry". The "Grand Lie" uttered whenever it suits their purpose for the maintenance of their power is their constant practise. They utter alternately and indiscriminately lie and truth on the same topic, unabashedly contradicting and belying themselves. They have no fear of insulting public intelligence with their lies, because the "peasants" have submitted to "molding" at their hands to the point where the great majority of them are bereft of intelligence or initiative; and those that are not, are robbed of a voice by control of all avenues of mass communication.

This is well illustrated by the matter of the recognition of the Communist Chinese Government and of seating it in the UN debating arena. Truman, Acheson, Jessup and their entire Rockefeller Red coterie in the State Department and Government, repeatedly went on public record as advocating recognition of the Chinese Reds. When that cause had been made unpopular among the "peasants" by the Korean "police action", not too many months later, the entire mob of the Red officialdom just as publicly belied their published statements and asserted that they had always opposed such recognition. Those who rightly accused them of shiftiness and lying, were subjected to concerted gang-smearing that is the conspirators' habitual practise. This technique is well illustrated by the "McCarthyism" smear campaign that was intended to protect the treacherous crew against exposure, by intimidation and vilification of the would-be patriot. The attack on McCarthy for repeating the exposure of Communists in the State Department and attempting to rise to the defense of our country, a dread offense in the eyes of the conspirators, is a chain attack on him through every one of the channels of mass communication which they control, in succession. Millions of dollars of the conspirators' funds, most of it tapped by devious devices from the pockets of taxpayers via the Treasury, have gone into the campaign. With a fine contempt for public intelligence, their pandering columnists

started the ball rolling by openly announcing the plan of the attack. Starting in the Daily Worker, the New York Compass and the New York Post, the "proletarian" media, its tide rose to fill the columns of the prostituted press in higher echelons, the New York Times, Time, Life, Fortune, Collier's and even the fashion magazines, as well as all channels of radio, television, burlesque, the stage and movies. Thus a group of Red playwrights joined forces in producing Maxwell Anderson's "Barefoot In Athens", a "McCarthyism" chorus in Greek setting. The Rockefeller Red puppets in McCarthy's own Republican Party, Senators Smith, Saltonstall, Morse and others of that breed, have joined in the subversive conspiracy to intimidate patriots. Unlimited funds are afforded the conspirators' agents by the foundations by such grants as the Rockefeller Foundation's "history" grant to foster historical lies and its "study" of civil rights in investigations of subversive activities" to harass and discredit investigators of un-American activities.

The exploitation of "sports" and the gambling associated with them, in order to divert the "peasants", has been one of the most important tools of the conspirators. It serves the same purpose in the so-called democracies that the circus did in the Roman "New Deal" and the mass disciplines and military reviews in the Communazi dictatorships. The nation's press systematically devotes more space to the so-called sports than it does to the nation's affairs and policies by which men eat or starve, work or idle, live and die. When the political scene becomes particularly ugly, as during the Korean "police action", or the exposure of Communist agents and spies in the State Department, the conspirators can always manage to dig up one of their systematic sport "fixes" for the press, to fill the headlines. They can manage to work up more indignation among the thought-controlled mob over a basketball gambling "fix" than over the needless sacrifice of a battalion of troops in Korea.

When the "fixes" do not suffice, the "peasants" are also regaled with the traditional soporific gangster continuity, a la the Kefauver Committee, by press and television. And from time to time, new "thrills" are cooked up by the conspirators to divert shallow minds that have been taught to avoid

thinking and to live only for transient "thrills" and excitements.

Attainment of the ultimate goal of absolute control of publication and thought was the task assigned to the American Commission On Freedom Of The Press, which in the words of Kenneth E. Olson, Dean of the Medill School of Journalism of Northwestern University,

"... arrogating to itself an official status which it never had, comes forth with 'findings' which have no basis in fact . . . and . . . produces a new philosophy which destroys the concept that American citizens have any unalienable basic rights and sets up the claim that freedom to print is the property of the government to be granted or withheld from individual citizens at the government's will ..." This passage is quoted from the introduction to the scholarly, masterful presentation of this conspiracy by Frank Hughes in his *Prejudice And The Press*, which the Devin-Adair Co. published as a patriotic service in 1950. Were the activities of the Pulitzer Prize Committee as devoted to the cause of patriotism as they are to that of subversion, this book would have automatically received its prize.

The Rockefellers avoided launching this attack on the freedom of the press directly. The Commission On Freedom Of The Press was financed by a grant of \$200,000 from the Rockefeller controlled Time Inc. and \$15,000 from the Encyclopedia Britannica Inc., in which Rockefeller influence is not unknown, to the University of Chicago as an agency that would serve to lend prestige to the scheme. The members of the Commission were the following: Robert M. Hutchins, chairman, is the former boy prodigy Chancellor of Rockefeller's University of Chicago, the "brain truster" entrusted to supervise the writing of the Constitution of the Empire, as head of the Committee To Frame A World Constitution, that came forth with its efforts, in 1947, as a pattern for the United Nations. He is director and chairman of the editorial board of Encyclopedia Britannica Inc., in which he is associated with Henry R. Luce and William Benton. His ideas, activities and the associates with which he chooses to surround himself, make it obvious that his sympathies are indiscriminately totalitarian. Incapacity for consistency and

intellectual honesty are revealed by the contrast between his attitudes on "freedom" when it concerns him, in the form of "academic freedom" for himself only, but not for his faculty; and as it concerns others, in the form of "freedom of the press", and the measure of freedom assigned to the community at large in his "World Constitution" which is a pattern of dictatorship. For his "academic freedom" he demands no limitation, free license. For himself he specifies, with arrogant conceit, that "Academic freedom is simply a way of saying that we get the best results in education and research if we leave their management to people who know something about them. Attempts on the part of the public to regulate the methods and content of education and to determine the objects of research are encroachments on academic freedom" (The Higher Learning In America, p. 20). For all others, including the press, freedom is to be restricted by "duty" and "accountability", as in "Freedom of the press for the coming period can only continue as an accountable freedom ... it becomes an imperative question whether the press can any longer be left to the unregulated initiative of the few who manage it".

Hutchins has been very cagey about joining Communist fronts openly. Ex-Communist Louis Budenz has testified that "leading persons" in the field of education were under Communist Party orders to conceal their membership and infiltrate the field of education. Hutchins, however, openly acknowledged his radicalism to the Trustees of the University of Chicago before his appointment to the post of Chancellor. And he did join several Communist or front organizations, including:

1. Moscow State University.

2. Bureau on Academic Freedom of the National Council of Arts, Sciences and Professions, that demanded the reinstatement of the three U. of Washington professors, who had been ousted for membership in the Communist Party or affiliations with its causes.

3. American Civil Liberties Union—on advisory board of the Chicago chapter.

Under his "educational" guidance a legislative committee found that the University of Chicago had become a den of Communism, crime, and vice, that

culminated in the horrible Heirens case, in which a young child was murdered by a student.

Zechariah Chafee Jr., vice-chairman, Professor of Law, Harvard University. In 1920, he published a book entitled *Freedom of Speech* in which he showed an appreciative insight into the meaning and value of "freedom" as defined in the Constitution and the Bill of Rights. But shortly thereafter the Rockefeller influence, as exerted by Beardsley Ruml in direction of the Marxist "social sciences" and totalitarianism, made itself felt and changed the intellectual atmosphere at Harvard. And with it, Professor Chafee changed his tune and joined the ranks of Rockefeller's Council on Foreign Relations as another of the "brain trusters" of the Empire. In line with its policies, he then identified himself faithfully with every turn and twist of the Communist party-line and signed and sponsored, in the company of notorious Communists, numerous manifestos, letters, and other releases of the Party.

John Maurice Clark, Professor of Economics at the Rockefeller-subsidized University of Chicago and Columbia University, member of Rockefeller's National Resources Planning Board, consultant to the NRA, and attached to the OPA. The Marxist trend of his thought is indicated in his work *Social Control of Business*.

John Dickinson, Professor of Law, University of Pennsylvania, partner of William G. McAdoo, (Wilson in-law and later New Deal Senator). He is a Rockefeller New Deal "brain truster" who became Assistant Secretary of Commerce and then Assistant Attorney General in charge of anti-trust investigations. He is a member of Rockefeller's Social Science Research Council and his Council on Foreign Relations.

William Ernest Hocking, Professor of Philosophy, Harvard University. He is listed as a member of the editorial board of *The Protestant*, which the Un-American Activities Committee described as "one of the most remarkable vehicles of straight Communist propaganda in existence". He has been identified with a number of other Communist-front activities.

Harold D. Lasswell, Professor of Political Science, University of Chicago, lecturer at the Marxist New School For Social Research, and 331

now Professor of Law at Yale University. His record of Communist activities parallels his Rockefeller-subsidized roles and includes:

1. Chicago Workers School of the Communist Party—lecturer.

2. American Civil Liberties Union.

3. War Communications Research Laboratory, director of a research program financed by the Rockefeller Foundation with a three-year grant of \$81,800, the objective of which was to root out any opposition to Rockefellerism by a process conceived by Lasswell and named "content analysis", another of the pseudo-sciences of the "social science" group. In these activities he was assisted by Communist front and Wallace supporter, Professor Frederick L. Schuman of the University of Chicago and by a group of others of the same breed, including Goodwin B. Watson and William E. Dodd, Jr., who were dismissed from government services by an act of Congress because of their association with dangerous subversives.

Archibald MacLeish, who calls himself poet but has been called by the 1948 California legislative committee investigating un-American activities, one of the "noted Communist Party liners." MacLeish was head of the Library of Congress to which \$90,000 was contributed by the Rockefeller Foundation for the support of his activities. In 1940 he was made Assistant Secretary of State; in 1941, Director of the Office of Facts and Figures; in 1942, Assistant Director of the Office of War Information and American Delegate to UNESCO, of which he became chairman. MacLeish is a member of Rockefeller's Council on Foreign Relations and has been connected with the Social Science Research Council.

Charles E. Merriam, Professor of Political Science at Rockefeller's University of Chicago, who favors "planned collectivism". He was affiliated with the American Society for Cultural Relations with Russia which is listed as an "American propaganda agency for the Soviet System." He was also an official of the NRA. He was appointed by President Truman to the Loyalty Review Board. He is closely identified with the Rockefeller Empire, including the following top policy-making bodies: 332

1. Spelman Fund—trustee.
2. Social Science Research Council.
3. National Resources Planning Board, which he was instrumental in organizing for the Rockefeller interests with Louis Brownlow, and into which the Rockefellers have put \$3,953,000. It succeeded to the point where it successfully supplemented the activities of the Rockefeller Institute of Public Administration in realizing proposals for a reorganization of the government in Washington, to suit the Rockefeller dictatorship plans, and actually moved into the White House. Representative John Taber of New York called it a "menace to the welfare of the American people and ... a menace to Constitutional government."
4. Council on Foreign Relations.

Reinhold Niebuhr, Professor of Applied Theology, Union Theological Seminary, an exchange professor with Britain under the Rockefeller plan by which the Rockefeller interests brought to the U.S. to propagandize his schemes, Sir William Beveridge, "cradle to grave", "social security" advocate, whose plans have done so much to undermine the British Empire. Niebuhr's Communist-front activities are discussed in detail in the chapter on the Federal Council of Churches of Christ in America. He is a member of Rockefeller's Council On Foreign Relations.

Robert Redfield, Professor of Anthropology at Rockefeller's University of Chicago. He is Director of the American Council On Race Relations and was associated with Louis Adamic, Mary McLeod Bethune, and other notorious Communists; Charles Dollard, president of the Carnegie Corporation, who appeared before Congress as a friend of Alger Hiss; Will W. Alexander, former vice-president of the Rosenwald Fund, who was named before Congress by Lauchlin Currie as an intimate of Gregory Silver-master in connection with the investigation of the Washington spy rings; and Edwin R. Embree, late president of the Rosenwald Fund and vice-president of the Rockefeller Foundation. The Rosenwald Fund joined forces with the Baptist-inspired Laura Spelman Rockefeller Memorial, under the guidance of Beardsley Ruml, in fostering Negro Communist race propaganda and agitation. He was also on the advisory board of 333

the Guggenheim Foundation, which has a long record of grants, according to investigating committee reports, to Reds, including Granville Hicks, Louis Adamic, Langston Hughes, and Carey McWilliams. He also has been affiliated in various capacities with the Social Service Research Council and has been trustee of the Carnegie Institute of Washington and the Social Science Foundation.

Beardsley Ruml, Rockefeller's principal agent in promoting Communism and the subversive "social sciences" in the educational world, launched through the Laura Spelman Rockefeller Memorial, as has been related in another chapter in connection with that organization. He has been trustee of the Spelman Fund and of the Julius Rosenwald Fund. During his tenure as Dean of the Social Science Division of Rockefeller's University of Chicago, Communist activities of members of his faculty and of the students became so notorious as to precipitate a legislative investigation of the University in 1935. He is a member of Rockefeller's Council on Foreign Relations and a top "brain truster" of the Rockefeller Empire.

Arthur M. Schlesinger, Professor of History of Harvard University, who has been identified with numerous Communist and front activities. He is adviser to Rockefeller's Colonial Williamsburg, member of the Social Science Research Council, and member of the Council on Foreign Relations.

Schlesinger writes for the "Sunday" (it appears on Saturday) edition of the Red New York Post, a column entitled History Of The Week that aptly illustrates his concept of historic truth. It consists of a mixture of New Deal and other shades of Communist propaganda. Currently it is harping on the present Party "line", McCarthyism.

George N. Shuster, President of Hunter College, an indiscriminate totalitarian who discerns the ideologic identity of Nazism and Communism and subscribes to both, is a member of the Council On Foreign Relations, was placed in Bavaria, where he has been doing a through job or restoring Nazis to control. He is proving himself an outstanding proponent of Rockefellerism. The personnel of the Commission On The Free-334

dom Of The Press as well as its sponsors, Henry R. Luce and Senator William Benton, stand out clearly as Rockefeller associates, "brain trusters", and pawns of the Rockefeller Empire, and beneficiaries of their "philanthropies". Luce, Benton, Chafee, Dickinson, MacLeish, Niebuhr, Rummler, Schlesinger, and Shuster are all members of Rockefeller's Council on Foreign Relations. Dickinson, Leigh, Lasswell, MacLeish, Merriam, Redfield, Rummler and Schlesinger are all identified in various capacities with Rockefeller's top level propaganda agency, the Social Science Research Council. Benton, close associate of Nelson Rockefeller and on his advisory committee as Coordinator of Inter-American Affairs, was vice chairman of the board of the Committee for Economic Development. Merriam was one of the organizers of Rockefeller's top level "planning" agencies, the National Resources Planning Board.

Hutchins, Hocking, Redfield, Niebuhr, and Rummler, of the Commission On Freedom Of The Press, were also members of the Committee to Frame A World Constitution that drew up the initial Constitution for Rockefeller's United Nations. All of them have benefited from Rockefeller "philanthropy" and have shown their willingness to follow direction; and all of them prospered accordingly. It truly can be concluded, therefore, that the schemes which they promote represent the intent and purpose of their Rockefeller masters.

The objective of the Rockefeller imperial interests that emerges again, more clearly than ever, from the report of the Commission On Freedom Of The Press, is a dictatorship that will eliminate all human rights that have been assured by the Constitution and the Bill of Rights, including freedom of the press. This they justify by Marxist dialectics. It is the same pattern of freedom presented by Pravda.

The same concept of freedom of the press has been written into the "Bill of Human Rights" of the United Nations by a subcommission on which Professor Chafee and Senator William Benton sat with that distinguished "libertarian" Jacob M. Lomakin, Soviet consul-general in New York City. Lomakin was expelled from the United States following an attempt to kidnap Mrs. Oksana Kasenkina and force her return to Russia, which resulted in her jumping out of the window of his consulate

in an effort to escape his "libertarianism". Freedom used in this sense is obviously a semantic distortion of the word that makes it synonymous with slavery. The latest step of the conspirators to protect themselves from exposure, has been the agitation being conducted to muzzle the members of Congress so that it will not be possible for them to bring the conspiracy to the attention of the public. The first move was a resort to typical Communist smearing of Senator Joseph McCarthy, who dared to repeat charges that had been made before against traitors, Communists, and other subversives in the government. McCarthy is being repaid for the limited measure of courage which he showed in exposing some of the lesser conspirators, (while remaining strictly silent on the topic of the top conspirators which the author has repeatedly called to his attention with ample proof) by being held up by the President himself and by known traitors, to the ridicule and scorn of the moronic element of the nation who swallow this palpably false propaganda. "McCarthyism" has become a word of opprobrium and scorn for any patriot who dares to expose the conspirators and seeks to defend and protect the nation.

Subversion in our laws and courts, packed by the conspirators, has made it a crime to label Communist a person who by his very act and association proves himself an accomplice of the Communist Party, unless oft non-existent party-membership cards in the name of the person can be produced, or the person openly confesses himself to be a Communist. The conspirators have created for themselves a special privilege and thereby have constituted themselves a class above and beyond the law who are free to continue their crimes against the nation, immune to exposure, except by the most daring members of Congress. Now even the members of Congress are threatened by the conspiracy. The members of Congress would be subject to the same persecution as was Mrs. Hesta McCullough when she correctly labelled two notorious supporters, accomplices of the Communist cause, if the schemes of Senators Hunt and Benton, supported by the Administration, were carried out.

This scheme would destroy what little voice the Representatives of the nation have in Congress. At present the members of the House are allowed, as

a rule, only one minute for comment on a matter under discussion, when recognized by the Speaker. In the case of some critical legislation, recently, only half a minute was allowed each member for discussion of the bill, by a rule adopted by the majority of the House.

To make the muzzling of the Congressmen even tighter, another wrinkle has been added to the regulations of Congress. A Congressman may not even publish the remarks and discussions that he would have made, if allowed, in the Congressional Record, except by unanimous consent of the members. Any one member of Congress, in alliance with the conspirators, or one of their number, could completely muzzle the Congress, if Senators Hunt, Benton, and their accomplices can carry through their scheme.

But the conspirators have at their disposal still other tricks for silencing those who might still dare them or manage to get by with criticism and exposure of them. The only member of the Congress who in recent years has dared expose the Rockefeller control of our Government is courageous Senator George W. Malone of Nevada; and the only newspaper in the country that dared publish his expose was the Chicago Tribune, in its issue of April 25, 1949, that has been quoted. Since then, Senator Malone's name has been virtually barred from mention in the Rockefeller-controlled press. There has been set up in regard to him a wall of silence that generally means political death. The only mention of him in the national press since that date has been an attack on him for using the privilege of franking his remarks and telegraphing them to the press, practices that are used by all members of Congress under their privileges, and are constantly being used on a wholesale scale by the critics and conspirators themselves. More recently it has been announced that Rockefeller and allied money would be poured into Nevada when Malone comes up for re-election, to secure his defeat; and that a woman, secretary of his fellow Senator from Nevada, is being groomed by the conspirators to run against him.

The censorship imposed by President Truman on the nation's press is another step in carrying out the conspirators' plans for muzzling it. Annoyed by the exposures of corruption and subversion in the

Government, Truman berated the press for "jeopardizing national security" by publishing releases made by government departments themselves. His attitude was that of the Commission on Freedom of the Press, that a "responsible" press should publish nothing displeasing to the rulers. Oddly enough, Truman's "security" motivated censorship was designed solely to withhold information from the nation, and not from the enemy. For a representative of the Kremlin's press, Tass, was present at the conference. He has not been barred by Truman from getting the press releases of the departments of his own Administration that he alleges jeopardize national security, and from transmitting the information to the Soviet Union.

The penultimate in press censorship and suppression has been attained in the last few years, by a cartelization of the paper and pulp industry that has resulted in one of the most absolute monopolies in history, and has run the price of newsprint from \$60 per ton to as high as \$250 per ton, when it can be bought. George Sokolsky commented wisely on this and other phases of the conspiracy in a Don R. Mellett Lecture at the University of Syracuse, on May 8, 1947, on The Free And Responsible Press, as follows:

"It is interesting to note, for instance, that the OPA never took a single step to protect the newspapers of this country from the abuse of the price of newsprint by an alien cartel . . . The price of paper, the high cost of labor, high taxes, force weaker newspapers either to fold or sell to chains. Some newspapers have folded because they were unable to obtain newsprint or could not pay the exorbitant prices charged by a monopolistic alien cartel. A government which demands freedom of press in countries that have never known freedom of anything, has taken not a single step to safeguard the freedom of its own press by protecting the flow of paper upon which its newspapers are printed. Small newspapers in small cities find it difficult to remain solvent, and therefore free, with newsprint at \$90 a ton, if they can get it at all. To this must be added not only the high cost of newspaper labor but also feather-bedding procedure in the printing trades which large newspapers meet with difficulty and some smaller newspapers cannot meet at all. 338

"For example, there is a trick in newspaper production called 'Bogus' and the name is correct. It consists in setting copy which is never used, the newspapers paying out hundreds of thousands of dollars every year for this purpose. Such bogus copy is set, a proof is taken, and the whole thing is thrown away. It is utter and complete waste. But it obeys the union rules." However sage and true Sokolsky's statements are, they do not represent the whole truth. The alien cartel is dominated by the Rockefellers through the alien powers in question. The Chairman of the Paper Industry Board is John D. Rockefeller 3rd. The unions in question have been especially fostered by the Rockefeller interests through our government, for the very purpose of effective control of the press, which it now serves. This illustrates the profits that have accrued to the Rockefellers from their fostering of labor unionism as a device for regimentation of the people and of control of monopolization of industries through monopoly of labor. It fits perfectly into the totalitarian and syndicalist plot of the Rockefeller Empire.

Leaving nothing to chance, the Rockefeller Foundation, conjointly with its satellite Ford Foundation, has financed the setting up of the International Press Institute and the American Press Institute, as has been related, for the regimentation of the press. In order to insure foreign news that suits their purposes, Rockefeller's Council On Foreign Relations, with the aid of their satellite Carnegie Corporation, have undertaken to reward foreign correspondents who serve them well with lucrative fellowships. The Advisory Committee of the Council that selects the fellows and supervises their work were reported to be the following members of the Council: Gardner Cowles of Look; John K. Jessup of Fortune; Walter Kerr of the New York Herald Tribune; Grayson Kirk of Columbia University; Eugene Meyer of the Washington Post; Edward Murrow of the Columbia Broadcasting System; and Shepard Stone of the New York Times. In 1949-50 fellowships were awarded to the following: Henry R. Lieberman, the New York Times correspondent in China, who has covered Nationalist and Communist areas, including Manchuria and Sinkiang; and Robert Clurman, chief

correspondent and manager for the United Press in the Netherlands East Indies. In 1950-51, the fellowships were awarded to the following: Fitzhugh Turner of the Washington bureau of the New York Herald Tribune, formerly correspondent in the Middle East and Palestine, for a study of Russian imperialism; and William J. Boyle, of the Vienna bureau of the United Press, for a study of modern European history.

They have yet to solve the problem of preventing the publication, independently, of exposures such as this. Thus far such exposures constitute little annoyance to them, because of two factors: first, their control and censorship of the press and most other avenues of advertising and publicity bar these books from wide circulation; and second they have learned to trust to the morosity of the rank and file of the average public whom they have "conditioned" through the decades to be completely disinterested in such "minor" matters as national policy, which often determines whether they live or die, and so completely absorbed in such "vital" issues as the universally "fixed" sports and in the deified motion-picture stars, that they have no time for anything else. The more "intellectual" and "educated", or thought-controlled, of the mob have been so completely indoctrinated and conditioned that with a show of bigotry and intolerance, they refuse to believe the truth when it is presented to them. Therefore, the conspirators realize, it is only the exceptional individual who is interested enough to read and profit from a presentation of the truth, like this volume. And such individuals are an infinitesimal minority and count for so little in our land, that they can be ignored. Therefore, a volume such as this, however true, has been of little concern to them.

## CHAPTER XVIII

### THE "TROJAN HORSE"

ROCKEFELLER'S PHILANTHROPY TRUST A Cesspool Of

Subversion And Perennial Campaign Fund

Philanthropies, social-service activities and charities are political weapons of the first order, if those who control them are minded to use them for political purposes. They have the popular appeal of appearing to give the public something for nothing. And it is notorious that no one wants to shoot Santa Claus. Bismarxism, Communism and New and Fair Dealism have made foundations their most powerful weapon. They are lobbies of the highest effectiveness, entirely outside and above the law, a law unto themselves. The propaganda and political campaigns waged by foundations excel in effectiveness any party political campaigns, because they are waged continuously, year in and year out, with unlimited funds and without any of the legal restrictions imposed upon political parties. These restrictions in the use of political campaign funds were imposed primarily through the efforts of the foundations, which thus cunningly intensified the influence of their own lobbies.

The Marxist New and Fair Deals could not have come into power and retained it for so long a period without the continuous propaganda, campaigning and lobbying for their measures by the Rockefeller-controlled foundations and associated organizations, with all the great wealth, influence and prestige they possess. Not even the Government itself can wield as great an influence, because in politics the purchase of influence carries the limitation of the stigma of corruption, as it does in the world of business and commerce; but in the field of philanthropy and social work it is "accepted practice" to bribe public officials with retainers, jobs and favors, because of the false inference that their lobbying is done in the public interest.

This corrupt use of pseudo-philanthropy in politics is as old as human history. Shrewd members of Congress, back in the days before so many of them had come under the influence of the "philanthropic" lobby, recognized the menace of the proposed Rockefeller Foundation. In 1910 to 1911,

they refused to grant a charter to it on the ground that it would constitute a menace to the nation. On January 26, 1917, Senator Chamberlain of Oregon, stated on the floor of the Senate, in a wisely accurate and prophetic vein:

"The Carnegie-Rockefeller influence is bad. In two generations they can change the minds of the people to make them conform to the cult of Rockefeller or the cult of Carnegie, rather than to the fundamental principles of American democracy." Senator Martine, of New Jersey, said, on another occasion:

"I hope that the United States may be spared from living on contributions from Rockefeller and Carnegie". Many other of the shrewder members of Congress were wise and discerning enough to speak in the same vein. Their attitude was in sharp contrast with the abject and craven subservience to the Rockefeller interests of the large majority of the members of present-day Congresses that defile Washington and echo the historic remark of servile, "bipartisan" Senator Arthur H. Vandenberg at the 1945 San Francisco U.N. Conference:

"Anything Rockefeller wants is O.K." This sentiment, unfortunately for the nation, represents the views of all the members of our present-day Congresses with the exception of one or two men, notably Senator Malone of Nevada. They are the only true Americans representing the country in these times of disaster wrought by the conspirators. In 1911, there were still Americans in the majority on the floors of Congress. They rejected the granting of a charter to the Rockefeller Foundation by an overwhelming vote.

Monopoly is the keynote of Rockefeller enterprise. It is quite natural that when John D. had discovered the publicity, propaganda, thought-control and commercial value of pseudo-philanthropic foundations, he should seek to gain a monopolistic control of them and of allied organizations. Besides, self-interest dictated that he would seek to eliminate that bugbear to the Rockefeller mind, the waste that would be involved in a battle of foundations promoting opposing or differing causes. Carteliza-tion of philanthropy, of propaganda agencies parading as philanthropies, of commercial pseudo-

philanthropies, and of charities that feed on the generous impulses of mankind was, from that viewpoint, a desirable objective.

John D. Rockefeller attained the first step in the direction of a merger of "philanthropies" in 1908, when Andrew Carnegie, an in-law of William Rockefeller, was given a trusteeship by Rockefeller on the General Education Board. This initiated the merger of the two richest groups of "philanthropies" of the time, following a period of several years of collaboration between Rockefeller and Carnegie personally through social and golfing contacts. (Nevins, JDR, v. 2, p. 592) It was not long before the Rockefellers and their underlings were appointed to the boards of the various Carnegie philanthropic organizations and dominated them.

At the present time, the Rockefellers are represented personally in the Carnegie Endowment For International Peace, a significant set-up in the international field, by David Rockefeller, as trustee; and the chairman of its board of trustees is their kinsman and agent, John Foster Dulles. The two of them were largely instrumental in the appointment of Alger Hiss to the post of president of the Carnegie organization, and with their puppets and agents dictated its policies, propaganda and powerful lobby. Through their agents appointed to the board of each and every one of the Carnegie foundations, they now control them all. This domination has been tightened up by interlocking of a majority of these trustees with the Foreign Office of the Rockefeller Empire, the Council On Foreign Relations.

Under Rockefeller control, the activities of the Carnegie Endowment For International Peace have completely belied its name and violated the purpose for which it was chartered, by propaganda for our involvement in war—in 1914-1917, and again in 1940, when its President Nicholas Murray Butler campaigned for our intervention on behalf of England. Also, in violation of the law, it was the organizer of the campaign for the three billion dollar gift to England; and it published and distributed 300,000 copies of a propaganda pamphlet designed to influence the Congress, by Robert M. Gulick Jr., entitled Fifteen Facts On The Proposed British Loan. As the reader undoubtedly suspects by now, the "loan" was merely another device for looting the

taxpayers to fill the treasury of the Rockefeller Empire.

It is ironic that the control of the pro-British Carnegie organizations should have fallen into the hands of the Rockefeller interests who are effecting the destruction of the British Empire, and that it should be subverted to their purposes. But in this they share the fate of every important foundation in the country. Through their drafting of the laws, through control of the governmental agencies and courts involved, through seduction, bribery or other form of procurement of personnel skilled in the administration of foundations, through flattering offers of "cooperation" with the newer foundations that ends up in eventual control, or through court action, as in the case of the Frick Museum, the Rockefeller Empire has gained control of every important foundation and subverted them all to the uses and purposes of the Empire. Their control of the educational institutions of the country, especially in the field of the "social sciences", in which is included the administration of philanthropies, has been a material help in this cartelization of the philanthropies.

A mere detailing of the extent of the interlocking of the trusteeships of the foundations on the one hand, and their interlocking with the Rockefeller-dominated, and subversive and Marxist political and propaganda agencies and Government agencies on the other hand, gives some slight inkling of the extent of the menace of the Philanthropy-Charity-Social-Service Trust.

Of the total of 151 trustees listed, 37 interlock the trusteeships of two or more foundations each, 109 interlock membership with Rockefeller's Council On Foreign Relations, eight or more interlock with the Institute of Pacific Relations, and four were editors of Amerasia magazine. The character and tenor of these trusteeships is indicated by the fact that Alger Hiss Was interlocking trustee of the largest number of these organizations at the time his "patriotic" career was interrupted by a jail sentence for perjury in connection with treason. Hiss's trusteeships included the presidency of the Carnegie Endowment For International Peace, trusteeships of the Woodrow Wilson Foundation and the World Peace Foundation, and membership in Rockefeller's Council on Foreign Relations and the

Institute Of Pacific Relations. His "sponsor, patron and mentor", John Foster Dulles, was "runner-up" with four: chairman of the board of trustees of the Carnegie Endowment For International Peace, trustee of the Rockefeller Foundation, member of the Council On Foreign Relations and of the Federal (alias National) Council of Churches of Christ in America (alias U.S.) Others, who rival these in the number of their foundation trusteeships, are Karl T. Compton, Cleveland E. Dodge, Douglas S. Freeman, Walter S. Gifford, Robert Gordon Sproul, W. W. Waymack and Harry Merritt Wriston.

Making use of the generous impulses of mankind has become a big and important aspect of the business enterprises of the Rockefeller Empire that overlooks no exploitable human failing or weakness. It gives them two advantages: it places the control of enormous wealth in their own hands to be used as they choose; and it keeps that wealth out of the hands of possible rivals in the quest for power and domination. Since these moneys flow directly into their control, it is not surprising that their agents have written into the law, provisions that exempt from taxation the moneys that flow into their "philanthropic", "social service" and "charitable" organizations.

On August 13, 1951, the National Planning Association, an organization that has been subsidized by the Rockefeller Foundation, released a pamphlet written by Rockefeller "tax expert" Beardsley Ruml, in collaboration with Theodore Geiger, entitled "The Five Percent". It deals with a clause in the Federal tax laws Ruml was instrumental in having inserted for his masters, that permits corporations to deduct 5% of their total net income "for approved expenditures for educational scientific and welfare purposes." It can be assumed that expenditures are "approved" by agents of the Empire planted in the Treasury Department, whose approval must be had for all such matters as setting up tax-exempt foundations or researches—a key device in the process of gaining control of all foundations. Ruml, an old hand at the commercial use of pseudo-philanthropies, naively let the cat out of the bag by pointing out the profits of these "philanthropies" to the donors, as follows:

"... many corporations which contribute to scientific research gain access to industrial and 345

technologic applications as a result of that research, which may more than repay the expenditures.

"The expenditures create a highly favorable atmosphere for the corporation within its other business activities—for example, its sales promotion work and its labor relations—have a much better chance of being successful." The real uses to which these "research funds", as well as the activities of the National Planning Association, are put when "approved", can be discerned from the fact that Beardsley Ruml's collaborator, Theodore Geiger, was exposed as a Communist by Professor William Canning before the McCarran Internal Security Committee hearing on August 16, 1951. The taxpayers' moneys are used to supplement the foundations' wealth in fostering Communism in the guise of "social science" research.

The subversive character of the activities and of the key personnel of Rockefeller's Council On Foreign Relations and of their other "philanthropies" and their multitudinous subsidiaries, allies and fronts, has been detailed in other chapters. The political complexion and efficiency of the various Rockefeller foundations has been recounted. How true this state of affairs is in the other foundations of the Trust can be illustrated by listing the Board of Trustees of some of them. The italicized are New Deal officials and the starred, notorious Left Wingers and Marxists.

#### SPELMAN FUND

Cleveland E. Dodge	Charles E. Merriam*
Clarence A. Dykstra	John D. Rockefeller III
Marshall Field*	Laurance S. Rockefeller
William Tudor Gardiner	Beardsley Ruml

#### TWENTIETH CENTURY FUND

A. A. Berle Jr.	Paul G. Hoffman
Francis Biddle*	Ostuald W. Knauth
Bruce Bliven*	Robert M. LaFollette Jr.*
Chester Bowles*	Morris E. Leeds
Benjamin V. Cohen*	Robert S. Lynd
Henry S. Dennison	James G. McDonald
John H. Fahey	Charles P. Taft*
H. Chr. Sonne	W. W. Waymack

## WOODROW WILSON FOUNDATION

Mrs. Barry Bingham	Archibald MacLeish*
Joseph E. Davies*	Hugh Moore
John S. Dickey	Edward R. Murrow
Cleveland E. Dodge	James B. Reston
Thomas K. Finletter	Mrs. Ruth Bryan Rohde
Mrs. Raymond B. Fosdick	Francis B. Sayre
Douglas S. Freeman	Arthur Sweetser
Alger Hiss*	Henry A. Wallace*
Grayson Kirk	William W. Waymack
Mrs. Henry Goddard Leach	Sumner Welles
Herbert H. Lehman*	Mrs. Quincy Wright

The mechanics of control and subversion of foundations that are not directly dominated is currently illustrated by the developments in the Ford Foundation. This Foundation was established in 1936 by Edsel Ford with a gift of \$25,000, and was rapidly enriched by gifts from Henry and Edsel Ford and their estates. Its stated purpose was to receive and administer funds for scientific, educational and charitable ends, to further the public welfare. Its method of operation was to extend grants to other organizations for their maintenance and operation. In December 1947, it showed capital assets of \$204,855,975.65; total expenditures of \$1,060,064.93; and grants of \$982,185.67, but published no report. It had only five trustees: Henry Ford II, President; Burt J. Craig, Secretary and Treasurer; Karl T. Compton, who is chairman of the board of Massachusetts Institute of Technology that has been so liberally subsidized by the Rockefeller-controlled foundations, interlocking trustee of the General Education Board, the Rockefeller Foundation, the Edison Foundation and the Alfred P. Sloan Foundation, a member of Rockefeller's Council on Foreign Relations and noted in educational circles as a "liberal"; Donald K. David, who is dean of the Harvard School of Business that is controlled by the Rockefeller-dominated foundations, a familiar Harvard brand of "liberal" and a member of Rockefeller's Council On Foreign Relations; and Benson Ford.

Hard-headed Henry Ford had been quite successful in keeping both Wall Street and the Rockefeller interests out of his enterprises. But Henry the Second, far more naive than his grandfather, succumbed to political pressure exercised through inheritance-tax and Treasury bureaucrats and had

opened the door by way of the Ford Foundation to the agents of Rockefeller, peddling their dictatorship conspiracy as "social science". It is safe to predict that this will lead the way to his eventual loss of control of the enterprise he has inherited. For, although the Ford Foundation holds only 3,-089,908 shares of the Class A, non-voting stock of the Ford Co., ways will be discovered by the conspirators to give it, and their agents in it, control of the enterprise. By 1950, the process was already under way. By this time, the value of that stock alone was reported by the Foundation to be \$417,-137,580, mere "chicken feed" in these days of squandering of tens of billions of dollars of taxpayers' money, but still one of the largest boodle funds available in the nation, in the form of a tax-exempt foundation, that can be converted to subversive political propaganda by the conspirators.

The breach made by Compton and David, representing Rockefeller-controlled "philanthropy" was considerably widened by enlargement of the board of trustees, through the addition of:

John Cowles, president of the Minneapolis Star & Tribune Co., trustee of the Foreign Service Foundation and member of Rockefeller's Council On Foreign Relations.

Charles E. Wilson, president of the General Electric Co., and trustee of the Foreign Service

Foundation, and Fair Deal official. In addition there were added a host "learned professors", officers of universities heavily subsidized by the Rockefeller "thought control" organizations that parade as "philanthropies", who are dependent upon the Rockefeller-controlled Carnegie Foundation For The Advancement Of Teaching for their pensions and who must do as they are bid.

These submissive "learned professors" were organized into a "study committee" to serve as "independent consultants to the Foundation". This was required by the Treasury Department before it would make a final ruling on the tax exemption of the funds left to the Foundation.

This learned group of professors was permitted by the powers-that-be to dictate how the Ford fortune should be spent. But even learned professors must eat; and to attain the positions they hold they must have learned long since that the easiest and only way to insure steady eating is to

prostitute themselves to the Rockefeller thought-control machine that dictates to the schools and the Government what shall be taught and by whom, and to do its bidding. It is not surprising, therefore, that this "study group" emerged after two years, on September 26, 1950, with their report that required the Ford Foundation to follow the purposes laid down by the Rockefeller interests for all foundations, to support the Marxist New and Fair Deals with their funds and thus to provide a half-billion-dollars perpetual campaign fund for the Socialism and/or Communism of the Democratic Party and the advancement thereby of the Rockefeller Empire.

Their report dictated "five areas for action" to the Foundation, which surprisingly happen to be the same categories into which the Rockefellers classify the activities of their Foundation, except that the "social sciences" are divided into two categories.

Thus the Ford Foundation was either seduced or blackmailed through Treasury Department "acceptance" into constituting itself a perpetual and perennial campaign fund for Rockefeller's Marxist New and Fair Deal and the Democratic Party that carries it out. The program which these "independent consultants" imposed on the Ford Foundation was Rockefellerism. Carrying out of this deal was insured by the appointment of the New Deal ECA Administrator, Paul G. Hoffman, as president of the Foundation at a salary of \$100,000 a year, announced in the New York Times, September 27, 1950. Robert M. Hutchins, former Chancellor of Rockefeller's University of Chicago, head of the Red Commission on Freedom of the Press and Committee to Frame a (Socialist) World Constitution, whose record is cited elsewhere, was appointed Vice-Director. Hoffman has served the Rockefeller Empire sufficiently well to merit membership in Rockefeller's Council on Foreign Relations.

At the time of Hoffman's appointment, the New York Times announced that the Foundation would promptly launch an intensive campaign for the political activities dictated by "learned professors" and "independent consultants", especially in the various "areas" of the "social science" program urged by them. It was announced that: "Its disbursements will be in the field of social sciences,

with Mr. Hoffman having 'enormous powers' in the apportionment of the fund . . ."

The available liquid resources for this campaign fund, that can be expended for steady propaganda and campaigning, year in and year out, and with no regard to the Hatch Corrupt Practices Act, was announced by the Foundation to be \$68,791,847, as of the end of 1950. Used in connection with the 1952 Presidential election campaign, it would probably make the total Foundation election boodle fund the largest in the history of the country. It would probably prove sufficient to saddle the Democratic Party and its program of Marxist Rocke-fellerism on the nation for at least another four years—and their totalitarian rule.

The New York Times announcements that have been recounted were preceded on September 21, 1950, by one of the "scoops" for which Walter Winchell is so renowned. He announced in the New York Journal American:

" . . . the Ford Foundation will distribute its \$80,000,000 tax exempt fund in the field of social science—particularly the training of men for government services." Eliminating any doubt as to the influence of the Rockefeller Foundation over the activities of the Ford Foundation, the report stated:

"Winchell said the Foundation 'studied the workings of the Rockefeller Foundation and others, before deciding to devote its wealth to social sciences rather than medicine or other physical sciences'."

With Hoffman in control, no time was lost in launching the Ford Foundation in an intensive thought-control and propaganda campaign. The first step was announced on February 20, 1951, in the New York Times, under the headline, Ford Foundation Sets Up Educational Study. The Foundation announced the creation of a Fund For The Advancement Of Education, with an initial grant of \$7,154,000. The chairman is none other than Frank W. Abrams, chairman of the board of Rockefeller's Standard Oil Co. of New Jersey. The president is Professor Clarence H. Faust, dean of the college and of the graduate library of Rockefeller's University of Chicago, who had been transplanted in 1947 to Leland Stanford University as Dean of the

Humanities and Sciences. The board of trustees include the following:

Barry Bingham, president and editor of the Courier—Journal & Louisville Times, owner and operator of radio station WHAS, member of the board of overseers of Harvard U. and member of Rockefeller's Council on Foreign Relations

Ralph J. Bunche, director of the Division of Trusteeship of the United Nations, trustee of the Phelps-Stokes Fund and member of the Council on Foreign Relations

Walter Lippmann, author and journalist and member of Rockefeller's Council on Foreign Relations

Owen J. Roberts, former U.S. Supreme Court Justice and rabid "internationalist", who has publicly proclaimed his desire to haul down the American flag and replace it with an "international" U.N. banner A fund for adult "education" was announced as one of its first activities in the N.Y. Times of April 24, 1951. Adequate secrecy for the activities of the Foundation that could not stand the light of day was provided by its announced policy of leaving publicity on grants to the discretion of the grantees. Censorship of the press on an international basis was the next venture of the Ford Foundation, in the form of the International Press Institute. It was entered into in collaboration with the Rockefeller Foundation, that had never been brazen enough to openly launch such a venture, but now saw the opportunity to do so through one of its less suspect agencies. The purposes of the Institute stated in the Times announcement on April 10, 1951, are as follows:

"First, the furtherance and safeguarding of the freedom of the press, by which is meant free access to the news, free expression of views, free publication of newspapers; second, achievement of understanding among editors and so (Ed.: good rhetoric is apparently of no interest to these distinguished editors) among peoples; third, the promotion of free exchange of accurate and balanced news among nations; and fourth, the improvement of the practices of journalism." There is no record that the ultra-Red Newspaper Guild which herds the newspaper staffs of the nation, and especially that of the New York Times,

in the service of Communism, Russia and the Rockefeller-Soviet Axis, had the slightest word of protest against the Institute, in spite of its rigid control of all activities and organizations broaching on newspapers. Within a short time the Times announced "seminars" on newspaper topics held by the American Press Institute, Columbia University. Television, which has such tremendous potentials for propaganda, subversion and political control, was the field of activity next entered into by the Ford Foundation. On June 13, 1951, the N.Y. Times announced that the Ford Foundation had launched, in cooperation with the National Association of Radio & Television Broadcasters, a study to determine "how commercial television can contribute to 'a better level of educational, informative and more culturally mature programs'" in the form of an experimental and radio workshop to prepare special programs and offer them to sponsors. James Webb Young, consultant to the Foundation, is quoted as stating that commercial broadcasting would have great social significance and that:

"It is this powerful stream of commercial broadcasting which in my opinion, will be the real impact of television on this country—on its level of information, its emotional maturity and on its unconscious behavior patterns." This powerful weapon of propaganda, thought control and subversion, the conspirators openly propose to control through the Ford Foundation: "In the workshop it would undertake to produce, probably on film, programs with a content in line with the foundation's purposes . . ." Once again it is curious to note that the Communist elements, usually so active and vociferous in all matters that touch on propaganda, have raised no objection to this program. It must be quite to their liking. The reason may be discernible in a broadcast made by a Columbia Broadcasting System panel on Sunday, August 19, 1951. The participants were Representative Reva B. Bosone (Democrat, Utah), Rev. Paul C. Payne of the crimson Board of Christian Education and George H. Shaw, former Assistant Secretary of State. They refused to lay the blame for destruction of the morality of the nation's youth on the perversion and subversion of the educational system of

the nation by the Rockefeller-subsidized Communist "educators" who openly teach in our schools and through all avenues of publication that morality is an anachronistic, bourgeois foible, weakness or vice; or on the wholesale corruption, perversion and treason of public officials. These callous propagandists and perverters of the truth followed the line laid down by the Communist Party and by President Truman in his speech before the American Legion and by the Democratic National Committee, in preparation for trick campaign oratory and for pulling the wool over the eyes of the "peasants". They laid the blame for the immorality on the exposure of corruption, treason, perversion and immorality, especially in the course of political campaigns. They call the exposure of such corruption, treason, perversion and other immorality, "character assassination", until the day that the party involved is thrown behind bars; and they apparently feel that the offenses do not exert an evil influence even then, except in the process of exposure and prosecution. In short, the damage is not in the crime but in its exposure. It is a new version of the old idea held by the criminal, that the only crime is being caught.

This cry of "character assassination" sounds strange coming from the mouth of Harry Shippe Truman, the vestige of the courageous American Senator who, in 1942, "assassinated" the character of Rockefeller's Standard Oil Co., his present day bosses, with the truthful charge of treason. It sounds even stranger coming from the mouth of a clergyman in defense of Senator Tydings and his shameful protection of subversion and treason.

The Rockefeller-dominated Trust has made it impossible to set up any sizeable fund or foundation for the fostering of Americanism or the support of the Constitution. The Constitution is an anathema to the conspirators and is never mentioned by them in any of their programs. Any organization for Constitutional education invites the fury of the conspirators and all the persecution and prosecution which their puppet public officials can bring to bear. But in the case of the Alfred P. Sloan Foundation, another technique was used, one that has become the standard among the conspirators in blocking the philanthropic intent of true Americans.

In 1934, Alfred P. Sloan, then president of General Motors Corp., member of Rockefeller's Council On Foreign Relations, announced a gift of ten million dollars to establish the Sloan Foundation for the purpose of effecting

"... a broader as well as a better understanding of the economic principles and national policies which have characterized American enterprise." He appointed his brother Harold Stephenson Sloan, who obtained his M.A. of Columbia U. in economics, in the year 1926, and became associate professor of economics at the N. J. State Teachers College, visiting professor of economics at New York University and lecturer at Columbia U., vice-president and executive director of the Sloan Foundation. He occupied this post until 1945.

Under his directorship, the Sloan Foundation was reincorporated as the Alfred P. Sloan Foundation Inc. (Delaware). The foundation became a hotbed of Marxist "science", otherwise known as "social science", and the "Americanism" that it promulgated was Soviet Americanism. To what extent New Deal pressure was responsible for the subversion of the Foundation is not known. But the Treasury Department has been capable of ruling that to foster Americanism is "to engage in propaganda", a ruling that would bar the Foundation from tax exemption. But it never has been known to rule that spreading Communist and New Deal propaganda is "to engage in propaganda".

The board of trustees of the reorganized Foundation, which was unquestionably dictated by the Rockefeller interests through the Treasury Department, as indicated by its personnel, included:

Karl T. Compton, trustee of the General Education Board, Rockefeller Foundation and Edison Foundation and member of Rockefeller's Council On Foreign Relations

Lewis W. Douglas, trustee of the Rockefeller Foundation and General Education Board, member of Rockefeller's Council On Foreign Relations, former Ambassador to St. James Court and president of the Mutual Life Insurance Co.

Rev. Harry F. Ward of the Union Theological Seminary and the Federal Council of Churches of Christ in America, a steady contributor to the official Communist publication, the Daily Worker,

and notorious pro-Communist and joiner of Communist front organizations

John L. Pratt, kinsman of Rockefeller's partner, George Whitney, President of J. P. Morgan & Co. and trustee of Consolidated Edison Co.

Alfred P. Sloan Jr. Assisting Director Sloan, as "educational" director, was Miss Eunice Fuller Barnard who was a member of two organizations listed by the Department of Justice as "subversive and Communist": 1. The Joint Anti-Fascist Refugee Committee which supported the activities of Gerhardt Eisler as ranking Soviet agent in the U.S.; and 2. The Conference on Pan American Democracy. The outstanding achievements of the Foundation under this direction were:

1. Public Affairs Committee Inc. which was supported with grants that totalled \$379,947.20

2. Institute of Post-War Reconstruction, with \$59,212.

3. Educational Film Institute, with \$75,000, for the production of Communist films with music by Rockefeller protege, Hanns Eisler. The Public Affairs Committee was described by

the House Committee on Un-American Activities as "an organization which issues higher quality pamphlets on subjects related to those adopted for propagation by the Communist Party." Its founders were:

Evans Clark, one of the first employees of the Soviet Information Bureau in the U.S., director of the Twentieth Century Foundation, and member of Rockefeller's Council on Foreign Relations. Frederick Vanderbilt Field, whose record as a sponsor of Communist causes and membership in Rockefeller's Council on Foreign Relations is recounted in these pages.

Maxwell S. Stewart, editor of the Committee's publications, who was identified by Louis F. Budenz as a Communist Party member on the authority of Earl Browder, taught at the Moscow Institute, was associate editor of the Moscow Daily News, and has fifty-two citations for affiliations with subversive organizations. It is not surprising that the Public Affairs pamphlets, written by such authors as Maxwell S. Stewart, Carey McWilliams, Morris Ernst, Harold Loy Ickes, Ruth Benedict, Gene Weltfish, Robert E. Cush-

man and Dr. Charles E. A. Winslow are rated as Red propaganda and reading recommended by the Communist Party. The pamphlet written by Benedict and Weltfish, entitled Races of Mankind was barred from circulation among the Armed Forces after protests by the House Military Affairs Committee against its Communist propaganda.

Under the secretary-generalship of Henry Allen Moe, director of the American Association of Rhodes Scholars, trustee of the Rockefeller Foundation and of Rockefeller's Museum of Modern Art, the John Simon Guggenheim Foundation has supplied fellowships and support almost exclusively to Communist fellow travelers selected by the Standing Committee headed by Dr. Linus Pauling, a frequent sponsor of Communist-organized protests and fronts. Among the Fellows are:

Louis Adamic  
Carleton Beals  
Marc Blitzstein  
Jack Conroy  
Angner Enters  
Mordecai Gorelik  
Josephine Herbst  
Maurice Hindus  
Joe Jones  
Douglas S. Moore  
Alexander North  
Nathaniel Peffer  
Isidor Schneider  
Tom Tippet  
Edmund Wilson

Newton Arvin  
Albert Bein  
Kenneth Burke  
Aaron Copland  
Kenneth Fearing  
William Gropper  
Granville Hicks  
Langston Hughes  
Otto Klineberg  
Carey McWilliams  
Max Nomad  
Bernard Reiss  
Harry Slochower  
Genevieve Taggard  
Richard Wright

Peggy Bacon  
Alvah Bessie  
Harriet Buckmaster  
Adolph Dehn  
Hallie Flannagan  
Albert Halper  
Abram L. Harris  
Kolfe Humphries  
Owen Lattimore  
Lewis Mumford  
Saul K. Padover  
Earl Robinson  
Maxwell S. Stewart  
Charles R. Walker  
William E. Zeich

Not included in the above list is one notable, Professor Margaret Schlauch, who left the U.S. to become a teacher in Communist Poland.

The Rosenwald Foundation, under the directorship of Edwin R. Embree, former vice-president of the Rockefeller Foundation, and avowed Marxist, persistently engaged in Communist agitation, especially among Negroes. Dr. J. W. Holley, Negro educator and founder of the Albany State College for Negroes, called the Rosenwald Foundation one of the principal agencies fostering hatred of the whites by a campaign that accused them of robbing the colored folks of their rights. It contributed, with Rockefeller's General Education Board, to the Bethune College for Negroes that is headed by Mrs. Mary McLeod Bethune, who is listed in the California Un-American Activities report as one of the "well known Communists". It also supported liberally the American Council on Race Relations,

on the board of which Embree served with Mrs. Bethune and Will W. Alexander, a vice-president of the Rosenwald Foundation named by Lauchlin Currie, as friend of Nathan Gregory Silvermaster, who was accused of complicity in Communist spy ring activities. The Council was also supported by the Rockefeller Foundation and the Carnegie Corporation, and the president of the latter served on the Council's board.

The Foreign Service Educational Foundation that undertakes to indoctrinate men who wish to enter, or are in, the Diplomatic Corps, in 1950 turned over to Owen Lattimore's pro-Communist control its School of Advanced International Studies, to be merged with his Walter Hines Page School of International Relations at Johns Hopkins U. that has been liberally subsidized by the Carnegie Corporation and the Rockefeller Foundation.

Instances of subversive activities of a host of foundations merged into a Foundation Trust by the Rockefeller interests, can be cited endlessly. Enough has been related to make it clear that they are a grave menace to the nation, a power above and beyond our government, the adjunct of an invisible super-government that boldly and baldly engages in subversive political activities and undertakes to impose a dictatorship on our country. In their political activities the foundations that comprise this Trust violate the provisions of the laws that make their existence possible by according them tax exemption on the condition that they refrain from political activities. By failure to comply with the law, this group of foundations provide the immediate instrument of their destruction. For it is inconceivable that the courts will hold that in their pro-Communist political activities they were engaged in "education" and not in politics. By mere enforcement of the law this social cancer can be and should be destroyed.

It remains to be seen if these foundations and their sponsors are more powerful than the nation that created their right to existence. There is delicious irony in this situation, that provides that the selfsame Marx-inspired tax laws that the conspirators promoted to impoverish the nation and enrich their sponsors, shall serve to destroy them and rid the land of their menace.

One fact emerges from a study of the founda-357

tions. Directly or indirectly they are all controlled by the Rockefeller interests. Under the provisions of the law and its administration, no important foundation can exist without their acquiescence, that is not subject to their control.

#### FOUNDATION CODE

## CHAPTER XIX

### ROCKEFELLER'S "POPULAR FRONT"

#### The "New" And "Fair" Deals.

The Roosevelt "New Deal" regime was the fulfillment of the pledge of a "Popular Front" government in the U.S. that the Rockefeller Empire had obviously made to Stalin as one of the bases of their pact. It was composed almost entirely of Rockefeller-Soviet Axis agents, who had planned it as "social science", and of other types of puppets of the Rockefeller Empire and its "philanthropies". It is absurd to speak of the Communist spies and agents who have been exposed in high posts in Washington as "infiltrators". They were the very backbone of the New Deal, planted there from the start to serve the Rockefeller-Soviet Axis in its global conspiracy. From the very start of the regime, after removal of a large number of employees from government posts by Roosevelt, at the behest of the conspirators, on the pretense of "economy", which had been a sham campaign platform, the government was packed with hundreds of thousands of Rockefeller Reds spawned in the Rockefeller-dominated "educational" system. Rockefeller-subsidized professors, especially the peddlers of the bogus "social sciences", and their students, whose training fitted them only for some task in a "managed economy", a euphemism for Communist or other forms of Marxist dictatorship, and who consequently constituted an ever growing pressure group supporting the Rockefeller-Soviet Axis, became the priests of the "new social order"—the New Deal.

Surrender of control of the destinies of the nation to the professors who constitute the vaunted "brain trust", consequently means surrender to the type of totalitarianism dictated to them by the Rockefeller-Soviet Axis. They must be ever-ready to betray their country to that Axis. This is eloquently attested to by the fact that the great majority of the traitors who have been exposed in the past decade have been professors and their students. Hiss and Field of Harvard, Coplon of Columbia, Gillars of Hunter College, Pressman of Cornell, Dr. Ponte-corvo and numerous others attest to the subversive influence of the Rockefeller-subsidized or dominated universities. The presidents of most of our leading

universities are included in the membership of the Rockefeller Empire's Foreign Office, the Council on Foreign Relations, where they are indoctrinated by such characters as Owen Lattimore, Frederick Van-derbilt Field and William W. Lockwood, former editors of *Amerasia* and Alger Hiss, all champions of Marxism, and by others of equal calibre and inclination. Soviet interests could not be expected to suffer, at their hands, in a conflict of interests with the U.S. Among the university presidents thus indoctrinated are General Dwight Eisenhower, President of Columbia University, Harold Stassen, President of the University of Pennsylvania, Karl Compton, President of Massachusetts Institute of Technology, James Bryant Conant, President of Harvard University, John Sloan Dickey, President of Dartmouth, Isaiah Bowman, former President of Johns Hopkins, Robert Gordon Sproul, President of the University of California and numerous others. Through them the educational system of the nation is impressed into the service of the Rockefeller-Soviet Axis.

In 1926, the Rockefeller interests started grooming Franklin Delano Roosevelt for the role of puppet, depression President. He was an incompetent who had never been able to earn enough to support his family; who had started off as a Ku Klux Klan candidate for the N. Y. State Senate, trading on the Roosevelt name and its appeal to the "peasants"; whose wife was trusted by the Kremlin as one of the original agents of the Bismarxian school of Marxism in the U.S.; who had suffered from an attack of encephalomyelitis, falsely described as infantile paralysis, that had left him with the stigma of high suggestibility so aptly described by his wife in her autobiography and by others, and gave him the reputation of being a good politician because he acquiesced with all who spoke with him but that made him completely pliable by agents planted at his side,—this Roosevelt recommended himself highly to the Rockefeller interests as the prospective Charley McCarthy, the "perfect dummy" to serve as spokesman in putting over their totalitarian conspiracy, and in fulfilling their Soviet agreement. Through their collaborator, George Foster Peabody, they made him a present of Georgia Warm Springs, with a quarter-of-a-million dollars mortgage attached, that was too large for him to

handle without their help. In the following year, they bribed him to accept the New York gubernatorial nomination to the tune of more than \$800,000, as related by Ernest K. Lindley, his publicity man, in the official campaign biography, under the cover of a philanthropic sham. That sham was completely exposed by me in 1935 in my book, *Rackets, Social Service And Medical*, and in 1940 in *Your Life Is Their Toy*.

Franklin Delano Roosevelt might not have been placed in the White House by the conspirators, if President Hoover had not been a Quaker and turned down the proposal made to him on their behalf, by Henry L. Stimson, Rockefeller puppet Secretary of State under Hoover, to declare war on Japan for the purpose of rescuing Standard Oil property that was being consistently wrecked by the Japs in the course of their invasion of China. According to Professor Harry Elmer Barnes in his pamphlet, *The Struggle Against The Historical Blackout* (6th ed., p. 43) :

"Henry L. Stimson openly played his Lucifer hand in Far Eastern diplomacy. He took Hoover to the mountain top and ... he did make it evident that Mr. Hoover could recoup his political fortunes and have every prospect of reelection in the autumn if he would make war on Japan. But Hoover would have nothing to do with the idea. A year later Mr. Stimson had a rendezvous with Mr. Hoover's newly elected successor at Hyde Park and had no difficulty in selling him his bill of goods. Roosevelt's recently published letters show he took the initiative in bringing about this momentous conference with Stimson on January 9, 1933. From about that time onward Mr. Roosevelt had an 'ace in the hole' whenever he needed a foreign war to rehabilitate his political prospects at home. He played the ace in the summer and autumn of 1941. But as James Farley has revealed (Ed.: *James Farley's Story*, p. 39), Roosevelt discussed the possibility of immediate war with Japan in his very first Cabinet meetings of March, 1933." Stimson was rewarded by Roosevelt with the post of Secretary of War. He mentions his agreement with Roosevelt on war on Japan in his autobiography, *On Active Service in Peace And War*, (p. 301). Professor Barnes is wrong in his as-

sumption that Roosevelt delayed playing his ace until 1941. He began playing it promptly following his inauguration. On the day of his inauguration vainglorious Franklin Delano Roosevelt told his friends, in an expansive moment, that he wanted to be a wartime president. He was compelled to delay his war because Japan was not prepared to fight us, and Congress was not in any mood to declare a war. Public opinion had been aroused against war by one of the typical Communist "peace" propaganda campaigns that was actively financed by the Rockefeller interests, and was intended to lull the U.S. into complete disarmament.

The first obstacle was surmounted by the Rockefeller-Soviet Axis by American-planned and financed rearmament of Japan, in which the Standard Oil companies played a significant role. After the Panay incident, the Rockefeller interests made the Mitsuis their exclusive agents in Japan and conquered territory in Asia. The second impediment was overcome by Roosevelt and his fellow conspirators, as pointed out by Charles A. Beard in his work, *President Roosevelt And The Coming Of The War*, and by the author in *The Strange Death Of Roosevelt*, by goading Japan into attacking the U.S. at Pearl Harbor. In this treachery, as has been related, Rockefeller's Institute of Pacific Relations played the dominant role. This was the reason for the delay in the Japanese war for which Roosevelt hankered so long.

In the meantime, Roosevelt very materially aided the Rockefeller Empire in bringing on the war between Germany and England by engineering the upbuilding of the Nazi Party in Germany and inducing the British to enter World War II after the invasion of Poland, for the purpose of smashing both of the other Empires. How little Roosevelt was interested in the fate of Poland is demonstrated by his subsequent sell-out of the Poles to Stalin. But they were for him as good a pretext as any for bringing on the war that he sought to immortalize himself. Jesse Jones, in his book, *Fifty Billion Dollars*, confirms my earlier statement that Roosevelt deliberately sought, instigated and precipitated World War II.

Every measure of national or international import, as well as the minor local ones, championed by the "brain trusters" in the New and Fair Deals

have served the purposes of both the Rockefeller Empire and Soviet Russia. When Stalin stood at the side of Hitler, they and their students championed "isolationism", pacifism, Buchmanism, and the America First movement, which was discredited by the influx of both the Communist and the Nazi elements—with the purpose of keeping the U.S. out of the war and serving the interests of the Rockefeller-Soviet Axis. That is the true significance of the vaunted membership of Ambassador Philip Jessup and of Senator William Benton in America First, which was advanced in the press as disproof of the Red complexion of both. It proves exactly the reverse. For support of America First by subversives served Soviet interests quite as effectively as did Frederick Vanderbilt Field's Communist-front Peace Mobilization, in the propaganda for keeping the U.S. out of the war.

But as soon as the Rockefeller interests had effected their deal with the British for Saudi Arabian oil in exchange for their bringing the U.S. into the war, and as soon as Hitler's forces were turned against their Soviet allies, these subversives fairly shrieked their insistence that America enter the war. The Communist Party line then publicly coincided with the interests of the Rockefeller Empire, and "internationalism" became the shibboleth of both. Philip Jessup and Senators Arthur Vandenberg and William Benton were in the forefront of the changelings.

This open alliance with the Soviets prepared the way for the conspirators to begin frank subsidy by the U.S. taxpayers of the industrialization and modernization of the armaments of Russia. Every "international" plan proposed thereafter contained tribute by the American taxpayer to the Kremlin. "Lend Lease" provided over ten billion dollars worth of armaments and supplies, including an entire fleet of naval vessels. The United Nations Relief And Rehabilitation Administration, which was almost entirely financed with American taxpayers' money, was converted into a device for financing Communist Russian infiltration and conquest of many nations. Communist agents, under the direction of Herbert H. Lehman, were placed in charge of the distribution of this American aid in such lands as Czechoslovakia, Rumania and Poland that the Axis agreements turned over to the Soviets.

But the lion's share of the money and supplies went to Soviet Russia itself.

The New Deal and its Fair Deal successor have been made to serve the domestic purposes of the Rockefeller Empire as effectively as it does the Rockefeller-Soviet Axis in the international field. The industrial monopolies which they control are fed from the Treasury and the public's purse. Their Milk Trust's monopoly was extended, and even in depression the price of milk was tripled. Their monopoly of food has been widened, with the cooperation of the truckmen's unions, to the point where they maintain a constantly high price even for produce, throughout the nation the entire year.

The seizure of industries which they did not control and the setting up of new monopolies assumed a fresh pattern under their New Deal. No longer was it necessary for them to resort as individuals to the racketeering of the South Side Improvement Company type and risk public indignation. Their agencies, the Government and the unions, do their dirty work, undermine the industries which they seek, smash them so as to force out the investing public and form them into monopolies to be taken over.

When these things are done by the "New Deal" they have the complete support of the very radical and labor elements which would rail at them if done by private enterprise for itself. By some curious quirk of mentality akin to faith, they are happy and content when these crimes are committed for the benefit of the same private cartels, through public agencies, by themselves as agents, at public expense. For the "liberal" or radical does not seek to remedy evil situations. He merely seeks to be master of them himself. He is motivated not by principle but envy and unprincipled greed. That was the Machiavellian idea that lay behind the Rockefeller support of Communism and its incorporation in the New Deal mechanics for attaining monopoly and dictatorship.

The NRA (National Industrial Recovery Administration) and the Federal Securities Act with its provision barring holding companies, and enhancing the Federal Reserve Board's power to regulate money, constituted the initial effort to accomplish a complete cartelization of all industries.

The NRA was openly a device for setting up

rao-365

nopolies or giving legality to existent monopolies, in their own interest, in every industry. It specifically suspended the Sherman-Clayton Anti-Trust Act and permitted each industry to organize itself under an absolute code authority. The plan had been suggested by the U. S. Chamber of Commerce.

The man who controlled the Code Authority wielded dictatorial powers over an absolute monopoly. The rules promulgated by the Code Authority had the force of law for both industry and the nation. It fixed prices, controlled production, licensed producers, admitted or barred newcomers from the industry, set conditions of competition, prescribed the amount of space and the machinery that could be used; and also possessed police and judicial powers and could put violators in jail. As a sop to Labor, a minimum wage of \$12 to \$15 per 40 hour week was provided and Section 7A recognized the right of collective bargaining. In other words the NRA created a syndicalist or corporate state in the U.S. at about the same time as had Mussolini and Hitler, whose sponsors were the same as those of the NRA.

The SEC established by the Federal Securities Act, is a device for tightening the monopoly of industries by control of financing. Its power to block new financing is absolute. Likewise its order to wipe out investments in railroad and utility securities is final. But it offers stockholders absolutely no protection. Numerous securities that have been passed on by the SEC and marketed, have been wiped out within a period of one or two years. On the other hand numerous worthwhile and essential enterprises have been barred from financing. Its effect on the mining industry for instance, has been devastating; and as a consequence the U.S. is becoming constantly less self-sufficient in strategic minerals and metals.

In short the SEC was never intended to serve the interests of the investor, but was planned to foster the purposes of the monopolies. This is quite manifest in its utility securities activities. In this group of securities alone, the SEC has wiped out, in a decade, more of the public's investments than all of Wall Street's swindles of a century past.

The conspirators' monopoly of all sources of power and energy, as comprehensive as their American Telephone and Telegraph Company in its field, that will extend from the Arctic to Tierra del Fuego,

looms very large. They control the currency and banking system as well as the government and have acquired even greater strength through the enhanced powers they have given themselves through the Federal Reserve Bank. They were confident that they were safe in permitting others to develop the power systems with moneys invested by the public. Then by manipulating a depression and by retroactive laws written for the purpose, they robbed their rivals of their work and the public of their investments. That is the purpose of the abolition of holding companies and the power over utilities incorporated in the Federal Securities Act.

The SEC has directed a looting of the public of its investments in utilities that is fully comparable with those perpetrated by the Nazis and Communists. By dishonest and wholly illegal and un-Constitutional acts that have been supported by corrupted and packed courts, the conspirators deliberately depressed and manipulated the market for utility securities by its orders and rulings. The TVA was used for the malevolent purpose of smashing the market in utility securities. On the day that the ruinously low rates for TVA power were to be announced, the press and the nation were kept waiting for Commissioner David E. Lillienthal from 10:30 A.M. until after the markets had closed. In the meantime a terrific wave of short selling hit the utility bonds and stocks that depressed them terrifically. Washington phone calls to Wall Street were particularly heavy that day, especially from the Reconstruction Finance Corporation offices. There can be no question that the announcement of the TVA rates was a prearranged signal for a "killing" in the market by the conspirators. These maneuvers cost the investing public hundreds of millions of dollars. The market for utility securities was smashed, and they dropped steadily thereafter.

The Federal Reserve Board has ably aided and abetted the swindling of the public by manipulation of margin requirements. Repeatedly it has forced the public out of stock desired by the powers-that-be by raising margin requirements, at the bottom of the market, just before large upswings were planned.

The conspirators then bought up at their own price, or virtually stole, a particular class of security in each company. It was a simple matter for them

to dictate that the particular class of security which they had cornered shall be given complete control of the utility in question, all senior securities shall be retired and junior securities wiped out, without regard to earnings or values.

It is safe to predict that when the nation's utility companies will have been "simplified in structure" (a euphemism for "stolen") they will be, in due time, merged into a nation-and continent-wide Power Trust, under the domination of the Rockefeller Empire and its allies.

The public has been looted, under the direction of the Interstate Commerce Commission, during the Roosevelt Administration of many more billions through another industry, through the railroads. The Roosevelts, the Delanos, the Rockefellers, the Harrimans and numerous others of America's rulers are heavily interested in railroads.

The Interstate Commerce Commission which they dominate, exercises absolute control over the minutest details of the operation of the railroads and their rate structure. It is a simple matter for them to boost the earnings of the railroads when they own their securities, and to wipe out the earnings and force them into receivership after they have unloaded the securities on the public. This is done periodically.

The I.C.C. dictates the terms for lifting of the receiverships, subject to court approval.

The Supreme Court decision in the Chicago, Milwaukee and St. Paul Railroad case has introduced several new "principles" into American jurisprudence, that contrast oddly with what has been regarded as honesty and sound law consonant with it.

The railroad had been in 77b receivership for several years following a period of earnings that were fixed by the I.C.C. so low that it could not meet its fixed charges. After the onset of hostilities in Europe, the earnings of the road rose rapidly to a point where all arrears on bonds could be paid off in full out of cash on hand and leave the company more than adequate capital for its future operations—in short the road became completely solvent and highly prosperous. If it were required, refinancing could have been arranged readily.

If this condition should arise in the affairs of a private individual in bankruptcy, he would be deemed guilty of fraud if he failed to pay off his in-

debtedness in full and thus secure discharge from bankruptcy. But in the case of the railroad, the Court ruled that the company is not bound by the ethical or legal principles that apply to individuals. Instead of ordering the corporation to pay off its indebtedness and secure its discharge from receivership, as it wished to do, the Supreme Court did the reverse. It ordered the railroad to do what would be ruled as fraudulent on the part of a private individual, i.e. to refuse to meet its obligations in full, to wipe out the major part of its debts, to defraud its creditors and stockholders, and to settle even mortgage and other protected claims at a fraction of their face value.

The legal support of fraudulent bankruptcies by the highest court of the land is a new "principle" in American jurisprudence.

But an even stranger departure is the reason assigned by the Court for its decision.

The Court acknowledged that the railroad was completely solvent at the time of the hearing. But it assumed the role of oracle and undertook to predict that after the war the earnings of the road would drop and it would no longer be solvent. For this reason it ordered a fraudulent settlement to be compounded by the Company. Subsequent events proved the Court a false prophet. The earnings of the road continued very high.

In this act the Supreme Court has given divining and fortune-telling greater weight in our law than it ever had even among the Romans at the time when these procedures were part of their faith and practice. It has returned American jurisprudence to a status as primitive as that of Medieval law, with its "trial by ordeal". It has nullified the entire code of law that has been built up to protect honest commercial practice. For it is a matter of record that few enterprises survive for more than a generation and most of them terminate bankrupt; and under this decision the Courts could safely divine that the majority of debtors will eventually be bankrupt and order them to defraud their creditors, as in the St. Paul case. The decision has wiped out billions of railroad investments. It is another of the New Deal devices to "distribute wealth" in certain favored directions only.

The NRA proved unwieldy and unmanageable. While it was highly successful in wiping out tens of

thousands of small businesses, it failed to permit the wrecking of larger units, the control of which the conspirators sought. The report brought in by the NRA Board of Review and signed, among others, by Clarence Darrow, found that the NRA was being used to foster monopoly. Senator Borah made the same charge on the floor of the Senate. The Supreme Court was called upon to declare the NRA unconstitutional, which it did on the perfectly correct ground that it was an abdication of its Constitutional powers by Congress. Unfortunately, though this is equally true of virtually all of the New Deal, the packed and biased court has seen fit to so rule only when it serves the interests of the rulers.

The most amazingly ingenious and ingenuous sham incorporated by the Dynasty in its New Deal is its mechanism for regimenting labor under their own aegis through "labor leaders" and its use for establishing monopolies that are entirely within the law. Wagner's subservience to the Rockefeller-Standard Oil interests makes it clear that the Wagner Labor Relations Act is designed to serve their purposes. It epitomizes and points up the war of Labor on Capital in so truly a Bismarxian sense that Wagner has earned for himself the title of "America's Bismarck", a noble title for a pawn.

The Supreme Court decision wiping out the NRA was mock obeisance to public sentiment against monopolies in restraint of trade, through control of machinery, that has been built up through decades. With equal diligence there had been built up by Marxist agencies and pseudo "liberals" a sentiment in favor of union monopolies of labor. It required little astuteness to discern that industry could be monopolized even more completely by control of labor than by control of machinery.

The fostering of labor unionism on a vast and unprecedented scale by the Rockefeller Empire is completely understandable. By doing so they have completely regimented labor under their own control through their own appointed agents provocateurs and dictators, more pleasantly labelled "labor leaders". This they have done through the Wagner Labor Relations Act and other "New Deal" labor legislation, which have robbed workers of their freedom and their right to work at a vocation of their own choice. This right they have farmed out

to the goons, racketeers, ward heelers and zealots, the "labor leaders" who are their vassal agents. They would be more correctly named "Labor Barons", for they serve in the same capacity as do barons in feudal states.

Under the franchise of the Wagner Act the Dynasty extended to the Labor Barons a series of so-called "rights" that flagrantly violate the rights that are supposedly guaranteed to the nation at large by the Constitution and the Bill of Rights. These special "rights" of the Labor Barons include the following among others:

1. The "right" to extort from vassal workers a private tax for the privilege of working.

2. The "right" to dictate who may work, when he may work, and to virtually enslave the worker.

3. The "right" to practice blackmail and extortion on all employers and industries, and to levy unlimited assessments on them.

4. The "right" to wage unlimited class warfare on the rest of the community for their own special interests and to sabotage the nation at large.

5. The "right" to mercilessly profiteer, to exploit communities and to deprive them of the very necessities of life, whenever it suits their purpose.

6. The "right" to betray the country and to traitorously traffic with its enemies—as is instanced by the negotiations of John L. Lewis with Hitler, and the CIO-PAC betrayal of our nation to Communism and Russia.

7. The "right" to conspire to restrain trade.

8. The "right" to disrupt industry and to destroy whole industries.

9. The "right" to bring whole communities, and if they desire, the whole nation, to verge of starvation by strikes and sabotage.

10. The "right" to throw out of work and deprive of a livelihood, employees of whole groups of industries whenever, however, and as often as they choose.

11. The "right" to precipitate inflation, panic, depression and unemployment on as wide a scale as they choose.

12. The "right" to destroy the Constitution and the government and to deliver the United States to foreign powers.

13. The "right" to engineer staggering taxation

on the community at large while they themselves are taxfree.

14. The "right" to bribe and corrupt public officials, and to buy elections.

The Labor Barons and their henchmen—gangsters, goons, ex-convicts, convicts and "intellects" prostituted to them—have extended these "rights" on the pretense of giving "protection", in the true gangster or baronial sense, to workers. The more moronic element believe that the unions provide the higher wages, the employment and the standard of living that now prevail. It requires only a very mediocre memory to reveal how false is this claim.

Labor unions rose to relatively as great power in World War I and its aftermath, as they now enjoy. They then did not prevent depression and unemployment, or provide for it. On the contrary, they forced wages during the post-war era to such extortionate heights, and restricted production so much, as to force collapse of commerce and industry and to price workers out of their jobs. They forced an inflation so high that the unions themselves called a buyer's strike against the purchase of the very merchandise produced at the higher wages.

With unions equally strong in the 30's and now, the difference in the situation accounts for higher employment at this time. Industry was prostrate in the 30's and could provide no employment. It is strong and prosperous now, and therefore provides jobs. Strong industry provides employment. Strong and arrogant unions weaken industry and destroy employment.

The Labor Barons deliberately collaborated with the Dynasty and precipitated the depression of the 30's. The objective of the right wing Labor Baron is to control or destroy; and many of them have gained control of industries in their domains. The objective of the left wing and subversive Labor Baron is to destroy the U.S. Government and to create an American Soviet over which he hopes to be Commissar.

To cover up their crimes, the Labor Barons employed prostituted professors of economics and statisticians to throw dust in the eyes of the public and to falsely place the blame for the depression on capitalists and industry. The latter have been too stupidly disorganized to refute the false charges levelled against them.

What is more disastrous for the nation, is the fact that these "economists" who are prostituted to Labor Barons and most of them frankly Communists, have deluded the public into taking larger doses of the same quack medicine that killed the golden goose of prosperity in the 1920's—ever higher wages for ever less work. Their pretended purpose is "pump priming" and "increasing the purchasing power of the workers". At a time when the United States and the world at large are crying for greater production of the necessities of life, they are imposing a shortening of the work-week and a restriction of production. This is clearly a part and parcel of their wrecking program of Communization of the United States through national bankruptcy. As might be expected, the result of their activities is a rapidly mounting inflation.

Pretendedly in the interests of the workers, the vassals of the Labor Rights, the "padrones" extend the following so-called "rights":

1. The "right to work"—when, as, and if the Labor Baron wishes them to work. As a corollary to the "right to work" there is claimed the "property right" in a job. This means in principle that when an employer gives a man a job, that man acquires a share in the business, which is tantamount to confiscation of the employer's property. This is one phase of the idea that has been incorporated into our law, to the effect that any man who gives employment to another man and provides him with a living, is an enemy of society, a criminal suspect who is guilty of any and every crime until he proves himself innocent; and that he must be hounded, harassed and penalized at every turn.

2. The so-called "right to strike" consists of the right to violate the Constitutional rights of the others—the "right" to deprive the owner of the use of his property, the "right" to restrain trade, the "right" to use force and violence on the person and property of others, the "right" to assault, maim and murder, the "right" to deny others the "right to work" and earn a living, the "right" to endanger the health, safety, and lives of whole communities, and numerous other wrongs and crimes that when perpetrated by or under the direction of a Labor Baron are strangely converted, by a perversion of our laws, into "rights".

The "right to strike" is neither used nor intended 373

primarily to benefit the worker. So-called organizational strikes, called by almost all Labor Barons annually under normal circumstances, are intended to assert the authority of Labor Barons over their vassal workers, to force them into line and to pay arrears in dues and special assessments including those levied for the strikes in question. They are primarily directed against the workers; and only secondarily against the employer and community.

Strikes are sources of revenue for the Labor Baron. They serve to dramatize him and put him before the public. In normal times strikes are the Labor Baron's chief function. The union member, or serf, loses wages during the period of strikes and can only be the loser. But the Labor Baron has asserted his authority and gained for himself notoriety and added income.

3. The "right to collective bargaining" which means the "right" of coercion, blackmail, extortion and hold-up of industry through their agents, the Labor Barons, in the pretended interest of the worker. These holdups of industry continue until high wages completely wipe out profits, shut down or bankrupt industry, and destroy employment. At the same time they force steady inflation. Ultimately they serve merely to impoverish the worker. Wages can not be paid by industry that has no earnings for any length of time.

With the launching of the NRA the Federal Reserve Board and other banking pressure for prolonging the depression had been relieved slightly. Business began to pick up. The failure of the NRA to accomplish its purpose called for resumption of the depression. Roosevelt was put into service to mouth vigorous attacks upon business to smash the stock market and prolong the depression.

The attitude of the nation and of Congress made it apparent that dictatorship and industrial monopoly could be attained only by the Lenin formula of national bankruptcy. The squandering involved in prolonging the depression, in the Agricultural Allotment Plan, in Relief, and in other deliberately wasteful measures had not irreparably damaged the solvency of the nation. Only war, civil and external, could accomplish this. War war also required at attain world-wide Imperial scheme. In the international sphere World War II solved that problem. Labor agitation served as a civil war.

## CHAPTER XX

### SUPREME ROCKEFELLER CRUSADE-WORLD WAR II "... We work our own good will ..."

G.E.B. Occasional Letter No. 1 Rockefeller & Gates

The most extensive and devastating of the Rockefeller Crusades, and one that has been most profitable to them, was World War II. With it, they "killed many birds with one shot". For it won for them their Oil War in many sections of the world and set them on the road to victory in others.

World War I, as has been related, did not solve for the Rockefeller Empire the problem of control of the Turkish, Arabian and Iranian oil reserves, because of the effective opposition and rivalry of the British Empire. In the meantime, the Japanese Empire threatened with destruction the Rockefeller Standard Oil interests in the Far East. And Germany menaced with a process for synthesizing oil; but this was of minor significance, because the Rockefeller interests controlled Germany and more particularly the German Dye Trust, I.G. Farben-industrie, that developed, this process. Russia had been taken care of by the deals described in the chapter on the Rockefeller-Soviet Axis.

The pressing problems were elimination of the British Empire as a rival, which, it was now realized, could be effected only by its dismemberment and destruction, and the subduing and conquest of Japan. These were the top problems on the agenda of the Rockefeller Empire in the period between the formation of the Rockefeller-Soviet Axis and the success in precipitating World War II to accomplish both those purposes. The cunning with which these two widely separated ventures were woven into the pattern of a single "Crusade" is unmatched in all cognate history. And the role played by the U.S. State Department in these conspiracies of the Rockefeller Empire portrays how fully the former has become the tool of the Rockefeller interests.

Mosul, one of the causes of the British - German conflict that led to World War I, together with other sections of Turkey, Arabia and the Near and Middle East, continued to be a major source of conflict between England and the Continental powers on the one hand, and between England and

the Rockefeller Empire on the other. To seize those fields, the British launched their campaign at Gallipoli in World War I, and lost. In exchange for French help in the Near East, Britain offered Syria and a quarter interest in the Turkish Petroleum Co. That was the same interest that had been given the Germans in 1912 in exchange for their claim based on the concession for the Anatolian Railway and the right to drill the Bagdad-Mosul oilfields which Sultan Abdul Hamid had given them in 1904. This deal was confirmed in the San Remo agreement between Britain and France in April 1920, which stipulated that the Rockefeller Standard Oil interests were to be excluded.

President Woodrow Wilson, personally, Secretary of State Colby and U.S. Ambassador in London, John W. Davis, vigorously protested the exclusion of American interests from the Mosul field, echoing the protest of Walter C. Teagle, president of the Standard Oil Co. of N.J., published in the New York Times of November 18, 1920. Senator Kellogg and the other members of Congress openly threatened war on England and other reprisals.

Characteristically, the British proceeded despite the San Remo Agreement, to eliminate the French from the situation by stirring up a Turkish invasion of Syria, by inspiring Emir Feisal to proclaim himself King of Syria and stir up a revolt in Lebanon. France retaliated by signing a treaty with Turkey in October 1921, acknowledging that Mosul belonged to the Turks, thus nullifying the San Remo Agreement. Britain countered by claiming Mosul for Iraq and making Emir Feisal King of Iraq.

In December 1921, the British made a deal through Sir John Cadman, signer of the San Remo Agreement, with Standard Oil for a fifty-fifty division of the Mesopotamia and Palestine oilfields and a quarter interest for Standard in the Turkish Petroleum Co. (the French share) in exchange for a similar deal on the North Persia fields for which the Rockefeller interests had been given a concession by the Persian cabinet earlier in the year. This prepared the way for withdrawal of Standard Oil opposition that had been exerted through the State Department to the granting by the League of Nations of mandates over Palestine and other regions

to the British. Following this deal in favor of the Rockefeller interests, the State Department lost its zeal in its protests for an Open Door in the Near East in spite of the fact that another American group, led by Admiral Chester, had a valid claim to the concession, thus belying the declaration of Secretary of State Hughes that he stood "for American rights generally and not for any particular interest".

In the meanwhile, the British and French sought to fight out their claims through a war between the Greeks, supported behind the scenes by the former, and the Turks, supported secretly by the latter. The British and their Greek mercenaries lost. But when shortly thereafter, the French wanted to take over the Ruhr and its industries, and required British support, a deal was made by them to stand together against the Turks at the Lausanne Conference, in reseizing the German Turkish concession for the Turkish Petroleum Co. But the Ruhr occupation was sabotaged. The French blamed the British and refused to support them against the Turks. The Turks then defied the British and refused to sign the treaty.

The Turks thereupon gave Admiral Chester a 99-year exclusive railway, mineral and oil concession. The State Department refused to give Admiral Chester effective support in carrying out the deal, and the Rockefeller interests blocked the financing of his Ottoman-American Development Co. which he had organized for that purpose. This deal was effective, however, in enabling the Turks to abolish the extra-territorial rights of foreign powers and to retain the Dardanelles and the Bosphorus. The British made a deal with the Rockefeller and French interests to share the Mosul oilfields and acquired final title to the fields by way of the second Lausanne Conference, in 1923, and of the award by the League of Nations Council in 1925 of Mosul to Iraq, under British mandate.

Immediately thereafter a controversy broke out between the British and the French over the route of the pipeline to be built. The French wished it to course through Syria, and the British, through Palestine, as part of the British Chemical Trust's plan for exploitation of the potash of the Dead Sea and other Palestine resources.

The Standard Oil Co. was satisfied with this deal, 377

as a beginning. The Lamp, official publication of the Standard Oil Co. of New Jersey, editorialized: "For the first time there has been negotiated what promises to be a practical Open Door policy in which four great nations take equal participation in one field." (April 1926) The State Department headed by Rockefeller's agent, Secretary Charles Evans Hughes, was content with his version of the Open Door that shut out most American interests but satisfied the Rockefeller and Mellon cliques.

An interesting phase of the deal was the part that religion had played in it. The play for Mosul had originated in Admiral Chester's visit to Turkey on behalf of the massacred Armenians; and the Near East Relief had played a significant role in the maneuvers. But when the Turko-American Treaty was presented to the Senate for ratification, Vahan Cardashian, attorney for the Armenian Republic, presented the following charges to the Senate Foreign Relations Committee:

"... What ... is the motive, the purpose behind the Turkish policy of the Department of State?

"I charge that it is oil.

"An Administration which has surrendered legitimate American rights and then has the impudence to fill the air with irrelevancies, wild insinuations and falsehoods to divert attention from its disgraceful policy; an Administration which has deliberately trampled upon the Constitution of the United States in its conduct of foreign relations—such an Administration, I charge would not hesitate, and has not hesitated, to sell out the Armenian people and their homes for oil, in the interest of a privileged group . . ." For the Rockefeller interests this compromise was merely an expedient. They never settle for a part as long as there is any possibility of getting the whole; and any compromise, for them, is merely an opportunity to stab their partner in the back. In that respect they resemble their British adversaries, who used the compromise to prevent the Rockefeller interests from effectively developing their share of the deal, Saudi Arabia.

The Rockefeller interests turned to their pawns in World War I, the Germans, to set the obstructive British Empire on its heels. As bosses of the Ger-

man Dye Trust, I.G. Farbenindustrie, they controlled German industry and the German government. On October 30, 1930, for instance, the press announced that the Standard Oil Co. had purchased the German alcohol monopoly. Inevitably, they played a large role in the rise of Hitler and exercised a large measure of control over the Nazi Party and its policies.

The resurrection of German nationalism and militarism was a crafty move toward the destruction of the British Empire and its elimination as a bitter adversary in the control of the oil reserves of the world. Just as in the 1920's, after the Rockefeller interests had entered into their entente with Russia, they assigned Rockefeller's top publicity man, Ivy L. Lee, to advise the Russians on their propaganda and publicity and to build up favorable public opinion in the U.S. Ivy Lee was also assigned by the Rockefellers, in July 11, 1934, to serve their I.G.Farbenindustrie as publicity agent and to advise Hitler on the rearmament of Germany. It was announced that for this service the Rockefeller interests were paying Ivy Lee the sum of \$25,000 a year. Walter C. Teagle of Standard Oil, and Edsel Ford were on the I.G. board. On August 14 of the same year, it was announced that Standard Oil Co. of New Jersey had acquired 730,000 acres of oil land from the North European Oil Corp., built extensive refineries in Germany for the Nazis and supplied them with oil, for which they were later paid, in June 1936, with 40 mililon harmonicas and a number of ships.

The Rockefeller interests played a major, and possibly a key, role in setting Hitler and the Nazis loose on the world. Hitler's *Mein Kampf* echoed the views of John D. Rockefeller's associates, advisers and spokesmen on the topic of social organization and human, or inhuman, relations. The medieval, feudal type of dictatorship that is the essence of Nazism, was laid down as the pattern of perfect government for the U.S. and the world in his blueprint of the New Deal, *The American Rich*, by Rockefeller's associate and fellow member of the Union Club, Hoffman Nickerson, as related elsewhere. In that work is laid out the pattern of subversion and wiping out of all semblance of human freedom, the concept of a superior race ordained to rule a nation of divided minorities, whose

racial stock eventually was to be purified by the elimination of "foreign" elements, especially the Jews. This anti-Semitism suited the purposes of the Rockefeller interests, because the directors of the operations of their fierce opposition in the British Empire, namely, the Royal Dutch and Shell and the Anglo Persian and British Controlled Oilfields, were the Samuels family, the Rothschilds, the Monds the Sassoons, and other Jewish families.

Rockefeller's associate, Alexis Carrel, of the Rockefeller Institute, "scientifically" suggested the ruthless murder of "undesirable" and "inefficient" humans, whose existence he regarded as exemplifying that "waste" which the Rockefeller mentality so abhors. He published his views at full length in his book, *Man, The Unknown*. When Hitler took over France, Carrel turned there to help put his ideas into operation, with the cooperation of the Nazis and at their invitation.

It should be noted at this point that much of the bond of inhuman sympathy between Hitler and Stalin can be attributed to Rockefeller and his agent, Ivy Ledbetter Lee. It was their entente that paved the way for the Nazi conquests.

It was not until Hitler had arrived at Dunkirk, that the British awoke to the realization that unless they knuckled down to the Rockefeller Empire, their own Empire would face destruction. An agreement was hurriedly reached whereby the Rockefeller interests were given a free hand in the development of Saudi Arabia in exchange for their dragooning the United States into the war to fight it and pay for it, prompt convoying of the British merchant marine by the U.S. Navy, and the intensive launching of the sardonically labelled Lend-Lease program whereby the wealth of the U.S. was poured into the laps of England and her allies.

Though Hitler could have crossed the channel in a matter of hours, and invaded England, some force deterred him and caused him to turn against Germany's ally, Soviet Russia, in a suicidal invasion attempt. The role played by the Rockefeller and I.G. interests in influencing this decision has yet to be fathomed. But it is clear that since they dominated Hitler and the Nazi party, they did play a role.

The problem of dragooning the United States into the war was complicated by a decade of intensive pacifist propaganda that had been fostered by Nazi,

Communist and allied Rockefeller-Carnegie forces. It was a simple matter to issue an order for a change of front to their agents in Congress. Their agent who led the Republican Senate minority, Senator Vandenberg, shifted overnight from the position of leader of the pro-American forces, then labelled "isolationist" because they sought to serve and protect our own country, to the position of leader of the "internationalists", who were intent upon serving the Rockefeller interests in the international field.

Because the Constitution specifically states that Congress alone can declare war, and because the members of Congress did not dare violate the pacifist sentiment of their electorate for fear of failure of re-election, it was necessary to find some way of forcing the country into war without a declaration by Congress, that is, by attack upon the United States by some power. The Rockefeller Empire had anticipated this contingency and arranged to have it serve their interests in another section of the world.

In the struggle with British interests for control of the Chinese oil market, the Standard Oil Co. loaned China 15 million dollars in February 1914, in exchange for a concession for a period of 75 years, for development, in partnership with the Chinese government, of the provinces of Shensi and Chi Li. To pave the way for these commercial interests, the Rockefeller Foundation launched an intensive propaganda campaign in China in the guise of "education", with medical activities for window-dressing. The concession aroused bitter opposition, both among the Chinese and among foreign powers, including England and Japan.

By the 1920's the Socony-Vacuum-Standard Oil subsidiaries had gained a virtual monopoly of the market for oil for the lamps of China. The tale of this trade is well told in Vera Teasdale's *Oil For The Lamps Of China*. It was a monopoly dear to the heart of Rockefeller, of the type he sought to extend to the whole world. Kerosene was sold at exorbitant prices in tiny amounts to fill gift lamps distributed by the Company. But if ever the rich Chinese oil resources were developed, such fantastic prices for kerosene even in beautiful tin cans, would be out of the question. It was essential for the monopoly and price structure that no oil be

produced in China. The Soongs and the Nationalist Government saw to that. Blunt General Smedley Butler of the United States Marines, after his retirement roared, "All I ever did for twenty-five years in China is watch Standard Oil cans."

All went well until the war lord of Shansi Province granted a concession to the Japs to drill for oil. The Japs found oil aplenty. This was a serious threat to the Standard Oil monopoly in China. The Chinese Nationalist Government was ordered to seize the war lord if necessary, cancel the concession and oust the Japs. This was done in 1927.

The Japs did not take kindly to cancelation of their oil concession after spending a hundred million yen on it. Nor did they feel kindly toward the Rockefeller-Standard Oil crowd, whom they knew to be responsible. They vowed to come back and seize China, if necessary, to get their oil.

The Japs made good their threats and proceeded to seize China beginning with the first Shanghai incident in 1931. And they did not forget the role played by the Rockefeller-Standard Oil crowd in the cancelation of the concessions. They avenged themselves wherever they went, by destroying Rockefeller-Standard Oil property first.

An illustration of how far the Japs went in destroying Rockefeller-Standard Oil property is the Panay incident. The gunboat Panay was the only representative of the United States Navy in the China seas. For six years it plied the Yangtze River during the Jap invasion of China but was never molested. Suddenly one day in 1937, the news was blazoned to a shocked world that the Panay had been shelled by the Japs. It has never been told that the reason the Panay had been shelled was that it was convoying two Standard Oil tankers. That, the Japs would not tolerate.

The efforts of the Rockefeller-Standard Oil group to protect their property took three directions. First, in April 1938, within a short time after the Panay incident, they made the Mitsuis of Japan, who with the Zaibatsu dominated Emperor Hirohito and Japan's policies, their exclusive agents in North China and all conquered territory in Asia. This placed the Rockefeller-Standard Oil group in a position to influence Japan's policies.

But it has always been a Rockefeller policy never to be satisfied with half a loaf when they can get

a whole loaf at no expense to themselves. To accomplish the destruction of Japan, it was necessary to bring the American Army to the rescue of their property in China. But it would have been futile for the Rockefeller-Standard Oil interests to ask Congress to declare war on Japan because it was destroying their property in China.

They did, however, make an effort to get the U.S. to declare war on Japan in the early 1930's. When Roosevelt proposed launching the Rockefeller Crusade on Japan, shortly after his inauguration, at his first full Cabinet meeting, he was talked out of an immediate declaration of war as unwise, by his counsellors. Even their numerous agents in Congress could not afford to vote for a war on such grounds. To avoid committing political suicide, they would have to reply: "Go fly your own kite."

If, however, Japan could be induced to attack the U.S.—that would be a different story. To accomplish this purpose, it was imperative that the American public have no suspicion of the significance to the Rockefeller-Standard Oil interests of Japan's aggression on China; and they never were told.

Through their control of the Navy and the Government, they were able to prevent any leaks from these sources. When Admiral Yarnell, Commander of the Panay, threatened to return to the United States and tell the American public of the indignity of the United States Navy being used as a convoy for tankers, he was retired; and learned better than to open his mouth on the subject.

The appointment of Joseph Grew, nephew of John Pierpont Morgan, as Ambassador to Japan was dictated. The plan was to induce the Japs to attack the United States. Grew rapidly earned for himself the name of "friend of Japan." He was of invaluable assistance in aiding their armament. Standard Oil literally poured oil into Japan. Wright Aeronautical and other aviation manufacturers built plants and supplied unlimited numbers of engines and planes. American munitions flowed into Japan in a steady stream. Literally all the scrap on the American market, including the Sixth Avenue El of New York City, were shipped into Japan. The United States generously supplied Japan with everything she needed for war.

Despite the growth of her armaments, Japan could not screw up sufficient courage to attack the United States. The conspirators were impatiently waiting and working to bring about an attack on the United States that would force Congress to declare officially the war that Roosevelt already was waging unofficially. Admiral Richardson, who was Chief of Staff of the Pacific Command, testified before a Senate investigating committee that President Roosevelt had expressed the wishful thought, at a White House luncheon, October 8, 1940, that "the Japanese sooner or later would make a mistake and we would enter the war." Promptly thereafter, Admiral Richardson protested once again the splitting of the Pacific Fleet and stationing it at Pearl Harbor, which had been done against his advice, in view of the intent expressed by Roosevelt to take steps leading to active hostilities. When Admiral Richardson insistently urged preparing the Pacific Fleet to protect itself, he was relieved of his command and replaced by Admiral Kimmel. The Navy deliberately was barred by Roosevelt from preparing for war.

Rockefeller's Institute of Pacific Relations agents working under Sorge precipitated the Japanese attack on Pearl Harbor that the conspirators sought in order to bring the U.S. into the war. The IPR's agents, Agnes Smedley and Guenther Stein, collaborated with Richard Sorge, Soviet master spy in Japan, in diverting the attack the Japanese were preparing to make on their rational foe, the Soviets, from the Soviet Union to the U.S. and the British. So successful was their work that as early as October 1941 the conspirators knew that the Japanese definitely planned an attack on Pearl Harbor.

"At the instance of his bosses, Roosevelt followed his childhood yearning to play with warships and naval warfare. He took over, indirectly, command of the Pacific Fleet. Roosevelt did everything that might be calculated to induce the Japs to attack the fleet at Pearl Harbor. He stationed the vessels within the Harbor, where they could be bottle-necked and could not possibly be defended. He ordered disregard of any and all warnings of danger and attack that were picked up.

"The Japanese were told in effect: 'Destroy the United States Fleet at Pearl Harbor, and you have

won the war at the start'. In the meantime, the Japanese who itched to attack were goaded to fury in the field of diplomacy.

"This deliberate plan to induce the Japanese to attack the United States was common knowledge in diplomatic circles, but it has been regarded as a breach of "ethics" to mention it. But Capt. Oliver Lytteton, Minister of Production in Winston Churchill's wartime cabinet, stated before Parliament on July 20, 1944:

'Japan was provoked into attacking America at Pearl Harbor. It is a travesty on history to say that America was forced into the war.'

"This is the import of a statement made by Eleanor Roosevelt, as usual sharper in tongue than in wit, in an interview given Kathleen McLaughlin, published in New York Times Magazine, October 8, 1944: 'December 7, was just like any other D-Day to us. We clustered at the radio and waited for more details—but it was far from the shock it proved to the country in general. We had expected something of the sort for a long time.'

"Her statement is exceptionally significant. D-Days are known in advance to the high command. This D-day was known beyond any question to Roosevelt and his entourage. Roosevelt had on his desk many hours before the attack, a decoded message sent by the Japanese to their envoys in Washington, known as the "East Wind Rain" radiogram, which stated that Japan planned to attack Pearl Harbor on the following day. But he deliberately betrayed the nation and its defenders and failed to warn them. On the contrary, they were under orders to disregard outside danger signals.

"This means that the rulers and their pawn, President Franklin Delano Roosevelt, had courted and precipitated a Jap attack, then deliberately withheld the warning from the armed forces and prevented them from defending themselves. Why? For eight long years the conspirators had worked, prayed and waited for the attack. They would not risk its miscarriage or effectiveness. The motto of the conspirators might have been: 'Oil is thicker than blood.'

"It was not their own blood that was shed and for them the price was cheap, the blood of 2500 men and a fleet of battleships paid for by the American people. The lives meant nothing to them. The

jeopardy in which they deliberately placed the nation was, as usual, of little concern to the internationally entrenched scoundrels." (The Strange Death of Franklin Delano Roosevelt pp. 233-5.)

Effecting a split between Hitler and Stalin was as simply arranged as had been their alliance. It involved treachery against a partner; but conspirators are not squeamish folks. At home in the U.S., Hitler's attack on Soviet Russia resolved a difficult problem for the Rockefeller interests and their New Deal. It healed the breach between them and the Communist elements, caused by our entry into the war following Pearl Harbor, and aligned the Reds of all shades solidly behind the war effort and all the attendant schemes. One of the most important consequences for the Rockefeller-Soviet Axis was that it offered a complete and simple solution of the problem of rearming the Soviets at the expense of the American "peasants", by means of that grand give-away, "Lend Lease". The war solved the problems of cartelization of industry in which the NRA had failed, of more complete regimentation of the "peasants", of looting them more speedily by rapidly pyramided taxation, and paved the way for a totalitarian state in wartime, that would "gentle" the nation into accepting dictatorship.

Our entry into the war assured the Rockefeller dominated Aramco the right to develop Saudi Arabian oil for Standard Oil of California's and Texas Company's joint venture, Caltex. When King Ibn Saud demanded royalty payments amounting to \$30,000,000, Caltex employed James A. Moffett, Vice-President of Standard Oil of New Jersey who had been appointed by Roosevelt to the post of Housing Administrator, to use his influence to get the Government to pay for holding the concession. Moffett had no difficulty in arranging this "New Deal" for the Rockefeller interests. For his success, he alleged in lawsuits which he brought against the Companies in 1947, he was promised a total commission of over \$8,000,000.

The \$30,000,000 which the United States Treasury gave Ibn Saud for the support of himself and his 450 wives and their progeny, to maintain the Rockefeller-Standard Oil interests in his good graces, cost the American people twenty cents a head. In addition King Ibn Saud got a "loan" of \$25,000,000 of taxpayers' money from the Export-Import Bank to

build a railroad from his capitol across the desert to his summer palace at Rayadh, and numerous gifts from the American taxpayers ranging from multi-million dollar airplanes to sight-seeing tours to the United States for himself, his many princes, and their numerous retinues.

For the millions of taxpayers' money poured into his lap by the United States, King Ibn Saud did offer to them in return, a very suggestive, and under the circumstances, a premonitory and appropriate token gift. He presented America's Queen Eleanor (Roosevelt) with a jewel becrusted, solid gold crown. Eleanor accepted this crown with peculiar alacrity, but it was given little publicity.

After they secured payment for their concession by the United States Treasury, the Rockefeller Empire then ordered their New Deal agents in 1941 to begin the construction for them of a pipeline in Saudi Arabia at the expense of the American taxpayer. This required the diversion of pipe sorely needed for the war effort and for the heating of homes on the Eastern seaboard that were without fuel and heat.

A bill was introduced in Congress appropriating \$165,000,000 for this Rockefeller-Standard Oil chore. The outcry against the bill was so great that it was dropped.

In the following year President Roosevelt gave the Rockefeller interests the \$165,000,000 out of special, secret appropriations given him by Congress for use in the war effort, for which he was required to render no accounts. It was used for surveys and preparatory work for the pipe line. In addition the United States Army was assigned to do part of the task and to build an airfield and base at Dharan. Under the contract with Ibn Saud, the base was turned over to Saudi Arabia in February, 1949, shortly after its completion at the cost of more than six millions to the United States taxpayers.

Two drafted United States soldiers who were kept in the service after the termination of the war to labor on the fields protested to Congressman Philip J. Philibin who denounced this "quasi-private" undertaking for the Rockefeller Empire at the cost of the American public, with drafted American soldiers. The air base is close-by the oilfields.

A number of gross misrepresentations were in-387

volved in the negotiations with the New Dealers to induce them to take the burden of Saudi Arabian concessions off the shoulders of the Rockefeller-Standard Oil interests, according to testimony before a Congressional committee investigating the deal. First, it was misrepresented that the oil was fit for use by the U.S. Navy. The Naval Laboratory reported, however, that the oil was of inferior grade and unsuited for use in Navy boilers. Though it was condemned, its purchase was arranged for by oilman, Admiral Andrew F. Carter, then executive officer of the Army-Navy Petroleum Board and now employed by Overseas Tank Corporation a subsidiary of Caltex Company, Aramco's owner. The purchase was made by his brother, Admiral William J. Carter, Chief of the Bureau of Supplies and Accounts. In charge of the price negotiations were Lt. John Walsh, now employed by the Standard Oil of New Jersey and Lt. D. Bodenschatz, now with General Petroleum Company. What use the Navy made of this inferior oil, if any, has not been revealed.

Aside from the false representation regarding the quality of the oil and its value to the Navy, misrepresentation was made regarding the price that would be charged the Navy for it. Despite the fact that the U.S. taxpayers financed the deal, the price that the Navy was to pay was the same as would be charged to British Navy; 40 cents a barrel for fuel oil, and 75 cents a barrel for Diesel oil. Instead the U.S. Navy was charged \$1.05 for fuel oil and \$1.68 for Diesel oil, more than double. Senator Brewster, chairman of the Senate Investigating Committee stated that these prices involved an overpayment of \$68,000,000.

The ownership of the Saudi Arabian concession was vested in the Standard Oil of California and the Texas Company, through a jointly owned company. Caltex. The operating company is a subsidiary, the Arabian-American Oil Company, called briefly Aramco. The Caltex Company, sold a 40% interest in the field to the Standard Oil of New Jersey and Socony Vacuum Oil for a sum stated as more than a quarter of a billion dollars.

Aramco is now shipping from Ras Tanura more than 850,000 barrels of oil a day, and the shipments are rapidly increasing. The value of the shipments amounts to an income of almost two million dollars a day for the Rockefeller Empire. The cost of this

oil to them is very low. The profits to the Standard Oil of California, the Texas Company, the Standard Oil Co. of New Jersey and Socony Vacuum on the Saudi Arabian oil are enormous. But they are completely exempt from taxes on those profits. Thus the Treasury Department has aided the Rockefeller Empire in evading taxes on profits made on moneys given it by the American taxpayers.

The cost of the Rockefeller Empire's Saudi Arabian oil to the American people is tragically high. It cost them two World Wars, hundreds of billions of dollars, tens of thousands of lives and hundreds of thousands of maimed and crippled—the expense of obtaining the oil fields for the Rockefeller Empire. If the U.S. had paid the Rockefeller Empire ten times as much as their profits from the fields, it would have gotten off cheaply. For it would have saved its citizens the untold miseries of the wars and billions of dollars.

As the price for permitting the Rockefeller Empire to remain in undisputed possession of their Saudi Arabia prize, the Soviets have dictated the policies of the U.S. in recent years; and the Rockefeller-Soviet Axis has consistently sacrificed the interests of the U.S. while making its taxpayers foot the bills.

World War II was waged as dictated by the Rockefeller-Soviet Axis. The U.S. provided arms and equipment under "Lend Lease" for the Soviet troops, while our own troops were not adequately equipped. These items were furnished in such profusion, especially by way of Iran, that there came a point when the Soviets refused to accept any more unless Harry Hopkins and Roosevelt would arrange to send over specialists to show them how they could be stored in the open for ten years without deterioration. The New Dealers complied. But American-donated trucks, planes, engines, machinery and equipment of all varieties were stacked high on Persian docks and on the desert and left to the elements to deteriorate, while at home they were in such extreme shortage as to interfere with our war effort.

At the same time, the conspirators deprived our troops in the Pacific of essential equipment and reinforcements, for lack of which they were repulsed and tens of thousands of G.I. lives lost. The conspirators, guided by Rockefeller-Soviet Institute of

Pacific Relations and State Department agents, were bent on keeping the U.S. from winning the war until such time as the Soviets could barge in and claim the spoils—all of Asia and the Pacific isles, regained by U.S. forces at enormous sacrifice of lives, and needlessly lost as a result of the conspiracy. Meanwhile, the Soviets were maintaining an entente with Japan and actually supplying the Japanese with war material we had supplied to them as our "ally". American airmen who were compelled to land on Russian soil were interned and their planes confiscated.

In Europe, a similar situation prevailed. Stalin demanded invasion of Europe and a second front, though our troops were not adequately equipped because of shipments to Russia. The conspirators used Russia's necessity to fight an invader as a pretext for propaganda to further the objectives of the Rockefeller-Soviet Axis by building up Russia as the defender and protector of the "democracies". They did so in spite of the fact that even honest Bolsheviks were willing to acknowledge openly that victory would have been impossible for the Soviets without the self-sacrificing aid given her by the U.S. Instead, they presented the U.S. in our own press and the world as "slackers" who impeded the "noble battle that Russia, the 'greatest of democracies', wages for us". They compelled us to accept Stalin's order to invade Europe by the costlier and more dangerous route, across the English Channel. A trans-Mediterranean invasion, striking the "soft underbelly of Europe", through the Balkans, could have been made at an early date and at infinitely lesser cost. It was barred by the conspirators for the same reasons that it was advocated by Churchill, because it would have interfered with their division of the world with the Soviets, would have shut them out of Yugoslavia and thwarted their pan-Slavic goal.

American and allied troops were barred by General Eisenhower, under orders from his conspirator-bosses, from taking all of Germany, so as to permit the Soviets to seize Berlin and Eastern Germany, with its strategic industrial and mineral resources. This bit of treachery that has cost us our victory in Europe and left us at the mercy of the Soviets, left American troops isolated in West Berlin, as hostages to the Soviets, who could be cut off and

wiped out by the Russian horde at any time it would suit their purposes. A vestige of intelligence would have excluded such a breach of elementary military tactics; it was dictated by treachery. Such episodes as the Berlin blockade, suit the purposes of both members of the Axis, as is related elsewhere.

In the Pacific, General MacArthur was petitioned for peace by the Japanese, on the same terms that were accepted eventually, seven months before the Rockefeller-Soviet Axis partners would agree to their acceptance. Months before the armistice, on May 29, 1945, Rockefeller's puppet, General George C. Marshall, blocked, at the behest of the pro-Soviet bloc in the State Department, which included Acheson and MacLeish, with Elmer Davis of the OWI—all of Rockefeller's IPR—the sending of a peace ultimatum to Japan, recommended by Mac-Arthur and endorsed even by the clique's henchman, Henry Luce. This was reported to the Senate McCarran Committee by former State Department executive, Eugene H. Dooman. He stated that the object was to allow Truman to connive at Potsdam to give the Soviets a pretext for breaking their non-aggression pact with Japan, and permit the Russians to invest Manchuria. This opened the way for the delivery of China to the Communists, that has proved so disastrous to us. (the Freeman, Nov. 5, 1951)

At Teheran, and again at Yalta, there was confirmed the Rockefeller-Soviet Axis program of partition of the world that allotted Eastern Europe and all of Asia, except the Near East, to the Soviets. In accord with their plan of destroying the British Empire, the Rockefeller interests, acting through the U.S. State Department, marked Iran for eventual surrender to the Soviets, at Yalta, right under Churchill's nose. President Roosevelt, or his double, mouthed the Empire's agreement, alternately with mouthings of the non-existent Atlantic Charter that "guaranteed" autonomy to the very states assigned to the Soviets.

At Yalta Molotov and Alger Hiss (of Rockefeller Empire's Foreign Office, the Council on Foreign Relations, and of the Institute of Pacific Relations), with the approval of Stalin, drew up the United Nations Charter. And Alger Hiss was there appointed Secretary General of the Conference to

Organize the United Nations by the Rockefeller-Soviet Axis partners.

The dropping of the atom bomb on Japan was a needless act of brutality perpetrated upon a defeated and suppliant enemy. But it served the conspirators well in intimidating the U.S. into continuing and expanding war expenditures, in fear of the exaggerated frightfulness of our own bombs. In the meantime the conspirators facilitated the leak of much atomic-energy material and information to the Soviets through Axis agents and spies, when it was not directly supplied to them by Harry Hopkins, Averell Harriman and other New Dealers.

To further insure continued high expenditures and a steadily increasing tax burden for the American "peasants", the Soviets and the Axis agents fostered propaganda demanding American disarmament and recall of troops from both the European and the Asiatic war theatres. This propaganda also had as its objective the facilitating of the division of Eurasia on the basis of the Axis plan, by gradual, stealthy expansion by the Soviets. With this latter purpose as a goal, Rockefeller's Institute of Pacific Relations and State Department set about delivering China to the Soviets. The Soviets took over Manchuria and rifled it immediately after the Japanese surrender. As has been related, the Chinese Nationalists were forced by the Rockefeller-Soviet agents to yield to the Communists, at the very time that the former were badly defeating the latter. Aid appropriated by Congress for the rearming of the Nationalists was treacherously withheld by the agents in strategic U.S. Government posts. Lauchlin Currie, assistant to President Roosevelt, ordered dumping in the Indian Ocean of whole boatloads of surplus munitions shipped to the Chinese Nationalists. The State Department, as a Rockefeller-dominated agency, left no stone unturned to make good on the agreement to aid the Soviets in attaining the first goal set by Lenin in the world conquest of Communism, conquest of China.

In order to facilitate the process, the arms cast aside by the disarming U.S. were sold as surplus, and the great bulk of it found its way, directly or indirectly, to Russia. Much of it was being shipped to Russia at the very moment that Congress was appropriating billions of dollars for its replacement.

The Soviets demanded that "Lend-Lease", pledged to her by the U.S. for the war effort, be delivered, though the war was over in the belief of the rest of the world. Instead of disarming as it demanded of the U.S., Soviet Russia continued to expand its military establishment, largely, if not entirely, at the direct and indirect expense of the American taxpayers, at the behest of the Rockefeller Empire and its agents. They launched the United Nations Relief and Rehabilitation Administration, almost entirely at the expense of American taxpayers, to serve the Soviets in penetrating Poland, Czechoslovakia and other lands that they later engulfed. Under the direction of Herbert H. Lehman, of Rockefeller's Council of Foreign Relations, numerous Soviet agents were placed in charge of UNRRA to facilitate the process.

Loans to foreign lands by the sale of their bonds had been exposed after World War I as a gigantic swindle perpetrated by American bankers who had profited hugely from them. Most of them rapidly dropped in value to mere fractions of par, or became worthless. Congressional investigations revealed that the major portion of the "loaned" money had never reached the lands for which the bonds were issued. It had stuck to the "sticky" fingers of domestic bankers. The wariness of the American investing public and the Johnson Act forbade a repetition of the bond sales. The Rockefeller interests circumvented these obstacles by forcing the American public to donate their earnings and wealth, for the same purpose for which they had been induced to voluntarily invest after World War I, by the mechanism of compulsory, tax-financed government "loans" to the same lands. These countries are never expected to repay because the bulk of the funds flowed directly into the coffers of the Rockefeller Empire. Much of this money financed delivery of material of war, oil and supplies to Soviet Russia directly—and much more went indirectly — by virtually all of the lands supposedly receiving the aid, despite the pretense that the object of the loans was "to fight Communism". This represented tribute paid by the American public on behalf of the Rockefeller Empire to its Axis partner.

The mechanics of these loans is made clear by the Greek "loan" of \$400,000,000 "to fight Commun-

ism". If fighting Communism was the true object of this loan, the purpose would have been served better by shipments of arms and munitions from our huge war surplus. For wars are still fought with shells and not with dollar bills. If it was the intent to stop Communism, the U.S. would not have sent some of its notorious Reds to Greece for that purpose—headed by New Dealers, Griswold and Eleanor Roosevelt's kin, Ambassador MacVeagh. For when the program began, there were but a few scattered bands of Communist guerillas in northern Greece. But after several months of "stopping Communism" and the expenditure of the whole loan, a Communist government controlled all of northern Greece. But just as if it had been prearranged, the Communists stopped short of the Mediterranean life-line of Saudi Arabian oil.

The "loans" to England total many billions of dollars. These "loans" were largely of the nature of a subsidy to the British Labor Government as an agency of the Rockefeller Empire. The funds which do not flow into the coffers of the Rockefeller Empire, in payment for oil and other items, largely subsidize Britain's trade with Iron Curtain countries. The Labor Government steadfastly refused to abandon its Soviet trade and frankly acknowledged that it was carried on with moneys supplied by the U.S. This traffic is particularly outrageous since the onset of the Korean "police action", as the bulk of it goes to the Communists for slaughter of GIs.

The Marshall Plan, the Point 4 program and the North Atlantic Treaty Organization were conceived and organized by the Rockefeller interests for the same purpose, as related elsewhere. They have proved enormously profitable to the Rockefeller Empire and helpful in building up the military power of the Iron Curtain lands and North Korea.

The tale of the treachery of the Rockefeller-Standard Oil interests in connection with this Crusade of theirs is not complete with the mere accounting of their trading with the enemy and providing him oil and war material. They were indicted in the second year of World War II by Assistant Attorney General Thurman Arnold, for deliberately blocking the production of synthetic rubber. Under their influence, Jesse Jones had persistently refused to stockpile crude rubber and tin for the oncoming war despite the obvious need

and the demands of the military. Such stockpiling would have involved a violation of an agreement with the Dutch-British cartels under which the Rockefeller-Standard Oil interests participate in East Indies oil production. But in this war emergency, the British and Dutch interests were identical with ours, and they undoubtedly would have welcomed our stockpiling rubber and tin under these circumstances. Nevertheless none was stored.

The Rockefeller-Standard Oil interests and their Chase National Bank owned and controlled the majority interest in the German Dye Trust. It is interesting that the name of Rockefeller did not appear in the indictment.

The Standard Oil of New Jersey pleaded that their agreement with I. G. Farbenindustrie barred their permitting the use of synthetic rubber patents by the United States or the Allies. In effect they pleaded guilty to conspiring with Germany to prevent the use by the U.S. Government of synthetic rubber processes. Without the synthetic rubber prepared by these processes, the war inevitably would have been lost. Caught red-handed in their "treason" they pleaded guilty to the indictment. They agreed to release the patents and processes for use by the U.S. barely in time to save the situation. Far more binding and protective is loyalty to the Rockefeller-Standard Oil Empire than to the U.S.A. The conclusion that the defeat of the Allies would have made no difference to the conspirators is sustained by the fact that they had extended their full support and cooperation to Hitler and the Nazis. Thurman Arnold was relieved of his post shortly after the incident.

Senator Joseph C. O'Mahoney of Wyoming, discussing the Saudi Arabian deals of the Rockefeller Empire in a radio interview, Feb. 2, 1947, stated:

"It is but a step from giant combinations of this kind to an authoritarian state." Commenting on the situation, Senator Harry Shippe Truman, kinsman of the Rockefellers (Winthrop Aldrich's daughter, niece of John D. Jr., is named Lucy Truman Aid-rich) called it "Treason".

In these machinations, the Sidney Hillmans, Harry Hopkinses and their ilk, were mere puppets and stooges of the Rockefeller Empire—red herrings drawn across the trail.

## CHAPTER XXI

### ROCKEFELLER'S UNITED NATIONS

#### "Internationalism" And The Rockefeller-Soviet Axis

"An internationalist is one who is prepared unreservedly, unhesitatingly and unconditionally to defend the U.S.S.R." J. Stalin (New Leader, March 11, 1950)

The plan of the United Nations was written at Yalta by Molotov, representing the Soviets, and by Alger Hiss, representing the Rockefeller-Soviet Axis and the Foreign Office of the Rockefeller Empire, the Council on Foreign Relations, and incidentally, also, the State Department. Alger Hiss' membership in the Hal Ware Communist cell in the State Department (Toledano & Lasky, *Seeds of Treason*, p. 46) and the invaluable service he and his associates had rendered the Soviets in their official capacities, had won Stalin's trust; Stalin advocated Hiss' appointment as Secretary General of the projected San Francisco Conference for the Organization of the United Nations. Hiss was equally trusted by the Rockefeller interests.

The United Nations is an outgrowth and direct successor of the defunct League of Nations. The League of Nations was a Rockefeller Empire agency. It was so completely under Rockefeller domination that Socony-Vacuum director and agent, Sir Francis Rickett, was able to assure Mussolini that the League of Nations would never exercise any effective oil sanctions against Fascist Italy if she would invade and seize for Standard Oil the oil fields in the Harrar province of Abyssinia, which was the real prize of the Italo-Ethiopian War. Rockefeller's agent, Raymond B. Fosdick was Under-Secretary of the League of Nations.

It was the natural intelligence and the patriotism of the American public, which led it to reject the surrender of U.S. sovereignty to the League of Nations, that impelled the Rockefeller interests to barrage the country with internationalist propaganda, initially through the Laura Spelman Rockefeller Memorial under the direction of Beardsley Ruml, and then through the Foundation which took it over. They proceeded to seduce, pervert and corrupt our school system to turn out generations

of vipers and potential and actual traitors.

The discrediting of the pretense that the League of Nations (or any other organization under our present economic setup) would serve to prevent war, compelled its scrapping at the outbreak of World War II. Immediately thereafter, however, the same agents undertook to organize a new, fake peace organization, the United Nations. So complete is the basic identity of the two organizations that in many instances persons occupy the same positions in the United Nations they held in the League of Nations.

In some cases the kinfolks of the older generation of League of Nations agents now occupy positions of trust in the United Nations. An instance is Miss Dorothy Fosdick, of the Division of International Organization of the State Department, who attended the San Francisco Conference at which the United Nations was organized, as Assistant to the Secretary General, Alger Hiss.

Following the agreement reached with the British at Dunkirk, the Rockefeller propaganda machine and lobby had gone into high speed for "internationalism", the attainment of "One World", that is, a Rockefeller-dominated world. Under the direction of Harold Stassen of Rockefeller's Council on Foreign Relations, they engineered the nomination of their "One World" pawn, Wendell Willkie, to "oppose" their pawn Franklin D. Roosevelt in the 1940 Presidential campaign. This made the election a "heads I win, tails you lose" proposition for the carrying out of their deals. In the meantime, their controlled press agitated more intensively for "internationalism" and U.S. entry into the war. The Time-Life-Fortune group, for example, headed by Henry R. Luce of Rockefeller's Council on Foreign Relations, and financed by the Standard Oil crowd through Harkness, editorialized persistently in 1941 on the theme of "a young and rising international party preparing to do political battle for a future world." The press at large joined this group in singing long and loudly the Rockefeller-Soviet, Marxist, "internationalist" theme song.

The story of the origin and purposes of the United Nations from the viewpoint of the Rockefeller Empire is related in a Headline Books pamphlet entitled *Uniting Today For Tomorrow, The United Nations In War & Peace*, published by Rockefeller's Foreign Policy Association in October, 1942. The

authors of the pamphlet are both propagandists closely identified with the Rockefeller Empire. Grayson L. Kirk is Acting President of Columbia University, Professor of Government and member of Rockefeller's Council on Foreign Relations. Walter R. Sharp is Professor and Chairman of the Department of Government at the fiery-Red College of the City of New York, and also is member of Rockefeller's Council on Foreign Relations.

The authors relate that the Joint Declaration by United Nations was signed by 26 countries on January 1, 1942. The signatories agreed to employ their full resources "against those members of the Tripartite Act and its adherents with which such government is not at war," and "not to make a separate armistice or peace". The preamble of the Declaration embodies the mythical "Atlantic Charter". The intent of the powers behind the scene, the authors state, was to make as many international commitments for the U.S. as possible for the purpose of holding the UN together after the war and in order to avert the fate of both the Fourteen Point program presented by President Wilson and of the League of Nations, which were rejected.

There is considerable presumptive evidence in the report on Yalta that have reached the public eye, more particularly in the Stettinius report contained in his book *Roosevelt and the Russians*, that prior to the Conference a deal with Stalin on Saudi Arabia had been sealed and delivered. Stettinius states that at Yalta there were repeated and acrimonious discussions on Iranian oil and concessions (pp. 43-44, 65-66, 87, 193-195). In sharp contrast thereto, nothing was said about Saudi Arabian oil in spite of the fact that "Roosevelt" stressed his anxiety about the Saudi Arabian situation and his desire to meet with King Ibn Saud (pp. 72, 257, 278, 289-290).

It is inconceivable that Stalin and the Russians would have failed, in view of Russia's extreme oil shortage, to seize upon Saudi Arabia as a bargaining point unless a deal had been consummated previously that would insure the Soviets of part or all of the oil produced there. The nature of the deal leaked out subsequently in a release by the State Department and published exclusively in the May 18, 1948, edition of the *Wall Street Journal*. It divided the world with Stalin on a line that assured

the Rockefeller Empire of Saudi Arabian oil and a "life line" for its transportation through the Mediterranean, as a condition for world peace.

The critical state of the negotiations for Saudi Arabian oil made it necessary that the Rockefeller interests be represented by agents who were trusted implicitly by themselves as well as by Stalin. Alger Hiss fully justified the confidence which the Rockefeller Empire and Stalin placed in him. Eight-hundred-and-fifty-thousand barrels of oil a day, produced with moneys almost entirely derived from the U.S. Treasury, are yielding the various Standard Oil companies and their associate, the Texas Co., a tax-exempt, gross daily income of approximately a million-and-a-half dollars a day; and that is just the beginning of their profits from the tax-exempt use of American taxpayers' money. Although the full extent of the treachery at Yalta has not yet been revealed, it has been fully established by the course of events that it involved betrayal to the Soviets of the bulk of Europe and Asia and sell-out of China and northern Korea to the Communists to be used by them, as planned by Lenin, with the aid of Communist traitors planted by the cabal in the U.S. government, to slaughter American troops and exhaust our military might, to prepare the way for direct attack on Alaska, after American forces had been diverted and dispersed around the world.

Under the terms of the Yalta agreement, the Rockefeller Standard Oil interests provide the oil essential for these conquests, directly or indirectly, from Saudi Arabia, entirely at the expense of the U.S. taxpayers. The Treasury pays several times over for each barrel of oil delivered to the Communists in Korea and elsewhere through the Marshall Plan.

The secret Saudi Arabian deal was the very foundation of the sell-out at Yalta; and its terms stipulated in effect that the Rockefeller Standard Oil interests were to act in Saudi Arabia merely as producers of oil, largely, or entirely, at the expense of the U.S. taxpayer to provide fuel for world conquest by Communism. This is the obvious explanation of the immunity of the Saudi Arabian oil fields from Communist harassment and seizure.

At Yalta, the plan of this conspiracy was laid out in the pattern of organization of the United

Nations. It was put into operation at the San Francisco Conference for International Organization that, in the spring of 1945, launched the UN.

From the very start, the Rockefeller-Soviet brand was stamped all over the United Nations. The U.S. delegation to the San Francisco Conference virtually was entirely a Rockefeller delegation. The family was directly represented by Nelson Rockefeller and by John Foster Dulles, who served the U.S. State Department as "adviser". Oddly enough, Nelson Rockefeller's name is omitted from the official list of delegates published by the UN. Rockefeller's Council on Foreign Relations and its host of subsidiary organizations were profusely represented in the delegations and fully justify the Council director's boast that they control the policies of the U.S. and of the world. They were represented by the following characters, all of whom are listed in the official UN publication, United Nations Conference On International Organization, (vol. 1, Document 639, entitled "Delegates and Officials, United Nations Conference On International Organization," pp. 65-75) as follows: Alger Hiss, Assistant Secretary of State CFR\*

Secretary General Edward R. Stettinius Jr., Secretary of CFR

State, Delegate Commander Harold E. Stassen, USNR, CFR

Delegate Leo Pasvolsky, Special Asst. to Sec. of CFR State for International Organization and Service Affairs, Adviser to UN Delegation Isaiah Bowman, President of Johns Hopkins U., CFR Adviser to Sec. of State and UN Delegation Hamilton Fish Armstrong, Director of the CFR Council on Foreign Relations, editor of its FOREIGN AFFAIRS, Special Adviser to Sec. of State and UN Delegation John Foster Dulles, Adviser to UN Delegation CFR

John J. McCloy, Assistant Sec. of War, CFR Adviser to UN Delegation Admiral Arthur J. Hepburn, Chair. Gen. CFR Board U.S. Navy, Adviser to UN Delegation

Arthur Sweetser, Dept. Director of OWI, CFR

OWI Attache to UN Delegation Wilder Foote, Asst. to Sec. of State, CFR

Asst. to Chair, of UN Delegation Charles Noyes, Asst. to Sec. of State, CFR

Asst. to Chair, of Delegation Edward G. Miller Jr., Special Asst. to CFR

Asst. Sec. of State Dean Acheson John E. Lockwood, Dept. Director, CFR American Republics Affairs, State Dept. Joseph E. Johnson, Asst. Chief of Div., CFR

Int. Security Affairs State Dept. Ralph J. Bunche, Assoc. Chief of Div., CFR

Depend. Area Affairs, State Dept. Lt. Bernard Brodie, USNR, Div., of Int. CFR Security Affairs, State Dept. (\*CFR—Council On Foreign Relations) The Asiatic section of the State Department was represented among the advisers to the Delegation exclusively by members of Rockefeller's Institute of Pacific Relations: Joseph W. Ballantine, Dir. of Div., Far CFR

Eastern Affairs, State Dept. John Carter Vincent, Dir. of Chinese

Affairs, State Dept. Striking indeed, is the omission of the name of Nelson Rockefeller from this list. For on May 10, 1945, Drew Pearson, who is most friendly to the Rockefeller interests and a spokesman for them, in an article copyrighted by Bell Syndicate Inc., made ultra-clear the boss role played by Rockefeller at the Conference, as follows:

"SAN FRANCISCO. —The play-by-play account of what went on behind the scenes after the Conference reluctantly voted to admit Argentina can now be revealed.

"After Stettinius forced a public vote on the issue despite Russian requests for delay, he found himself criticized by some of the press and public. Upset, he hastily called a closed meeting of the U. S. delegation, charged with tension. "Young Rockefeller eulogized the way Stet-. tinus had handled himself.

"This country is fortunate to have its affairs in his hands", he praised.

"Asst. Sec. Jimmy Dunn started to chime in, 401

but was interrupted by shrewd Hamilton Fish Armstrong, key U.S. adviser:

" 'I am very disturbed by all this. I think we ought to call the press in and explain the American position. We are being called Fascists. Stettinius is being put in an unfair position.'

"Harold Stassen, of Minn., who had been cool to Argentina's admission, interrupted: 'And what are you going to tell the press?'

"John Foster Dulles said: 'It's very important that the public does not view our delegation as reactionary.'

"Again Stassen interrupted: 'Why must we be apologetic about something discussed fully here, then voted on and passed? The important thing is to work together. We can't avoid all differences between nations and people.'

"Stassen emphasized that there was justification for the American view, even if he didn't entirely endorse it himself. If there were no arguments, there was no use of a conference.

"Stettinius thought Stassen's statement so good that he ought to broadcast it.

"Dunn protested the Russians were holding up the Conference by refusing to permit Argentina to take up the chairmanship of a sub-committee. He launched upon an anti-Soviet tirade in no uncertain terms.

"Rockefeller endorsed Dunn's idea about giving Argentina a place on a Conference committee, saying:

" 'We must treat Argentina as well as anyone else.'

" 'I agree', chimed in Michigan's Sen. Vandenberg. 'Now that we've invited them, we must treat them right.'

"Stassen could not go along with them, saying: 'It's bad enough we let them in without giving them honors.'

"Vandenberg retorted, 'ANYTHING ROCKEFELLER WANTS IS O.K.'

"Dunn suggested that the U.S. delegation slip Argentina into the first committee vacancy. Stettinius demurred.

" 'I've gotten into enough trouble over Argentina already', he observed." (Copyright 1945 by Bell Syndicate Inc. Reprinted 402

by special permission of the author and the N.Y. Mirror.)

The story of the extreme agitation of the Rockefellers to keep the UN in New York under their thumb is graphically related as the climax of the Joe Alex Morris series, *The Rockefellers*, in the *Saturday Evening Post* in the issue of January 13, 1951. (p. 121)

Although the Rockefellers preferred not to be openly identified with the UN, they overtly dominated every move of its founding. They anxiously sought this symbol of unity for their community of interest with the Soviets. They did not hesitate to emerge into the open to anxiously insure that the UN headquarters would remain in the U.S., under their thumb. Stoian Gavrilovitz, Yugoslav chairman of the Marxist headquarters subcommittee sought to take over a fifty-square-mile site in Westchester County, N.Y. and Connecticut that would have constituted an ideal military and naval base within instant striking distance of every strategic industrial and military target on the east coast. When this plan was rejected, they threatened to recommend, quite logically, that the UN take over the League of Nations quarters in Geneva. This would have saved our taxpayers many millions of dollars. It would have eliminated the grave security risk of the UN headquarters now used as an espionage and propaganda base. It would have averted the outrage constituted by the surrender of sovereignty by our country over U.S. territory, the United Nations site in mid-New York City and the indignity of extra-territoriality, which even prostrate China spurned as an affront.

But John Rockefeller Jr. would not have it otherwise. He rushed in to offer to the UN his cherished Westchester country estate at Pocantico Hills. Then, he rushed out to buy for it an eight-million-dollar site in the very center of New York City, which he turned over to the UN as a gift. But as Homer long ago advised: "Beware of the Greeks bearing gifts".

The UN is an ideal "international" front for the Rockefeller Empire and for the Rockefeller-Soviet Axis. It is the prototype of the parliament for the Rockefeller Empire conceived by Hoffman Nick-erson in his *American Rich*,—a mere "advisory body", whose advice need not be heeded, a debating

society—all talk and no action—for allowing the "peasants" to let off steam.

Another motive of the Rockefeller Empire's interest in the United Nations was revealed by their spokesman in the State Department as world-oil control. This was embodied in a New York Times special article, published on August 17, 1946, reporting a broadcast on the National Broadcasting Company's "University of the Air". The State Department "experts", loaned it by the Rockefeller Standard Oil interests, proposed an International Petroleum Authority under the United Nations. Naturally this was represented to be in the interest of the U.S.—to relieve its oil "shortage", and not in the interest of the Rockefeller Empire—to increase its monopoly and profits. The following month, on September 6th, 1946, a variant of this scheme was offered by Howard A. Cowden, President of the Consumers' Cooperative Association.

Regulation of world oil production by the Big Five Oil companies—Anglo-Iranian, Royal Dutch Shell, Standard Oil of N. J., Caltex and Gulf—was announced to be an accomplished fact on December 29, 1951, by Elmer Patman, observer of the Senate and House Small business Committees. Walter J. Levy, of the London School of Economics, who had been planted by Socony Vacuum in the ECA to arrange the financing of Rockefeller controlled refineries around the world with Marshall Plan funds, was named by Patman as the "front" for the oil cartel and "the most influential oil economist in the world".

Pending world-wide dictatorship by the Empire, they have brought about an oil cartel under the auspices of the UN. The Rockefeller entente with Russia in opposition to England, came out into the open at the Paris Conference on September 21, 1946, when the U.S. voted with Russia and the Slavic bloc against the British Empire on Roumanian oil. The same community of interests was responsible for their ousting of Churchill when, after his speech before Parliament announcing that he "would not preside over the dissolution of the British Empire", he began blocking afresh the development of Saudi Arabia. Churchill was promptly ousted and the Marxist Labor Party, that stands so close to the Soviet, was put in power.

On the domestic scene, the UN serves the Rocke-404

feller Empire most effectively in carrying out on a world scale the totalitarian and imperialist aims of their "philanthropies", as expressed by Gates and Rockefeller in Occasional Letter No. 1 of the General Education Board. Our Republic, with the Constitution, the Bill of Rights and the Federal and state governments, sets up numerous barriers to the dictatorship which the Rockefeller Empire seeks. Although the conspirators have succeeded in breaking down many of these barriers, including the Constitution, over a period of decades, that process is slow for the impatient conspirators, especially when the wooing and winning of electorates is involved. The conversion of our Republic to a dictatorship would be greatly facilitated by transferring its sovereignty to a totalitarian agency that is beyond the reach of the voters.

To accomplish this legally and in compliance with the Constitution, would require only one step that would involve the voters only indirectly. That step would be the adoption of an Amendment to the Constitution that would destroy the fundamental character of our Government by surrendering the sovereignty of the nation to an "international" union, or federation. In this international union, U.S. citizens would have neither vote nor voice. They would be taxed without commensurate, or any, representation, and eventually could be enslaved thereby. For the United States with its 150,000,000 citizens would be hopelessly outvoted by the hordes of Asia's billion, and Russia and every other invidious enemy or "ally" would be free to despoil and enslave us through legislation we would be powerless to stop.

Thus the purpose in fostering the United Nations and kindred organizations is to attain with one fell swoop, by remote control, the dictatorship which two World Wars, a devastating depression, and the New and Fair Deals with the NRA, bureaucracies, (mis) managed economy and numerous synthesized "emergency" devices have failed to bring about.

The UN has meant imposing upon the U. S. and such other lands as have been foolish enough to adhere to it, an irresponsible supergovernment, control of which implies dictatorial domination over the lives, wealth and destinies of the citizens. This is clearly illustrated by the decision handed down on April 25, 1950, by the California State District

Court of Appeals in the case of Sei Fujii, a Japanese. California has on its statute books a law that bars the ownership of land to certain Orientals. That law has been declared Constitutional by the U.S. Supreme Court. In the Sei Fujii case the court ruled that ratification by the United States of the UN Charter invests the Charter with force of a binding treaty which overrides laws which conflict with it, thus superseding and scrapping U.S. law and the Constitution.

To serve the purpose of the conspirators, both the UN charter and constitution, with its "Bill of Rights", were written by a horde of Rockefeller-Soviet Axis agents in the various UN committees and commissions, with the aim of slyly destroying the U.S. Constitution and converting the nation to a dictatorship ruled by the Rockefeller-Soviet Axis. Its provisions for freedom of the press, for instance, have been written in the vein of the recommendations of the Rockefeller-dominated Commission on Freedom of the Press, when they are not identical with those recommendations. They prepare for destruction of that freedom under the pretense of preserving it. Its provisions for freedom of religion are similarly written, with "sleeper" clauses to facilitate destruction of religion on some such pretext as "national security".

The New York Times in a special dispatch from Geneva on April 23, 1951, reported:

"A number of leading representatives of labor, religious and cultural groups are beginning to wonder whether the efforts to draft a United Nations covenant of human rights may not in the end do more harm than good to actual human rights."

But ratification by the U.S. of the UN charter is treason of an order worthy of Alger Hiss. For although the Constitution provides for partial surrender of their sovereignty by the states to the Federal Government, the states have not yielded the right to transfer their sovereignty to any other power. The only conceivable circumstance under which the citizens and the states would be compelled to yield their sovereignty to any other power would be under duress of ignominious defeat in war that would render our nation incapable of defending itself and protecting its sovereignty. Not even Germany and Japan have been willing, in their defeat,

to surrender their sovereignty to their conquerors. Nor have we, as victors, asked it of them. But the conspirators at home are forcing on the U.S. terms that they have not dared to demand of even our defeated enemy—abject surrender of our sovereignty to a foreign power, Rockefeller's UN. They have even imposed on the U.S. the grant of extraterritorial rights, demanded by Stoian Gavrilovitz and his committee of Communists, to the UN area in the midst of New York City that was so hurriedly offered to them by Rockefeller. Even prostrate and war-torn China refused to grant extraterritorial rights to the U.S. or any other nation, on the grounds that it was an affront to her sovereignty. But thanks to Rockefeller's "philanthropies" we have become more supine and degenerate than China, in this and other respects.

There Can Be No Room For Doubt That Ratification Of The United Nations Charter By The Delegates Of The United States Is Absolutely Unconstitutional, And Is Susceptible Of Interpretation As Treason. On This And Other Grounds, The People Of The U. S. Should Compel Immediate Withdrawal Of Our Nation From The United Nations And The Annulling Of Extraterritorial Rights Granted The UN In Violation Of Our Constitution. In this illegitimate, high-handed and treacherous manner, the Rockefeller interests have contrived through the UN, to bring about the "new social order" which was the primary purpose of their "philanthropies". The behind-the-scene bosses of the UN have become the dictators of the U.S. and of the world. But they now share that power with Soviet Russia. When Stalin told an interviewer that Americans are no longer masters in their own house, he might have said also, and quite truthfully, that through the UN he is more master of the United States than is its citizenry.

Joseph Stalin denned "internationalist" as follows:

"An internationalist is one who is prepared unreservedly, unhesitatingly and unconditionally to defend the USSR." (New Leader, March 11, 1950) In Stalin's sense of the word, the UN has served "internationalism" perfectly. Stalin-trusted Alger Hiss worked well at Yalta and at San Francisco, to fashion the UN into an ideal weapon for the

Soviets. No longer do their espionage agencies have to depend upon their Rockefeller-financed Institute of Pacific Relations for their dirty work. The U.S. Treasury-financed UN is infinitely better equipped to serve their purposes, and bring the ultimate objective of the Axis world conquest, infinitely closer to attainment, at no greater cost to it than mere words and debate. Soviet Russia sits at the UN table with the very powers she seeks to destroy, fully protected against any action against her own aggression by the ever more numerous votes of her satellites added to her three votes; and by the power of veto. Side by side with Hiss, at Stettinius' elbow, was Dalton Trumbo, a notorious Red of the Stalinist breed. Like Hiss, he supplied Stettinius, who was hopelessly beyond his depth, with ideas which, needless to say, were pro-Communist, and entirely to Stalin's satisfaction. Trumbo also ghosted Stettinius' speeches at the Conference. In this position, the Kremlin is enabled to render impotent any nation that might wish to check its plan of expansion by subversion and engulfment, and to block any inclination to arrest its predatory activities. It uses the UN as a shield. UN debates serve as a sounding board for its propaganda that has played an important role in its conquests of large sections of the globe by subversion and infiltration. Under the protective shelter of the UN, Soviet Russia has extended her dominion to almost a third of the people of the world. It has gradually expanded to take in the Eurasian lands that Rockefeller-Soviet Axis deals, ratified by the U.S. State Department and confirmed at Teheran and Yalta, have assigned to Communist Russia and aided her in acquiring.

Under the guidance of Alger Hiss's worthy successor Trygve Lie, a Norwegian Red, and the personnel which he was empowered to employ for the UN delegations, the UN has served also as an espionage center. Fulton Lewis Jr. reported on January 18, 1951, that "29 high-ranking officials of Communist parties in foreign countries were then working at the UN headquarters in New York" according to the records of the U.S. Central Intelligence Agency. He reported further, as follows: "Some 90 U.S. citizens working for the UN have Communist-front records sufficient to bar them completely from jobs in the Federal Government. 408

"Yet they represent this nation at the UN." Arrangements for the hiring of employees of the UN delegation, initiated by Alger Hiss, gave the sole right of passing on the qualifications of the candidates to the Secretary General. Though Try-gve Lie has ousted some of his appointees on the ground that they are Communists of the wrong complexion, he has consistently approved only Reds for UN posts, and it is now packed with Reds of all shades, spies, traitors and foreign agents.

Following the delivery of China into the hands of the Kremlin by State Department employees and other agents from Rockefeller's Council on Foreign Relations, Institute of Pacific Relations and other subsidized fronts, the clique led by Dean Acheson originally collaborated with Soviet Russia and Great Britain in seeking to give the Communists another vote in UN councils, by turning over to them to seat of Nationalist China. In late 1951, the tide of public opinion aroused by exposures, such as those of Senator McCarthy, and by the chicanery of the Chinese Communists in the Korean armistice negotiations, forced Acheson and his clique to pretend to oppose seating them in the UN. The move was proposed by the British Labor Government, which was dominated by the Rockefeller Empire, that has heavily subsidized the Fabians and the Labor Party. Dean Acheson, likewise was a Rockefeller-Soviet Axis spokesman in this matter. This illustrates the well-developed technique of using foreign governments as catspaws for pulling their chestnuts out of the fire. The same technique was used in their dismissal of General Douglas Mac-Arthur, when he undertook to upset their conspiracy by offering to defeat the Chinese Communists and Russia itself, if necessary.

One of the most dangerous uses to which the UN has lent itself, in the hands of the Kremlin, is its use as a military device. Through the UN, the Kremlin blocked the bombardment of concentration and supply centers in Manchuria. Through the UN, it managed to stall for sufficient time to secure reinforcements and supplies when trounced and facing defeat, on the pretense of seeking an armistice. By the UN, Marshall Plan and NATO, which aided Britain, their undercover ally, the Soviets have been supplied with jet engines and planes, and their plans, that were developed at the expense

of U.S. taxpayers and are so far superior to those that the English have supplied the UN forces and to our own, that on November 11, 1951, General Vandenberg, as head of our airforce announced that all of the UN planes and jets recently built and currently being built are already obsolete and are being destroyed by the Russian airforce. Through the good offices of our pretended allies in the UN, the Kremlin has been able to block the use against her forces and bases in the Korean Crusade, of the atom bomb, for whatever use and value it may have in warfare; and has managed to maintain its position of using the UN itself as a super-espionage agency that sits in the inner councils of the very powers it is engaged in destroying. Meanwhile, the Soviets are rapidly gaining enough voting power for Iron Curtain lands, and through secret allies such as India, to paralyze and take over the U.S. and the balance of the world without firing a single shot.

The UN constitution, Bill of Human Rights and all of the several conventions being drafted by various agencies, many of them subsidized by the Rockefeller Empire and its puppets, are all being deliberately designed for the purpose of betraying the U.S. and forcing upon the land the "new social order" of totalitarianism. Thus the Committee to Frame the World Constitution comprised a part of the same group of Rockefeller's University of Chicago and Council on Foreign Relations agents that constituted the Commission on (or to betray) Freedom of the Press: Hutchins, Hocking, Niebuhr, Redfield and Ruml, joined by U. of Chicago's Red professors, Richard P. McKeon, Mortimer J. Adler, Rexford G. Tugwell, Wilber G. Katz, James M. Landis, Charles McIlwain and Guiseppe A. Borgese. Borgese, an Italian Red refugee and close personal friend of Senator William Benton, was entrusted with the actual process of drafting the "Constitution" that was brought out in 1947, as a pattern for the UN to follow. In the writing of this brutalitarian "Constitution", which might better be termed a license for slavery, a deliberate and absurd effort was made to effect a "compromise" between the U.S. and Soviet constitutions. So delighted were the Reds with this document, that its adoption by the U.S. was made one of the planks in the platform of

Henry Wallace's Rockefeller-subsidized Communist front, the Progressive Party.

Mrs. Anita McCormick Blaine, a distant kinswoman of the Rockefellers and a heavy supporter of Communist causes, including the Communist newspaper, Compass, donated \$1,000,000 for a foundation for world government that seeks the adoption of this "Constitution For World Government". It is administered by two "liberal" former professors of Rockefeller's University of Chicago, Stringfellow Barr and Scott Buchanan.

All the World Federalist groups have similar inspiration. Cord Meyer Jr. and Clark M. Eichel-berger, leader of two of the groups, are of the membership of the Foreign Office of the Rockefeller Empire, the Council on Foreign Relations. Supreme Court Justice William O. Douglas, who swore to uphold the U.S. Constitution in his oath of office, is vice-president of the United World Federalists, dedicated to breaking down our Constitution, and surrendering the sovereignty of our country to the Rockefeller-Soviet-dominated and inspired UN "world power". The safety and security of the country required his impeachment and removal from the Supreme Court bench.

So sly, intensive and powerful has been the drive of the conspirators, led by the United World Federalists Inc. and the Rockefeller-supported agencies, that by June 1949, twenty-two state legislatures had voted for an Amendment to the U.S. Constitution that would turn over our nation to a world government by Rockefeller's UN, rob us of our sovereignty and nationality, and betray us into the hands of the Rockefeller-Soviet Axis. A group of ninety-three Congressmen sponsored a concurrent resolution in the House of Representatives:

"It is the sense of the Congress that it should be a fundamental objective of the foreign policy of the United States to support and strengthen the United Nations and to seek its development into a world federation open to all nations with denned and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation and enforcement of world law."

The list cut across party lines and contained fifteen of the twenty-four members of the Foreign Affairs Committee. (marked with \* table 1, p. 412)

The names of these "patriotic Americans" should be borne in mind by their electorates. It is notable that the subscribing states were predominantly-Democratic and New Deal. It is fortunate for the nation that many of the states have withdrawn their support from it alerted to the nature of the conspiracy by the Daughters Of American Revolution.

One of the most nefarious aspects of this UN conspiracy is the propaganda to root out patriotism in the schools, and to supplant it with "internationalism", in the Stalin-Rockefeller sense. The Rockefeller-Foundation-dominated New York School Board adopted in December 1950, over the protests of numerous citizens and patriotic groups, a resolution which provided for flying the UN flag above the Stars and Stripes.

In conclusion, the fact is inescapable that the United Nations device is a suicidal, paralyzing force of the Rockefeller Soviet Axis that aims to destroy and engulf the governments of the United States and of the world into a totalitarian "One World", a Rockefeller World. The only cause the "United" Nations are united in is in the betrayal of our United States. It has served in the cause of "internationalism" of the Rockefeller Soviet brand. It must be destroyed or it will destroy us.

## CHAPTER XXII

### ROCKEFELLER'S MARSHALL PLAN & POINT 4 PROGRAM

#### The "Cold War" And The Korean "Crusade"

The so-called "Cold War" is obviously a cautious expansion of the Soviet Empire to invest the lands ceded to it by the Rockefeller Soviet Axis pact. Likewise, the Korean "Crusade", or "police action", serves to carry out the pattern of the same pact. In no other manner can there be explained many of their very strange aspects.

First, the Kremlin has made no move to disturb the Rockefeller interests in their peaceful possession of the enormously oil-rich Arabian Empire, in spite of its need for oil.

Any inclination to doubt the existence of an understanding between the members of the Rockefeller-Soviet Axis will be dispelled promptly by an examination of the map of Asia Minor. It will be noted that Soviet Russia borders Turkey for hundreds of miles, and that there exists no real barrier that would block the Soviet seizure of Turkey, Arabia, Palestine, Iraq, and all the puppet states that have been set up in that region. It would be absurd to propose that the \$600,000,000 fund levied on American taxpayers "for the rearming of the Greek and Turkish armies" sufficed to make Rockefeller's Saudi Arabian oil secure from the hordes of the Soviet Army, that outnumbers the total population of those countries.

Certainly, it did not create, nor does there now exist in that region, the military might that would stop the enormous, well-trained Soviet Army. There is only one answer to the question: "What stops the Kremlin from seizing the plentiful Arabian oil that it needs so direly?" The answer is quite obvious. The Soviets are receiving that oil at no cost, or at a price that is less than the cost of production by themselves, on the basis of an alliance with its producers, the Rockefeller Empire, which has thus secured immunity for its holdings. This brings up the next question: "Who is paying the grasping, ruthless sham philanthropists for that oil?" By now the answer should be obvious to the dullest.

On May 13, 1948, the Wall Street Journal carried 413

on its front page in a special dispatch by Ray Crom-ley, the substance of the agreement reached at this conference, confirming substantially the secret agreement reached at Yalta, some three years earlier, between Stalin and Edward Stettinius and Alger Hiss, who, with "Roosevelt", represented the Rockefeller Empire. The dispatch was a release by the Rockefeller puppet agency, the State Department, of a pretended "warning" to Russia, under the headlines Nexus For Russia, U.S. Diplomats Sketch a "Line" Which Soviet Shall Not Cross. In effect, the "line" divided the world between the Rockefeller-Soviet allies into the Western and Eastern zones. The "line" runs to the west of Finland and Sweden, through mid-Germany and Austria, along the Yugoslav Adriatic coast, across northern Greece and Bulgaria, north of the Bos-phorus and Turkey and along the eastern border of Persia to the Persian Gulf, the Gulf of Oman and the Arabian Sea. It was drawn to leave the Rockefeller Empire in control of its Saudi Arabian oilfields and its line of supply through the Mediterranean ; and it gave to the Soviets, Finland, Sweden, East Germany, Czechoslovakia, East Austria, Yugoslavia, Macedonia, Poland, Rumania, Bulgaria and all of Asia with the exception of Turkey and Arabia. The correspondent naively explains:

"The weakness of the Iranian defense line— and the importance of Near East oil—are major reasons why military men and diplomats want no bad flare-up in Arabia." He discreetly fails to mention that Near East oil is important primarily to the Rockefeller interests. But he makes it clear that it is the crux of the situation. He makes it clear that Iran and its oil, concerning which there is now such a pretense of concern, was relegated to the Soviets, in line with the confirmed policy of the Rockefeller-Soviet Axis to despoil and destroy the British Empire. China, which the Rockefeller "philanthropy" agents, operating through the State Department, have played the key role in delivering to the Soviets, was assigned to the Soviets together with Japan, Indo-China, Indonesia, Burma, Ceylon, India, Tibet and Afghanistan, where Rockefeller agent Owen Lattimore has been as curiously active as he was in China before its betrayal. The pro-Communist activities of Nehru in India and the appointment as

U.S. Ambassador to India of Chester Bowles, the former partner and associate of pro-Communist Senator William Benton, who is intimately identified with Alger Hiss and Nelson Rockefeller, and with Rockefeller's Institute of Pacific Relations, presage an early delivery of India to the Soviets. Tibet has already been delivered to the Communists, following the activities there of Owen Lattimore and of the same clique. And Afghanistan, that has been likewise the object of Lattimore's attentions and the interest of Standard Oil agents, will no doubt soon follow suit.

Four significant events followed closely on the conference between Nelson A. Rockefeller and Andrei Gromyko, upon which it probably had an important bearing. First was the Berlin Blockade, which paved the way for arresting the dismantlement of the Rockefeller dominated I.G. Farben-industrie plants, the release of its officers from jail and its restitution to control of West Germany under the guidance of its Rockefeller attorney, John J. McCloy, as American High Commissioner. The second was the delivery of China to the Communists through the activities of the agents of Rockefeller's Institute of Pacific Relations in and out of their puppet State Department; and their proposal to wipe out the Nationalist Chinese Government completely by seating the Communist "Popular" Government in the UN, that would imply turning over to the latter all the assets of the former that are held abroad. These acts have been disastrous for the nation, and the second has cost the blood of more than 180,000 GIs, the lives of almost 20,000 of them and the spectre of national insolvency through the third, the Korean War that was thereby made possible. It was a fulfillment of the conditions laid down by the Rockefeller Empire through the State Department and published in the Wall Street Journal dispatch, as "the price of peace."

Proof of the fact that an agreement on such a partition of the world existed prior to Yalta and the termination of the war is clearly revealed by the withdrawal of our troops before Berlin in order to yield it to Soviet troops, in the European theatre of war. And in the Pacific, seven months before the termination of the war the Japs offered General MacArthur surrender on the same terms as were accepted at its termination; but the offer was

rejected by Roosevelt and his Rockefeller-Soviet Axis bosses. The war in the Pacific was deliberately prolonged until after Stalin had been induced to agree to permit us to terminate it, after he had the Soviets make a token entry into it as the basis for claiming Far East lands. Obviously the Rockefeller-Soviet partners sought on behalf of Stalin, to exhaust our forces in the process of conquering territory for the Soviets. The dropping of the atom-bomb on a people pleading for peace was a needless, brutal psychologic gesture that was designed by the conspirators more to intimidate folks at home than to defeat the already defeated Japs. In this it is proving more lastingly effective than the Orson Welles Invasion From Mars broadcast that they staged later as a test of the gullibility of their thought controlled Americans.

Third, in sharp contrast with the Saudi Arabia situation, Iran, with a larger population and army, and a smaller oil potential and production, is being cautiously stripped from the British Empire, and drawn under the Iron Curtain by the propaganda and agitation of the Communist Tudeh Party, with the sly, dissembled support of the Rockefeller Empire, through its agents and emissaries, including Averell Harriman, and its puppet State Department. Their pretended concern over the situation has served as a cover-up for dollar loans to Mossadegh's Iranian Government, that may amount to a hundred million or more to begin with, to enable it to carry on without the revenues derived from the Anglo-Iranian Oil Co. operations. Naturally, the American "peasants" will be forced to pay out this money on behalf of the beggarly Rockefeller Empire, through taxes and the U.S. Treasury. Sicken-ingly melodramatic Mossadegh, who alternately blusters and sobs, and makes blatant public exhibitions of his cowardice in fainting spells and hospital visits, is giving the "peasants" a show for their money.

It is also apparent that the present Iranian situation is merely what was planned between the Rockefeller-Soviet Axis partners even prior to Yalta,— speeded up by the impediment placed in the way of delivery of Saudi Arabian oil to the Soviets. The Rockefeller Empire has no direct interest in Iranian oil. In pursuing its consistent policy of being willing to give away other peoples' money and

property, its puppet State Department had already published its intent to yield Iran to the Soviets.

Fourth, the Rockefeller Empire is supporting the Kremlin in the various phases of the "Cold War" and the Korean "Crusade", directly and indirectly, at the expense of the American taxpayers, through the UNRRA, the Marshall Plan, the Point 4 program and the North Atlantic Treaty Organization. With the usual cunning of the schemers, all of these plans are being presented to the "peasants" as devices for "stopping Communism".

The Marshall Plan and its continuation, the Point 4 program, and the North Atlantic treaty are completely transparent plans for subsidy of the partners of the Rockefeller-Soviet Axis. They were conceived in the 1930's by the Rockefeller-subsidized "social scientists" and promoted by their Foundation, and their Council on Foreign Relations. They were labelled with the names of their pawns, Marshall and Truman, and were dictated to the members of Congress, who passed them without pretense of a debate. In an address before the "78-79" club of Congress, in 1946, I predicted that it was planned to use the Marshall Plan in the same manner as the OPA — as a principal agency of Communism — to paralyze the flow of commodities through normal channels of industry in order to force inflation and chaos in business, with the purpose of furthering Communism and dictatorship in the U.S.; and also to subsidize Soviet Russia. In *The Strange Death of F.D.R.*, I repeated the prediction (p. 272).

The Committee for the Marshall Plan that propagandized the "peasants" through all the mass channels of information and misinformation controlled by the Rockefellers and their allies, from an office at 537 Fifth Avenue, New York City, in addition to the Rockefellers personally, comprised the familiar list of Rockefeller agents, puppets and pawns of the Foreign Office of the Rockefeller Empire, the Council on Foreign Relations. Its personnel include the following:

Hamilton Fish Armstrong    George H. Blakeslee

Isaiah Bowman

John W. Davis

Stephen Duggan

Allen W. Dulles

Charles H. McIlwain

Reinhold Niebuhr

George Shuster

Charles Seymour

Henry L. Stimson

Henry W. Wriston

Nelson A. Rockefeller 417

The following Trustees of the Rockefeller Foundation were members of the "national council" of the Committee:

Karl T. Compton

John S. Dickey

Robert G. Sproul

Arthur Hays Sulzberger

Winthrop W. Aldrich On December 13, 1949, the Chicago Tribune published an editorial bearing the caption Rockefeller Profits From The Marshall Plan. This editorial was based entirely on the reports of the ECA Marshall Plan, records of the first 45-day period of operation. It points out that the Rockefeller family, the demonstrated bosses of all Standard Oil Companies, played the key role in getting the Marshall Plan through Congress and are cashing in on it handsomely. It quotes from the ECA report the following instances in which Rockefeller's Standard Oil companies, or their subsidiaries, collected several times from the American taxpayer for the same products in connection with Marshall Plan deals:

Anglo-American Oil Company Ltd., 100% owned British subsidiary of the Standard Oil Company of New Jersey, purchased from two other wholly owned subsidiaries of the same company, the Esso Export Corp. and the Standard Oil Export Corp., \$7,258,332 worth of products that were paid for by the U.S. taxpayers out of ECA funds. The transaction which was in effect merely a transfer of the products from one department to another of Standard Oil, netted it two profits at the expense of the taxpayers.

Standard Francaise des Petroles, a French company 83%-owned by the Standard Oil Company of New Jersey, bought \$4,020,210 worth of products from the Esso Export Corp., a wholly owned subsidiary of Standard Oil, in the same type of deal.

Other subsidiaries of the Standard Oil Co. of New Jersey, throughout the world engage in the same type of transactions with their mother companies at the expense of the American taxpayers. Les Raffineries de la Vacuum Oil bought from Socony-Vacuum Oil Co., its parent company, \$2,-249,877 worth of products under the same conditions. The appointment of Paul G. Hoffman, former Studebaker Co. executive, protege of Bernard Baruch, Rockefeller henchman and member of the

Rockefeller Empire Foreign Office, the Council on Foreign Relations, as head of the ECA, assured the Rockefellers of direct and full control of its activities.

The banks controlled by the allied Rockefeller and Roosevelt interests, the Chicago Tribune editorial states, have an exclusive monopoly of the profitable letter-of-credit business arising out of these plans, and in the financing of the exports made under them.

The nations in the name of which the Marshall Plan was set up saw little of the funds or benefits from them. A large proportion of the billions levied on the U.S. taxpayers never left the country, but was transferred directly or indirectly from the U.S. Treasury to the coffers of various Rockefeller-controlled corporations here or abroad, as stated in the Chicago Tribune editorial and the ECA reports. As a consequence, most European nations have manifested little interest in the Marshall Plan. In France for example, ECA officials were instructed by their superiors to create the appearance of enthusiasm for the plan and to instigate a demand in the French press for the passage by Congress of the necessary appropriations bill. Few French newspapers, other than those controlled by the Rockefeller and allied interests, even mentioned the story. They were not interested in the Marshall Plan because they were getting little or nothing out of it.

It is only the lands in which the Rockefeller interests seek further expansion, or have an axe to grind, that are given direct and visible benefits from the Marshall Plan, for the purpose of influencing acceptance of the deals in question.

The Rockefeller Empire itself has been the largest supplier to the Communist forces in Korea of an absolute essential for modern war—oil. The North Korean forces could not have launched the war without the oil provided them by Rockefeller's Cal-tex Co. from Saudi Arabian oilfields, entirely at the expense of American taxpayers through the Marshall Plan. That oil has made it possible for the enemy to operate its tanks, planes and other equipment that slaughter our GIs. It has made the Korean War an extremely profitable venture for the Rockefeller Empire.

Within a month after the Korean War got under way, it leaked out that Rockefeller's Caltex Co. was

supplying the enemy with their oil. The matter became so ugly a public scandal that puppet Secretary of State Dean Acheson was compelled to go through the form of ordering his Rockefeller Empire bosses to stop the treasonous trade. This meant, according to Rockefeller's Caltex employees, a complete standstill and loss of their highly profitable business. For the Rockefeller interests were paid for each barrel of oil three times by U.S. taxpayers, and made three profits. The oil is produced originally at the expense of the taxpayers by the Arabian American Oil Co., known as Aramco, a subsidiary of Caltex. Aramco was paid for the oil which it delivered, by the ECA. Caltex shipped the oil to Hong Kong in tankers, at the expense of the U.S. taxpayers, through the ECA, and sold it to a British subsidiary of Rockefeller's Standard Oil Co. Caltex was paid for the oil by the ECA. The Hong Kong company delivered the oil to the Chinese Communists and North Koreans and was paid for it out of the British Marshall Plan funds, by the ECA. The Caltex employees were trained in methods of billing and paper work in a special course given by the ECA in Washington at expense of the taxpayers.

Shipment of oil to the enemy was promptly taken over by a British subsidiary of the Standard Oil Co. in Hong Kong, still at the expense of the U.S. taxpayer, through the ECA. The tankers engaged in the trade, many of them built at the expense of the U.S. taxpayer, were transferred to Panamanian, Greek, Norwegian and other foreign registry, and the trade continued under foreign flags, at the expense of the ECA. When the facts leaked out several months later, aroused public sentiment once again compelled puppet Secretary of State Dean Acheson to go through the motions of "bringing pressure to bear" against the "British" traders to discontinue the shipments of oil. Thereafter the shipments have been made by companies that are less directly controlled by the Rockefeller interests, from other parts of the world, such as Venezuela. This oil keeps the war going.

It is a matter of record that the Marshall Plan and North Atlantic Treaty countries transship the bulk of the material which they receive under the plans, or their equivalents, to Russia and the Iron Curtain countries. They fabricate raw materials which they receive, that are in short supply in the

U.S., into military equipment and munitions, and export them to Russia and Korea. The sixteen Marshall Plan nations have a total of ninety-six trade pacts with Russia and her satellites, in connection with this treacherous commerce.

Fulton Lewis Jr. reports that he toured all of Western Europe seeking in vain the heavy tractors and combines which were shipped there by the ECA. He noted that there were no sections that he visited where they could be used. Had he been permitted to visit the collective farms of Russia, he would have discovered that they had all been transshipped by our Western European "allies" to Russia.

The North Atlantic Treaty countries are demanding of the U.S., arms, equipment, cruisers and other material of war for the purpose of "resisting aggression by Russia", and at the same time are shipping to Russia all their production of those items that is made possible by the Marshall Plan aid they are receiving. Thus the October, 1951, issue of Shipping World reports that Marshall Plan countries are building the following ships for Soviet Russia at the present time:

Denmark	10 whalers
8 trawlers	2 suction dredge hulls
Italy	Belgium
2 passenger-cargo ships	8 cargo ships
	7 trawlers
Netherlands	Sweden
3 cargo ships	12 trawlers
6 tankers	2 tankers

In connection with the hubbub about atomic bombs, there naturally comes to mind the question of the bearing of the Rockefeller Soviet Axis on the leakage of information on the bomb and of raw material for its manufacture. Major Jordan testified that Harry L. Hopkins' name played a role in clearing both information on the development of the bomb and actual shipments of processed uranium. Hopkins serve the Axis loyally as one of its top Washington agents. A large number of the scientists connected with the development of the bomb were identified with institutions subsidized by the Rockefeller "philanthropies". Many of the college presidents who went on record publicly as favoring the release of atomic energy information to the Soviets are members of the Rockefeller Empire Foreign Office, the Council On Foreign Relations, and were

there identified with and indoctrinated by Alger Hiss and with the editors of Amerasia Owen Lattimore, William W. Lockwood, Thomas A. Bisson and Frederick Vanderbilt Field and others of the same tinting. David E. Lilienthal, Chairman of the Atomic Energy Committee who approved of its grants for research work in the field to known Communists, is likewise a member of Rockefeller's crew. William Wesley Waymack, a fellow member of the AEC was a member of the Board of Trustees of Rockefeller's American Institute of Pacific Relations and of the Rockefeller subsidized, Marxist National Planning Board, and was identified with numerous other subversive or Communist front organizations, including the Russian War Relief Inc. and the Council for Democracy, as well as a member of the Executive Committee, with John Foster Dulles and David Rockefeller of the Carnegie Endowment For International Peace that appointed Alger Hiss its president, (in which capacity Hiss became his associate), and a member of the Red Twentieth Century Fund. Rear Admiral Lewis Lichtenstein Strauss, the other member of the AEC, who opposed its subsidizing acknowledged Communists in atomic energy researches but was overruled and resigned, member of Kuhn Loeb & Co. who has been appointed financial adviser of the Rockefeller Bros. Inc., is also a member of Rockefeller's Council on Foreign Relations.

This situation makes thoroughly understandable the fact that the Marshall Plan, the Point 4 program and the North Atlantic Pact all have operated to strengthen and rearm Russia while depleting and weakening the U.S. As in the case of the UNRRA, Russia and the "Iron Curtain" countries are receiving, directly or indirectly, a lion's share of Marshall Plan aid and are being very materially supported through it in their Korean War, however involuntarily, by the American taxpayers. Indeed, the promptness with which Russian overtures for an armistice followed the adoption by Congress of measures, such the Kem Bill, that ordered the withholding of all aid from nations that traded with Russia and her satellites, make it appear probable that all the oil, munitions and supplies for the North Korean and Communist forces were being supplied, directly or indirectly, by the Rockefeller-Marshall conspiracy against the U.S. and its taxpayers.

One can not wonder that the Rockefellers, especially Nelson, are wildly enthusiastic about the Marshall Plan. It has poured billions of dollars of American taxpayers' money into their pockets through the firms which they control. It has assured their control of governments and concessions throughout the world. It has discovered for them new and fabulous sources of wealth, such as the new oil fields drilled with Marshall Plan funds by one of their subsidiary companies in French Equatorial Africa, which they now seek to exploit at the expense of the U.S. taxpayer through the extensions of the Marshall Plan which they have promoted, the MSA and the Point 4 program.

The most insolent and grandiose of the conspiracies to make the American taxpayer support with his money and life the expansion of the Rockefeller Empire and of the Rockefeller-Soviet Axis, is the Point 4 program. This program, as has been related, was launched by John D. Rockefeller 3rd in 1948, on his return from Africa, on a mission supposedly on behalf of the Rockefeller Foundation that quested the welfare of the Hottentots that are so dear to the heart of Henry Wallace and the rest of the crew of Rockefeller Reds.

Point 4 is an essential part of the program of the Rockefeller-Soviet Axis. It was laid down as such by Earl Browder, in his book *Teheran, Our Path In Peace And War*, published in 1945:

"America can underwrite a gigantic program of industrialization of Africa to be launched immediately ... (p. 53)

"Our (U.S.) government can create a series of giant industrial development corporations, each in partnership with some other government or group of governments and set them to work upon large scale plans of railroad and highway building, agricultural and industrial development, and all-round modernization in all the devastated and undeveloped areas of the world ..." (p. 79) John D. 3d dictated the program to Truman. Truman dictated it to Congress. Congress subserviently adopted it without any question of the orders it had received, other than a few feeble protests about a "global WPA".

It is not difficult to understand the interest of the Rockefeller-Soviet Axis in the Point 4 program for the development of Africa. For the Soviets the

plan presents a number of immediate advantages. They are trading heavily with the British and French colonies in Africa. A development of its industries would make Africa an even more important source of military supplies and material. It would build up the continent at the expense of the U.S. taxpayers, hasten the financial debacle that would lead to the U.S. downfall, while at the same time building up Africa and make it a prize worthy of the conquering efforts of the Rockefeller-Soviet Axis. Their agents are already at work preparing the way for both of these accomplishments. Ralph Bunche, the Urban League and a host of other agencies subsidized by them are simultaneously agitating the F.E.P.C. program, inciting race friction in the U.S. and actual race warfare and riots in Africa.

John D. Rockefeller 3rd's praise of Bundle's prediction of an Asiatic Communist pattern of "upheaval", or revolution, in Africa at the Urban League's dinner to the winner of the Nobel Peace Prize has been related. The job they are doing is proving very effective in all sections of Africa. In the industrial and mining sections of the Union of South Africa, they are breeding totalitarianism and hatred of the white, and stirring up race riots that are directed initially against the Hindu immigrants. In the uranium-mining sections of Katanga, they are adapting their methods to the customs of the natives. They are concentrating on indoctrinating the powerful tribal witch doctors and making them the agents of hate and revolution.

Nelson Rockefeller's Point 4 program has been in the hands of trusted Communist agents from the very start and in it he is carrying forward the objectives of the Rockefeller-Soviet Axis, closely associated, as usual, with pro-Communists and Communists and Communist agents, in and out of the State Department. The Executive Director of the Secretariat of the Inter-Departmental Committee on Scientific and Cultural Cooperation which is the official title of the Point 4 program, is Haldore Hanson. Haldore Hanson has a long record as a Communist, starting with the editorship of a Chinese Communist magazine in Peiping. Collaborating with Haldore Hanson and Nelson Rockefeller in the Point 4 program in Afghanistan is Owen Lattimore, whose earlier activities in Asia, on be-

half of the State Department and the Rockefeller-Soviet Axis, were so successful for the Soviets, that the Communists took over the country without a struggle.

Nelson Rockefeller's Point 4 Program is doing its best to make the world, and the U.S., safe for Communism. It is engaged in the Marxist enterprise of providing social security in Egypt, whose king can insure the permanent and absolute security of death by arbitrary edict to any and all of his subjects, at the expense of the U.S. taxpayers, as was announced on May 1, 1951. It is building ports and developing mines and oil fields in Africa for the Rockefellers and providing them with the irrigation projects, for which a large part of undeveloped California, Nevada, New Mexico and other sections of the U.S. languish. It is rapidly getting around to Henry Wallace's favorite enterprise of providing "milk for the Hottentots", with Marxist dialectics as a flavor, at the expense of the world's greatest sucker, the U.S. taxpayer.

The immediate urgency and the direct impetus to Rockefeller's Point 4 program for Africa was revealed in a center-page photographic spread in the Sunday magazine section of their official journal, the New York Times, on September 23, 1951. Under the headline Africa Strikes Oil, it relates in the legends of the photographs that oil has been found in French Equatorial Africa, in the Ogoe River basin of Gabon territory, about 150 miles from Port Gentil on the Atlantic coast. The oil was found after four years of exploration by the Societe des Pet-roles d'Afrique Equatoriale Francaise. It relates that the company was French government financed, but states that the \$207,000 dollars that the French government furnished was U.S. Treasury, E.C.A. and Marshall Plan funds. Rockefeller's Standard Oil entered into a partnership with the French government in the 1920's, as related elsewhere, that made them equal partners in the French oil monopoly.

On November 24, 1950, President Truman dutifully appointed Nelson A. Rockefeller chairman of the Advisory Board on International Development, to plan aid for the underdeveloped areas of the world, more specifically of petroliferous Africa, and to implement the Rockefeller-Soviet Axis scheme. In making the appointment, Truman left it osten-

sibly to the Board, but actually to Rockefeller, to decide "the type and size of programs . . . desirable for the United States to undertake in this field." This was, in effect, a carte blanche to Nelson and the Empire.

On March 11, 1951, the Rockefeller report, or order, was handed to Truman in the name of the Board. It recommended that \$500,000,000 should be appropriated by Congress to launch the program. To secure additional power, scope, funds and personnel, it recommended a merger of all overseas economic activities including the Marshall Plan's Economic Cooperation Administration, the State Department's Institute of Inter-American Affairs that Nelson Rockefeller had launched, and the Technical & Cooperation Administration, among others.

The "opposition" in Congress had not one word to say against the utter un-Constitutionality of the Point 4 proposal. Part of the explanation is probably the fact that the law firm of the leader of the "opposition", Sen. Robert A. Taft, has represented the Rockefellers in such affairs as Abby Rockefeller Milton's and her husband's Charleston Shipyard deal that tapped the U.S. Treasury. Taft evidently heard "his master's voice" and was as eager to approve of this outrageous criminal raid on the U.S. Treasury as any other of the Rockefeller puppet, "bipartisan" agents in Congress. He rushed to volunteer his support of it so that it could be included in the press reports carrying the Rockefeller proposals, obviously by pre-arrangement, in order to block effectively any protest or opposition. The Associated Press report quotes him as saying, as "leader" of the fake opposition in Congress:

"I have no objections to Point 4 assistance so long as it is conducted on a limited basis and isn't a global giveaway." Sen. Taft echoed, in effect, the famous words of Sen. Arthur Vandenberg:

"Anything Rockefeller wants is O.K." Evidently Taft does not mind a "small" violation of the Constitution, when his firm's client, Rockefeller, is the beneficiary.

With the opposition thus bowled over, the Rockefeller-Soviet Axis Point 4 program was adopted in record time by Congress. In the midst of the Korean War that was taxing the resources of

the nation and piling up staggering costs and taxes, a Point 4 appropriation of \$500,000,000, for subsidizing further the Rockefeller interests, was passed by Congress with literally no opposition, to help speed the insolvency of the nation and its taxpayers:

Since his appointment Nelson Rockefeller, who in the words of Joe Alex Morris, his biographer, seeks "to get a good return on his investment", has devoted a large part of his time and energy to promoting his Point 4 Program. Indefatigably he races around the country speaking before any or-gainzation that will listen to the promotion of his Point 4 business. He demanded of Congress for Point 4 \$19,000,000,000, plus a greatly aggrandized Marshall Plan. After placing agents in key positions Nelson resigned in December 1951.

After the outbreak of the war, there was loud public protest against the continued shipment of "Lend Lease" material to Russia by the boatload. A demand was made in Congress for discontinuance of the shipments that would inevitably reinforce Russia in her war on us. The Rockefeller-dominated State Department and other agencies, promptly opposed a boycott of the shipments on the absurd ground that it would violate an agreement made with Russia for the supply of material for the waging of World War II, the hostilities of which were already ended. The innumerable breaches by Russia of agreements with us and the Korean War constitute ample ground for stopping the shipment of supplies. When union longshoremen refused to unload Russian imports, both Dean Acheson and President Truman condemned them for their intelligent and patriotic boycott.

The Rockefeller agencies, including their puppet State Department, have bitterly fought any measure that sought to cut off U.S. taxpayer support to the Soviets or their purveyors. The only conceivable explanation of their acts is that the Rockefeller Empire is pledged to the Soviets, as an instigator or ally, to supply them with all material for their conquests and the Korean War. The immunity of their Saudi Arabian oilfields from Soviet molestation and agitation, as compared with the inspired disturbances in Iran and Egypt bears out this view.

## CHAPTER XXIII

### AMERICA BETRAYED WHAT LIES AHEAD? WHAT CAN WE DO ABOUT IT?

In his Rockefeller publicity in the Saturday Evening Post, Joe Alex Morris stated that in the plans of the Rockefellers for the U.S.

"... even a casual observer can see a pattern emerging . . .  
Just what that pattern will finally show, remains to be seen  
..."

"What pattern will finally show" can be predicted with a large measure of assurance on the basis of past record, present performance, and publicly avowed ideas and plans. New "Crusades" will be provided for the "peasants" to offer them an opportunity for blood-letting and an outlet for their exuberant energy and surplus production of men and things; and primarily to further the modern equivalent of the Holy Grail, world conquest and world oil monopoly. Attainment of the intermediate objective will be marked by "THE DECLINE AND FALL OF THE UNITED STATES" as predicted by Joseph and Stewart Alsop, cousins of Eleanor Roosevelt, in an article of that name published in the Coronet magazine in May 1948. They predicted that this would have been accomplished by 1954, with the setting up in this country of an absolute dictatorship that would align the country at the side of the other dictatorships that have been brought into being throughout the world under the Marxist "social sciences". This prediction by the Alsops was not based on guesswork but on their full and accurate knowledge of the conspiracy; for they are of the inner circle.

This pattern will be the fulfillment of that conjured by Rockefeller and his almoner, Gates, in the Occasional Letter No. 1 of Rockefeller's General Education Board: a feudal society in which the "peasants" are reduced to the status of serfs, or slaves, on the pretense of offering them "security".

The pattern of the American dictatorship was drawn up officially in the Hopley Plan For Defense Against Enemy Attack that was designed to mobilize and regiment 15,000,000 men and women, and was submitted to Secretary of Defense Forrestal

in November, 1948. This dictatorship plan was prepared by the conspirators to be carried out in the guise of a defense measure in the midst of the "artificial alarm", in the words of John Foster Dulles, created by the first "military emergency".

To reduce resistance to it and to prepare the way for its more ready national acceptance, the conspirators arranged to have the plan adopted first in New York State, their usual procedure. Governor Thomas Dewey, is a trusted Rockefeller errand boy, who was openly ordered by the Rockefellers personally to run for reelection after bribery of candidate Hanley to withdraw. He has been for more than a decade, chief tool in putting up phoney opposition and "bipartisanship" on the national scene, and is regularly employed by them to "run interference" for their administration in Washington. He demanded the passage of the bill as an "emergency" Defense Bill, in the war of nerves that the conspirators are waging on the American public, the "peasants", centering around the atom bomb.

The pattern is further revealed by the issue of Collier's that has been described, on the "approaching war with Soviet Russia."

The complete pattern, in the opinion of such students as Professor Harry Elmer Barnes, will be that portrayed in George Orwell's novel "1984"—complete and abject slavery under inhumanly brutal dictatorship.

The smashing of the British Empire and the control of the oil reserves and markets, that has been the objective of the Rockefeller Empire for more than half a century, has become an accomplished fact. This is demonstrated by the ousting of the British from Iran through the activities of the Rockefeller-Soviet Axis; by the virtual monopoly by the Standard Oil Co. (N.J.) and associates of refining and marketing in India, following the appointment of their agent, Chester Bowles, as U.S. Ambassador to India and the shipment there of grain valued at \$190,000,000 with numerous other grants of millions, after India deliberately undertook to betray the U.S. to the Rockefeller-Soviet Axis; and by the concession renegotiated by the Rockefeller's Standard Oil Co. indirectly thru Glenn McCarthy, with an Egypt incited to revolt against British rule.

The enemy in our midst has woven a web of conspiracy for half a century. It is well on its way to accomplishing its purpose of replacing our Republic with a totalitarian monarchy of the "1984" pattern, and to use it to attain a world conquest with the aid of the Soviets and of even less highly organized gangsters such as the Mafia. What can we do to save our country, ourselves and our fortunes ?

The problem is complicated by the fact that so many of us accept the conspirators' propaganda that "security" is to be preferred to freedom, even though it means serfdom. Inertia leads many to accept rule imposed on them by more aggressive, unscrupulous and ruthless elements. They are satisfied so long as their bellies are filled, their other animal cravings satisfied and they are diverted. Lacking these, they generally revolt. But there is grave danger that once the conspirators have destroyed freedom, modern techniques of enslavement devised by "social scientists" are so cruel, brutal and barbaric that any attempt at revolt would be doomed. To avert such a fate, immediate action must be taken to undo all the treacheries that have been perpetrated.

It would be unwise to be deluded by the "Freedom" movements mockingly launched by the conspirators. They are intended to divert attention from their destruction of our freedom at home by making a noisy pretense of restoring freedom to others.

The Constitution, as it originally stood, without its negating amendments, and the Bill of Rights are the instruments that endowed us with the large measure of freedom which we alone among the nations long enjoyed. They were drawn up, as a compromise, by a group that included some of the wisest, sincerest philosophers that ever assembled to draw up a blueprint of human organization. That blueprint was the first written expression of the concept that freedom, for which mankind had fought and died from the beginning of time, shall be the basis of government. Despite the fact that it was a compromise that has never been given full expression, or has actually been negated, in our laws that should have carried out its letter and spirit, it had assured our people the freedom that made our country what it is.

The Constitution is the chief obstacle to the plan of the conspirators. For this reason they call this eternal philosophy "obsolete"! With slyness, cunning and stealth they perpetually seek to pervert and erode it—by amendments, laws, "legal" decision, evasions and "established" practises. Their objective is to destroy it principally by the strategy of demented Karl Marx who speciously, but plausibly, undertook to convince mankind that the devices that spelled abject slavery for centuries mean "security" and improvement on freedom.

The United Nations "Treaty" was entered into as has been related by the conspirators for the avowed purpose of thereby turning over to themselves our sovereignty, annulling the Constitution and superseding it as our basic law with a UN charter that will better serve their totalitarian objectives.

Our Constitution and law require, as has been related, that the conspirators be condemned, that all commitments to the UN in which they have treacherously involved us must be denounced, and our troops withdrawn from foreign lands without and more delay than is consonant with their security. The conspirators' "revolution by stealth and deceit" must be undone as rapidly as possible. For the menace to our security and solvency are grave. And day by day, more of our men are falling, victims of the most shameful betrayal in history.

Mindful of the adage: "Whom the gods would destroy, they first make mad", the conspirators have perverted the nation's minds through control of "education" and mass communication. We must open our ears, eyes and minds to the things that they do not want us to know, and suppress. Education, especially in the formative ages, must be made nationalist, patriotic and pro-Constitutional. For if the mind is warped in childhood to reject freedom and the Constitution that gave birth to it, and to accept the slavery of Rockefellerism, we are lost. We must eliminate censorship from all channels of mass information and make them common carriers of political thought, subject solely to the limitation of loyal support of the Constitution. Censorship of radio and television, reinforced by limitation of station licenses subject to political approval, are especially menacing. For stations are compelled to broadcast the conspirators' subversive propaganda

as "non-controversial" and loyal views that uphold the Constitution are barred as "controversial".

The Constitution gave our government the form of a democratic republic, a representative government in which, theoretically, all citizens have the right to vote. The conspirators have expressed their intent ultimately to rob the people, openly, of their franchise. Stealthily, they already have robbed the nation of its power to choose their representatives, and of any effective representation, by seizing control of all parties' nominating machinery.

For decades the candidates for important offices have been a "parade of Rockefeller dummies". The voters had no real choice at the polls, for the candidates of both parties were pledged to betray the nation into new Rockefeller "Crusades".

Voting machines that can be fixed as readily as the slot machines turned out by the same manufacturers, trick the voter and have made voting futile. All pretense of real opposition between the parties has been abandoned. Nominations are held by the parties, successively, in the same meeting places, for the acknowledged purpose of "saving expenses"—that are obviously defrayed by the same individuals. The nominations of "opposing" candidates are obviously idle gestures of the conspirators for contemptuous diversion of the "peasants".

In 1952 the conspirators are trying to give the nation a new version of "Hobson's choice", by imposing their puppet Gen. Dwight D. Eisenhower on both major parties as "bipartisan" candidate" who could rapidly prepare the way for dictatorship if elected. To guard against miscarriage of their plans, all other nominees are also theirs.

Robert A. Taft, for instance, is bogus leader of the fake "opposition". He is of the Roosevelt-Delano Dynasty, that has placed more than a dozen of its members in the White House, has played the role of America's Royal Family, and has misruled and mulcted the country for more than a century before the Rockefeller Empire joined forces with it. Like his father, he derives from Rockefeller's Ohio Republican machine, built by Mark Hanna. His record reveals him as a weak, ineffective rubber stamp of their New Deal. His "opposition" requires merely slight modification, for the record.

Taft's law firm has been counsel to Jack Kroll, 432

National Chairman of the CIO-PAC; and apparently his record has been quite satisfactory to the radical CIO. The "fight" on him was part of the sham of grooming him as star of the fake "opposition". A basically sound bill drawn up by Hartley, he did his best to emasculate for the CIO. The law that bears his name upholds the violations of the Constitution, the Bill of Rights, justice and honesty that prevail in labor law and practise. The Taft Hartley Act is the Magna Charta of labor bosses and racketeers and protects the labor agitators and the apostles of class warfare in their illicit power.

Taft served Abby Rockefeller Milton in connection with the Charleston Shipyard and its lucrative dealings with the Government during World War II. He also served as Trustee of the Rockefeller-dominated Carnegie Endowment For International Peace, the refuge of Alger Hiss. He ranked as a Rockefeller "internationalist" long before "bipartisan" Sen. Vanderberg somersaulted to become bellwether of their cause in the Senate. Now, with "internationalism" become unpopular, Taft shams "opposition" to it but he shrinks from "isolation-ism", the conspirators' smear for nationalism and patriotism. He is merely a bit less "internationalist" and not willing to go "all out" in betraying the country.

On January 1, 1951, Taft announced that he opposed the sending of troops to Korea and Europe by Truman as un-Constitutional, and that he would fight it to the last ditch. He sounded like a good American, a patriot who would not blench at tthe "isolationist" smear. But on the next day he backed down and agreed to a bit of un-Constitutionality, and the sending of troops to Europe. Day by day he backed down, until eventually he advocated a European-troop program exceeding the original proposal.

His New Deal Rockefellerism emerged in his bill to socialize medicine and his housing bill in which his name was coupled with that of Rockefeller's chief New Deal agent, and staunch friend of the subversives, Sen. Wagner—the Taft-Ellender-Wagner Bill. He also supported the conspirator's Federal Aid to Education Bill.

Taft's Presidential nomination would spell extreme danger for our Republic because it would bolster the Roosevelt-Delano Dynasty's pretensions

to divine right to rule the U. S. His case would be the second in the Dynasty of father succeeding son to the Presidency, the Adamases being the only other instance.

The "Parade of Rockefeller Dummies" has brought "One World", UN delegate Harold Stassen to the front, offering himself as a Presidential "joker" Xmas gift to the nation. His proposed platform is Rockefellerism modified by opportunism. He plans to make his Cabinet more completely than ever a Rockefeller agency by recruiting it from Rockefeller's Foreign Office, the Council on Foreign Relations, with such of their puppets as Ralph J. Bunche and Gen. Dwight D. Eisenhower, to carry out policies dictated by Alger Hiss, Joseph E. Johnson, Frederick Vanderbilt Field and Owen Lattimore, on behalf of the Rockefeller-Soviet Axis. In his every public act and utterance, Stassen has proved himself completely subservient to his Rockefeller masters, their "trained seal" in their bogus "opposition", a rubber stamp of their "New Deal" and a betrayer of our country. If our Constitution and our nation are to survive, he and all his breed must be ejected from public life. Gen. MacArthur and other real Americans whom he proposes to use as deodorants for his breed, should spurn this agent of the very forces that they are fighting.

Eisenhower, Stassen, Warren, Taft and all candidates of both the Republican and Democratic parties, nominated by the conspirators, will run, like Sen. Estes Kefauver, in the words of Walter Trohan, on a "Benedict Arnold platform."

The nation must repudiate all of these candidates of the group whom Harry Shippe Truman accused of "treason". It must seize the nominating power from the conspirators, however completely they have stolen it from the nation. If it is impossible to secure amendment of the laws in regard to nominations, the public can resort to "write-ins" for Presidential and other candidates. The situation is critical. It must be done now or never.

Control of nominations must be taken out of the hands of private cliques and given to the people, if our franchise is not to rival in absurdity the one-party tickets of the Soviets. Any honest loyal American who seeks to serve the nation would be preferable to any of the candidates groomed by the conspirators, and should be given an equal op-

portunity to offer himself and his program to the nation. Nomination and election campaigns should be financed by the Treasury, to avoid moneyed dictatorship, and monarchy. Public officers who betray their trust and fail to uphold the Constitution must be impeached under its provisions.

Freedom of life and other property rights assured by the Constitution and Bill of Rights, have been destroyed by the conspirators. The Constitution gives the right to draft life and property for the defense of the U.S. only. For more than three decades, men have been drafted, denied the freedom of life, and met death in the battlefields around the world, and the nation bled by taxation, primarily for the expansion of a hostile power, the Rockefeller Empire, and the support and defense of its allies, in violation of the Constitution.

Private property rights assured by the Constitution have been completely abrogated by the conspirators and the wealth of the nation confiscated in various manners. Farmers have been denied the use of their land for crops. Their losses were subsidized by the nation as a whole, because they constitute a vociferous majority. But property owners, who are a minority, have been forced to subsidize lower rents for the public, under "rent control", by outright confiscation of their property and other rights, by bureaucratic edict from which there is no appeal, in complete disregard of honesty, principle or the Constitution,—robbed as effectively as if a gun were held to their heads.

The slyest methods that the conspirators have adopted for looting the nation is Karl Marx's program of progressive income tax, which they have incorporated into the Constitution by the 16th Amendment, and inheritance taxes. An income tax can be the most just form of taxation if it is made to comply with the Constitution and if it is honestly administered by law, not by bureaucratic edict. As proposed by Karl Marx, and as adopted in our law, it is a device for confiscation of wealth and forcing a revolutionary "new social order."

Under its provision neither income nor capital belong to the citizen except by consent of Congress, whose power of taxation is unlimited. Capital is being confiscated by legal and bureaucratic interpretation of capital gains as current income. The nation has not suspected the extinction of property

rights until recently because the conspirators have gone slowly about the process of confiscation of wealth, until now it is faced with such wholesale looting by taxation that extinction of property rights is obviously imminent unless the Amendment and law are revoked.

As might be expected, the conspirators have exempted themselves from income tax and inheritance tax looting, by loopholes they have written into the laws and regulations. They have provided tax exemption for their bogus "foundations", for oil drilling, for earnings on foreign holdings, for their labor goons and racketeers and their union rackets, and an endless array of other devices the use of which they reserve to themselves. Through nepotism and corruption this income tax thievery has been converted into a means of rewarding friends and oppressing enemies. Blackmail of citizens by bureaucrats and their criminal associates is a natural outgrowth, and plays an important role in maintaining conspirators in power. The effectiveness of income tax in oppression and looting of the nation is enhanced by making evasion of income taxes the most heinous crime.

To make the tax more palatable to the "peasants", it has been made "progressive", or "soak the rich", class legislation that initially exempted a large section of the nation. The exempted were too shortsighted to realize that it would be merely a matter of time before they also would be victimized. In a special dispatch to the N. Y. Times on January 4, 1952, the Treasury issued another false attack designed to deceive the public in regard to the protection of property rights by limitation of taxes, directed against the Committee for Constitutional Government and the American Taxpayers Association. It falsely alleged that limitation of taxes would merely, benefit the rich.

For national salvation the entire income tax thievery and fraud must be wiped off the statute books. There must be written into the Federal and State Constitutions a limit of total tax assessable by the government of 10% of income. Multiplicity of taxes and hidden taxes must be abolished. Excise taxes on poisons, such as liquor and tobacco, that leads officialdom to encourage victimization of the public, also should be abolished as unethical, as well as futile. For in most instances these taxes

serve only to support the parasitic bureaucrats that administer them; and in more than one instance that cost amounts to more than the tax collected.

"The power to tax is the power to destroy" is an old adage, that is eternally true. Limitation of that power will do much to protect our government and ourselves from destruction by the enemies in our midst. The power to intensify tax looting in "emergencies" and wars is often the reason why the plotters precipitate wars, as in the case of Korea. In the words of John Foster Dulles, wars serve the purpose of keeping the nation "artificially alarmed" and creating "justification" for intensifying the looting. In this, the maneuvers of the Rockefeller Soviet Axis have served so well that the tax looted from the country during the Truman Administration, in the years 1945-51, have mounted to more than the \$260,000,000,000 tax levied by the Federal Government in the century and a half prior. In the meantime the conspirators have placed an ever larger number of employees on the Government payroll and made so large a proportion of the citizenry dependent upon it that their Marxist goal of making everyone the servant of a totalitarian State is rapidly looming in sight.

More subtle than even the income tax device for looting nations, is the control of currency. In these matters the Rockefeller Empire has been guided by the principal German agents of the Bismarxian conspiracy, Felix and Paul Warburg, sons of M. M. Warburg, representative of the Rothschilds and banker for the German governments, including Hitler's. The Warburgs became partners of Rockefeller's bankers, Kuhn Loeb & Co. at the beginning of the century, directly after their arrival in this country from Germany. With the cooperation of the Rockefeller interests, represented by Senator Aid-rich, they promptly set about creating the Federal Reserve Bank as a private corporation that, in violation of the Constitution, controls our currency system, and through it, manipulates and steadily absorbs the wealth of the nation for the conspirators, and dominates the industry, commerce and policies of the nation.

A quick understanding of the extent of the looting that can be accomplished by this control of the currency system by the conspirators, without going into the technicalities of the mechanism, can be

conveyed by one simple statement, to wit: The same conspirators, with the same mechanics that they are employing in the U.S., engineered the devastating inflation in Germany that wiped out the wealth of the citizenry and destroyed their freedom. They also planted revolution and Communism in Russia. Every device and method that they employed in those countries has been adopted in their domestic conspiracy. Every move that they make in their pretense of fighting inflation is deliberately designed to increase it and to hasten the debacle.

The staggering taxation, which they pretend will cut the purchasing power of the people and prevent inflation, is the most powerful factor in increasing inflation. Taxes are an integral part of cost, often multiplied many times. The increased revenue from taxes also increases the amount of money available for spending by the government itself, the most powerful factor in speeding inflation. On the other hand the conspirators block increased production, the only final deflationary force, even more directly, by rigid restrictions of production. To these devices they add the tremendous costs of a vast bureaucracy, of welfare and social security trickery, of increased wages fostered for their own advantages through class, "labor" legislation and "collective bargaining", deficit financing and by enormous and steadily rising appropriations for "defense", the Point 4 program and Marshall Plan and pretense of "fighting Communism" in Korea and Europe, most of which flows directly into the kitty of their gigantic swindle, and to the bolstering of the Soviets.

The value of ruinous inflation for the success of the totalitarian conspiracy was pointed out long ago by both Marx and Lenin. In one stroke the "new social order" can be attained by individual and national bankruptcy. Inflation by manipulation of currency, the squandering of the wealth of the nation, deficit financing and ruinous taxation must all be checked and the plotters ousted, if we are ever to recover our freedom and survive as a nation.

The solution of the currency problem is not a difficult one, if there arises a will to solve it. The solution lies in exactly the opposite direction from the measure imposed on the nation by the conspirators. It lies primarily in the direction of stimulating maximum production of the necessities of life, a

surplus economy instead of the present restriction of production and scarcity economy. Such maximum production is only feasible if provision is made for stabilizing the value of what is produced, and for storing it for long periods against time of need. It is the solution that Joseph offered Pharaoh, according to the Bible—the lesson that the conspirators do not wish their puppet economists to teach. The device has succeeded under normal conditions as applied to gold, in the form of the gold standard. It inevitably will succeed as well in maintaining the monetary value of other staples if the monetary standard is rationally extended to include all staples. Coupled with true freedom of employment that would eliminate all need for labor unionism and associated rackets that are operated in the pretended interest of the workers, it would enable us to attain the form of government that was envisaged by the wise authors of our Constitution. For a detailed discussion of an obvious solution of this problem, the reader is referred to the author's books, *Your Life Is Their Toy* and *The Strange Death Of Franklin Delano Roosevelt*.

The conspirators are rapidly converting government into a totalitarian tyranny. They are making our Government a device for harassing, oppressing, looting, and for executing citizens in wars cooked up by them. We are further from the Constitution and the Bill of Rights than the country was at the time of the Declaration of Independence.

Normal intelligence and regard for the security of the nation demands that only loyal, native-born citizens should be eligible for public office. For persons who would not feel some allegiance to the land of their birth, could not be expected to be capable of allegiance to their land of adoption, and they should be rejected, therefore, for citizenship. On the other hand, persons whose loyalty is divided, cannot be regarded as wholly dependable in conflicts involving the two countries. They, therefore, should be ineligible for public office.

Restricting public office to native-born, provably loyal citizens would serve to eliminate the presently widely prevailing practise of foreign governments sending their spies and agents here to become "naturalized", and to serve them in the capacity of bogus "American" citizens, often in top, policymaking capacities. Lauchlin Currie, for instance,

actually held public office before he became a citizen. He was planted in the White House as Assistant to President Roosevelt, where he was in a position to influence our national policies, and did so, to our sad disadvantage.

Our enemies defy us with impunity and our so-called "allies" and "friends" betray us, confident in the knowledge that their highly placed spies and agents, in our government and in the UN, will protect them from reprisals and render us impotent.

All public officers whose loyalty comes under the slightest question, must be driven out and prosecuted to the full limit of the law. Execution for treason must be restored to practise.

It is a sad commentary on the state of the nation that it is the women, led by the brilliant and courageous Vivien Kellem, and the patriotic, truly American housewives of Marshall, Texas, who alone have had the courage to revolt against the conspiracy that is rapidly betraying our country to ruin and destruction. Even sadder is the picture of the rejection of Kellem's candidacy for public office in favor of subversive puppets of the conspirators.

Unless the rank and file of the nation can be awakened and induced to slough off their excitement over forms of amusement such as so-called "sports", ball games, "fixes", movie stars and television and comics, and devote their energies wholeheartedly to the measures that spell their survival—life or death—our outlook is black. If, however, the nation can be as completely aroused, as are those intelligent and courageous women, past performance indicates that he cowardly conspirators will run for cover. Chameleon-like they will try to change color, much as they have when confronted with the nation's change of sentiment regarding Communism—they now all pretend to be "Socialists" or American Democrats for Action. The nation would be imbecilic indeed, if it permits itself to be deceived by those turncoats.

As for the master conspirators, and their ill-gotten gains, their fate can be entrusted to an aroused American public. The lives that they have cost our people can not be recovered. The wealth can be regained by the nation.

ANOTHER BOSTON TEA PARTY IS LONG OVERDUE!

## A CALL TO ACTION IN AMERICAN EDUCATION By Fred

H. Johnson

For many years American education has been infected by an "educational" conspiracy to "change our social order" the backbone of which is the "social studies" or "sciences", which scramble together history, geography, civics and economics, with a left wing twist.

"Socialization of the individual" is the aim of the social studies stated in the 1936—14th Year Book of the Dept. of Superintendence of the Rockefeller subsidized NEA (p. 6), and the taking of private property for public purposes without compensation is called "basic and imperative", (p. 8)

This continued teaching of legal larceny is a flagrant violation of the keystone of civil liberty embedded in the Ten Commandments, our Federal, and State Constitutions.

Constitutional taking of property by due process of law, without compensation applies to punishment only, for the Fifth Amendment, adopted 1791 says: "No person . . . shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty or property without due process of law;" after which comes "nor shall private property be taken for public use without compensation."

Our Constitution embodies the principle of civilized government which is protection of life and property, not distribution or control, at home or abroad, in accordance with the ideas of the Rockefellers and their associates.

The bias of great wealth in Rockefeller and allied tax-exempt foundations is all on the side of the "social sciences", which discard moral law and established principles, putting everything but Socialism to the clinical test.

Organizations such as the National Council for American Education. The Friends of the Public Schools and the Educational Reviewer, are bucking the subversive tide with small contributions from patriots, and are the targets of a lavishly financed smear campaign waged by the NEA, its puppets and allies who pay no taxes.

The struggle to restore Constitutional principles and our national sovereignty is crucial. Every patriotic American must pitch into this fight against Rockefellerism and the "socialist" studies in his home school district.

Death Certificate of Sen. Joseph McCarthy. It states that the cause of his death was unknown. In view of assurance of Rockefeller CFR agent C. D. Jackson to the Bilderbergers (v. p. 172) that he would be assassinated a postmortem was legally indicated but never done.

## PREFACE

**"FOR THE SAFETY OF THE REPUBLIC WE NOW DECREE THAT THE DANGEROUS CONSPIRACY MUST BE ENDED BY NOVEMBER 15, (1911)"**

Thus wrote the U.S. Supreme Court in its historic decision in the Rockefeller Standard Oil criminal prosecution by the U.S. Department of Justice. Unfortunately, the decree has been evaded and the conspiracy continues unabated and in ever more aggravated form.

"... the Standard Oil magnate, king of the North American oil trust . . . THE NO. 1 ENEMY OF OUR COUNTRY . . ." editorialized Brazil's newspaper O SEMANARIO, according to Rockefeller's pressagent and biographer, Joe Alex Morris. (8)

This author views as incorrect, the use of the term PUBLIC ENEMY NO. 1 for the designation of those who commit crimes against individuals or organizations of relatively minor character, such as murder, rape and burglary, or bank robbery. He feels that it is more rightly reserved for those who commit crimes against society and the State, such as those charged by the above Supreme Court decree as engaged in a "conspiracy" that menaced "the safety of the Republic," who are the subjects of this biography. In that sense of the words, their usage by O SEMANARIO must be acknowledged to be correct; and they are so used here.

The heinous character of the crimes against society in question, the conspiracy to rob our society of liberty, justice and wealth and to destroy the Constitution and the Republic thereon based, which are our hard-won basis of security, would in themselves characterize the criminals in question as psychopaths. Additional evidence supplied by the central character of this biography and by his intimates, however, make the designation "criminal psychopathy" obligatory and beyond question.

Ex-President Harry Shippe Truman must be credited with more courageously and aptly describing the activities of those designated as "conspirators" by the Supreme Court. On March 27, 1942, as Chairman of a Senate Internal Security subcommittee, he said of the Rockefeller-Standard Oil conspirators:

"Even after we were in the war, Standard Oil of New Jersey was putting forth every effort of which it was capable to protect the control of the German government over vital war material.

"As Patrick Henry said: 'If that is treason (and it certainly is treason) then make the most of it'

**"YES IT IS TREASON**

**"You can not translate it in any other way."**

It was a treason that cost the lives of many of our GI's. One never ceases to wonder why these traitors whose activities cost so many lives, were not meted the same punishment as the Rosenbergs whose activities were relatively harmless and cost no lives.

This book has been written and published in a spirit of public service, in a sincere effort to preserve our liberty, and Constitution and Republic that were created to ensure it, against the onslaught of conspirators from within and from without, so that our country can once again become ". . . the land of the free, and the home of the brave."

This work was originally planned as a series of columns. It is hoped that the reader will overlook the consequent repetitions. The reader should bear in mind that the subject of Rockefeller gangsterism and brigandage alone, is far too vast for a volume of this limited scope that is intended to supplement the author's earlier work, **ROCKEFELLER "Internationalist," The Man Who Misrules The World**. The reader is referred to it and to the many volumes listed in the bibliography for further, but still very incomplete, records of the Dynasty's rascality and criminality.

## CHAPTER I

### CRIMINALLY PSYCHOPATHIC ANCESTRY "DOC" WILLIAM AVERY ROCKEFELLER— QUACK FELON

The rise of the Rockefeller Dynasty takes its place beside the growth of the thievish Illuminist-Socialist-Communist conspiracy as the outstanding and overshadowing developments of the past two centuries of world history. They are rapidly, and seemingly inexorably, casting a blight on the product of the American Revolution, human liberty, that was defined in the Constitution and the Bill of Rights and was intended to be given creation and form in our Republic. Both had their origins almost simultaneously with our Revolution. And curiously, both are counter-Revolutionary and are certain to destroy human liberty unless they are checked.

The Illuminist conspiracy cast its shadow on the American scene shortly after it was launched by the Jesuit, Adam Weishaupt, in 1776, less than three years after the Jesuit Order had been abolished by Pope Clement XIV, on July 21, 1773, in his breve "Dominus ac Redemptor". (1) It is reflected in the adoption of the Illuminist emblem as the reverse of the seal of the American colonies and the Continental Congress, that was later adopted as the seal of the United States. As such it has appeared since the mid 1930's, on the reverse of the silver certificates issued by the Treasury. Following the exposure of the nature of the conspiracy launched by Weishaupt, alias Spartacus, by the Bavarian Government after a raid on his quarters in 1785, he transferred the headquarters of the movement to the United States under the leadership of his adherents there. (1) In Europe, the organization was forced underground. And Weishaupt was forced to flee for his life and seek refuge in Saxe Gotha, because his records disclosed that he planned to destroy religions, other than the Church, and governments around

the world; and to make himself "One World" ruler through a "United Nations."

Of necessity, this revolutionary movement was forced to adopt different names whenever it again emerged from underground into the open. Usurping the designation "liberal" in its pretense of seeking human liberty, it was named at various periods: "Jacobin", "Fourierism", "Marxism", "Socialism", "Bolshevism", "Communism", "Nazarenism", "New Deal", "New Frontier" and numerous other titles, at various times and in various parts of the world. Though each of the groups laid claim to differences in their tenets, they all aim to communize property by the process of either surrender or looting, and to rule the world on one pretendedly "noble" pretext or another. That they call "internationalism". Their schemes are, in reality, nothing more than pseudo-philosophic justifications for wholesale thievery. It is quite natural that cunning thieves and gangsters fall in line with these thievish schemes for the purpose of fleecing the dimwitted imbeciles who are deluded by them. (1) After its success in forcing the Vatican to reestablish the Jesuit order, Illuminism remained under its direction.

Throughout early American history these "liberals" have been given the generic name of "communists". As early as 1831, Ebenezer Elliott revealed how well-known was the true character of communism in his jingle:

What is a communist?  
One who hath yearnings  
For equal division  
Of unequal earnings.  
Idler or bungler or both  
He is willing  
To fork out his copper  
And pocket your shilling. (2, p. 166)

Additional evidence can be found in the 1875 publication of Charles Nordhoff entitled THE COMMUNIST SOCIETIES OF THE UNITED STATES (1794-1875) that recently has been reprinted by Hillary House Publishers Ltd. (3)

The first of the progenitors of the Rockefeller dynasty who can be reliably identified, was a drunk by the name of Godfrey who is variously reported as the son of a Rhenish immigrant, and of a Hessian mercenary. He married Lucy Avery, of Great Barrington, and later migrated to Michigan Hill, not far from Apalachin, Tioga County, New York. The third of ten children of the marriage was William Avery Rockefeller who was born in 1810.

William Avery Rockefeller was the real, but unac-

knowledgeed founder of the Rockefeller Dynasty. He so firmly molded its character in his own image that the Dynasty has never swerved from the pattern that he gave it. Inasmuch as a knowledge of his character is essential for an understanding of the Dynasty, a biographic sketch of him that was published in 1929 and 1931 by the Vigilante Press under the title **THE ROCKEFELLER DYNASTY** is here reprinted. (6) The facts, as presented in it, are verified and in some instances amplified in the biography John D. **ROCKEFELLER** that the family authorized Prof. Allan Nevins to write and publish. (4) Additional data on the subject is supplied by William H. Allen, in his **ROCKEFELLER, GIANT-DWARF SYMBOL**. (5)

"In the year 1835, a peddler, apparently nearing his mid twenties and who pretended to be deaf and dumb so that communications with him had to be carried on by signs or in writing, made his first appearance in Richford, a small village of Tioga County, N.Y., located about twenty miles northwest of Binghampton.

"As soon as the supposedly deaf and dumb peddler had located the farm of his father, Godfrey Rockefeller, had satisfied himself that the coast was clear, and, visiting his parents, had learned that he was not being sought or wanted by the Sheriff or local authorities, he broke out, to the astonishment of the natives, with a voice of such great volume for song and story that he was later acknowledged as the champion singer and spinner of yarns, anecdotes, jokes and stories in the township. (6, p. 25)

"Large for his age as a boy and of a roving pleasure loving disposition, he quit school early and, with a scant education, started out to earn money in various ways. Objecting to handing over his early scant earnings, as was the custom in those days, to his father to be spent in the rum shops of Massachusetts, he left his home at an early age, to see and make his way in the world. He returned to visit home and mother at times when he was hard pressed or in difficulties.

"Shrewd and tricky, anxious and ever ready to make money, by hook or crook, to satisfy his money greed and miserly instincts which were noticeable even in his early manhood, he tried many occupations and lived as it were by his wits but preferred working for or with peddlers and vendors of quack medicines and cures for man and beast. He also worked for horse traders and horse doctors and what are known today as gyps, and later in his life operated as a horse trader himself, with unenviable reputation . . .

"Bill's early physical development was such, that before

he was nineteen he appeared in size and stature and strength as a full grown powerful man and when dressed in Indian fashion he was a striking figure, even as a boy and young man, when working the deaf and dumb racket to conceal his ignorance of the Indian language, and grunting his satisfaction as he passed out the Indian herbs and remedies and the great American oil medicine 'petroleum', 'Rock-oil' and 'Seneca oil' and received money in exchange . . . (6, p. 35)

"In 1828, the boy, Bill Rockefeller was engaged at Providence, Rhode Island by a master oil peddler who dressed up Bill partly in Indian and partly in trapper fashion. The 'high-pitchman' or 'Spieler' said that 'Bill' or 'Seneca' as he called him, had been found aiding the Chief-Medicine Man of a tribe of Indians in collecting a supply of 'Seneca Oil' from secret Indian springs. 'Bill could not speak the Indian language' continued the spieler! 'He was probably struck deaf and dumb through fright, when he was lost or stolen as a child. But he was certainly a healthy example of the curative power of "Seneca Oil"'. . .

"'Seneca Oil' and 'Rock Oil' was handed out by Bill at \$2 per bottle as medicine, to be taken as prescribed: three teaspoonfuls three times a day, for consumption, liver complaint, cholera morbus, etc. A thick mixture was offered as liniment." (6, p. 34)

This is the obvious root of the Rockefeller interest in oil, drugs and medical practise and "research". It has been a profitable tradition for them!

"William Avery Rockefeller, better known as 'Doc' or Bill, had no legitimate trade or calling and disdained to do farm work. He was generally well supplied with cash, and his clothes and horses were of a better class than those of his neighbors. He was liked, loved and adored by the ladies and returned their affection when possible. He was addicted to all the vices that the country sports indulged in, but showed no marked weakness for alcohol. He became the companion of the most notorious sports and men of the countryside and was ever ready to join them in gambling or carousing parties. He was the associate of gamblers, tricksters, horse thieves and bad characters and was looked upon as a 'suspicious' or 'dangerous' character by the respectable members of the community.

"His mysterious disappearances for long intervals, his invariable return with replenished pockets, the stories concerning him that leaked in from afar, coupled with local gossip and knowledge, caused some to look upon him as a professional gambler, others as a quack doctor, and still others as an agent or dealer in stolen horses, and to this

day 'Rockefeller ravine' near Lake Owasco, is pointed out as the place into which horses gathered from many parts, were driven and where they were held until they were again driven away to be sold or traded off in parts and places other than those from which they had come. Three of his companions were indicted as members of a gang of horse thieves at Moravia in 1850. (6, p. 36)

"Shortly after the dumb peddler had regained his bel-  
lowing voice and acute hearing, and considered it safe to  
venture forth on further purse replenishing expeditions,  
he did so. In 1837 he returned from one of his treasure  
seeking expeditions not only with a well filled purse, but  
what was of still more importance to the future John D.  
dynasty, with a treasure, in the person of Eliza Davison,  
daughter of a farmer of Moravia, N.Y." (6, p. 27)

Nevins quotes from a clipping from the Elmira Tele-  
gram found among Rockefeller's papers that, a short time  
prior, "Doc" Bill had built a house in the Richford woods,  
furnished it and put in charge of it a young woman, Nancy  
Brown and her two illegitimate children that he had fa-  
thered, according to information given by John D.'s cousin  
Mrs. John Wilcox. It was to this fouled nest, it was re-  
ported, that William Avery Rockefeller brought his bride,  
to share it with his mistress. (4, pp. 20-1) This is reminis-  
cent of the housing arrangements made for his wives by  
Nelson Rockefeller.

"Folks who live nearer to the scenes of the elder Rocke-  
feller exploits give other details that include allegations of  
illegitimate children and gambling. Of several illegitimate  
children, one is said to have been proud of her bar sinister,  
or at least its source, while another was tragically unhappy.  
'He had to be mighty smart to get away with that,' said one  
relative. 'I fear I have many cousins round here who don't  
go by the name of Rockefeller', said another. (6, pp.  
52-3)

"It is said that Eliza married the irresistible Bill against  
the opposition of her parents. She bore him six children:  
first Lucy; then on July 8, 1839, John Davison, as the sec-  
ond born child and eldest son now known the world over  
as John D. the First; William, the next, was also born  
at Richford, Mary and the twins, Frank and Frances, were  
born on a farm near Owasco Lake and their mother's  
home town Moravia, where Frances died in infancy. (6,  
p. 27)

"After the indictment of three of Bill Rockefeller's pals  
on horse stealing charges, John D. the First, then in his  
eleventh year, was obliged to give up his profitable turkey  
raising enterprise at Moravia to go with his father, who

thought it best to seek new pastures, many miles away on a large farm near Owego, N.Y. There he left his family, while he traveled about the country working the Indian Medicine Oil racket and peddling other cure-all quack remedies, which proved so profitable that he not only kept his family liberally supplied with cash, but that he was able to provide his sons, out of these quack medicine profits, with the cash capital required to establish them in business . . . (6, pp. 34-5)

"In 1842, salt wells located at Tarentum, near Pittsburgh, owned and operated by Samuel K. Kier, flowed so much oil up with the salt water that it proved to be a serious nuisance, until the owner began to bottle it as Medicinal Oil, as a business, at Pittsburgh.

"By 1850, Kier's Petroleum or Rock Oil was sold all over the United States. The Crude Petroleum put up in 8 oz. bottles . . . and wrapped in circulars lauding its many virtues as a cure for the many ills recited, with explicit directions for its use, and accompanied with many testimonials of its efficacy as a cure, practically ruined Doc Rockefeller's 'easy Indian Medicinal Oil graft'. This caused him to take up other lines of quack medicines and he then majestically decreed and diplomaed himself Dr. William Rockefeller, the celebrated cancer specialist, and continued to represent himself as such until John D's commission business brought him back into the oil profiteering business. (6, p. 42)

"In 1922 The Fiddlestick, a local magazine published at Bainsbridge, New York told the following story about the medical practise of Rockefeller's father:

"A Moravia boy named Hewitt who was twenty seven years old at the time the Rockefellers moved there found Rockefeller's father fascinating as well as mysterious. He went off with Rockefeller senior as a deaf and dumb physician with magic powers. He was 'the celebrated Dr. Livingston'. He kept up the pretense throughout his life until just before his death when he became mildly insane and actually believed himself deaf and dumb.

"The reason for the hoax was that, as Rockefeller's father told him and as experience proved, the Indians had a superstitious awe of a person who lacked one or more senses. They believed the gods compensated such a person by giving him occult healing ability . . .

"Sometimes the two Moravians, Rockefeller's father and their neighbor Hewitt, traveled together as Dr. William May and the celebrated Dr. Livingston, a money-making precedent for Rockefeller's substitution of cooperation for competition . . . (6, p. 38)

"An itinerant peddler of quack medicines and sure cures for man and beast, he was known as Bill or Doc. Rockefeller by his friends on his rare visits to his known home towns . . . Away from home he was more widely known in his old stamping grounds in the middle west and other districts, as 'Seneca Bill' or 'Seneca Doc' the 'Indian Medicine Peddler', 'The Petroleum Cure Doctor' and the 'Rock Oil Feller', and after migrating to Ohio in 1853, as 'Dr. William A. Rockefeller, the celebrated cancer specialist', as he grandiloquently dubbed himself in his business cards and handbills, adding: 'All cases of cancer cured unless too far gone and then they can be greatly benefited.'

"Doc's usual dose for internal use was 3 teaspoons or 1 tablespoon 3 times a day, as he had been taught in his Indian cure days. His cancer cure medicine was made up of a few well known diuretics and water.

"He sold with the medicine his wonder-working cancer liniment, also at \$2 per bottle. This cancer-cure lotion was practically his old Indian horse liniment 'good for man and beast.' It consisted of crude petroleum, with lighter oils boiled out, so that practically only the lubricating oil and paraffine or heavy constituents remained. He also had a black or so called tar liniment. This was made from crude oils with an asphaltum base instead of the paraffine base oils of Pennsylvania.

"Doc was the envy of his class as a master spieler, high pitchman, grifter, and Quack Doctor, as he worked his petroleum and medicine rackets on sick 'suckers' during the many unaccounted for days of his frequent, long and mysterious though profitable absences from home . . . (6, pp. 35-6)

"Owego rumor says Rockefeller's father came home only in night times from the wandering that took most of his years; announced his return by tapping on the chimney pipe; gave each child a five dollar gold piece, saying that he would get it away again if he could; wore fancy clothes; said nothing about his business but talked engagingly about almost any other topic; paid all store bills and was off again. (6, p. 53)

"John D. himself, writing on 'The Difficult Art of Getting' wrote; 'To my father I owe a great debt, in that he himself trained me to practical ways. He engaged in different enterprises; he used to tell me about these things, explaining their significance; and he taught me the principles and methods of business'. (7, p. 33)

"Doc Rockefeller himself intimated just what these principles and methods were when he confided to an Ohio pal that he wanted to make his boys sharp. 'I trade with

my boys and skin 'em. I beat 'em every chance I can. I want to make 'em sharp'. (6, p. 59; 4, I, p. 93)

"Rockefeller either in his own story or that of his official biographer says that his father practised medicine away from home; that he took long trips for this purpose; that on those trips he also practised trading, that he loaned money at high rates of interest in which Rockefeller says that he believed at the time and has always believed that money is worth what borrowers will pay. Miss Ida Tarbell . . . refers to the horse-stealing story only as neighborhood gossip. She does say, 'There's an indictment for something worse than horsestealing'.

". . . The old indictment, dated July 26, 1849, by twenty jurors of the court of oyer and terminer, reads:

"That William A. Rockefeller late of the Town of Moravia in the county of Cayuga, on the first day of May in the year of the Lord one thousand eight hundred and forty-eight, with force and arms at the town of Moravia in said County, in and upon one Anne Vanderbeak (v. Nevins) in the Peace of God and the people of the State of New York then and there being, violently and feloniously did make an assault on her the said Anne Vanderbeak then and there violently and against her will feloniously did ravish and carnally know against the form of the Statute in such case made and provided, and against the Peace and dignity of the People of the State of New York". (4, I, p. 52)

"Rockefeller's father left the county before he could be arrested. We know this from another old document on file in the Auburn court house which earlier investigators do not mention. Perhaps they never saw it. County officials claimed ignorance of it in 1926, nor did they know if Rockefeller's father was ever tried. However the Auburn Daily Advertiser carried a paid notice on its back page for six weeks in August and September, 1849, which pointed to a civil suit and eventually to this old record.

"Four days after the criminal indictment of William A. Rockefeller, his father appeared in Auburn and sought judgement against him for two overdue notes dating from August 2, 1845 and October 7, 1846, totaling \$973.57 plus interest. The reason given for invoking the court's aid was that Rockefeller's father had told the father-in-law on 'Wednesday of last week' that he had heard that he was indicted for rape and hoped that his father-in-law would go his bail. The father-in-law said he was 'too old to go bail for any one', whereupon the indicted man told him he would never see him again, by which the deponent understood that Rockefeller's father 'intended to abscond

from this state and never to return to it again'. The wife said he had already absconded. The father-in-law believed that the intent was 'to defraud his creditors' and therefore asked that 'some personal and real estate' left behind be attached. The next day, July 31, the sheriff and an assistant went to the Rockefeller home near Moravia; made an inventory; had two neighbors, Eliza and Thomas Vanarsdale, appraise the property; and attached it. On February 9, 1850, the judgement was satisfied . . . (6, pp. 55-6)

"After he left New York . . . he rented two farm houses for his family in Strongville and Parma, Ohio, and at least one year in Cleveland . . . He sent Rockefeller money to loan at high rates of interest. He advanced son, John D., \$1,000, the coming-of-age present he intended making two years later, and loaned \$200 more—all at 10% interest—for buying a partnership in a grain commission business. After his wife's death in 1889 he occasionally made short visits to Rockefeller in Cleveland and at least once at Pocantico Hills. (6, p. 56)

"After his indictment in New York in 1849, Doc under the alias of Dr. William Levingston, operated from his Philadelphia headquarters. "In Philadelphia Doc and Bissell both interested in Rock-oil or petroleum met in 1854 and were soon discussing oil springs, larger supplies and Kier's saltwater oil well and medicine oil trade that had killed Doc's oil-peddling business.

"In 1854, George H. Bissell . . . on a visit to Dartmouth College was shown by a professor a laboratory specimen of Rock-Oil obtained from oil springs on the farm of a lumber firm, Brewer, Watson and Company, near Titusville, Pa.

"These old Indian oil springs had for years yielded oil, regularly collected and sold for medicinal purposes. Later, the oil was also used for lighting and lubricating purposes in the local mills.

"Bissell, impressed with the commercial possibility of petroleum, organized the Pennsylvania Rock-oil Company, leased the land on which the springs were located, sent a quantity of the oil to Professor Silliman of Yale College, received a highly satisfactory report on its illuminating, lubricating and other qualities, and so started the first oil company in the United States.

"But Doc was interested in medicine oil only, and took no stock in exploiting oil for industrial purposes. He sought therefore to obtain control of the Company, in order to utilize it for his own base purposes as a peddler and prescriber of quack remedies. By means of his usurious loans

and advances on the shares and interest of the others, he almost succeeded in obtaining control.

"As a result of Doc's plotting the Company was soon in financial difficulties, and no progress was made in its well drilling operations, the specific object of its organization.

"The usurious Doc was putting the screws on his associates in Pennsylvania Rock-Oil Company. He induced them to change the Company's name to 'Seneca Oil Company'.

"Some of Doc's old pals, who had worked with and knew him as 'Seneca Bill' and 'Seneca Oil Doc' . . . knew that he was indicted for a felony and then a fugitive, incensed by his refusal to assist them financially, informed the officials of the Seneca Oil Company of Doc's crooked antecedents.

"This knowledge obtained at a critical moment enabled them to free the Company and some of its stockholders from the clutches of the grasping crook, Levingston.

"In this case his greed and crooked extraordinary profits denied opportunities in which he would have shared, had he played straight and aided the Pennsylvania Rock-oil Company to drill the first oil well, even though he could not have shared publicly in the glory, because of his aliases, his indictment, his bigamous marriages, etc., etc.

"Bissell, the founder of the world's first Oil Company, and Col. Drake, the driller of the world's first oil well and other shareholders in the 'Pennsylvania Rock-oil Company' were not anxious to publish to the world the fact that the notorious swindler and quack, Doctor William Levingston, had been associated with them for a time, had loaned money at usurious rates and almost ruined some of them and their company, had caused them to change the name of the company to the 'Seneca Oil Company' to facilitate his medicine oil schemes, and who had almost obtained complete control of their company before they discovered that he was a notorious swindler and indicted fugitive from justice.

"In the Spring of 1859, Col. Drake visited Kier's well at Tarentum, purchased a crude well drilling outfit, engaged an experienced driller, brought them to Titusville, sunk a well near the end of August, 1859, struck oil, pumped twenty-five barrels the second day, and so caused the great oil rush of '59. (6, pp. 44-7)

"Doc, under the alias of William Levingston, homesteaded 160 acres of Government land in Dakota on October 8, 1883. On Sept. 25, 1884, he assigned the receipt to John D's sister, Laura E. Briggs (. . . of Cleveland, Ohio); and gave her a quit claim deed in March 28, 1885.

He again obtained title but under his right name, William A. Rockefeller by a warranty deed on June 23, 1886, and in October 10, 1889, deeded it to his son-in-law and purchasing agent of Standard Oil, Pierson D. Briggs. (6, pp. 48-9; p. 57)

"The first clause in this deed is: 'I William A. Rockefeller, widower.' At this time he was living at Freeport, Ill. under the alias of Dr. Levingston with his Canadian wife whom he married in 1885, and with whom he continued to live as husband and wife until his death and burial from their home in Freeport in 1906. His will bequeathed all his property to his widow Mrs. Margaret Allen Levingston.

"When he deserted the Rockefeller dynasty in 1854, he was in fact 'keeping company' with his 19 year old Canadian sweetheart, Miss Allen, when the timely death of his alleged first legal wife (not John D's mother) left him free to consummate his marriage to Miss Allen, Doc's desertion of John D's mother and family caused John D. to apply for assistance to Dr. Emerson E. White . . . (6, p. 49)

"His Canadian wife, Margaret L. Allen of Norwich, Ontario, was misled by an alleged bigamous marriage and lived with him from 1855 for over 50 years before she learned of his deceit as a result of an accident. On Jan. 25, 1904, old 'Doc' broke his arm. For weeks he was near death. In his delirium he often said to her, 'You are not my wife, where is Eliza?' And when delirious moments carried him back to New York and Ohio and the days when he was Doc Rockefeller, he babbled the name of his wife Eliza, and also John, William, Frank, Lucy and Mary, sons and daughters of the Rockefeller-Davison union. (6, p. 48)

"John D's mother died on March 28, 1889, at the residence of her son, William at 689 Fifth Avenue, New York City, but was buried as a widow at Cleveland, though John D's father continued to live for a further 17 years as the husband of Miss Allen under the alias of Levingston. (6, p. 49)

"The New York World in its issue of 1908, speaks of Miss Allen as his second wife, and refers to the second marriage as bigamous, assuming of course that his first wife was Eliza Davison, the mother of John D. whom he married in 1837 . . .

". . . William Avery Rockefeller . . . died May 11, 1906, at Freeport, Illinois, where he was buried in an unmarked grave as Dr. William Levingston, aged 96 years, 5 months and 28 days.

"Seneca Bill's indictment for rape in Cayuga County,

N.Y. on June 28, 1849, his bigamous marriages, his numerous infatuations and affairs with women whom he desired to possess and did possess by bigamous marriages, by felonious assaults, by seductive promises, or by other methods and his winning ways, all bear evidence of the fact that Bill Rockefeller was 'woman-mad', as his son was 'money mad'." (6, p. 50)

This account of the founder of the Rockefeller dynasty is verified by Nevins (4) with amplifications from data provided him by the members of the family. It is not cited in full for the purpose of scandal-mongering, but because it serves a useful purpose in giving insight into the mentality and activities of the present generation who dominate the world scene and rule its destiny. In particular it enables us to fathom the character of his great-grandson, Nelson A. Rockefeller, who in so many respects resembles "Doc" Bill, and is a throwback to him. The inordinate greed, the contempt for law, the insistence on being a law unto himself, the trickiness and treachery, the pose of "good fellowship" that mask innate ruthlessness and the sexual and marital vagaries, are present in both to a greater degree than it has appeared in the other members of the Dynasty.

Possibly it is because Nelson so deliberately patterns his attitudes on those of his grandfather, but exhibits as dominant traits the characteristics of his great-grandfather, that accounts for what he is. His grandfather also acknowledged his debt and training to his father. But the religious piety in which he was drilled by his mother served to mask and camouflage the more obvious evil traits of his father. And the rest of the members of the Dynasty have patterned their conduct on that of their grandfather. In any event, the criminal psychopath, Seneca Bill, has left his stamp on the Rockefeller Dynasty and through them a curse on the nation and on the world.

## CHAPTER II

### CRIMINAL PSYCHOPATHY WITH A RELIGIOUS CAMOUFLAGE JOHN D. THE FIRST

The basic psychopathic criminality of the Rockefeller Dynasty changed in its manifestations in successive generations. These changes were highly purposeful. They were adaptations to changing environment and steadily widening goals. The crude criminality of "Doc" William Avery Rockefeller, swindling, horse thievery, bigamy and rape, were directed against individuals. They involved a good chance for inordinate advantage, gain and loot in a frontier, pioneer society in which the lot of a fugitive from justice was not materially harder than that of the law abiding citizenry, but often was easier and more secure. Escape was easy and the danger of apprehension was almost nil for one lacking in humanity and devoid of personal attachment.

John D. Rockefeller learned well the lessons in sharpness and criminality about which, as related, his father boasted to his cronies (4, I, p. 93) That he cherished it, is evident from the fact that he extended the same type of discipline, training and education to his children and made it a family tradition that was passed down to each succeeding generation.

However, his experience led him to view his father's criminal escapades from a different perspective, that of personal security. Neither he nor his descendants were endowed with the personal physical prowess and courage of "Doc" Bill. Nevertheless there had been instilled in him by his father the urge to outstrip him in his criminal vocation. To attain this goal while not jeopardizing, but steadily enhancing, his personal security required some device or agency that would camouflage his activities.

John D. found ready to hand the traditional device for masking criminal and anti-social activities—religion,—in the piety which his mother imposed on him. Eliza Rockefeller's piety was signalized by an extraordinary breadth of tolerance. It was manifest in her contentment

with living in the same home as a mistress (or was it a wife?) and children of her lusty "Doc" Bill, and bringing up her own children by him in that environment. Such "piety" is rarely to be found even in a Mormon household! That elastic type of "piety" was coupled with an ostentatiously painful charity in the form of tithing, contribution of one tenth of his acknowledged earnings to his church. How painful this tithing was to miserly John D., and how purposeful, is evident from his detailed record-keeping of it, and from his preservation and elaborate press agenting of it. It was preserved as "Ledger A", the family's prize exhibit. It assured winning the support of the minister and a standing in the congregation, and through it in the community. That served to neutralize the odium attached to the blatant criminality of the father. And in those days when there was no Dun & Bradstreet to provide ratings, such "piety" served to establish credit ratings and afforded contacts of high commercial value. But, press agent Manchester relates, John D. never "permitted piety to block the main chance." (9, p. 106)

This "piety" was coupled with intense penury and inherited miserliness that intensified the contrast with the pretense of "charity" that was involved in tithing, and clearly indicated its anticipated profitability. Coupled with a Uriah Heapish, feigned humility, it served to mask merciless ruthlessness that proved far more dangerous to others and remunerative to himself than his father's roguish criminality. His tithing removed the stigma from his Civil War illicit sale of the unstamped liquor from Harkness's stills, bootlegging, which with the capital loaned him by his father yielded him his first inordinate, shady "profit"; and won for these activities the approval of a church dedicated to temperance and prohibition. Likewise his practise of moneylending and usury on behalf of his financier, his father, at rates as high as traffic would bear, was lent an aura of holiness. (8, p. 36; 5, p. 174) "Dr." William A. Rockefeller, as he was listed in the Cleveland directory, was guiding the career of his son, with whom he lived for a while at 35 Cedar Avenue; and though contemptuous of everything for which religion stood, he impressed on John "the advantages of a pious cloak" that has become a tradition in the Dynasty.

John D's cardinal virtue, his thriftiness, he exaggerated to a vice, under the tutelage of his father. Money became his God. And the power with which money endows, he dedicated to the accumulation of more golden godliness. All his waking hours were devoted to the quest for ever larger gains by any available means no matter how un-

scrupulous, provided that he could manage to get away with it without too serious a scrape with the law. This attitude did not imply that John D. had any less contempt for the law, government and the people, or that his intent was any less criminal, than had his criminally psychopathic father. It meant merely that he lacked "Doc" Bill's blatant daring, recklessness and defiance; that in cowardly manner, he sneaked and cringed until he had gained the upper hand and could crack the whip mercilessly. He was, in reality, far harder, more cruel and treacherous than his blustering sire. No petty vice or deceit was too low for him to adopt to get to the top of the heap. He was cold, calculating, slimy, reptilian, underhanded and treacherous. His character was a sublimation of the bold, overt criminality of his father. This has become the tradition of the Dynasty, until they manage to get the upper hand, by gaining control of the government and dictation of the law and its administration.

As soon as John D. had acquired sufficient wealth to do so, he set about taking over control of the government and the administration of the law by various devices including patronage, bribery and corruption. By these devices he converted into his agents Presidents, legislators and judges, including more than one Chief Justice of the Supreme Court. And under this shelter, he proceeded, through his criminal agents, to engage in gangsterism on a nation-wide scale, resorting to flagrant crimes to attain his felonious objectives, including arson, murder, robbery and the "protection" racket. When his Standard Oil Co. undertook to stop competitors shipping kerosene into the overseas markets, the Maffia was called in to take over control, in the late 19th century, of the waterfront of New York and Brooklyn. The Maffia which was thus introduced into domestic commerce and industry, has been used more than once by the Rockefeller patrons for the purpose of attaining criminal objectives. Labor unions, under gangster control, were effectively used in 1877, to force the powerful Pennsylvania Railroad to cease and desist from competing with Rockefeller's monopoly of transportation of oil over pipelines. The strike, that was engineered for this conspiratorial purpose, was characterized by violence, murder, arson and extensive property destruction. It continued until the Pennsylvania Railroad was forced to sell its competing pipeline to Rockefeller interests on their own terms. (9, p. 80) Railroads were bludgeoned and blackmailed into transporting the oil of the Rockefeller interests at ruinously lower rates than those charged competitors; and the railroads were forced to rebate to the Rocke-

feller interests part of the ruinously higher rates paid by competitors and pay them "protection money" in the form of drawbacks. Oil fields were stolen, as were whole enterprises, by forged documents and deeds, with the full collaboration of bribed and corrupted public officials and judges. Oil drillers were habitually bribed to improperly drill, or to ruin in other manners, valuable and productive oil wells and to withhold information from their employers. John D's influence is credited with converting the development of the domestic oil industry into a gigantic crime wave. And that influence still prevails.

John D. and the Rockefeller Dynasty were rudely shocked and awakened to the fact that mere corrupt control of public officialdom could not assure them security in their criminal activities. He discovered that such security could be assured them only by control of public opinion when the South Improvement Co. conspiracy exposure, in 1872, turned loose public resentment and violence against him and his associates. Public reaction to Rockefeller's criminal activities erupted, in 1878, in an endless series of indictments, investigations, court actions and legal enactments directed against him, his associates and the Standard Oil Co. The nation and the world had become acutely aware of Rockefeller's psychopathic criminality that had expressed itself in crimes at which "Doc" Bill would blush. No crime was too heinous or sordid for him, that would yield a profit. He and his associates emerged as the top gangsters of history. He stole an empire.

John D. and the Rockefeller Dynasty retaliated the hatred and opprobrium heaped on them with a little suspected but devastating form of vengeance. He operated the Standard Oil Co. virtually as a bank. Nevins quotes John Moody as correctly stating that it ". . . was a bank of the most gigantic character, a bank within an industry . . . continually lending vast sums to needy borrowers, on high class collateral, just as other great banks were doing." (4, II, p. 439)

Needless to say, resort was had to the usual Rockefeller usury that "Doc" Bill made a dynastic tradition. What was more important for the financial status of the nation, Rockefeller learned early in his criminal career the devastating effects of using his vast loot for manipulations of gold supply and withdrawals of gold from the Treasury. These operations, which were engaged in either in association, or in conflict, with others, have repeatedly brought the U.S. Treasury to the suspension of gold payments and have precipitated financial panics, depressions and vast

unemployment. When he had garnered the loot that he desired and was sated with the misery and ruin that he had caused, Rockefeller would assume a piously benevolent pose and "philanthropically," return some of the gold to the Treasury that he had withdrawn, and sometimes shipped abroad, to restore its solvency until he was ready to repeat the withdrawal process and precipitate another panic and depression. Almost entirely unsuspected this bogus, nauseatingly "pious" so-called "philanthropist" was the most important gold manipulator and depression and panic precipitator of his time. Nevins specifically mentioned his role in supplying twenty million dollars of gold to the Treasury in 1894, after the panic had wrought its misery, making possible its restoring gold payments and its solvency. (4)

To facilitate these gruesome maneuvers of his, when his monopolistic control of national finance through gold was threatened by the campaign for the monetization of silver that was led for the producers by William Jennings Bryan and "Cash" Harvey, Prof. J. Laurence Laughlin of his University of Chicago was given the task of discrediting that movement and putting over the Gold Standard Act of 1900. (28) The author, in his book entitled THE "FEDERAL" RESERVE CONSPIRACY & ROCKEFELLER, relates how the Rockefeller Dynasty have amplified and developed this financial conspiracy down to the present time and describes the menace and threat to our Republic and the world that it constitutes. (10)

These gold manipulations and "corners" of the Rockefellers have been the principal mechanics of their colossal brigandage that periodically net for them the theft of vast enterprises and the looting of entire industries. In the panics that he engineered in the 1890's, John D. grabbed whole industries at the bargain basement prices that resulted from the depressions. He literally stole, "lead, copper, iron ore, railroads, banks and business enterprises of a thousand kinds" (8, p. 148)

John D. showed the usual Rockefeller contempt for the public's resentment and detestation of him and for court actions against him and his interests. For he was protected in his racketeering and gangsterism by hosts of corrupt public officials, politicians and political machines. He calmly went about carrying out his conspiracy to loot the oil producers of the nation by the simple device of setting up a monopoly of transporting and refining oil, through associates and subsidiaries of his Standard Oil Co. and through crooked deals with railroads and other transportation facilities. In his insane drive for money and

power, he sacrificed his health and personal well being. His digestion became impaired to the point that it tolerated only mothers' milk and he literally nursed at women's breasts. This, incidentally, is an old Japanese custom that rests on the belief that old men's mentalities are better preserved when they nurse at the breast of woman. He was a psychopathic, Mephistophelean monster who craved only ill-gotten wealth and sought, like a vampire, to drain the life's blood, the resources, of the nation. The relatively benign psychopathy of his petty larcenous father had blossomed out in the son, into a paranoid compulsion to steal everything in sight. That has become the guiding "principle" of the Rockefeller Dynasty.

Rockefeller's principal political lieutenant was Sen. Mark Hanna, boss of Ohio. The assassination of Pres. McKinley who was derived from Hanna's Ohio political machine, brought to the Presidency an adherent of Rockefeller's opponent, J. P. Morgan, Theodore Roosevelt. The subsequent death of Mark Hanna robbed John D. of his "protection" in the highest echelons of the government. This left Roosevelt free to join the attack on Rockefeller and his Standard Oil crimes. In August 1907, Judge Kenesaw M. Landis handed down in the Federal Court in Chicago, against the Standard Oil Co. of Indiana, a guilty verdict on fourteen hundred counts of rebates from the Chicago & Alton Railroad, and set the fine at \$29,240,000. The verdict was appealed. The fine was never paid. Simultaneously, a suit was brought in the Federal court in Missouri to dissolve the Standard Oil Co. In May, 1911, the Supreme Court, on appeal, confirmed the decree ordering the dissolution of Standard Oil Co. expressing their sentiments and those of the nation in the words:

"For the safety of the Republic we now decree that this dangerous conspiracy must be ended by November 15."

Directly after the imposition of the fine by Judge Landis, John D. vengefully vented his spleen on the nation and settled scores with some of his opponents by precipitating another of his "tight money" panics. In this he was aided by the Gold Standard Act that he had had placed on the statute books in 1900 for the purpose of tightening his grip on the Treasury and the finances of the nation.

Following the Rockefeller habit of never overlooking opportunity for further looting, he managed, through his press agents and pawns, to use the panic which he had precipitated, and the unemployment and depression which it caused, as a pretext for launching a campaign for measures that would enable the Dynasty and its pawns to constantly and mercilessly loot the nation through the agency of the

Government itself. These measures were both introduced by the Republican leader of the Senate, Nelson Rockefeller's maternal grandfather, Sen. Nelson Aldrich. They were: the XVIth Amendment, the un-Constitutional basis for an unlimited tax by the Federal Government on incomes, (that was quickly extended by bureaucratic edict of the conspirators into a capital tax that violates the Bill of Rights); and the Act that set up the fraudulent private banking agency that was sardonically named by them the "Federal" Reserve Bank (in order to delude the nation to believe falsely that it is a public, governmental agency). (10)

In the interim, in 1905, the Rockefeller conspirators had financed a Communist Revolution in Russia, headed by Lenin and Trotzky, through their banker Jacob Schiff, of Kuhn Loeb & Co. Their purpose was to gain control of the Baku and other Russian oilfields for which their Standard Oil Co.'s most formidable competitor, the Royal Dutch Co., had a monopolistic concession. It gave (11; 92) them fierce competition in the Eurasian market. The Russian revolution was intended to break the hold of the Royal Dutch Co. on the monopolistic oil concession. Schiff, the Jewish banker, was used for the purpose of creating suspicion on the part of the Czarist regime, in case the revolution should fail, that the Jews who controlled Royal Dutch were planning to destroy Russia. In addition, the conspiratorial writings of Adam Weishaupt, outlining his Jesuit plot to destroy all governments and make himself ruler of the earth who would reassert the Church's pristine claim to ownership of the earth and everything on it, were translated into Russian and published under the name of a Captain Linus as THE PROTOCOLS OF ZION. Henry Ford was duped into distributing it in the U.S., used for the purpose by the conspirators exactly as his descendants have been used since.

Theistic Communist concepts were not new to Rockefeller. He professed adherence to the Baptist Church, a Nazarene sect that avows itself to be the most leftwing of the Christian sects. It has been so recognized by the Soviets who have never hampered its activities since the Russian Revolution. According to Maurice Hindus in his most recent book on his latest visit to Russia, A HOUSE WITHOUT A ROOF it is the fastest growing sect in the USSR. Nor were even more overt forms of theistic and so-called "atheistic" Communism unknown in the U.S., as has been related. (2; 6; 14; 51) In reality, Rockefeller interests have been furthered by the transplanting of Communism from the U.S. to Russia.

If one bears in mind that the true nature in practise of Communism implies thievery on the grandest conceivable scale, of everything, and enslavement of everyone except the inevitable dictator, one can readily understand the appeal of Communism to the Rockefeller psychopath. This appeal would inevitably serve to reinforce the Nazarene tradition to which they profess allegiance. And it makes perfectly understandable the alliance of theirs with the Soviets, that has come to be known as the Rockefeller-Soviet Axis (11, pp. 204-31) and their dedicated adherence to the conspiracy's *sine qua non*, "internationalism" and "One World."

The Soviets serve as unsuspected agents of the Dynasty. The Rockefeller Dynasty, in return for the monopoly of oil exported from the Soviets and full collaboration, have reciprocated 1. by fostering the subversive Communist doctrines through their bogus foundations and the Philanthropic Foundation Trust through which they control all the foundations that are sufficiently richly endowed; 2. by infiltrating with Communist agents the "Popular Front", or "New Deal" Administration that they set up under their pawn, Pres. F. D. Roosevelt, whom the conspirators have openly acknowledged was "advised" personally and closely by Nelson Rockefeller (12); 3. by securing for the Soviets recognition by the U.S. and industrialization and rearmament at the expense of the American taxpayers; 4. by betraying the U.S. into World War II for the support and protection of the USSR; and 5. by full collaboration with the USSR, in their so-called "United" Nations, in blocking interference by any power with the expansion of their Rockefeller-Soviet Axis around the world. This is the fixed policy of the Rockefeller Dynasty that has launched on a campaign to attain a "One (Rockefeller) World" totalitarian Empire based on expansion of their Soviet agency over the whole world, especially over the U.S.

This insane program was launched by "money mad" psychopath John D. for attaining the ultimate achievement in thievery, ownership of everyone and everything in a supercapitalistic super-dictatorship that invariably is the ultimate development of Communism. It has become the fixed policy of the Rockefeller Dynasty. Rockefellers established themselves as the ringleaders of world Communism, and of the wave of revolutionary and counter-revolutionary movements that have plagued the world. Their agents have been busy overthrowing every government in the world that they do not directly dominate absolutely or indirectly through their Soviet partners, with the ultimate

objective of attaining their thievish, malign goal. Their spokesman Rovere has named them THE ESTABLISHMENT.

Their dedication to "internationalism", the basic tenet of Communism, and to revolution, has been reaffirmed by each successive generation of the Rockefeller Dynasty. Most recently it has been reiterated by Gov. Nelson Aldrich Rockefeller in an article apparently written by one of his Red "ghostwriters", entitled much like a Papal bull, PURPOSE AND POLICY, that he published in the official organ of the Rockefeller "Foreign Office", of its Council on Foreign Relations, FOREIGN AFFAIRS. (13) In it, Gov. Rockefeller commands that we make ourselves worthy of this "revolutionary period" in which "one revolution is piled on another—the political revolution giving birth to new nations, the population explosion, the chain of scientific discoveries" by dedicating ourselves to support it and make a success of it. (13, p. 370). Rockefeller psychopaths have repeatedly made it clear that they rate nothing as a "success" unless it is fantastically profitable to themselves and yield unlimited booty. Violent crime, revolution and war serve that end.

The periods of criminal prosecution, public revulsion and hatred had a startling influence in modifying the basic psychopathy of John D. and the Dynasty. They intensified the fear of poverty. John D., the multi-billionaire gangster who dominated commerce, industry and finance, unabashedly stood up before his colleagues in the Standard Oil Club, at 26 Broadway, New York City, and told them that he would awake in a cold sweat at night, fearful that he had lost his billions of loot, his empires and his fortune, and was reduced to poverty. Fear of poverty became the absurd motive force of the Rockefeller Dynasty, instead of the lusty joy in crime of "Doc" Bill, the founder of the family fortune, and crafty, cowardly, mean and contemptible swindling and other crimes of John D. himself.

This absurd, but very real fear of poverty John D. succeeded in inculcating in his predatory clan has had some strange consequences. His daughter, Bessie Strong, Nelson Rockefeller's aunt (their press agent biographer, Manchester, reports) ended her life "with the pitiful fear that she would die penniless." (9, pp. 91-2) The author has at hand a letter of the director of the Boston Psychopathic Hospital confirming the psychopathic condition of Winifred, Nelson Rockefeller's cousin, about a decade before she murdered her two children and committed suicide because of fear of poverty. Another cousin, Gladys, when

hospitalized for her mental condition, saved after each meal every crust of bread and scrap of meat for fear that she could not afford another meal. She secreted the scraps of food under her pillow, refusing to trust them to the nurses. Mrs. Nelson Rockefeller, in an interview given the *Journal American* on November 19, 1961, stated that her husband is, despite the income of a million dollars a minute, more penny-pinching and penurious than his grandfather. She related that he is affected by the familial psychopathy.

This insane fear of poverty is the psychologic basis of Rockefeller support of Communism. Though for the average individual, Communism represents the concept of sharing of wealth, the more materialist minded Rockefellers discern in it the concentration of control of all of a nation's wealth and populace in the hands of one man, the dictator. They discern the thievish, the dominant, aspect of Communism in the light of "security" of an ideal character. The poverty-fearful, Dynastic psychopaths yearn for Rockefeller "security". And from that viewpoint, what more perfect "security" can there be than to be "permanently rich" through acquiring the power to instantly loot whole peoples, whole nations and whole states, by using their governments to rob them of everything that they have and to enslave them personally? One can discern that to such psychopaths no more perfect form of "security" is conceivable than the supercapitalism and superdictatorship of Communism. In a Communist totalitarian state, perfect "security" is had by the dictator, so long as he remains dictator. All others are completely robbed of any security of either life or property. This may serve to explain Rockefeller support and fostering of all forms of totalitarianism, especially of Communism. This explains the drive that the Dynasty has instituted and maintained for Sovietization of the U.S.A. as a preliminary for converting our Constitutional Republic into an absolute, hereditary monarchy, that will dominate the world—"ONE (ROCKEFELLER) WORLD". And it puts in its true perspective Nelson Rockefeller's strenuous drive for the Presidency.

The Rockefeller mania for their personal "security", motivated by their psychopathic fear of poverty, lies behind the setting up of their pseudo-philanthropic foundations and a whole, vast array of institutions that have, and do, serve them in subverting and destroying our Republic with the avowed objective of making it an absolute monarchy that is to be ruled by themselves. Rockefeller

was advised, as early as 1887, by his son-in-law (husband of his aforementioned daughter, Bessie) Prof. A. H. Strong, that "only by a conspicuous pose of Philanthropy could he hope to win over and seduce public opinion". (11, p. 69; 4, II, p. 208)

In the character of John D. and of the Dynasty there is as little of the true spirit of charity or philanthropy as there is of patriotism and loyalty to our country. This is illustrated by his reply to a letter from his mother asking for help for his cousin, that is cited by Nevins (4, II, p. 177):

"I decided that (I) would not comply with the request contained in it. I want to know surely, in giving, that I am putting the money where it will do the most good."

It was not until a soliciting Baptist minister, Frederick Taylor Gates, had conclusively demonstrated the swindles that could be perpetrated with a pose of pretended charity and philanthropy cloaked by a sham of religiosity and piety, by helping swindle the Merritt brothers of their holdings of iron deposits in the rich Mesabi range for a pittance, that John D. began to "see the light"—to realize the enormous potential profit in the fraud of a bogus pose of "philanthropy". The swindle netted Rockefeller a profit of several hundred million dollars when, shortly after their acquisition, he sold the mines to U.S. Steel Co. that was then being organized. (94)

Convinced by this swindle that Rev. Fred Gates was "a wonderful business man" who could make fraudulent "philanthropy" net plunder even greater than could he through gangsterism, and make it serve to evade and flout the law, John D. "saw the light". Under the guidance of crafty Rev. Gates, John D. launched his shady "philanthropic" frauds. They soon served John D. for the same *quackish* purposes as the "Seneca Indian Medicine" had served his father, "Doc" Bill—to dupe the public and exploit them ruthlessly and enormously profitably. But they were planned to go further than to swindle the public of relatively paltry fractions of its wealth and possessions.

The conspirators openly avowed their intent to brainwash and enslave the nation, in Occasional Letter No. 1 that Rockefeller and Gates issued to state the purpose of their General Education Board. It reads:

"In our dreams, we have limitless resources and the *people yield themselves with perfect docility to our molding hands*. The present educational conven-

tions fade from our minds, and *unhampered by tradition, we work our own good will upon a grateful and responsive rural folk.* We shall not try to make these people or any of their children into philosophers or men of learning, or of science. We have not to raise up from among them authors, editors, poets or men of letters. We shall not search for embryo great artists, painters, musicians nor lawyers, doctors, preachers, politicians, statesmen, of whom we have an ample supply. *The task we set before ourselves is very simple as well as a very beautiful one, to train these people as we find them to a perfectly ideal life just where they are. So we will organize our children and teach them to do in a perfect way the things their fathers and mothers are doing in an imperfect way, in the homes, in the shops and on the farm."*

All the vital elements of Weishaupt's conspiracy are found in this letter. First, there is the pose of "philanthropy"; second, the intent to brain-wash, or "mold"; third, the abandonment of tradition, science and learning; fourth, the dictatorship objective; fifth, the intent to regiment the peasantry into a caste system—"just where they are"; sixth, the intent to reduce national intelligence to the lowest common denominator and to destroy parental influence (which has been so successful that it has given the country a terrifying wave of juvenile delinquency); seventh, contempt of the "peasantry" (who were also called "our children" by the tyrannic Czar, the "Little White Father"); seventh, the element of deceit (that entered the situation when the too frank avowal of the true purposes of the foundation became recognized shortly after it was founded, and the Rockefellers belied their intent to reduce intelligence to the lowest denominator, and posed as patrons of art, letters and science); eighth, the element of subversion and un-Americanism—the avowed intent to overthrow accepted customs and institutions to serve the purposes of the Rockefeller sponsors and to further their plots and schemes; and finally, "perfectibilism", the "perfecting of human nature", Weishaupt's sham.

Rockefellers, and the "Philanthropic" Foundation Trust that they have contrived, are beyond any doubt the most effective advocates, executors, and missionaries of Weishaupt's Illuminist-Socialist-Communist dictatorship program. The "brain-washing of the U.S.A., begun in 1904 through all channels of education and mass communication, over which they have usurped complete control, has been so completely effective that the American public has

no suspicion or intimation of the fact that they can only think as Rockefeller wishes them to think—that they have been “trained” and “perfected” to serve Rockefeller’s purpose. (1, pp. 17-19)

At the beginning, public hostility aroused by this brazen statement by Rockefeller of his intent to subvert our government and institutions, compelled temporary deviation from the conspirator’s plan. And a pretense was made of doing the reverse. Sight was never lost, however, by the Dynasty of the avowed treasonous purpose of this “philanthropy”. Its objective is to pervert and warp the native intelligence of the public, whom they scornfully call the “peasants”, through the conversion of education, from its very start in childhood, to their subversive propaganda. The end goal is that they acquiescently accept as “a new social order” the imposition on themselves of a progressively more totalitarian state dominated by the Dynasty; and accept the status of “mass man”.

Curiously, the process was materially furthered by reversion of the Dynasty to the medical quackery of “Doc” Bill through the establishment of the Rockefeller Institute for the ostensible, represented purpose of “medical research”. Instead, it was designed and has served to control medical practise and direct the drug industry in channels which afford maximal profits to the Dynasty. This phase of the conspiracy has effectively deluded the “peasants”. It has made even viciously poisonous drugs and remedies immensely more profitable to the Dynasty than “Doc” Bill’s Seneca Indian Oil; and has made every phase of medical care infinitely more costly to the public and profitable to themselves. This tremendously increased profit to the Dynasty conspirators, and exorbitantly increased cost to the public has characterized every activity into which the “philanthropists” have entered. Especially is this true of medical care and education. These are becoming one of the richest sources of plunder and loot for the Dynasty, that are little suspected by the “peasants”. The conspirators have gained complete control of every agency involved and make enormous profits on every phase.

Before they had succeeded in effectively brainwashing the nation and before they had gained control of every medium of mass communications, John D’s bogus “philanthropies” and their treasonous intent were correctly evaluated and denounced by well-informed individuals. They were vigorously attacked on the floor of Congress by members who had not been “reached” and were not

subject to Rockefeller discipline. On January 26, 1917, for example, Sen. Chamberlain of Oregon said:

"The Carnegie-Rockefeller influence is bad. In two generations they can change the minds of the people to make them conform to the cult of Rockefeller or the cult of Carnegie, rather than to the fundamental principles of American democracy."

And on another occasion, Sen. Martine, of New Jersey said;

"I hope that the United States can be spared from living on contributions from Rockefeller and Carnegie."

Sen. Martine was in error when speaking of grants from Rockefeller Foundation as being Rockefeller contributions. The moneys of the Rockefeller Foundation and other foundations are actually grants to them by the people and the Treasury. For they are tax-exempt funds, funds that are legally the property of the Treasury but the disposition of which has been yielded by it to the Rockefellers. It is in reality the people, it is you and I, who are the real philanthropists. For as Congressman Wright Patman has pointed out in the report of his Select Committee On Small Business On Tax-Exempt Foundations and Charitable Trusts (15, p. 133):

"We must start with the fact that when an organization is tax-exempt, it means that all other taxpayers must pick up the tab."

The use of moneys remitted by the Treasury to foundations, which is the meaning of tax-exemption (they are therefore really contributions of the public to the foundations) is hedged by legal restrictions regarding their use. First, the law bars their use for personal profit of the party whose taxes have been exempted. Second, the funds must be used for the benefit of the nation, of the people who, in a very real sense of the word, are the philanthropists who have contributed the funds. Third, the funds must not be used for political purposes. A violation of these rules regarding the use of tax-exempt funds is a felony as real as any other income tax fraud. And under the law, it is punishable by imprisonment and/or fine. That is the situation in the case of any violators of the law other than the Rockefellers and a few other folks of similar influence in our government, who are a law unto themselves and safely hold the law in contempt.

There is really no justification for exempting from taxation the Rockefellers or anyone else who undertakes to pose as "philanthropists" at the expense of his fellow men. The one service that the philanthropist can render his fellow man and the nation, is to first bear his full burden of

taxation and not shift it onto the shoulders of the rest of the community. If true philanthropist he wishes to be, let him use the funds that he has available after paying his full share of taxes. That is the only true form of philanthropy. What is now known as "philanthropy" is defrauding the community and the nation.

All of the Rockefeller so-called "philanthropies" however, follow the Dynasty pattern of looting the citizenry and the nation in every conceivable manner. Not only do they take full advantage of dishonest tax-exemption, but they use the funds deliberately to promote schemes that increase the burden of taxation on the rest of the community and the nation, as well as for hostile and often treasonous enterprises and plots that betray the interests of the nation. A large part of the funds of the various Rockefeller foundations as well as those of all the other rich foundations, such as the Ford Foundation, over which the Dynasty has usurped control (11, pp. 347-52) through their control of the Treasury, is used for personal profit and political purposes in clear-cut violation of the law.

Rockefellers and their foundations have never tried to hide the fact that their funds are used in violation of the law for political purposes, for influencing domestic policies in directions required by them and their interests; in additional violation of the Logan Act, in influencing the international relations of the U.S. with other lands; and for the treasonous purpose of subverting our government and influencing the dealing of other lands with the U.S. for their own nefarious and generally thievish purposes. The Rockefeller Foundation and the various agencies that it finances and supports, as well as the Ford Foundation and its subsidiaries, such as the Fund For The (Betrayal Of) The Republic, that the Rockefellers control through their agents and interlocking directorate and trustees (11, pp. 341-59) regularly report in boastful vein of their activities in these directions in their annual reports.

The Laura Spelman Rockefeller Memorial and the Rockefeller Foundation contributed more than two million dollars to the subversive Institute of Pacific Relations between 1926 and 1950, as its principal supporters. The Senate Internal Security Subcommittee reported in 1952:

"The net effect of the IPR activities on the United States public opinion has been such as to serve international Communist interests and to affect adversely the interests of the United States."

"Persons associated with the IPR were influential in 1949 in giving United States far eastern policy a direction that furthered Communist purposes." (16, p. 225)

This characterization of the Rockefeller agency that supplied spies to the Richard Sorge spy ring that induced the Japanese to attack the U.S. at Pearl Harbor that cost the lives of thousands of our boys and the loss of our Pacific Fleet, and was parent organization of Amerasia, a magazine that the "philanthropists" induced the Federal Government to finance for the purpose of spying on it, stealing top secret documents from its vital war agencies and supplying them to our enemies, is extraordinarily mild. The reason for this mildness may be found in the fact that the Rockefeller brothers were personally involved in these activities. (11, pp. 274-299) The Rockefeller interests reluctantly ceased openly supporting this treasonous agency only after the Senate Committee ordered an investigation into

"The extent to which contributions by American charitable, scientific, and educational foundations have aided Communist or pro-Communist activities in the United States." (16, p. 226)

The Rockefellers and their foundations have been, and are, the main supporters of the subversive Council on Foreign Relations, which they have used in the capacity of the "Foreign Office" of their Rockefeller (One World) Empire. Between 1927 and 1949, they were its chief supporters, contributing more than a million dollars to it. In addition to the Rockefeller brothers, David, John D. the Third, and Nelson, and their kinsmen, the Dulles brothers, it harbored their traitorous agents Alger Hiss and Frederick Vanderbilt Field (the editor of the Communist magazine NEW MASSES); also Owen Lattimore (editor of their Government-financed AMERASIA magazine). (11, pp. 237-72; 17) The role which these and numerous other subversives play in the Rockefeller agency is indoctrination of the Dynasty's puppets and agents who are groomed for holding the highest offices in the nation and/or occupy them. The conspirators openly boast of the success in indoctrinating the members, their agents, in preparation for serving in the government, in the Report of the Director for 1949-1950 (pp. 39-40):

"The primary purpose of the Council discussion groups is to keep members informed . . . But very often the groups serve, as well, as *training ground for members called upon to serve the government in important positions*. Such instances are too numerous to record here, but members who have recently undertaken official posts include: Thomas K. Finletter, . . . Philip C. Jessup . . . Charles M. Spofford . . . and George N. Shuster . . ."

Among the numerous foreign pawns of the Rockefellers who were summoned to indoctrinate the Rockefeller Council on Foreign Relations agents have been: V. K. Krishna Menon (17, 1957, p. 34); Anastas Mikoyan, Kwame Nkrumah, Oscar Lange and Fidel Castro (17, 1959, pp. 32, 31, 38, 33), Herbert Matthews (17, 1960, p. 30), their N.Y. Times correspondent who "promoted" Castro, and their invited guest, and agent, Nikita Khrushchev.

The array of minor subversive organizations and Communist fronts set up, financed and supported by the Rockefellers and their foundations, such as their Foreign Policy Association (which was headed by their unfortunate cousin Winifred's husband, Brooks Emeny) and the Bilderberg conference (20, p. 333) are far too numerous to list here. For a partial list the reader is referred to the author's ROCKEFELLER "Internationalist". It is noteworthy that few subversive organizations and Communist fronts failed to receive Rockefeller support.

**IT IS ASTONISHING TO FIND, HOWEVER, THAT ABSOLUTELY NO RECORD CAN BE FOUND OF THE SUPPORT BY ROCKEFELLERS, OR THEIR FOUNDATIONS AND OTHER AGENCIES, OF A TRULY NATIONAL, PATRIOTIC AMERICAN CAUSE.**

These subversive activities netted the Rockefellers the complete domination and service of the Government in Washington. John D. boasts of this in the volume published under his name, entitled RANDOM REMINISCENCES OF MEN AND EVENTS (7, p. 63), as follows:

"One of our greatest helpers has been the State Department in Washington."

But John D. was not content with the trifling job of using and destroying his adversary at home, the U.S. Government. Lord Beveridge, the British, Fabian Red author of the "cradle to grave security" program, has published a letter of John D. Rockefeller's to him in which he offered his personal support in the financing of England's hotbed of Marxist Fabianism, the London School of Economics and Social Sciences, in addition to the rich support that was given it by his foundations. (18, p. 199) It has contributed more to the destruction of the British Empire than any one other factor.

For a more detailed story of the subversive uses made by Rockefellers of their foundations, the reader is referred to the author's ROCKEFELLER "Internationalist". (11, pp. 89-91; 147-9)

The coordinated control by the Rockefeller-Soviet con-

spirators of minorities and of the various groups and organizations into which people divide themselves could be expected to be of material advantage. Control was readily obtained by the "philanthropists" by contributions of sums extracted from the public and the Treasury by tax-exemption. The process has greatly delighted John D. and the Dynasty because of the irony involved in the bribing and seducing of people and their opinions with what in reality is their own money.

Arch-criminal, bogus "philanthropist", John D. Rockefeller, craftily succeeded, with the support of these agencies serving as confederates, in converting the U. S. Government into an agency to serve him in mercilessly looting the people without let or hindrance, and without limit. This he accomplished by supplementing his control of the Government that he attained in various manners: by patronage, bribery and corruption of elected and appointed public officials and by the planting of his, generally criminal, agents in all its levels, especially the highest; by perverting, twisting and distorting both law and Constitution through bribed and corrupted legal agents on the benches of the "sacrosanct" courts; by unconstitutional amendments to the Constitution forced through by hyperintensive propaganda by his press agents, such as the Volstead Act and the XVIth Amendment; by lobbying the passage by Congress of unconstitutional and illegal acts, such as the Gold Standard Act of 1900 and the fraudulent "Federal" Reserve Act; and by deliberately engineering "crises" and wars into which he arranged to dragoon the nation to fight as self-paid mercenaries in the service of the expansion of the Rockefeller-Soviet Axis and the Rockefeller Empire.

Exempted from taxation by the laws that were drawn up by his agents, and virtually immune from all government obligations and processes, he and his Dynasty have been and are free to loot to their hearts' desire and to profit from every disaster that they inflict on the nation and the world. They have been allowed to carry out their criminal conspiracy and to fully confirm the alarmed predictions of the Supreme Court, under the mask of bogus "philanthropy".

Thus did the relatively simple criminal psychopathy of "Doc" William Avery Rockefeller, founder of the Dynasty, blossom out into the megalomaniac madness that aims to conquer the world by subversion, overthrow of governments of the world by wars, revolutions and various forms of attrition with the ultimate objective of looting the whole world and everyone in it. The avowed

ultimate objective is attaining that status of hereditary world monarch and absolute dictator, with the help of a "United" Nations, of "One (Rockefeller) World" that will give "absolute security" to the Rockefellers only.

It remained for Nelson A. Rockefeller, and his brothers, to add some finishing touches to this mad conspiracy, including corrupt use of foundation and government funds plus other illegal devices for the promotion of his subversive political career for the purpose of forging his way to the American Presidency and dictatorship.

At the turn of the century, John D's homeopathic physician, Dr. Biggars, warned him to slow down his activities. Most probably because it suited his purposes to divert or deflect the attacks that were being continually levelled against him, he pretended to retire, and to abandon all connection with Standard Oil Co. and his other businesses. The deceptive nature of his "retirement" is revealed by his press agent Winkler. (8, pp. 234-5)

"... while the papers are speculating upon the health of a great diplomat or the possible overthrow of a foreign government, he has already been informed of the latest developments (Ed. which as often as not he himself had precipitated or ordered precipitated) through direct wires leading from Pocantico Hills to Standard Oil offices and, indirectly, to the remote places of the earth. There are over a hundred telephones at Pocantico, forty of them local, suburban and long distance lines.

"... He has never lost his interest in finance. During the period we are describing he was very keenly interested in various deals of the Standard Oil Co. of New Jersey. Through representatives, he advised the transaction by which the New Jersey Standard cut its capital cost by retiring \$200,000,000 of preferred stock and floated a new issue of \$120,000,000 in debenture bonds. His information about this and other matters that interest him is invariably accurate."

The ugly spider sat in his lair ready to pounce on all who were trapped in the net that he had woven about the earth.

Congressman Wright Patman, in his Report To The Select Committee On Small Business of the House, (87th Congress) on the subject of TAX-EXEMPT FOUNDATIONS AND CHARITABLE TRUSTS: THEIR IMPACT ON OUR ECONOMY, (15) pointed out that the Rockefeller-Standard Oil conspirators thumbed their noses (figuratively speaking) at the Supreme Court and the nation. They have continued their menacing conspiracy under the guise of their bogus "philanthropies" and

have brought our Republic to the brink of disaster. Patman stated in his 1962 report:

"Now the multimillion-dollar foundations have replaced the trusts which were broken up during the Theodore Roosevelt administration. It is a well-known fact that the Rockefeller family controls the Standard Oil Co. (New Jersey), and the Rockefeller-controlled foundations own a substantial part of the corporation . . .

"The use of subterfuge—in the form of Rockefeller-controlled foundations—in effect produces the same result as if Standard Oil Co. (New Jersey) owned substantial stock interest in Continental Oil, Ohio Oil, Standard Oil Co. (Indiana), et al . . .

". . . It is my hope that our studies will encourage the American people to take a close look at this tremendous concentration of economic power. The White House has taken an important step by putting together an intergovernmental group to study this problem." (15, pp. v-vi)

Can we depend on a Rockefeller as President to cut the conspirators' throats?

\* \* \*

The sexual psychopathy of John D., as might be expected, assumed a different pattern than that of his father rapist-bigamist "Doc" Bill Rockefeller. Quite as lecherous, and "double-gaited", he was too miserly to spend any money on his desires. The former Mrs. Nelson Rockefeller, in her interview given the New York Journal American, remarked that he treated his household help badly. (95) His employees reported that in addition to nursing at a woman's breast, in advanced years, he expected them to gratify him. And they reported, he would prowls around at night, trying their doors. An open door invited invasion of privacy. John D. the First also indulged in the practise, that they report became a Rockefeller tradition, of spying on the help to make sure that they did not eat too heavily. Those whose appetites exceeded the limits set by his penuriousness were dismissed. Mrs. Rockefeller stated that Nelson Rockefeller treated his household help worse than did his adored grandfather. Color is lent her statement by the subsequent course of events, by his later marriage to the wife of an employee, Dr. Murphy.

## CHAPTER III

### JOHN D. THE SECOND MONSTROUS, PIETISTIC, PSYCHOPATHIC "SHADOW"

John D. Rockefeller Jr. grew up as a shadow of his monstrous father. And as is the case of shadows, he was a grotesque exaggeration in his every trait. He was more penny-pinching and penurious, more conniving and ruthless, more grasping and greedy, more humbug in his poses of "piety" and "philanthropy", more precise and exacting, more dull and drear, more evil and hypocritic, and more psychopathic and criminal than even his father.

As an only son, he became the cherished disciple of his mad father. He benefited from a high intensification of the Fagin-like training that had been a tradition of the Dynasty that had been instituted by his criminally psychopathic grandfather, "Doc" Bill Rockefeller. Winkler aptly describes him as:

" . . . almost a replica of his spectrelike, sepulchral progenitor. The junior Rockefeller is as steady and as emotional as a clock. He firmly believes that he was brought into the world to perpetuate the mental, moral and spiritual qualities of his father, and he is doing his level best to fulfil his destiny. Twice daily he sinks to his knees and beseeches the Heavenly Father to bless his earthly father. Without conscious irreverence, he draws little distinction in deification. . . . They share a deep and unshakeable belief in work, Godliness and their own brand of righteousness. The latter includes, of course, the righteousness of making money." (8, pp. 180-1)

The delightful irony and humor of this Rockefeller press agent undoubtedly escaped his employers. It aptly expresses the grotesqueness of their psychopathy. They believe themselves to be gods.

John D. Jr's biographers give some amusing illustrations of the grotesque exaggeration that he presented of his father's dementia. Whereas John D. made it his practise to limit his tips to dimes, Junior long made it his practise not to tip at all. But on one occasion, a barber rendered him extraordinary service in an emergency.

Junior broke down and to the great astonishment of all, actually gave him a tip—a nickel! The nickel was promptly framed and labelled with the caption: “John D. Jr.’s Best Tip”.

Though John D. Jr. did come under the influence and “charm” of his grandfather, “Doc” Bill, it was his father who had the greatest influence in molding his character and whom he sought to emulate and outdo. (21, p. 27) His mother’s influence served him as a veneer to camouflage the “genius” of his paternal ancestry, with such items as abolitionism, religiosity and temperance. The superficiality of the latter is indicated by many of his subsequent activities.

From the very start of his business career, John D. Jr. became a partner and full-fledged accomplice in the subversive, criminal activities of his father, that had become a proud tradition of the Rockefellers. Whenever public resentment, antagonism and hatred rose high with respect to Rockefeller criminality, John D. Jr. served as a foil to deflect it with his hypocritic pose of “piety” and humility, while the gangster activities of the Dynasty continued unabated.

How well this sham was used by the Rockefeller press agents and confederates is illustrated by his widely publicized role as Sunday school teacher in the Fifth Avenue Baptist Church. His homilies were quite frankly efforts to cloak the Dynasty’s mad criminality with the sanctity of the Gospels interpreted in the light of its paranoid, self serving tenet: “Wealth, no matter how acquired, is Godliness”. This is well illustrated by one of his most widely quoted homilies that began with the explanation that Jesus did not mean what he said about it being “harder for a rich man to enter the Kingdom of Heaven than for a camel to pass through the eye of a needle”, because “conditions now are different”; nor did He mean what he said when He taught: “Lay not up for yourselves treasures upon earth.” He instructed the Sunday School class:

“A man may possess great wealth on earth, and at the same time build up treasures in Heaven . . . The growth of a large business is merely the survival of the fittest. It does the greatest good for the greatest number, although perhaps at the expense of the few. The American Beauty rose can be produced only by sacrificing the early buds which grow up around it. *So the growth of big business is merely the working out of the law of God and of nature.*”

John D. Jr.’s homilies evoked justifiably acrid comment, such as: “With his hereditary grip on the nation’s pocket-

book, his talks on spiritual matter are a tax on piety" (22) Bishop Charles D. Williams commented in a sermon at New York's St. Bartholomew's Church:

"A young scion of wealth and greed, possessed of more dollars than ideas, recently used the figure of the pruning of a rosebush . . . A rose by any other name would smell as sweet, but the odor of that rose to me smacks strongly of crude petroleum." (23)

The situation was so ludicrous that swindling, pressagent, Rev. Fred T. Gates, who was one of Junior's mentors, advised him to cease and desist his pietistic exercises. The excuse was offered that Junior had had a "nervous breakdown" of the type that so often characterizes the psychopathy of the Dynasty. (21, p. 127; 8, 205) But he continued the classes and periodically showed the characteristic sensitivity on the matter of money that bears no exorbitant return, in his admonition:

"Many misguided persons think the true test of friendship is whether the friend will lend money. Don't you believe it. If you have any friendship for people, don't you spoil it by trying to borrow money from them." (8, p. 196)

The monomaniac religious "principle" of the Rockefellers is: "Money is the most sacred of all things, and must be most precious guarded." Biographer, pressagent, Fosdick characterizes the attitude as a "principle" of sacred trust that is neither miserliness nor the worship of Mammon. (21, p. 108) He undertakes to justify, however, the abandonment by John D. Jr. and his father, under the guidance of Reverends Gates and Faunce, of tenets and basic "principles" of their orthodox Baptist faith, including: denial that Christ had founded the Baptist or any other faith, or intended to do so; that He or his disciples had ever performed baptisms or conceived of Church communion; or that the Baptist faith was based on His teachings. And he relates that this change in faith was brought about by the realization that sectarianism stands in the way of the most vital, sacred to Rockefeller interest and "principle", the gathering-in of money under their "trusteeship". (21, pp. 204-5) In short, the Rockefellers are reported to have espoused "higher criticism" and "liberalism" to the point of advocating for others, not for themselves, the Communism that characterized the Nazarenism of early Christianity. Fired with zeal by a huge sum, \$202 millions, gathered by a cooperative, non-sectarian United War Work Campaign under his chairmanship, John D. Jr. launched immediately after the Armistice, in cooperation with the Board of Foreign Mis-

sions of the Presbyterian Church and the Interchurch World Movement another drive with the objective of raising, or extracting from the public the trifling sum of \$336,777,572.00. It is noteworthy that levying huge and ever larger tolls and taxes on the public, the "peasants" has always delighted the Rockefellers. That money-raising campaign failed. But as is quite usual in Rockefeller enterprises, it was not abandoned. It was merely set aside and revived at a later date on a less ambitiously money-grabbing scale. (21, pp. 207-12)

As in the case of his father, there was little about the religiosity and "piety" of John D. Jr. other than the concept that "money is sacred". They acted in accord with the teachings that St. Paul so often reiterated in the Gospels: that the Ten Commandments do *not* apply to Christians. And the Golden Rule has been ignored. Religion has been persistently used by the Rockefellers to promote their business and personal advantage and interests, and to camouflage their criminality. His participation in the Institute of Social and Religious Research served to win the Dynasty the gratified support of a number of Protestant sects while swinging their attitudes further to the Marxist Left in support of the Rockefeller-Standard Oil interests in Soviet Russia. An investigation of Asiatic missions by an interdenominational group that was largely financed by Rockefeller, served as a pretext for his withdrawing support from the Northern Baptist Convention and influencing the swing further to the left of the various denominations engaged in the usual commercial exploration that was of interest to the Dynasty in that section of the world. How far to the left was John D. Jr. is indicated by the fact that "the Baptist movement inheritor of the extreme revolutionary left wing (Communist) of the Reformation" swung under his influence into the frankly Communist ranks it was acknowledged by Harry Emerson Fosdick at the opening, in 1930, of the Dynasty's Riverside Church. (24) The Riverside Church became notorious as a meeting place of the Communist Party during the 1930's, the period when the Rockefeller-Soviet Axis was taking form. In the furtherance of their commercial interests the Dynasty waved the whole gamut of religious banners, including those of the Communist "faith" as they now wave the Mohammedan.

That is the significance of the speech that John D. Jr. made before the Baptist Social Union, on December 11, 1917, entitled "The Christian Church—What Of Its Future?" (25) This address was delivered by him about eight months after the Rockefeller Dynasty had maneuvered

the entry of the U. S. into World War I, that they had deliberately precipitated for the expansion of the oily Rockefeller Empire in Saudi Arabia, Baku and other Near East points, following the engineering of the Bolshevik Revolution in Russia. And he repeated the same speech after the Dynasty precipitated W. W. II. It is notable that although John D. Jr. was of an age at which many misguided but patriotic citizens volunteered to sacrifice their lives to serve the interests of the conspirators, he remained comfortably at home raking in the profits that piled up from the war efforts, giving sententious addresses that had been written for him by hired ghost-writers.

John D. Sr. had likewise scorned patriotic military service in the Civil War. He remained at home to profit from the sale of unstamped, bootlegged, Harkness liquor to the soldiers, in the tradition of "business as ever, profiteering as never before" in war. When his brother Frank volunteered for service in the Union Army, John D., in contemptuous fury, refused to lend him seventy-five dollars for the purchase of a uniform; and earned his undying hatred. This Rockefeller tradition has rarely been broken by the Dynasty except in token, undoubtedly profitable service in swivel-chair jobs far from the front, in the spirit of "Theirs is NOT to do and die, but to live and profiteer."

The crux of John D. Jr's solution of the religious problem, of the problem of Christianity, was that like the religion of Communism, Christianity also must become the "Church of the Living God". In that version of the address and in its repetition before the Protestant Council of the City of New York, on January 31, 1945, during World War II, there lurked the implication that he would make a good God. In it there emerged the delusional, megalomaniac Roman concept of "Rex, Imperator et Deus". This represented the development of a more advanced phase of the Dynastic psychopathy that had fed and waxed on the intensive fake press agency and propaganda relative to the bogus "philanthropies", and on the blind and stupid adulation that it had engendered among certain elements of the public (whom the conspirators mockingly call "mass man" and "peasants") deluded by their own cupidity and hope of sharing in the pelf. (25, 11)

This consequence of the so-called "philanthropies" was the very design and purpose for which John D. Jr. and swindler-almoner, Rev. Fred T. Gates had collaborated in urging John D. Sr. to set up as a bribe to public opinion and as "institutional advertising" for the Dynastic conspirators. This is clearly stated in a letter cited by Fosdick

(21, p. 119) advocating that they be set up with "funds . . . so large that their administration . . . be as much a matter of public concern . . . as any function of government . . ." and ". . . as to attract the attention of the entire civilized world . . ." What made the fraud all the more delightful to the crafty conspirators was that it was accomplished free of cost to them, other than the relatively minor initial cost, by the device of tax-exemption which compelled the duped "peasants" to bear the evaded tax burden of their own deception and betrayal. As Chairman Wright Patman stated the situation:

"We must start with the fact that when an organization is tax exempt, it means that all other taxpayers must pick up the tab. Correspondingly, when any taxpayer reduces his tax by a deduction for contribution to a foundation, it means that all other taxpayers must make up for that tax reduction."

Furthermore, the bogus "philanthropists" retain financial control as well as direction of the foundations and use them: to flaunt the law in the conduct of their private business; to secure tax-exempt income for themselves; to mask bribery of public officials; to corrupt and subvert our governments; to pervert public opinion; to convert education to insidious propaganda; to foster their desired forms of totalitarianism including Communazism; to impose "internationalism" that served the interest of their oily Empire; to break parental discipline thereby fostering juvenile delinquency, adult criminality and breakdown of law and order as a pretext for establishing the dictatorship that they avowedly seek; to Sovietize the U. S. and the world; and to attain numerous malign objectives including systematic looting of the U. S. and the world. All of this was planned, and is being carried out under the pretense of benevolence, that has been made ultra-profitable for the fake "philanthropists" through control of medical and hospital practise and of the Drug Cartel, or Trust, by way of perversion of "medical research" for that purpose, and an endless array of other devices.

The cruel deception involved in this bogus "philanthropy" is obvious in every activity which it has corrupted in the process of "sponsorship". Thus education has degenerated under the influence of Rockefeller's General Education Board to the point where graduates of primary and secondary school learn neither reading, writing nor arithmetic, but are only schooled in the socialist "science" of Communism. This illiterate process has been mockingly named by the conspirators "Progressive Education". And its cost has mounted in geometric proportion to its

deterioration. Collegiate and professional education has increased in cost from the nominal figure averaging two hundred dollars a year to the exorbitant level of eight to ten times that figure, under the stimulus of Rockefeller "philanthropy". Sen. Hartke (D. Indiana) has attacked the usury of "education loans" as high as 60% a year. (141) Likewise, the cost of illness, hospitalization and medicine have become so cruelly inflated under the same influence, that of Rockefeller "philanthropy", as to condemn many unfortunates to death, as the less costly way out. Under Rockefeller's Milk Trust, the cost of milk has mounted from six cents a quart to four to five times that figure. (26, pp. 93-120; 27) But the direct and indirect profits to the extortionate "philanthropists" have risen proportionately in every instance, as it has in these. The bogus "philanthropies" are swindles of even more ruthless type than those perpetrated on a smaller scale by "Doc" Bill.

John D. Jr. fell in line with the fixed Rockefeller tradition that it is their function and prerogative to loot all mankind, the "peasants" (by which term they mean all others than themselves). He and his father-in-law, Republican majority leader of Congress, Sen. Nelson Aldrich, launched the movements that provided the principal weapons for that looting: the XVIth Amendment that is the un-Constitutional (violative of the Bill of Rights) basis for the unlimited looting made possible through the Federal income tax, and the capital tax made possible by their bureaucratic edict that capital gain is current income in varying degrees; and the "Federal" Reserve Act that is the fraudulent basis of their private stock corporations, the so-called "Federal" Reserve System, that gives them control of the Treasury as well as of the private credit of the rest of the nation, and through it, of the world. These were the initial moves of the Dynasty in the takeover of the Government to put a stop to its "interfering" with their criminal activities. And they served the purpose, with the aid of their German agent, Paul Warburg (who was brother of the chief of espionage and intelligence of Germany), of financing the entry of Germany in World War I, thereby precipitating it. (10; 28) These phases of the conspiracy served to enhance the power that the Dynasty had usurped through their "philanthropy" and tax exemption rackets. It made it possible for them to use the Government for the purpose of looting the nation on an unlimited scale. For it provided them one of the essential agencies for control and manipulation of national and personal wealth that made it more readily possible for

them to create at will, booms and depressions that served handily to enrich themselves and impoverish others.

Their bribed and servile agent in forcing the passage of these fraudulent measures for control of wealth was the lecherous scoundrel, Pres. Woodrow Wilson, whom they put in office after entering into an agreement with him in the Westchester home of Frank Vanderlip (29) when they found themselves confronted by the obstinacy of their in-law, Republican leader, Sen. Nelson Aldrich. He refused to introduce for them, as far too thievish, a bill that they desired. They decided to oust the Republican regime and to put the Democrats in power for the purpose of accomplishing their nefarious purposes. They accomplish this end by the traditional Rockefeller tactics of destroying the Republican Party from within by financing a split in the Party. For this purpose they used Theodore Roosevelt and his Bull Moose Party, so-called "liberals". This is merely another instance that forcefully illustrates the fact that the only "loyalty" of the Rockefeller Dynasty is to themselves. (10)

The arrant hypocrisy of the Rockefeller pose of religiosity and piety, and the fraud of their pose of "philanthropy" and "humanitarianism", is further emphasized by the murderous Colorado Fuel and Iron Co. strike. Control of the company was held by Rockefeller interests. John D. Rockefeller Jr. was a key director of the company, while actively engaged in Sunday School and other religious activities. The company workers were receiving a starvation wage that prevailed following the Rockefeller-engineered, revenge-dictated panic of 1907 that they had used to advantage in promoting their "Federal" Reserve fraud. The workers' circumstances were further reduced by costs in the "company town" and "company stores" to which they were compelled to resort for the purpose of yielding the Rockefeller interests additional loot. In desperation, the workers organized in 1913, and went out on strike.

The management, directed and supported by "pious" "philanthropist" John D. Rockefeller Jr., according to Rockefeller-Hearst editors, Lait & Mortimer in their U.S.A. CONFIDENTIAL (p. 183) sent in their Mafia gangsters and gunmen (135, p. 312) to strike fear into the hearts of the strikers, and to serve as strike-breakers. This "philanthropy" was accountable for the death of numerous strikers and many of their women and children, following the destruction of the colony on public land in which they were living, by arson. Public indignation rose high against the brutal criminality of the affair.

John D. Jr. followed the customary Rockefeller practice of flaunting the law and public opinion so long as they can "get away with it". But when aroused public opinion forced action by the authorities and investigation by Congress, he retreated in fear of criminal prosecution as accomplice before the fact, behind the shield of a "benevolent" and "philanthropic" pose. With the help of two press agents, William L. Mackenzie King who later became their Premier for Canada, and Ivy Lee, and an immense volume of publicity and propaganda, John D. Jr. condescendingly visited with the surviving workers assuming a pose of sympathy and piety. Under the pressure of public opinion he met their grievances with some concessions and proposed the setting up of a company union. This was represented to the public as Rockefeller support of unionization. And it was accepted as such by venal labor "leaders" in spite of the fact that it was recognized widely that his act represented the beginning of the Rockefeller takeover of unions as a device for attaining monopolies of industry that are within the law.

As part of Rockefeller's publicity buildup as a champion of labor by his propagandists, a book (no doubt ghosted for him by King and others) was published in his name under the title of PERSONAL RELATIONS IN INDUSTRY (30). It advocated the so-called Colorado Plan. Stupid persons who pantingly adore wealth in the hope of getting some crumbs from the table, accepted the lame dodge as sincere, and as atoning for the villainy. But it did not take long for the Dynasty to establish their Mafia and other criminal agents as Labor barons (misnamed "labor leaders"), their partners in enslaving and levying tribute on the workers in unions dominated by them. They used them to establish monopolies in restraint of trade and violation of public and national interest, that by law are prohibited to industry. That is the current product of Rockefeller "philanthropy" in Labor. "Labor's" Federation Bank & Trust Co. of New York, for example, is in effect, a minor subsidiary of Rockefellers' Chase Manhattan Bank. And even a casual study of the matter reveals that the interests of the Rockefeller Dynasty are well served by their Labor Barons. It is notable that Jimmy Hoffa announced his support of Nelson Rockefeller instantly.

Another example of Rockefeller hypocrisy that illustrates the sham of their "philanthropy" that is attested to by Nelson Rockefeller and his pressagents, is the pose of support of temperance and prohibition. It can not be questioned that the passage of the Volstead Act and the

18th Amendment was largely due to Rockefeller support of the temperance movement during two generations. But the characteristic "breadth" of conscience of the Rockefeller Dynasty in no wise interfered with John D. Sr. making his first big money by bootlegging Harkness's unstamped liquor to Civil War soldiers. Likewise pressagent Morris (31, pp. 39-40) acknowledges the truth in the story that relates that Nelson Rockefeller pointed out to his father that he was giving shelter to bootleggers in numerous speakeasies, tenants of his properties in mid-Manhattan, and made a mockery his "support" of prohibition. John D. Jr., like his father, did not have any scruples, it is related, about profiting from bootlegging.

It would be interesting to know whether the Dynasty's role in bringing on Prohibition had the oblique motive, so characteristic of the Rockefellers, of gaining control of the distilling and liquor industry at bargain basement prices by bankrupting them. How extensive their present holdings are in the liquor industry, their nominees will never reveal. This would help explain Gov. Nelson Rockefeller's refusal to raise the New York State minimum drinking age, on the urgent request of the Governors of New Jersey and Connecticut, from eighteen to twenty-one years in the interest of cutting down motor casualties of drunken, teen age drivers. If it could be determined whether the Dynasty derived other profits than merely the rent, to which Nelson Rockefeller referred, from the criminal element, the "Syndicate", the Unione Siciliano, or the Maffia and its Murder Inc., its bootlegging activities and associated narcotic smuggling and vending, its White Slave and black slave trade, its gambling activities and numerous other sordid crimes,—a better understanding could be had of the immunity under which the criminals, the so-called "syndicate" or Cosa Nostra, operate and the magnitude of their "take". It is said to exceed the total income of all legitimate business and industry in this country.

One must not permit oneself to be deluded by Rockefeller pretension of opposition to prostitution and "white slavery" that he adopted when he was appointed foreman by Judge O'Sullivan, in 1910, of a grand jury to investigate New York City vice, any more than one need delude himself with regard to Rockefeller's attitude toward profiting from bootlegging. (21, pp. 137-40) One of the traits of the Rockefeller Dynasty of which they are proudest and which they have their pressagents blazon most intensively, is their capacity for deceit and treachery. Thus pressagent Manchester relates John D.'s practise of pre-

tending to fight organizations that he completely controlled and entrapping his real competitors who join forces with those controlled organizations. (9, p. 80) The strange accuracy with which Tom Dewey was informed of the activities of "Lucky" Luciano, the Maffista head of the White Slave trade in New York, when embarrassing legal developments with the regard to the American Bond & Mortgage Co. frauds required a diversion of newspaper headlines, is as illuminating as is Luciano's subsequent release from jail after serving a brief fraction of his sentence. It was effected by intervention of Murray I. Gurfein, a Rockefeller lawyer prominent in the Republican Party, who had participated in the prosecution of Luciano; and as a reward for this "distinguished service," he became an honored member of Rockefellers' top coterie of agents, of the Council on Foreign Relations. The situation is highlighted by Luciano's strange assassination when he was about to be returned to the U.S. to testify in an investigation of the narcotics racket. These facts give pause for thought on the powerful "protection" he enjoyed.

More food for thought in this connection is to be found in the report by Rockefeller-Hearst editors, Lait & Mortimer, in their U.S.A. CONFIDENTIAL that the favorite haunt of the Unione Siciliano, of the Maffistas, has been what was then known as the Patio Bruno, now the Italian Pavilion, at 24 W. 55 Street, New York, on Rockefeller property. It directly adjoins Gov. Nelson Rockefeller's New York City political headquarters, at 22 W. 55 Street, and is diagonally behind his secret headquarters in John D. Jr.'s former home at 13 W. 54th Street. When Rockefellers built their homes on W. 53rd and adjoining streets, they were not exactly at the height of their popularity. Their pressagents had not yet brainwashed the public with regard to them. They feared for their lives when walking the streets. As a precaution, they built underground tunnels between their homes, that still exist. No doubt this was the inspiration of the underground tunnels connecting the buildings of Rockefeller Center. It is quite obvious that these tunnels could prove quite a convenience in hiding conferees of shady character. (32, p. 312)

It is an extraordinary fact that none of the hundreds of millions of Rockefeller "philanthropy" or of the other foundations controlled by the "Philanthropic" Foundation Trust that they have set up, has ever granted, so far as can be determined, a single penny for the study of the disease of narcotic addiction to determine the changes in the chemistry of the body that creates the craving for nar-

cotics, or how to correct it. This is one of the major causes of narcotic addiction and crime in the country, and one of the chief sources of recruitment of criminals by the "Syndicate." This failure to make grants for the study of addiction (and crime) indeed correlates most startlingly with the avowed purpose of the Rockefellers, stated in the Occasional Letter No. I of their General Education Board, viz., to break parental influence and lay the basis for the juvenile delinquency that prepares the way for adult criminality. (33)

The Rockefeller "philanthropy" that is most incredible to most folks, is their dedicated support of Communism. If it is borne in mind, as has been related, that Communism is a pseudo-philosophic justification for thievery on a nation-wide and world-wide scale; and that the Communist dictator enjoys the position of super-capitalist super-dictatorship that affords him the maximum of "security" so long as he remains dictator, one can more readily discern its appeal to the Rockefeller psychopathic mentality with its fear of insecurity and its mad dread of poverty. In addition, as applied to the American scene, it might have come to be enjoyed by them as vengeance for the rightful but ineffective prosecution of their criminal activities by the Government, which they regarded as "persecution".

A more pressing motive for precipitation of the first Russian Revolution of 1905 rested in the fierce competition of the Royal Dutch company with Rockefeller's Standard Oil in the European market on the basis of the former's monopoly of oil in Russia and the British sphere of influence. When Rockefeller's banker, Jacob Schiff, of Kuhn, Loeb & Co. was questioned by a Congressional committee, he acknowledged that he had furnished the Russian revolutionaries under Ulianov, alias Lenin, and Bronstein, alias Trotzky, with funds. Knowing better than to do so, the members of the Committee pursued the matter no further. They did not ask him whose money he had turned over. Had they done so, they would have found that the basic motive of the revolution was seizure of Russian oil that was monopolized by Standard Oil's strongest competitor. But Schiff was not in the oil business. Had they questioned further, they would have found that following the failure of the revolution, Lenin and his followers were "placed in storage" by the conspirators in Switzerland. Bronstein, alias Trotzky, was living without visible means of support, on Rockefeller-Standard Oil property at Constable Hook, Bayonne, New Jersey, the site of a refinery.

By curious chance, directly prior to the outbreak of the first Russian Revolution, there was widely circulated in Russia a translation, under the name of a mythical Capt. Linus, of a book outlining a conspiracy to take over the world. It had originally been published by a Jesuit named Adam Weishaupt, as the program of the Communist conspiracy that he launched in Germany, on May 1, 1776, under the same name as that originally borne by his Jesuit Order, the Order of Perfectibilists. He later renamed it the Order of Illuminati. The translation attributed to "Capt. Linus" bore the title **THE PROTOCOLS OF ZION**. It was obviously intended to impair the status of the Jewish principals of Royal Dutch, including the Rothschild, Sassoon, Isaacs and Samuels families, who shared its control with the British and Dutch crowns. The conspirators failed in their purpose of getting the Czarist regime to cancel the Royal Dutch concessions. It merely brought about the death in widespread massacres in Russia, of thousands of Jews. No one would accuse Jacob Schiff, himself a Jew, of seeking that objective, no matter how unscrupulous he may have been. It was a characteristic activity of the "pious" Rockefeller "philanthropists", that was in some measure paralleled by their Colorado Fuel & Iron "benevolence".

Resourceful and unscrupulous, the conspirators, after the failure of the revolution and murderous libel, used their German agent, Paul Warburg, for the dual purpose of arranging a deal with Kaiser Wilhelm to finance the seizure of the Middle East oilfields by Germany through the construction of the Berlin-to-Bagdad railroad. In return they required a monopoly of the oil. They also agreed to aid the financing Germany's entry into World War I (96, p. 160; 97, II, 1577) through the fraudulent "Federal" Reserve System that they had lobbied through Congress, after ousting the Republicans from power, as has been related. (10) They did this in full knowledge that grabbing control of the Middle East from Great Britain, inevitably would mean war. The Rockefeller-Standard Oil interests provided Germany with the oil that was essential for the conduct of the war. When in 1916, before Verdun, the British awoke to a realization that they could not win the war without American aid, Winston Churchill offered the Rockefeller oily interests the rich Saudi Arabian oil concession in exchange for forcing the U.S. entry into the war.

Before Rockefellers' German partners got wind of their planned betrayal, the German General Staff was induced to pass Lenin, Trotzky and their Bolshevik crew through

Germany in a sealed coach, and plant them in Russia to belatedly carry out the Revolution of 1917 which they hoped would give their Standard Oil interests control of the Russian oilfields. On the train, the Bolshevik revolutionists were provided, according to Col. Nikitine, with hundreds of millions of counterfeit ten ruble notes with which they purchased the votes of the soldiers and sailors and thus carried out the revolution for the conspirators. After the entry of the U.S. into the war, the Rockefeller-Standard Oil interests treasonously continued to supply the German Army with oil by way of their Spanish agent, Juan March.

In the meantime, Communism had become a "holy cause" of the Rockefellers and their foundations. Rockefeller profits are always a "holy cause" with them. It was through the agency of the Laura Spelman Rockefeller Memorial, set up in the name of John D. Jr.'s mother and directed by his agent Beardsley Ruml, that the Rockefellers first openly supported Communist and other Red causes in 1923. Among these given grants by the Memorial were the Russian Student Fund Inc., the Russian Zemstvos and Town Relief Committee, and the Institute of Pacific Relations. (11, pp. 223-4) Shortly after the setting up of the Rockefeller-Soviet Axis on the basis of a Rockefeller-Stalin deal, the Rockefeller "philanthropies" were exclusively dedicated to the support of Communist causes and fronts. It is as impossible to find a patriotic, American cause supported by the Rockefellers and their foundations (other than purely commercial enterprises, to profitably lure the tourist trade, such as Williamsburg) as it was to find a Communist or Red "front" cause that they failed to support.

With world control of oil as a goal, John D. Rockefeller Jr. openly announced his objective of world domination and his adherence to the basic tenet of Communism, "internationalism", in an address that he delivered at International House, in New York, on November 8, 1924, that is quoted by Fosdick (21, p. 390):

"... some day ... no one will speak of 'my country', but ... of 'our world'". The import of John D. Jr.'s advocacy of the Communist, "internationalist", "One World" conspiracy can hardly be overestimated. As Daniel A. Poling, editor of the CHRISTIAN HERALD, remarked in another connection (34, pp. 3, 26):

"It is a serious thing for one man to release so powerful an influence ...". It is questionable whether John D. Jr.'s personal and open support of the Communist "internationalist" cause did not outweigh in the influence on

its advance the moneys of the foundations that he converted to its support. It inevitably spurred, by personal precept and example, the repudiation of patriotism and the advocacy of treason.

Miscarriage of the conspirators' plot for control of Russian oil that they had engineered World War I to attain, was threatened by the defection of a tool of Rockefeller's Ohio political machine led by Mark Hanna, Pres. Warren Harding. Harding supported Harry F. Sinclair in his deal with Lenin that would have given him control of Russian oil. This threat was met by the Rockefellers with their usual slimy craftiness.

The steal of Teapot Dome Naval Oil Reserve was rigged by their agent, Col. Robert W. Stewart, the President of their Standard Oil of Indiana. Sinclair was lured into the deal by the conspirators, doublecrossed and thrown into jail, in order to prevent his concluding the deal with Lenin. In the meantime, both Harding and Lenin were poisoned and disposed of, in order to make sure that they could not come to the rescue of Sinclair.

John D. Rockefeller Jr. dramatized the favorite Rockefeller ruse, over which they and their biographers gloat, pretending to fight an organization that they dominate and control, with an air of "righteous indignation". He volunteered to testify before an investigating committee of Congress, hypocritically expressed his pretended indignation at the deliberately planned and executed crime. He staged a well-publicized and dramatized act of ousting his obedient agent, Col. Stewart, amidst an accolade of propaganda launched by his pressagents. Col. Stewart was richly rewarded for playing the role of "villain" with a pension that was reported to be fifty thousand dollars a year. And his two sons were given equally remunerative executive positions in the company. (84, p. 172)

The advance to dictatorial power of their agent Stalin assured the Rockefeller-Standard Oil interests the control of Russian oil for which they had plummeted the world into the holocaust of World War I. A deal entered into then has constituted the basis of the Rockefeller-Soviet Axis by which the world has since been ruled. Some of the terms of this deal can be gleaned from the book written by Rockefeller's pressagent, Ivy Lee, who was sent to Russia for the purpose of paving the way for its acceptance here. The first edition, published privately shortly after his return from Russia in May, 1927, appeared under the title THE USSR, AN ENIGMA. It was privately circulated by the conspirators to their agents, including their key agents who constituted their "Foreign Office" and

are there indoctrinated and trained to serve them in the Government in Washington, their Council on Foreign Relations. Six months later, a revised edition for public deception was published at the instance of the conspirators by the Macmillan Co. under the title of **PRESENT DAY RUSSIA** (35).

The terms of the unpublished Rockefeller-Stalin deal can be surmised from the course of subsequent developments and the current course of world history. These were outlined by the author in his biography **ROCKEFELLER "Internationalist"** (11, pp. 204-31). They included the recognition, industrialization and rearmament of the Soviets; fostering the spread of Communism on a more intensive scale through their foundations and control of all media of mass communication; and the setting up of a Red, "Popular Front" government in the U.S.A. No one can deny that the Rockefeller conspirators have dedicated themselves to living up to their end of the deal at the expense of the U.S. and the world, and that they are still assiduously pursuing that objective. Nor can it be questioned that their activities have been very largely responsible for the spread of Communist domination around the world; and currently, especially in our Western Hemisphere.

The panic and depression which the Rockefeller conspirators engineered with the help of their fraudulent, so-called "Federal" Reserve Bank, materially helped them set up their Communist-infested "New Deal" under the agency of their puppet, Franklin Delano Roosevelt. This was the "Popular Front" promised Stalin by them. Its imposition on the U.S. might have come earlier, if the Rockefeller-Soviet conspirators had had their way, because of Japanese hostility to the Rockefeller-Standard Oil interests that had barred them from producing the oil that they had discovered in China in the 1920's. It threatened to upset the Rockefeller monopoly of "oil for the lamps of China".

The Japanese returned to China in the early 1930's, to seize it and their oil by force; and to avenge themselves on the Rockefeller interests by systematically destroying their property in China. By 1931, the cost of this destruction to the Rockefeller interests was enormous, amounting to billions. Prof. Harry Elmer Barnes has reported in his pamphlet, **THE STRUGGLE AGAINST THE HISTORICAL BLACKOUT** (36, p. 43; 11, p. 362), the overtures made by Rockefeller attorney-agent, Henry L. Stimson, then Secretary of State, to Rockefeller Presidential agent, Herbert Hoover, to induce him to declare war immedi-

ately on Japan in order to bring American G.I.'s to the rescue of their property in China; and the subsequent successful overtures made by him to the delightedly acquiescent Franklin Delano Roosevelt were the determining factor in FDR being given the Presidential nomination. (99, p. 43; 98, p. 244; 11, p. 224-5) James Farley, in his **JAMES FARLEY STORY** attests (37, p. 39) that Pres. Roosevelt was so anxious to make good on this deal with the conspirators that he was dissuaded only with great difficulty from immediately declaring war on Japan at his first Cabinet meeting after inauguration in 1933.

While thus engaged in seeking profit from a world-wide monopoly of oil, advancing the world-wide spread of Communism and the expansion of the Soviet Empire, and laying the foundation for World War II for the purpose of outstripping the thievery and loot of his forefathers and advancing the avaricious objectives of theirs to new and higher goals of psychopathic attainment, John D. Jr. and his interests by no means neglected their program of converting our government into a totalitarian device for looting and dominating the nation.

The basic plan of the conspirators was drawn up and published by their "social philosopher" and intimate friend, Hoffman Nickerson, in his book **THE AMERICAN RICH** (39). His mentality can be gauged from his admiration of the Inquisition as a "governmental institution". This is expressed in his book **THE INQUISITION** (40). He is an honored director of the Institute for Medieval Research, who is reported to speak of all persons outside of his "exalted" social circles, as "peasants". The book, published in 1930, presents the conspirators' plan for their forthcoming "New Deal".

The scheme of the conspirators, as presented for them by their sociologic adviser, Nickerson, is to destroy our Republic and nullify the Constitution by pretending to adhere to their form; and to sneakily convert our Government by deceit, cunning and trickery, into an absolute monarchy. Nickerson accords fully with the ecclesiastical view that representative government is "the work of Satan", and must be destroyed. (100, p. 7) He and his confederates speak of the republican form of government as an absurd "cult of equality", that can not possibly be good government. He agrees with the ecclesiastics in the concept that governing is the prerogative and function of a special ruling class. He is a bit more frank and honest in his description of that class than are the churchmen who describe them as "rulers by divine right". He defines the ruling class as the predatory plutocratic element who are

"perpetually rich" by virtue of usurpation of the power to loot the populace and dip their hands into its pockets, at will, through their control of the government. It is to the peculiar interest of the plutocratic "perpetually rich" thieves to establish a form of government that is good for themselves and will perpetuate them in power as governmental thieves. And, he concludes, the only absolutely perfect form of government is a hereditary absolute monarchy. In this respect he is fully in accord with the orthodox ecclesiastics. But, he says (39, pp. 301-2) that it might be wiser, at the start not to violate American sentiment regarding the elective principle by undertaking to impose on the U.S. an openly hereditary monarchy. He expressed himself as doubting that the idea of hereditary transmission of office would be accepted soon by Americans, when he wrote the volume in 1929. Within a period of three decades, the acceptance by the public of the concept of hereditary transmission of public office has been brought to full fruition by the conspirators' propagandists, though it seemed inconceivable to Nickerson that this could be brought about. In this, as in all other respects, the Rockefeller conspirators have outstripped in performance their own plotters' and planners' programming.

Nickerson's program was to build up the ringleader among the American Rich as an "indispensable man". This was to be accomplished by dividing the people in groups, minorities. Behind the scenes he would be busily engaged in setting them at each others' throats in violent dissension. In each case the ringleader was to pose on the public scene as the only man who composed their differences. The "indispensable" plutocratic ringleader would thus make himself the darling of the masses; and he would be elected to the Presidency, and repeatedly reelected so frequently that his election would become a popular habit and he would be undefeatable.

The conversion of the role of the "indispensable man" from that of President to absolute monarch, Nickerson related, is a simple matter for the conspirators. It merely requires the elimination of the checks and balances on the power of the President that the framers of the Constitution "unwisely" and "reluctantly, under pressure" incorporated into it, to convert his role to that of absolute dictator. These restrictions and checks consist, principally, of the division of power: the power of Congress to initiate and pass legislation, especially the power of the House of Representatives to initiate budgetary legislation; and the power of the Judiciary, especially of the Supreme Court, to interpret and to rule on the validity of that legislation.

The elimination of these restrictions on the monarchic, dictatorial power of the conspirators' "indispensable man" who is repeatedly reelected to the Presidency, Nickerson pointed out, is quite simple and readily accomplished. By his power under the Constitution to appoint the Justices to the Supreme Court, he could "pack" the court with agents of the conspiracy. And he could do so without arousing the suspicion or opposition of the nation if he were patient and went about it cautiously and slowly. The elimination of the check and balance constituted by Congress and its powers would be even simpler and more rapidly accomplished, and that body converted into a powerless "advisory" body whose advice the monarch could and would disregard.

The key to emasculating Congress and converting it into a mere "rubber stamp", Nickerson related, was already at hand. (39, p. 261) It was the "executive budget plan" that already prevailed in thirty-four of the forty-eight states as a result of the planned and plotted activities of the conspirators and of their treasonous, Sovietizing "1313" agencies. In seven of the states, including New York, the conspirators had already succeeded in restricting the budgetary powers of the legislatures. The conspirators would merely have to extend this plot to the Federal Government and to Congress to accomplish their subversive purpose. If the Presidential elective monarch would present to Congress, year after year, budgets so huge and costly that no member would dare add to it, so detailed and complex that members could not possibly find the time to read it and certainly could not manage to make a detailed study of it, and so richly provided with graft and so-called "pork barrel" for each and every member of Congress that none of them would dare to sincerely attack and expose it for fear of losing their shares in it—Congress would get into the habit of accepting the dictated budget, would abdicate and eschew the powers granted it by the Constitution and would by accepted custom surrender those powers to the President-become-monarch.

The mere surrender of the power to initiate budgetary legislation, Nickerson related, had established the "principle of monarchical initiative" (39, p. 271). The Presidential monarch would easily rob Congress of its Constitutional power to initiate any legislation by the simple device of repeatedly sending messages to Congress, under the pretense of faked and contrived "emergencies" and "crises", demanding the passage of legislation desired by the conspirators and represented as urgent. This could be

done under the provision of the Constitution which directs the President to send a message to Congress on the state of the nation. By sending innumerable messages to Congress under the aforesaid pretenses, the President could keep it so busy introducing and considering legislation desired by the conspirators that it would not have any time for initiating any legislation of its own. After a lapse of years of abdication of its Constitutional power to initiate legislation, it would have become established and accepted custom that all legislation be initiated by the Presidential monarch.

The program enunciated by Nickerson became the blueprint of the Rockefeller-directed "New Deal" that was put in force by Pres. Franklin D. Roosevelt and their other puppets and agents under direct Rockefeller direction and supervision. The victimized public paid the cost to the conspirators by way of tax-exemption of the Rockefellers and their foundations. Almost simultaneously, this same "New Deal" dictatorship pattern, that the conspirators were testing overseas through their agent, Stalin in the Soviets, was imposed by other agents of theirs: Hitler, in Germany and Mussolini, in Italy.

Under the direction of John D. Rockefeller Jr. the familial criminal psychopathy assumed an even more evil, Mephistophelean and Satanic "internationalist" cast tinged with treason. He maintained the Dynastic tradition which requires that each generation must outstrip the preceding in its attainments in both "muscle", or racketeering power, and loot. He established indirectly the absolute power of the Dynasty over the U. S. and the USSR. And he got under way the conversion of the U.S. to a Rockefeller Duchy, and impressed its wealth and "peasants" into service for conquering the world for the Rockefeller Empire. In the meantime, Americans were duped, by Rockefeller's pressagents, into the absurd belief that they are "benevolent philanthropists".

So cunning has been the false Rockefeller propaganda that only the rare, intensely acute observer discerned the facts and the true situation that had developed. Thus Grand Duke Alexander, of Russia, reports in his autobiography entitled *ONCE A GRAND DUKE* (41, p. 242) that when he visited the U. S. in 1913, he observed that the Rockefellers had already converted the country into a colony, or province, of the Rockefeller Empire.

Eloquent proof of the development of Rockefeller chicanery and its refinement within a generation, and of their mastery of the government for the looting of the nation by taxation while exempting from any tax levy

their booty, can be discerned in a comparison of the handling and treatment of the respective estates of John D. Sr. and of Jr. In 1905, it was estimated, competently, that John D. Sr. was already worth more than five billion dollars. In the crash of 1907, the inflation of World War I, the operation of the fraudulent "Federal" Reserve Bank, the panics of 1921 and 1929, and the intervening booms, the Rockefeller fortune grew many hundredfold. The process was in no way retarded by the Federal income tax that the Rockefellers had maneuvered to impose on the rest of the nation for their enrichment by numerous devious governmental processes, while they virtually completely exempted themselves. Nevertheless, John D. Sr.'s total estate was reported to be merely twenty-five million dollars, and that report was unquestioningly accepted by the Treasury and tax officials. Some tax was paid by the estate.

A quarter of a century later, John D. Jr. terrorized by Nelson's brazen activities died under hush-hush circumstances in an institution in Tucson, Arizona, and under strange circumstances, was hurriedly cremated within hours after his death, May 11, 1960 before the entire family had assembled. (136) It was reported that anxiety had led him to resort to drink with resultant aggravation of his psychopathic mental state.

The "New Deal", World War II and the Korean War had enormously increased the Rockefeller fortune. The Dynasty had gained control of the entire array of war industries as well as the leading industries in every other field, to add to their control of oil and finance, throughout the world. Its income has been estimated at more than a million dollars a minute, a trillion dollars a year. This estimate of their income emerged in spite of their efforts to withhold the facts regarding it from the public by such devices as designating minor capitalists whose total wealth is less than their daily income, such as their victimized dupe, Jean Paul Getty, as "the richest man in the world." The entire estate of John D. Rockefeller Jr. was nevertheless reported to be a trifling one hundred and fifty million dollars. And it was baldly announced directly after his death, that not a single penny of taxes would be paid on it to any government. And no inheritance tax whatsoever was paid on it!

By way of contrast a minor millionaire died at about the same time, leaving an estate that was valued at about ninety million dollars. His estate was taxed by the Federal and State governments more than eighty-four million dollars, leaving his heirs about six millions.

It has been estimated that if John D. Jr.'s wealth had been honestly required to pay a full inheritance tax prescribed by the law, the Treasury would be so enriched that income taxes could be suspended for the next half century with honest administration. But Rockefeller's agents, including Beardsley Ruml, did not write tax laws that would require them to pay anything but nominal taxes, thanks to an endless series of exempting loopholes. Even in death the "philanthropic" conspirators defraud the nation! (101)

## CHAPTER IV

### NELSON ROCKEFELLER'S PSYCHOPATHIC ANCESTRY

Nelson Rockefeller is a natural product of his strange ancestry. On the paternal side was the originally Turkish stock of the Hessian mercenary, Roggenfelder (the name means "rye fields" in German, and was perverted to Rockefeller), who apparently deserted the British forces, as did so many of them during the Revolutionary War, for the proffered bribe of a section of land in New Jersey. Its criminally psychopathic character has been related.

On the maternal side were the New England, Yankee Aldriches. They included in their ancestry a background of religiosity that traces back to the Nazarene fundamentalism of William Aldrich of the odd pre-Revolutionary, Rhode Island sect known as Jemimakins that, in theory, was ascetic and Communist. (45, p. 79) They worshipped a woman named Jemima Wilkinson as a "messiah" and "reincarnation of Jesus". Aldrich became involved with her sister, Marcy, and eventually married her after the birth of her illegitimate child.

The tribe's religiosity, however, constituted no barrier against engaging in the traditional trade of seafaring New Englanders, the rum, slave and molasses trade, in which many Yankee fortunes were made. Following the War of 1812, the slave trade became a capital offense that carried the penalty of hanging. Yankees who prized their necks, then turned to the cotton and wool milling business. They soon discerned that the slaves that they had sold to

Southern planters constituted cut-throat competition with their lowly-paid labor.

Thus impelled, they linked their residual Nazarenism with the Weishaupt and Fourier inspired Illuminist Communism that was rampant in New England as elsewhere in the land, (45; 51, pp. 65-74) with the Jesuit inspired insurrections of the Negro slaves (aimed at destroying the "work of Satan" constituted by our Republic) (100, p. 12) into the Abolitionist movement. Yankee concern with principal and profits was converted to the commercially dictated "principle" of freeing the slaves and desegregating them. Simultaneously their Nazarene "fundamentalist" Communism that, whether theist or atheist, taught "Poverty is Godliness" was supplanted by its antithesis, "Wealth is Godliness". And many of the Yankee "intelligentsia" abandoned theism and the worship of a mythical God, for the "atheism" of Communism, which is in reality the worship of a "living God".

Sen. Nelson Aldrich was the very cream of New England aristocracy. A miserly skinflint, he acquired great wealth and political power in Rhode Island. Elected U.S. Senator, he and his kinsman, Sen. Greene, long controlled the political destinies of that State.

As Republican boss of the Senate, he introduced, and dictated its adoption, at the instance of his Rockefeller in-laws, the two most important subversive and Communist-inspired measures for converting the Government into a thievish machine to serve their purposes. He introduced the un-Constitutional XVIth Amendment that makes possible unlimited, direct looting of the people by the Federal Government; and the deceptively named "Federal" Reserve Act that established a private stock corporation that enables the conspirators to usurp the control of the money, credit and wealth of everyone and of the national Treasury.

Because Sen. Aldrich refused to make the F.R.A. as thievish as his Rockefeller in-laws wished it, possibly because he distrusted them, and insisted on pushing the bill that had been drawn up in his name in conjunction with Rockefeller's German agent, Paul Warburg, he was ousted together with the Republican Party, by his kinsmen, (47; 10) in the manner that is their custom. To accomplish their thievish purpose, Rockefeller's agents met with unprincipled and corrupt Gov. Woodrow Wilson in the home of their associate, Frank Vanderlip, and offered him the Presidency of the U. S. as a bribe for arranging the passage of the more dishonest form of the "Federal" Reserve Act that had been drawn up by their agent, Pro-

fessor J. Laurence Laughlin. (10; 46; 47) Their corrupt political power enabled them to oust the Republican administration and replace it with Democrats led by Pres. Woodrow Wilson, who promptly called a special session of Congress to force the adoption of the thoroughly dishonest and thievish, so-called "Federal" Reserve Act.

Sen. Nelson Aldrich was a bogus "philanthropist" of much the same stripe as his Rockefeller in-laws. He joined Duke, Ryan and the Rockefellers in forming the Tobacco Trust with the aid of their agent, Bernard Baruch. After its organization, Aldrich showed the measure of his "milk of human kindness" by ordering that there be provided smoking rooms in the public grammar schools of Rhode Island, where for the purpose of stimulating the sale of tobacco products, school children were encouraged to begin smoking at the age of eight years.

This muddled mental environment was faithfully reflected in Abby Greene Aldrich, the Yankee lass who became the mother of Nelson Aldrich Rockefeller. She instilled in her sons that odd Abolitionist fervor that delighted in selling Negroes into slavery for profit, but demanded their liberation and desegregation when it interfered with their profits. To her influence can be traced the Rockefeller implication in enslavement of Negroes in Saudi Arabia while financing and instigating the desegregation movement at home and supporting the NAACP and Urban League. These Rockefeller fostered activities are proving almost as disruptive as the Civil War that their Abolitionist ancestors instigated. Their desegregation drive avowedly has as its treasonous goal the secession of Southern States to form a Negro State, accomplish the disruption of the Union at which it aimed, and enable the theft of some of the richest oilfields in the country.

Mrs. Rockefeller was so successful in teaching her children to love the Negroes, that some of them have accepted her teachings literally. When Winthrop Rockefeller was asked, by Harry Reasoner in an interview on a television network, why he left New York and went to Arkansas to live, he leeringly answered that because his Army boy friend would not come to New York to live, he went to Arkansas to be with him. During more than a quarter of a century, Jim Hudson, who is now his Petitjean (Arkansas) farm superintendent, has been at his side, it has been noted by Ebony magazine.

Court decisions have shielded Rockefellers against exposure of their key role in the support of the NAACP and other Negro organizations that have been involved in the Little Rock affair and the nationwide desegregation riot-

ing that can only end in damaging the status of the Negro and are deplored by intelligent Negroes who are not dedicated to the Communist cause. In New York, however, where desegregation is not a political liability but is an asset, Winthrop Rockefeller openly presented the Urban League with a building located at 14 East 48th Street, for their headquarters. In the lobby of the building he placed a plaque stating that it was a gift from him and his associates. And in the League's board room, on the second floor, he hung a plaque dedicating the gift to his mother, Abby Aldrich Rockefeller.

Rockefellers' true sentiments with regard to the Negroes is apparent from the fact that, though they have formed attachments and liaisons, none of them has married a colored person as have the daughter of Marshall Field and other scions of wealth. Their marriages are, by marked preference, with Nordic whites or Philadelphia "mainliners". But the Rockefellers, as exemplified by Nelson and his son Rodman, condescendingly mingle with the Negroes when it serves their profits and political advantages.

The same schizophrenic "conscience" that led the Yankees to trade in Negroes and sell them into slavery, still characterizes their Rockefeller descendants. In Saudi Arabia, where the Rockefeller oil interests are dominant, Negroes are still provided for sale in the slave market, mulcting the Arabs of their oil royalties. Most of the unfortunates are provided by the same slavers who supplied the Yankees in olden days—the Negro Ashanti tribe of Nkrumah in Ghana. This undoubtedly explains why Ghana was the first vaunted "democracy" set up by Rockefellers' U.N. in Africa. It also explains why Ghana and Nkrumah seek to dominate the "free world" of Africa. That would undeniably facilitate the capture of more Negroes for the slave markets and would help in the capture of kidnapping of the weaker, unfortunates for delivery to Arabia.

Interference with this Saudi Arabian Negro slave trade has been effectively blocked in the U.N. by Rockefeller's associate and Foundation trustee, U.N. Assistant Director Ralph J. Bunche whenever the matter has been brought up. Several reports have been independently published on the topic of this slave trade, including Sean O'Callaghan's **THE SLAVE TRADE TODAY** (107) which gives a detailed account of the horrible brutality of the trade. And they have been brought up on the floor of the U.N. and of Parliament. But the conspirators have always been successful in blocking any action aimed at stopping this trade.

An insight can be had into the motive for inciting de-

segregation in the U. S. in the widely published reports of the extensive trade that also goes on, for the Saudi Arabian slave market under the same auspices, in white girls and women. The white slaves are recruited in all parts of the world, in the usual manners: seduction, kidnapping, fake marriage, lure of "employment" as "entertainers", and numerous others. Young white girls command relatively high prices in the Arabian slave market. According to a report made to the U.N., the price ranges with age. Girls under eight years of age command a price of three to six hundred dollars. Between the ages of eight and fifteen years, the price is maximal, between six and nine hundred dollars. And for women over the age of thirty years, the traders think themselves lucky if their "merchandise" commands three hundred dollars.

"Desegregation" is the Rockefeller fostered treachery that is most dangerous to the nation, but offers the basis for the greatest potential for "making money" to the conspirators. It is motivated by no more sincerity of affection or regard for the Negro than the Arabian slave sales of theirs. The "desegregation" agitation is aimed at carrying out the subversive conspiracy behind the Civil War: destroying the Union and effecting the secession of some of the South. The objective of the present-day conspirators, and their purpose, differs from those of the Civil War breed. The section of the South that the NAACP, the Urban League and the Black Muslims demand, with the support of their Rockefeller financiers, is the South that is rich in oil, including Louisiana and Texas. Some of the "inspired" agitators demand for the Negroes the Rocky Mountain oil producing States. This is the motive behind the support and financing by the conspirators of the "desegregation" drive. As in Africa, the conspirators are using the Negroes to effect the theft by treasonous agitation that is intended to lead to revolt, merely to be looted themselves.

The Negroes who are so unwise as to fall into the trap baited by the conspirators, are disregarding the lessons taught by history, both past and current. They blindly accept the pronouncements of their treacherous, generally Red or Communist leaders, both religious and lay, that an "injustice" has been done them because they were sold into slavery and brought here in chains; and that they must be repaid for the "injury" done them. It is true that they came to this country in bondage as did many of the white settlers in sections of the country, including Georgia and Louisiana, as prisoners and apprentices.

It is also true that a wrong was done the Negroes by

their enslavers, their fellow Negroes. Often they were members of the same tribe or even of their own families. It is still not unheard of for a Negro in some parts of Africa, to sell into slavery his parents, or his children, to Moslem slave traders. In a considerable proportion of cases, being sold into slavery was a blessing in disguise for the victim. It resulted in the saving of his life because of the investment made in him by the purchaser. As a relative weakling, had he not been sold into slavery, he might well have ended up in the boiling kettle as a meat dish; or killed by a poison arrow to serve in the production of a freshly shrunken skull.

By way of contrast, the Negro sold into slavery in the South fetched a high price in the slave market, not infrequently as much as five thousand dollars. He was costly and valuable property, and was solicitously and well cared for by sane owners. Some slaves, it is true, fell into the hands of madmen and brutes. But even at their hands, none of them suffered from that savagery that might have befallen them at the hands of their fellow Africans, such as the Ashantis of Ghana, and the Balubas.

These facts were well recognized by the Negro slaves themselves. Slaves who were liberated by their masters prior to the Civil War not infrequently undertook to serve their fellow Negroes by engaging in slave trade. There were a number of such cases in Charleston, South Carolina, where the slaves were distinctly better off in many instances than were the "poor white" laborers.

The liberation of slaves began to be agitated actively in the second decade of the nineteenth century, by a number of variously motivated groups. By far the largest group were those who, as at present, sought to destroy the Union from within by use of the slavery issue. Most prominent in this group were the Jesuits, with their Order of St. Leopold, who were pledged to carry out the terms of their Treaty of Verona by destroying representative government, the "work of Satan", in our country; and their Illuminist, or Communist, pawns. (60, pp. 9-27) There were also those, especially the Yankees, who were commercially motivated Abolitionists. And some were visionaries with or without principle. One of the earliest riots staged by Negroes in the U.S. was that staged in the early 1820's by Denmark Vesey, under Jesuit influence. After a riot of murder and rape, he and his followers were captured and hanged.

Following the Civil War, the "carpetbaggers", under the leadership of Thaddeus Stevens, deliberately agitated among the Negroes and stirred up the more thoughtless

among them against the whites. Stevens' motives become more readily apparent when one considers his family history. He was kin of the female Communist agitator, Mother Bloor. She, in turn was mother of Hal Ware, after whom was named the most notorious of the New Deal Communist cells in the Roosevelt Administration, that was led by Harry L. Hopkins. Stevens conducted a typical Communist "hate campaign" against all whites, as "capitalists". As a result of his agitation, whites were barred from public office in some parts of the South, and all offices including Congressional, were occupied by Negroes. Whites were brutally discriminated against by the "carpet-baggers" and the Negroes. In some sections the whites were barred from the use of the sidewalks by them. This vicious, brutal agitation among the Negroes created a legacy of hate among the whites, from which the South was beginning to escape, when the present-day conspirators again deliberately launched their "desegregation" and "civil rights" campaign that can only serve to open up old wounds and stir up fresh hatreds.

One of the ugliest aspects of the current commercially and politically motivated "desegregation" agitation is its irrationality and its reversion to savage emotionalism, its disregard of the lessons of the past. Is it not the height of irrationality to represent as "civil rights", uncivil wrongs? Is it a "civil right" to be denied the choice of one's associates? Is it rational for some Negroes to refuse to associate with other Negroes whom they regard, rightfully, as beneath them in social and cultural level, but to demand that whites associate with the very Negroes whom they themselves spurn? Can the use by Negroes of their children to front in riots or in school strikes be regarded as any less savage than some aspects of African savagery? Would not the activities of the agitators not be better spent in putting an end to the ruthless exploitation of the Negro by their fellow Negro, and raising their level of civilization and culture? "Desegregation" obviously implies that Negroes resent association with Negroes.

Such rational and beneficial attitudes would not serve the various malign and selfish interests of the agitators. Such "religious" leaders as Rev. Luther King prefer to serve the Rockefeller-Soviet conspirators to serving their fellow Negroes. For abandoning the teachings of Christ for those of the Weishauptian-Marxist conspirators, he has been financed by Rockefellers and extended the "signal honor" of being entertained with his fellow agitators in that Rockefeller sanctuary, their Pocantico Hills estate, as noted in the N.Y. Times article of March 1, 1964, en-

titled: DR. KING, AT ROCKEFELLER ESTATE ADDRESSES URBAN LEAGUE RALLY.

The obvious objective of the conspirators' "civil rights" agitation is the breakdown of law and order in another direction, for the purpose of justifying the Nickerson-patterned dictatorship that they are furiously plotting. The eyes of their Negro victims might open widely if they should read the chapter in Nickerson's book *THE AMERICAN RICH*, on the subject of *THE RACE QUARREL*. (39, pp. 141-60)

In final analysis what can be gained other than loss of freedom and dictatorship by the agitation among the Negroes? Can the elimination of the poll tax and the gaining the right to vote be regarded as a victory and advance, in view of the fact that elections are stolen by the conspirators through the use of rigged voting machines that deprive both whites and blacks of their franchise? Does not the strife created by the conspirators' agitators serve merely to blind the nation to the devices whereby they are robbing us all of our liberties? Have not the agitators served the conspirators in building a trap into which we all are falling? Would it not serve us all better to leave the solution of the problems involved to the natural process of evolution than to be destroyed by revolution? Can the "desegregation" and "civil rights" agitation serve any other purpose than aggravation of the issue and rekindling old hatreds and violence that will serve the conspirators in their treasonous objectives? (1)

The conspirators' traffic in black and white slaves raises the question whether the desegregation conspirators do not contemplate the reduction of all of us to the same level of serfdom, rather than the pretended goal of "desegregation" of the Negroes. Communist affiliations of some of their key agents confirm this view.

The evidence indicates that Abby Aldrich Rockefeller was in some measure accountable for the scheme originally conceived by her husband, John D. the Second (Jr.) to dedicate the "educational philanthropy" that developed into the propaganda agency, the General "Education" Board, solely to the "education" of Negroes. Allan Nevins, in his biography of John D. that was authorized by the family, reported:

"The younger Rockefeller had gone (South with Baptists associates, in a special train) because his father and he were now keenly interested in the possibility of giving to Negro education . . . (4, II, p. 483)

"After his talks with Baldwin, (John Foster) Peabody, and others, John D. Rockefeller Jr. realized that it was im-

portant to give assistance to the whites no less than to the blacks." (4, II, p. 484)

The Nazarene-Illuminist-Socialist-Communist doctrines that have characterized the "first families of America", with its rigid, illiberal dogmatism, came to be known by semantic perversion of the term, as "liberalism". True to her family tradition, Mrs. Rockefeller was such a "liberal". And she raised her family in that tradition. As a "liberal", she gave her support to the subversive doctrines in education that were advanced by Prof. John Dewey as "Progressive Education".

The idea underlying so-called "PROGRESSIVE EDUCATION" is that originally advanced by the Jesuit Illuminist conspirator, Adam Weishaupt and advocated by his disciple, Marx. The objective is to break down and to destroy parental influence as well as traditional discipline, for the purpose of making the young receptive to subversive indoctrination. "Progressive Education" requires only that the child conform to the group pattern imposed by the conspirators. In all other matters, the child is to be free and unrestrained, to do only what it wishes: to remain totally ignorant if it so desires; to be undisciplined, insolent, megalomaniac and even criminal if that be its inclination; even to kill its parent, if it so desires. The professed objective is to avoid the Freudian "disaster" of "developing a complex" and warping its mentality so that it will not serve the subversive purposes of the conspirators—the establishment of a "new" social order, a totalitarian dictatorship.

With the exception of John D. the Third, Nelson Rockefeller and his brothers all attended the "Progressive" Lincoln School, Teachers' College, Columbia University. There they escaped the normal training and discipline that had been traditional. They came under influence of the "Progressive Education" that was richly supported by taxpayers' money through Rockefeller tax-exempt support. They did not, however, join the ranks of the less fortunate of their schoolmates who came under no other discipline and were left to join the ranks of the illiterates and juvenile delinquents that blossom into the rank and file of the criminal elements that plague the world.

The Rockefeller children received the "benefits" of the traditional, criminal Fagin-like "education" and training imposed on the Dynasty by "Doc" Bill Rockefeller. This they received at home. At the hands of their mother, they received indoctrination in other phases of the so-called "liberalism" that was being imposed on Russia as a result of the Revolution. Mrs. John D. the Second (Jr.) had

joined Helen Roger Reid, spouse of the owner of the traditionally Red New York Tribune, with other wealthy women, in fostering and sponsoring the Communist movement in the U. S. John Reed, the most violent of the native American Communists, testified that his Communist activities were supported by Mrs. John D. Rockefeller Jr. and her friends.

Her sons have given ample evidence that their indoctrination in Red "liberalism" was quite effective. Each of them has made signal contributions to the advance of Communism through personal activities in such Red agencies as the treasonous Institute of Pacific Relations and its Amerasia subsidiary, through their support of the Communist cause by their foundations as well as personally, and through their subsidy and affiliations with such key Reds as Gerhardt and Hans Eisler, Alger Hiss, Owen Latimore and numerous others.

Her influence on her sons in the direction of Red "liberalism" has made itself manifest in many directions. In the instance of Nelson Rockefeller, the influence of her patronage of so-called "art" is especially notable in its subversive and injurious influence on the country and the world. As a disciplined "liberal", she would only purchase "art" that, in the jargon of that element, had "social significance". The conspiratorial code of Communist "liberalism" requires slavish submission of its adherents to the dictates of its ringleaders in all matters, including thought, taste and appreciation of art. Their censorship in these matters is absolute. It is an exercise in discipline of the conspirators to require their cohorts to pretend to believe and to "see" as ordered. Their method is much the same device for breaking the spirit of their subjects as Petruchio employed with Katherine the Shrew. Another analogy is the requirement of other religions of their followers that they accept the incredible and impossible—as a matter of "faith".

When a ringleader of the "liberals" orders his cohorts to regard a canvas bespattered with unsightly blotches of paint as the portrait of a "beautiful woman", they are required to accept his dictates or be stamped as "illiberal", reactionary, conservative and a "traitor to the cause". This so-called "modern art" is alone deemed by these "liberals" to have "social significance". Its chief significance, however, is the reduction of "art" to the lowest common denominator of idiocy. It is a manifestation of the supreme form of dictatorship, that requires of its brainwashed followers suspension of human intelligence and denial of what their senses attest.

Abby Rockefeller bought much of her "modern art" from Alma Reed's Delphic Gallery, located then on Fifth Avenue, New York. Alma Reed, for reasons of sentimentality as well as "liberalism" sponsored only Latin American Communist "artists" such as Orozco and Diego de Rivera. She tells a pathetic story about Mrs. Rockefeller's art shopping methods. Mrs. Abby Rockefeller lived in a constant state of terror. This description of her mental state is confirmed by a citation from one of her letters to her son Nelson then at college, that is cited by press agent, Morris, as follows:

"I can't tell you how grateful I am to you for your telephone messages. I hope that you telephone from the office and get it put on the bill there for I am sure that your dear father would be shocked if I started telephoning freely to you, which I have a great desire to do." (43, p.72)

She would have her secretary or maid call up and order Alma Reed to clear everyone out of her gallery and lock the doors. Shortly thereafter, Alma related, a group of Rockefeller employees would arrive at the gallery and stand guard at all its doors. Finally, after she was notified that the gallery was empty and "safe," Mrs. Rockefeller would arrive with a bodyguard, to shop for "art".

Whatever price Alma Reed would ask for an item that she assured had "social significance" (a puerile absurdity) Mrs. Rockefeller would invariably protest and plead that she could not afford it, and bargain for a reduction in the price. The "socially significant art" thus purchased, constitutes the nucleus of the collection of trash that Nelson Rockefeller calls his "art collection". Much of it hangs in the Communist founded Museum of Modern Art in New York, that was built on the site of the former Rockefeller home for the purpose of securing tax exemption for it as a future Rockefeller Center building site. In the Museum, of which he is Director, Nelson Rockefeller is associated with some of the Red crew who originally founded the Museum before Rockefellers took control of it. These facts make it evident that in the Rockefeller ancestry runs a pathetically absurd "liberal" strain coupled with ruthless, grasping greed, cupidity, miserly penuriousness and a hereditary tradition of outrageous criminality, coupled with inbred psychopathy.

sentations regarding his budgets. However, it leaves unexplained his rigid penny-pinching in his private finances except on the ground that his budgets deal with "other people's money" that is favorably colored by private profits. That he graduated from Dartmouth U. with highest honors attests to the extent of prostitution of "education" at that institution.

3. "Grandiose ideas" (43, p. 14) and delusions of grandeur are symptoms of a number of forms of insanity, including the syphilitic condition, general paresis of the insane. According to pressagent Morris, Nelson Rockefeller acknowledges that he has long had "grandiose ideas"; and that it has been only his brother, Laurance, who has been able to shake him out of them, when he was a youngster. Now that he is grown up and has fully developed a dictatorship complex and has the trillions with which to indulge it, one might well wonder if anyone can shake him out of his "grandiose ideas". It is quite usual for persons so affected to fancy themselves Napoleon, Hitler or Mussolini; or even all three rolled in one and God as well. Since John D. the Second fancied himself as God (25), it would hardly be unexpected that his heir might share that delusion.

Psychopathic stigma is the term used in medicine to describe signs and symptoms of disordered mental states and of insanity. They may also be precursors of those disorders, evidence of early stages of dementia.

The Rockefellers pride themselves on the early manifestation of their innate, grasping, insatiable greed and the craftiness of their psychopathic, skinflint ancestors, almost in infancy. A proud family story that centers about Nelson's childhood relates:

"The proprietor of a candy store that the children patronized showed his Christmas spirit by offering the children a handful of candy. When Nelson was told that he could have his handful of candy, he wagged his head and refused. On the following day, Nelson returned with his father. Once again the proprietor offered Nelson his handful of candy, and again he refused. But this time, he talked up and said: "Let father take it. He has bigger hands."

His deliberate cultivation of the familial traits and character, is related by pressagent Morris. (31, p. 33) A Rockefeller boy, obviously Nelson, he relates, informed his mother, while he was at college, that he was training himself in the tradition of "Doc" Bill and John D. (and in his words) "to be cold and calculating" for the purpose

of preventing sentiment or feeling from interfering with the extraction of maximum profit, the last drop of blood, in the spirit of a Shylock, from the misery and misfortune of others. Morris also relates that Nelson shied away from making friends at college for fear that they might derive some advantage from association with him and the name of the Rockefeller family (43, p. 35). But Morris reported on behalf of his employers, Nelson and his brothers, that they seek only profits, and maximal profits, inordinate profits, in whatever they do. And he made it clear that Nelson, in particular, has required that his every activity must yield him high monetary profits. (31, p. 33) He put the situation in a light that is more favorable than the truth warrants when he stated that the Rockefeller brothers "have made use of all the *legitimate* financial and business advantages . . . Rockefellers possess" to make profits. Whatever terms may be applied to many of their activities, "legitimacy" is not one of them.

The natural, innate greed and rapacity of Nelson was intensified in childhood by the traditional Rockefeller Fagin-like training. He proved an apt and able disciple of it and learned at an early age to "scratch and scrape" for himself to qualify for initiation in the family villainy. In the literature which he issued under the title MEET NELSON ROCKEFELLER, under the auspices of his agency in the quest of the Republican Presidential nomination, he presented this training in penury in a favorable light.

"When he discovered as a child", he dictated to his propagandist ghostwriter, "that his weekly allowance didn't stretch far enough he began raising rabbits and selling them at a profit for pocket money." (44, p. 1)

But the explanation offered for this quest for profits in Nelson's political campaign material is a bit less than honest and differs radically from the propaganda that Morris was authorized to issue on behalf of the brothers. It falsely represents that "the mere acquisition of money was secondary in their scheme of things". (44, p. 3) It would never do to let the voters know that candidate Nelson Rockefeller, the "philanthropist", whose platform promises them all the things that they most desire, is more greedy, grasping and rapacious, and in quest of personal profits than the most corrupt of the rank and file of politicians; and that he had been studiously trained, from childhood, how to grab them. It was not made clear in the campaign literature, as it is in Morris's biographic propaganda, that "the Rockefellers almost never give presents of much value" and "deemphasize" money in

that connection (i.e., rarely, if ever, give any of their own money). (31, p. 34)

In his disclosures to his biographer-propagandists, Nelson Rockefeller has clearly revealed the peculiarities of his inherited psychopathy. The "cute" story that Morris tells of schoolboy Nelson aptly portrays his delusional "grandiose ideas", and his mentality, his arrogantly insolent "take charge" attitude which has been and is his to this very day. When introduced to a new teacher, at the age of ten years, in the Lincoln School, he advised her that "he knew the ropes around the school and if she had any questions he'd be glad to help her". (43, p. 18) The same conceit dictates his attitudes and actions in governmental affairs. He is convinced that the Founding Fathers of our Republic lacked his "wisdom" to guide them; and that the Constitution which they wrote is defective because it does not accord with his desires and interests. And therefore, he dictates, it must be discarded as "obsolete" and must be replaced by a Constitution that conforms with his wishes and dictates. His attitude is the same with regards to the Constitutions of the States and the laws of the land. Unfortunately for the nation and the world, the power for corruption that he wields through control of the Dynasty's swag has enabled him to force his psychopathic whims on the nation and the world. The consequence has been turmoil and disaster, war after war, crisis after crisis, panic after panic.

Since childhood, Nelson Rockefeller has manifested a paranoid dictatorship complex. Aggressive and domineering, he craftily masks his orders and commands with the expression: "Let us get organized". (44, p. 5) This childhood practise of his still survives in the form of organization of "Committees" and "Commissions" of his agents and pawns to echo his commands as their "considered decisions". (43, p. 18) He presented a problem to his father, especially on the score of demanding more authority in family affairs, and was a source of concern to him. (43, p. 66) Nelson insisted on being boss, "top man on the totem pole". (43, p. 58) Nelson Rockefeller, like John D., his racketeering father, "is a man who wants to have his own way" said a diplomat of him in later life; indicating that age has not changed him. (43, p. 296)

Mentally shallow, he was too poor a student to gain admission to the larger colleges of his choice. (43, pp. 4, 5, 24-5) At Dartmouth, he barely got by until he presented his theme lauding John D. and his Standard Oil activities, and identifying himself with them. He received a high mark in his course in economics from a professor

with an eye for the "main chance", with a Phi Beta Kappa key thrown in. (43, p. 43) Awareness of his intellectual limitations probably accounts for his high suggestibility from chosen individuals and sources. Thus he acquiesces readily in the puncturing of his "grandiose ideas" by his brother Laurance. (43, p. 14)

He submitted to disciplining, guidance and instruction by his publicity man, Francis A. Jamieson, a reporter who had been recommended to him by his brother Winthrop. Jamieson became in effect his "alter ego", and virtually did his thinking for him, (43, p. 138, 145, 307) and was also his ghostwriter and mentor. Others, including Wallace K. Harrison, a kinsman, exercise a similar influence. It may be that he is open to suggestion from those who let him think that he originated their ideas. These "alter egos" who ghostwrite his speeches and publications do not do his thinking for him, however, on the subject of greedy money grabbing! With other persons, he is characterized as cocky and self-confident (43, p. 29), bull-headed, iron-willed (43, p. 144) and stubbornly determined (43, p. 281). Lacking the wits or patience to carry out plans, plots and schemes, whether sound or "grandiose", he commands the power and means to buy the brains to do his chores and dirty work. The power with which wealth and position endow him, and the fear of his vindictiveness and vengefulness (43, p. 181) serve to suppress any opposition to his wishes and commands; and they make for the appearance of ability to "dissolve controversy". (43, p. 311)

Physically, Morris depicts Nelson Rockefeller, presumably on his say-so, as "chicken" and a coward. This may account for his evasion of the draft, after he had played a significant role in putting over military preparedness and military draft in order to provide the Rockefeller Empire with self-paid mercenaries. Another factor in the draft evasion is the Rockefeller scorn of patriotism, and their "internationalism", a family tradition. (43, pp. 107-8) But when his life is endangered, he reacts frantically. (43, p. 108)

Nelson Rockefeller makes it a point to advise all his biographers that in all that he does, he seeks a maximum of personal advantage and monetary profits. He and his clan, they explain, are generous only with things that cost them nothing, such as words and sympathy, or other people's and taxpayers' money and possessions. (31, p. 34) This is especially true of their so-called "philanthropies", which are moneys that they have empowered themselves to withhold from the Treasury, the people's money.

Biographer Morris makes it clear on behalf of his subject that his prime interest is "making money" (31, p. 33) in whatever enterprise he engages by whatever means serves his grasping purpose. And his record proves that no enterprise is too low, mean, sordid or vicious to engage in, on condition that it provides inordinate profits. Nelson Rockefeller has never required either guidance or advice on the matter of wringing the maximum profit and loot out of any enterprise in which he engaged. To this end, he has learned to pose and act. In connection with his political campaigns, he hired "Pat" Sylvester Weaver, former N.B.C. producer, to teach him to put on his act. He has learned to present an engaging personality that is extremely deceptive. He successfully poses as gracious—unless he is crossed and does not get his own way. But if he is crossed, his true meanness and vindictiveness and ruthless character emerges in spite of all training and discipline. This is especially true if interference with "making money" or looting is involved.

Nelson Rockefeller is presented by one of his publicists, Stewart Alsop, in an article in the SATURDAY EVENING POST of September 1959 entitled THE ROCKEFELLER NOBODY KNOWS, as a "Jeekyll and Hyde" character. Alsop relates (49) that to friends, Rockefeller is most gracious—provided that it costs him no money. As an example, he cites that Rockefeller offers his friends, when they are ailing, samples of tranquilizers that are distributed by drug firms, that the family control, free of charge for advertising purposes. But he himself takes none of these poisonous drugs that yield the family interests the 8,000% to 10,000% profits that Sen. Kefauver exposed. His friends, Alsop intimates, regard this "generosity" as unique and "out of character". But, relates Alsop, those who do business with Nelson Rockefeller must exercise their utmost caution. For they discover that he is utterly ruthless. They become, unfortunately, too well aware of his success in training himself to be "cold and calculating".

Cowardly, acquisitive, scheming, calculating, designing, suspicious, vengeful, vindictive, rapacious and ruthless (43), Betancourt, President of Venezuela, thus characterized Nelson Rockefeller; also as a "gangster and bird of prey". (31, p. 187; 43, p. 245) That was before Nelson Rockefeller adopted the traditional familial, masking pose of "philanthropy" and "piety". That the pose of "piety", "religiosity" and "tolerance" is as false as that of "philanthropy" will be made clear.

Publicist Morris points out on behalf of his client that

in Nelson Rockefeller there can be observed "a trace of all his ancestors". (43, p. 4) The broadest "traces" are those of his criminally psychopathic ancestors: of the lusty "horse thief, swindler, bigamist and rapist", "Doc" William Avery Rockefeller who revelled and prospered in exploiting human misery; and of John D. regarding whose activities the U. S. Supreme Court decreed:

"For the safety of the Republic we now decree that the dangerous conspiracy must be ended by November 15 (1911)." (8, p. 154)

Nelson Rockefeller's pose of religiosity is as much a sham as was that of his paternal ancestors, merely serving in "making money". He fosters "ecumenism" primarily because it will eliminate the religious barriers to "making money". Though he has played a role in fostering the "brotherhood" of Christians and Jews, his familial, Baptist bigotry emerged to light in the actions of his son at Princeton in excluding Jews from the dining clubs and in forcing the expulsion of the Catholic chaplain, Father Halton; and in the fate of Catholic agents suspected of defecting.

When "making money" in Arabian oil is concerned, Rockefeller's paramount loyalty is to Mohammedanism. Languishing, poverty-stricken Mohammedanism has been enriched and fortified by Rockefeller interests to the point where it challenges Christianity in Asia and Africa, and indulges in a Holy War against it. News of it has been carefully suppressed. The only report of this war on Christianity that has penetrated the rigid censorship of the conspirators, was carried in the shipping news section of their New York Times, on page 51, of its July 17, 1956 issue. Under the headline **CRUCIFIXIONS REPORTED IN ASIA**, it stated in a dispatch by its correspondent, Stanley Rowland Jr., from the Silver Bay Conference on Christian World Missions:

"... 'religious nationalism' in parts of Southeast Asia . . . is making missionary work difficult . . . crucifixions are reported to have occurred in the Celebes . . . The victims were said to be native Christian pastors and elders of established churches that carried on works of mercy in remoter sections of the Celebes. The violence was ascribed to a Moslem group of anti-Christians known as Darul Islam. The executives who hold responsible posts with major Protestant organizations **WITHHELD NAMES AND DETAILS FOR FEAR OF REPRISALS.**" (142)

The Jews likewise have found themselves betrayed to the Arabs in the partition of Palestine that was planned by the Rockefellers as a route for the originally planned

Trans-Arabian Pipeline, because they rightfully did not trust their Arab partners and wished to put the pipeline through non-Arab terrain. When the Israelis later undertook to stop harassment by the Arabs by invasion of Egypt, and were joined after their initial successes by the British and French intent on protecting their investment in the Suez Canal, Rockefellers acting through their agency, the U. S. State Department, and the Rockefeller-Soviet "United" Nations agency, came to the rescue of the badly defeated Egyptians and the regime of their renegade Jewish agent, Nasserbaum, alias Nasser. It has been reported that the Rockefeller interests were rewarded with a profitable long-term lease on Suez Canal. The affair established a precedent for the seizure by their Axis partners of the Panama Canal, that is now threatened. The promise made to the Israelis in return for their giving up the Egyptian territory that they had conquered, assured them of freedom from further harassment by the craven Egyptian agents of the conspirators. It has been honored solely in its breach. This characteristic double-dealing of the Rockefellers parallels that dictated by them to their puppet Pres. Roosevelt when he dealt on their behalf with Saudi Arabian King Saud.

## CHAPTER VI

### ROCKEFELLER BECOMES ROOSEVELT NEW DEAL "ADVISER" & BOSS

Directly after graduation from Dartmouth, Nelson Rockefeller qualified for sharing in the family loot by acquiring his own, by marriage to a wealthy Philadelphia mainline heiress, Mary Todhunter Clark. Their honeymoon trip around the world partook of the nature of a tour of royalty. And the tourists enjoyed the prerogatives of royalty wherever they went. The Rockefeller Dynasty had come to be recognized, after more than two decades of behind the scene control of the U.S.A. and of the world, as all-powerful and uncrowned world rulers whose wealth and influence exceeded that of any other royalty. For they had succeeded in accomplishing what all other monarchs had failed, making themselves rulers of the

U. S. This was recognized by them as early as 1913, as revealed by Grand Duke Alexander of Russia. (41, p. 242)

The Rockefeller honeymoon was a triumphal procession around the world. The considerable honeymoon entourage, which Nelson Rockefeller has since made his practice, was bizarre. Rockefeller reported for the edification of American "peasants", the course of this regal, nay imperial honeymoon, and their reception by royalty and nobility wherever they went. With Standard Oil executives supplementing the local American Ambassadors, the honeymooners floated on a sea of oil into palaces around the world. His Imperial Majesty, Nelson Rockefeller, accepted the homage of his regal vassals.

On his return from his honeymoon, Nelson Rockefeller took over control of the Dynasty's Rockefeller Center development in the role of Real Estate Director of the family-controlled Chase National Bank. The Center is grossly misrepresented by the Rockefellers and their pressagents as a Rockefeller "philanthropy" that they undertook in a period of depression, at considerable risk. (44, p. 2; 31, pp. 58-68) Actually it was, exactly like other of Rockefeller bogus "philanthropies", a malignly conceived and executed mercenary enterprise that could not fail to be enormously profitable.

The project had been launched by John D. the Second (Jr.) as a pretended "cultural center" that would furnish a new home for the Metropolitan Opera Company and other forms of performing arts, in much the same manner as there was launched by the Dynasty, several decades later, their Lincoln Center. Public support and contributions were solicited for it. The project (naturally merely incidentally) would serve to enhance the value of the Rockefeller homes and adjacent property that they had purchased in the neighborhood that was beginning to be run down. Whether any of the funds that the public was solicited to subscribe for financing the supposed "cultural center", which is a gimmick that is habitual with the Rockefeller "philanthropies", was ever returned to any subscribers or what may have happened to that money, is not clear from the record.

Shortly after the timely launching of this venture, the conspirators precipitated the 1929 crash and panic. (10) And "unfortunately", if one trusts their pressagents and propagandists, this so-called "white elephant" (44, p. 6), that constitutes the very heart of New York City and its most strategic and valuable property, fell into Rockefellers' exclusive possession. That is a "misfortune" that few

of us would begrudge ourselves. It gave the Dynasty a gilt-edged investment at bankruptcy prices, into which to stow away a small fraction of their plunder from the panicky and depressed nation.

Nelson Rockefeller used Rockefeller Center to "sell real estate short" and to extend to it the panic that the conspirators had created in the stock market by their "Federal" Reserve System manipulations. He deliberately precipitated the foreclosure of some of the most valuable property in the country, New York City office buildings, by conspiring to empty them by luring away their tenants. This resulted in a distrust of real estate finances and mortgages that precipitated an endless wave of foreclosures of properties. As a consequence, millions of people lost their property, their homes, farms, businesses and savings.

Rockefeller's subservient agent and pawn, Sen. Robert F. Wagner, ably served the conspirators in this vicious plot by pushing through Congress during the last hour of the last session of the 72nd Congress, Public Bill No. 296. The bill made Rockefeller Center a free-port. This enabled Rockefeller to offer tenants that he lured from other buildings into the Center, the added advantage of being able to import merchandise for display without paying duty on entry. This meant that firms moving into Rockefeller Center required less capital to do business than did their competitors across the street, thanks to the dishonest and un-Constitutional law that the conspirators had had passed for their malign purposes.

This vicious activity at Rockefeller Center that cost so many million folks the foreclosure of the homes and farms during the depression, and forced them into the ranks of the homeless and destitute, is represented by Nelson Rockefeller and his pressagents as "philanthropy". It is indeed representative of the true character of all of Rockefeller's bogus, so-called "philanthropy" which invariably covers up plundering, tax evasion, subversion, treason and other forms of criminal activities. They present it in his campaign literature (44) as a "boon to mankind" and the nation that "justifies" putting our fortunes and our destinies in his hands as our Presidential Dictator and Fuehrer.

It is interesting to note that Nelson Rockefeller omits from his campaign propaganda, any mention of the "ten percent" or kickback racket which he organized as his first "business venture" to "make use of Rockefeller influence" for assuring himself of questionably "legitimate" profits in Rockefeller Center and, later, Government con-

tracts. No doubt the exposure and disrepute of "ten percenters" during kinsman Truman's regime, and their criminal prosecution, accounts for this omission. Can it be that Rockefeller influence accounted for escape from exposure of his activities? Pressagent Morris, however, gives Rockefeller's proud account of his activities in the field of what is known as "cheap chiseling" and "ten percenting". While engaged in the building of Rockefeller Center, in the early 1930's, Nelson Rockefeller organized under the name of an associate (a common Rockefeller practise), Fenton Turck, a former American Radiator Co. vice-president, in partnership with him and with Webster Todd (son of a director of Rockefeller Center) this "unusual business enterprise". (31, pp. 58-9; 43, pp. 93-4)

With keen sense of humor, Morris relates that Rockefeller's connection with the Center, with the Chase National Bank, with Standard Oil Co., and with other enterprises controlled by the Rockefeller Empire, was "an advantage to Turck & Co." After a highly prosperous year, Nelson Rockefeller followed the usual practise of the Dynasty and "induced" his partners to turn over this entire, highly profitable enterprise to his exclusive ownership. He changed its name to "Special Work Inc." and made it a unit of the "philanthropic" Rockefeller Brothers. This variety of enterprise is now highly favored by the Rockefellers, especially in connection with Defense Department contracts. It may prove to be the "nigger in the woodpile" of the TFX aircraft contract that may never be brought to light.

Rockefeller expanded the thievish real estate operations into a device for dispossessing and disinheriting us as effectively as Communism has the Russians. It was launched under the pretense of remedying a deliberately engineered housing shortage created by their New Deal and World War II "rent control" operation that un-Constitutionally forced landlords to subsidize their tenants with rents so low as to bar adequate maintenance. Landlords were so completely robbed of control of their properties that they could not protect themselves from the deliberate destruction of their improvements by the tenants. To deliberately aggravate the damages, the conspirators colonized sections of cities that they planned to grab with white, colored and Porto Rican riff-raff who would be certain to wreck the properties and create slums. This the conspirators brazenly acknowledge in their publication **THE EXPLODING METROPOLIS**. (144, p. 105) The slums that they have thus deliberately created, the conspirators proceed to steal from their owners by so-

called "slum clearance" and "urban redevelopment" under legislation, that goes by the name, Title I. It compels the taxpayers to condemn, confiscate, demolish and clear the properties and sell them to the conspirators at an infinitesimal fraction of the cost. This sales price is converted to a bonus by such devices as public financing of new construction and tax exemption for periods as long as thirty years. The bitter irony of the situation is that the robbed owners are forced by the conspirators, as taxpayers, to pay for their own looting!

Rockefellers engage in this land grabbing on a nationwide scale, operating through an endless array of "dummy" agencies. For the steal of rural land, they use the Federal Defense, Park and other departments which they control. In New York City, they have managed, through a series of "slum clearance" and "urban redevelopment" deals, engineered by themselves and their agencies, to grab the most valuable property in the city, including its entire waterfront. In addition to the Lincoln Center, the Alfred Smith, the Herbert Lehman, the Metropolitan, the Morningside, and numerous other such "developments", Rockefeller have engineered the New York Stock Exchange and the Lower Manhattan steals. The last grab will destroy more than three thousand long established local businesses and the jobs of an estimated fifty thousand employees. The steal is directed by David Rockefeller, with the acquiescence and support of his brother, Governor Rockefeller. Both are intent on "making money" with a so-called World Trade Center operated by their Port Authority, that will be made possible by the looted taxpayers themselves through the projected relocation of New York State offices in the Center. So contemptuous have the Rockefeller become of us, their "peasants", that this steal has been carried out by them at the very time that Nelson Rockefeller was campaigning for the Republican Presidential nomination, and in complete disregard of demonstrations by the victims.

Among the widespread steals of the conspirators are those in: New Orleans, where persistent efforts to grab the entire business district, on numerous pretexts, have been valiantly fought by public spirited Col. Bluford Balter; Monroe County, Florida, where the conspirators have undertaken to steal, by a bill introduced by Florida's congressmen and passed, oil and sulphur land, that is under lease to their Humble Oil Co., by confiscating it for inclusion in the already million-plus acres, oversized wasteland that goes by the name of Everglades National Park, and includes the bulk of the valuable subtropical land in

our country; the steal of the Chavez Ravine oilfield in the name of the Dodgers, that was signed in the office of a Rockefeller attorney, and involved a number of "payoffs" and violent eviction of rightful owners; Los Angeles' Bunker Hill oilfield; Jackson Hole oilfield; and numerous other frauds and steals. Unfortunately, and unwisely, religious sects have joined in as partners in these steals, as in the case of the Washington HIGHTOWERS luxury apartment development, that highlights the use of zoning and rezoning as a device for stealing property and land-grabbing.

In his campaign material, Nelson Rockefeller represents himself as "patron of Labor". (44, p. 7) An interesting story that is told in this connection, closely parallels the tale of the activities of his father, John D. the Second, in breaking the Colorado Fuel & Iron Co. strike. It indicates how strong is the "proud tradition" of the Rockefeller Dynasty. Most of the workers engaged in the construction of Rockefeller Center during the depression were paid the NRA wage that had been set by the Dynasty through its agents in the Government, which averaged fifteen dollars for a forty-eight hour week. As one might expect, there was a bit of discontent with Rockefeller "munificence" and "philanthropy" among the construction workers. And there was some talk of organizing and striking.

The hitherto unpublished story recounts that one of the Maffista agents of the conspirators, Joe Adonis of Murder Inc. fame, was assigned the task of "convincing" the workers that they did not want an increase in pay. Successful in this chore, Adonis demanded a reward that was regarded by his patrons as "exorbitant". Joe Adonis was, thereafter, deported. Unquestionably, such practises that are common in the activities of the Dynasty, do assure what they call "good labor relations" and freedom from strikes.

The Labor Relations Act that was subsequently introduced by Rockefeller "New Deal" agent, Sen. Robert F. Wagner, has made the Maffia control and gangster leadership of Labor the "accepted and established practise". The Rockefeller boast that they have had only one "wild-cat" strike at Rockefeller Center, under Nelson Rockefeller's direction", is readily understandable. (31, p. 69)

In an article in the March, 1964, issue of *READER'S DIGEST*, entitled *THE MOUNTING SCANDAL OF URBAN RENEWAL*, Rep. John Dowdy (D. of Texas) Chairman of Subcommittee No. 4 of the House Committee on the District of Columbia, exposes and attacks

the thievery and misuse of power in the conspirators' "slum clearance" and "urban redevelopment" programs. He also cites the tremendous increase in rentals that has resulted from this perversion of "rent control".

An interesting development is rumored about the Rockefeller land and property grabs in New York City. The pressure brought by their banks and other financial institutions to force the building of steel and glass towers, that can not be weatherproofed and are enormously costly in maintenance, most of which have been built under the architectural direction of Rockefeller kinsman (partner?) Wallace K. Harrison, will inevitably result in foreclosure. The same fate is already in sight for the new slums created by the gerrymandered public housing developments, the sale of which has already come under discussion. These and other developments could readily result in a takeover of most of the island of Manhattan by the Rockefellers at even lesser net cost than the price originally paid for it by the Indians. The suspicion has been aroused that the conspirators plan to take Manhattan, after theft of all the island by these devices, out of the United States to make it their private domain under the auspices of their "United" Nations agency. The reader is referred to the author's elaboration of these matters published in the May, 1959 issue of WAKE UP AMERICA, entitled ROCKEFELLERS DISPOSSESS & DISINHERIT US.

Simultaneously with Nelson Rockefeller's entry into the affairs of the Rockefeller Empire, Henry L. Stimson, Rockefellers' attorney who was Secretary of State under Pres. Herbert Hoover, approached the President on behalf of the Rockefeller-Standard Oil interests with the proposition of declaring war on Japan for the purpose of sending American troops to protect their properties in China that were being systematically destroyed, as a matter of revenge, wherever their troops invaded. (11, p. 362; 51, p. 43; 52, p. 317)

Pres. Hoover, though a dedicated Rockefeller agent and member of their Council on Foreign Relations, rejected their war order on the obvious ground that the Japanese destruction of property in China did not involve the American people and their interests (other than those of the Rockefeller conspirators) and he did not "propose to ever sacrifice American life for anything short of this".

But venal, corrupt and traitorous puppet, Franklin D. Roosevelt, delightedly agreed to the treasonous proposal advanced to him by Stimson on behalf of the conspirators. (53, p. 27) The Rockefeller-Standard-Oil conspirators thereupon put their pawn, Roosevelt, in the White

House, where he immediately attempted to make good his pledge to them. (48, pp. 134-42) James Farley reported that directly after his inauguration, Roosevelt began planning to force war on Japan. (37, p. 39) In these maneuvers to jockey Japan into the attack on Pearl Harbor that finally accomplished the purpose of the conspirators and forced us into the war they had planned, the Rockefellers, their Institute of Pacific Relations and their attorney and agent, Henry L. Stimson, played key roles. (11, pp. 274-99, 375-95) For tricking Japan into the attack on Pearl Harbor, the conspirators made Stimson Secretary of War; and through their IPR, they furnished the Communist, Richard Sorge spy ring in Japan with funds and two spy reinforcements, Guenther Stein and Agnes Smedley, with the assignment of inducing the Japanese military to change their plan to attack Russia, and attack Pearl Harbor instead. (16, 56)

The plan to use the Pacific Fleet as a "decoy" accounted for Roosevelt's overriding the protests of Pacific Chief of Staff, Admiral Richardson, against this obvious treachery, splitting the Fleet and planting a major part of it, like "sitting ducks", in the Harbor from which it could not escape when attacked. In this, Roosevelt heeded his "closest adviser". (11, p. 384)

Two decades later, Rockefeller's New York Times announced in its Sunday magazine section article of May 22, 1960, (p. 88) entitled WHERE ARE THOSE RAM-PAGING NEW DEALERS?, the proud fact that Roosevelt's closest adviser was then Nelson Aldrich Rockefeller. (12) The article was planted in the Times as campaign material that was intended to secure for Rockefeller the Republican Presidential nomination at Chicago.

It is interesting and possibly not to be wondered, that the "rigging" of the attack on Pearl Harbor by the Japanese was not listed by him and his agents, in his widely distributed campaign brochure prepared in the name of the N. Y. Republican Campaign Committee, entitled MEET NELSON ROCKEFELLER, (44) as a "distinguished, patriotic service" to our country. It seems to indicate that the conspirators were more fearful of the patriotism of the rank and file of Americans than they were of that of the delegates to the Republican Convention. Fortunately, they were wrong in doubting the latter's Americanism, despite the innumerable agents the conspirators had placed among them.

Biographer Manchester cites an amusing story to illustrate how immense and unquestioned has been the power of the Rockefellers in general, and of Nelson Rockefeller

in particular, in the Government under the Roosevelt and succeeding Administrations. He relates that Winthrop Rockefeller Jr., schoolboy offspring of the divorced Bobo, fancied himself to be the inventor of a new type of airplane. He phoned about it to the local airforce base. The magic name of "Rockefeller", uttered in a childish voice, sufficed to connect him directly with the commanding officer of the base, and to give him a most respectful hearing. (9, p. 13)

Manchester labels the Rockefellers "capitalism's . . . royalty". He cites a number of instances when wishes of the youthful Rockefellers were obeyed as commands by governments in Washington and around the world. (9, pp. 9-13) He makes no mention of their support, adherence and domination of the Communist world. Possibly that is because he realizes, as do few persons, Communism is in effect a supercapitalistic dictatorship. Manchester wrote that "one need not be a Nelson" to agitate governments. He attributed their immense power to their worship as Mammon, that makes folks' knees bend before the Rockefellers. He failed to give credit to the immense power of the Rockefellers to bribe, subvert, seduce, corrupt and pervert at no monetary cost to themselves, but at the expense of the public, the taxpayers, who bear the burden, thanks to the virtual abrogation of the Constitution and law that they have brazenly effected for themselves. They have virtually made the whims of Nelson Rockefeller and his entourage the law of the land.

The Rockefellers, especially in the person of Nelson, have usurped for themselves exclusively, the status of the "perpetually rich" by virtue of their ability to dip their hands into the public and private purses of the nation that was envisaged by Hoffman Nickerson as the status to be attained by the absolute monarchic ruler of the land. (39) The "open sesame" to their power has been the tax-exempt status that they have created for themselves plus their control of the Government and "Federal" Reserve. The resultant power that they have thus usurped exceeds that of most of the world's monarchs. At the cost of the nation, they possess the power to bribe and corrupt by endless means, including political, industrial, elective and appointive preferment in government, private enterprise and their super-governmental agencies, their tax-exempt foundations that are financed by public funds. This is the real source of their power and the menace that they uniquely constitute to the nation and the world. This menace of the Rockefellers has been openly acknowledged by their agent, attorney and biographer, Raymond Fos-

dick. (21, p. 433) He frankly stated that a fortune as large as the Rockefellers' is dangerous in any form of society. But he omitted mention of the even greater menace constituted by the status that they have usurped, that makes their wealth and criminality a perpetual menace to the nation and the world.

## CHAPTER VII

### NELSON ROCKEFELLER'S RED TOOLS AND AGENTS: "THE ESTABLISHMENT"

The Rockefeller menace was greatly intensified when Nelson Rockefeller had won his spurs by his Chase National Bank, Rockefeller Center and Special Work Inc. skulduggery. He arrogantly and insistently demanded of his father, John D. the Second, a dominant voice in the affairs of the Rockefeller Dynasty, and especially in its domination of the Government. His father feared Nelson's plan to openly emerge in domination of politics and to strut on the public scene as open dictator, because he recollected with trepidation and consternation the nation's reaction to their past criminal activities. (43, p. 98) The father regarded the son much in the light of a menace and a troublesome juvenile delinquent. He failed to realize the extent to which the perversion of education by the bogus "philanthropies", that he had launched, had warped the nation's mentality and moronized it, wiped out all memory of past criminalities, and endowed the members of the Dynasty with saintly haloes.

Nelson Rockefeller's "Progressive" and Red education asserted itself. He had been taught that parental discipline should be spurned except as it pleased the child; and that the child should brush his parents and elders aside and do whatever, in his superior wisdom, or psychopathy, and experience, he wishes to do, lest he develop a "complex". He brushed aside his fearful father, and assumed the role of Dynastic overseer and boss of the U. S. and of the world.

Though Nelson Rockefeller had properly judged, in the light of his own training and "education", the changed mental attitudes and capacities of his compatriots who

had been seduced and subverted by the Dynasty's "philanthropies", he nevertheless is sufficiently imbued with their familial psychopathic suspicions and fears to avoid immediate and direct confrontation of the public with the power over them that he had usurped. He was satisfied to operate initially from behind the scenes, through such of the Dynasty's agents whom he has trusted as sharing his indoctrination of Red "liberalism" and ready to accept his dictates. He added to this group some of his intimate associates who were of one mind with him in regard to that "liberalism" and the "New Deal" conspiracy that had been blueprinted for the Dynasty by Hoffman Nickerson. Nickerson is their associate, friend and fellow member of the Union Club which is the "court" of the Rockefeller Empire that is located at the corner of Park Avenue and Sixty-first Street, New York City, nearby their Council on Foreign Relations. With their sister organization, the Soviet U. N. Delegation, they symbolize the real world government. (11)

It is readily understandable that the conspiracy for converting our American Constitutional Republic into an absolute monarchic dictatorship would accord with Rockefeller's psychopathy and "grandiose ideas", that it would have great appeal for him and readily would be expanded to the Weishauptian, super-Napoleonic, paranoid concept of making himself dictatorial "One (Rockefeller) World" monarch. It is equally understandable that in view of the relatively recent exposure of the criminally subversive character of the Rockefeller Dynasty that had been characterized by the Supreme Court as a menace to the Republic, the need for caution, slyness and patient planning was obvious even to such a psychopathic mentality. Nelson Rockefeller contented himself, in spite of his "brashness" and braggadocio, with initially operating through his picked and trusted associates and agents.

The select group of Nelson Rockefeller's sponsors, guides, associates and agents with and through whom he has dominated the "New Deal", the nation and the world, and whom he has carried along with him as he advanced to open emergence as dictator of the current scene, are of special interest. They include, in addition to the host of Reds, "liberals" and frank Communists who have been trained for their subversive roles in schools, colleges and universities subsidized by the Rockefeller foundations for the dissemination of subversion, in the guise of "social sciences", some figures who might be regarded as functionaries of the Communists and the Nazis, the Communazis.

Nelson Rockefeller's "New Deal" sponsors and guides included two tried and trusted Dynastic agents who were placed beside their puppet, Roosevelt. These were:

**HARRY L. HOPKINS** the Red social worker who financed his rise in the New York State "Charity Trust" with the dowry of his Jewish wife, Ethel Gross Hopkins. He then sloughed her off, with her children, for other women who could and did further his career. He became an intimate of Eleanor Roosevelt (as acknowledged in the November, 1936 issue of *VOGUE* by the Roosevelt pressagent, Jay Franklin Carter) in the early 1920's, shortly after her husband's incapacitation by encephalomyelitis. His second wife was a Barbara Duncan, whom, it was testified in the divorce hearing before Judge Phillip McCook, he shared with his boyfriends. His subsequent philanderings are a matter of record. (109; 26, p. 23)

This sterling character was appointed Director of the New York Tuberculosis and Health Association after rolling up an unenviable record as head of the Southern Division of the American Red Cross. It is a matter of record that none of the money raised by the sale of Christmas seals during his tenure of office with the N.Y.T. & H.A. ever served to furnish medical care for any victim of tuberculosis, or helped any institution providing such care. The bulk of the funds were diverted to Red political activities and to providing for his staff, including his mistress who later became his second wife. (26, pp. 21-30) Harry Hopkins followed Eleanor Roosevelt and Franklin to Albany; and then to Washington, where on the basis of the squandering of Christmas seal funds and his loyalty to the former, he was furnished with billions of dollars of taxpayer funds to use in the same manner. At the bottom of his "Relief", Work Progress Administration and numerous other boondoggles and squandering was his "philosophy":

"Tax! Tax!! Tax!!! Spend! Spend!! Spend!!! Elect! Elect!! Elect!!!"

His object was avowedly to force the nation into bankruptcy as the shortest and most rapid road to Communism.

According to Harry Hopkins' patron, Murray Garsson who liberally subsidized him with bribes for Government contracts, paid his gambling debts and racetrack losses, loaned him the use of the apartment that he maintained in a Washington hotel, during weekends for the entertainment of his coterie and paid for their checks. Those friends of Hopkins' who signed the checks proved to be Hiss, Marzani and other members of the Communist Hal Ware cell. Garsson reported that it was only after a long

lapse of time, when he found the leisure to make a detailed examination of the checks, that he discovered that he had unwittingly paid for the entertainment of the most dangerous group of Communists in the country who were led by Harry Hopkins. (111; 48, p. 146)

Harry L. Hopkins, the Communist who joined R. O. Lovejoy, Mary van Kleeck and Eleanor Roosevelt (48, p. 54) in an organization that was the nucleus of the American Communist Party (26, p. 160), registered as Socialist but changed over to Democrat without straining his conscience. He was a stellar figure in the "social service" and "philanthropic" setup dominated by the Rockefellers. His proverbial devotion to Eleanor Roosevelt and consequent influence with her husband made him a useful tool. (110, p. 29; 48, p. 174)

Harry L. Hopkins acknowledged his debt to the Rockefellers when (in the late 1930's) he was appointed Secretary of Commerce, by offering the post of Assistant Secretary to Nelson Rockefeller. (48, p. 67) This was the first timid, fearful move on the part of Rockefeller to test the climate of public opinion in regard to his emerging openly into the political career that was planned as the path to his "Presidential" monarchic dictatorship a la Nickerson. Hopkins's offer of the appointment was never openly publicized. It was designedly "leaked" to newspaper columnists as a "rumor". Walter Winchell later announced that Rockefeller and his advisers were not satisfied with the public reaction to the leak and had decided against the appointment. After the conspirators had arranged World War II and the Japanese attack on Pearl Harbor that effected our entry into the war, it was Harry L. Hopkins in cooperation with another Rockefeller agent, Anna Rosenberg, who arranged the draft-evading post of "Co-Ordinator" of Inter-American Affairs for him.

ANNA M. ROSENBERG (nee Lederer), (now married to another Rockefeller CFR and UN agent, Paul G. Hoffman) was originally employed by Rockefeller to handle the dubious labor relations at Rockefeller Center. She is reported to be on the Rockefeller payroll, at a salary of five thousand dollars a week, as one of their most trusted employees. A Hungarian-born Red, or "liberal", she had been given her appointment to an NRA board by Lee Pressman. Pressman was one of the few "New Dealers" who honestly acknowledged himself to be a Communist; and frankly stated that he had never made an appointment, as "New Deal" patronage dispenser, of anyone who was not a member of the Communist Party and subject to its discipline. (11, p. 296) Pressagent Morris reported that

Anna Rosenberg was instrumental in placing Nelson Rockefeller and keeping him in his draft-dodging "Co-Ordinator" and State Department job, because of her ready access to tovarich Eleanor Roosevelt and the President. (43, p. 131, 166) She in turn was placed, by Rockefeller influence and as agent, in many posts that were strategic for the conspirators, including that of Assistant Secretary of Defense during the Korean "police action" (1950-3) and the U. N. Red, brainwashing UNESCO. "Co-Ordinator" Nelson Rockefeller appointed her to his advisory committee on policy, and under his influence she became important adjuncts of the Truman and Eisenhower regimes, as well as of the organization for molding public opinion for the Dynasty then headed by Albert D. Lasker (102, pp. 288-90) that has been integrated into Interpublic Inc. She also has served on numerous of the "committees" and "commissions" picked by Nelson Rockefeller to echo his dictates, including his "committee" that echoed his plot for the future of the nation that was issued under the title of PROSPECT FOR AMERICA. (78)

ALGER HISS was one of the closest friends and personal associates of the Rockefellers. Hiss owed most of his appointments to the Rockefellers and their kinsmen and agent, John Foster Dulles, in the State Department, the United Nations, the Presidency of the Carnegie Endowment For International Peace, and in their Council of Foreign Relations. Hiss, Dulles and Stassen represented the Dynasty in their World Council of Churches that issued the call for an Ecumenical Congress that was heeded by the Vatican.

Nelson Rockefeller showed his craven spirit, possibly in fear of exposure of his implication, which he recently acknowledged, by not coming openly to the defense of Hiss in his trial, as did Dulles and other of his agents. But the conspirators richly supported Hiss's defense, presumably with tax-exempt, public funds.

JOSEPH E. JOHNSON, formerly assistant to Rockefeller's pal, Alger Hiss, in the State Department. He was permitted to resign after discovery of a "leak of intelligence". (62, p. 121) Directly after Alger Hiss was sent to jail for perjury in connection with treason, most of Hiss's appointments were given to Johnson by the Rockefellers and their kinsman, John Foster Dulles. He now holds, among other posts, that of President of one of the key propaganda agencies controlled by the Rockefeller, the Carnegie Endowment For International Peace. He is a member of Rockefeller's Council on Foreign Relations.

DEAN RUSK, the Rhodes scholar, and Joseph E. John-

son's assistant director of the Division of International Security Affairs in the State Department, from which post he was promoted to Assistant Secretary of State for Far Eastern Affairs, during the Korean "police action". In that capacity he served the conspirators well by collaborating in getting Pres. Harry Shippe Truman sufficiently "mellow", in the wee hours of the morning, to work up the bravado to dismiss Gen. Douglas MacArthur, in order to make sure that he would not carry out his threat to defeat the Communists. That would have wiped out the amity of the Rockefeller-Soviet Axis, disturb the serenity of Stalin and jeopardize the Rockefeller-Standard Oil profits in Russia, Saudi Arabia and elsewhere. (11) He was promptly rewarded by the Rockefellers for his "noble efforts" by appointment to the highest office in their Empire next to the Dynasty itself. He was rewarded with the post of President of the Rockefeller Foundation.

Pres. John F. Kennedy later appointed Dean Rusk, President of the Rockefeller Foundation, and a fellow member of the Council on Foreign Relations, his Secretary of State, on the "advice" or order of Nelson Rockefeller. It was reported at the time that this was one of the appointments dictated to Kennedy by Rockefeller as part of the pre-election deal made to betray Nixon and the Republican Party and "throw the election" to him. Rockefeller's associates report that he boasted that he had voted a "straight Democratic ticket" in 1960.

LAUHLIN CURRIE, a Canadian Red, or "liberal", who was planted in strategic positions in both the Treasury Department and later in the "Federal" Reserve System, to direct the control of U. S. finances for the conspirators. Like Alger Hiss, Currie was a graduate of one of the Rockefeller-subsidized hotbeds of Communism, Harvard University.

At Harvard, Currie was instructor of Harry Dexter White, whose activities in the Treasury, he directed under the aegis of his Rockefeller patron. Elizabeth Bentley, a Communist courier, reported that Currie was then, as since, a Communist agent under Party discipline. (63, pp. 172; 62, p. 117). Whitaker Chambers confirmed the fact in his testimony before the HUAC. (62, p. 117) Congressman Jerry Voorhis attests to the fact that neither Pres. F. D. Roosevelt nor Chairman of the "Federal" Reserve Board, Marriner Eccles, dared act in matters of national finance without the authority of the Rockefeller-Soviet agent, Lauchlin Currie. (64; 10)

Planted as Administrative Assistant to Pres. Roosevelt by the conspirators, in 1939, he was in a position to en-

gineer the bankrupting of China and its delivery to the Communist partners of the Rockefeller interests, by blocking shipment of munitions to the Nationalists. (62, p. 36) In this, he was subsequently aided ably by another Rockefeller associate and agent, Gen. George Marshall. (11, pp. 291-6) Currie's Communist treacheries, which has since cost the lives of so many of our G.I.'s, was facilitated by Pres. Roosevelt sending him, as his personal representative, to China. In 1952, when the Korean "police action" has made clear the extreme costliness in American lives and fortunes of his activities in delivering China to the Soviets on behalf of his patron, he was sent to South America where he would be beyond the reach of process servers and Congressional investigators. There he has served the interests of the Rockefeller-Soviet Axis. He is reported to have played an important role in saving the life of Fidel Castro, another agent of the conspirators, in the Bogota riots that the latter staged, preserving him for his present services to the Axis. He was closely associated with Nelson Rockefeller in the Council on Foreign Relations and other agencies.

It is curious that though these and other Communist agents of the conspirators cost the lives of numerous of our G.I.'s, they were never even threatened with the death penalty. This stands in sharp contrast with the execution of the Rosenbergs, whose activities cost no American lives. It is probable that the Rosenbergs were executed because they violated the orders of the conspirators and dared act on their own initiative. This fact is stressed by the delivery by John Foster Dulles to Communist atomic spy, Zarubin, who had been accepted by the Administration as Russian Ambassador to the U. S., of a large supply of uranium and plans for atomic devices. This was done, the New York Times reported at the time, within a month after the Rosenbergs had been executed for being found guilty of delivering fragmentary information to the Communists.

BEARDSLEY RUMML, director of the Laura Spelman Rockefeller Memorial, launched the Rockefeller Dynasty in open support of Communist causes and their so-called "social sciences". He wrote for his Rockefeller patrons the tax laws that have furnished them with the loopholes for virtually complete evasion of taxation. And at the instance of Nelson Rockefeller, he wrote into law the former's pet device for making sure that no one else can escape their tax looting, the withholding tax law and rules.

PAUL NITZE, nephew and namesake of the collaborator of German Ambassador-spy, Count von Bernstorff, in

World War I, Paul Hilke. Bernstorff was ousted by the Wilson Administration because of involvement in the Black Tom explosion. But Bernstorff maintained his lines of communication by planting his notorious mistress on Pres. Wilson.

Nitze married Phyllis Pratt, daughter of a Rockefeller Standard Oil partner. He secured a partnership and became vice president of the firm that was closely identified with Rockefeller's German interests, Dillon Read & Co. When Nelson Rockefeller became "Co-Ordinator" of Inter-American Affairs, he chose Paul Nitze as his financial officer, collaborator and accomplice. This rounded out that agency as a Communazi outfit of the type that Rockefeller desired. And when World War II arrived at the stage when control of the war policies and operations offered the maximal possibilities of advantage and profit, the entire subversive agency was bodily transferred into the State Department.

In 1944, Nitze was transferred, "loaned", to the War Department as "special consultant" on the strategic bombing of Germany. In this position, he was able to protect the Rockefeller controlled industries in Germany. This was done at the cost of prolonging the war and at a staggered cost in American lives. For one of the major factors in Nazi Germany's war potential has been the Rockefeller controlled chemical and explosive manufacturers, their I. G. Farbenindustrie. Its headquarters in Frankfort-am-Main was built by funds raised for the conspirators by Nitze's firm, Dillon Read & Co. And in the same town there stands the Rockefeller mansion that was built at the time that the Rockefeller interests set up the I. G. Cartel. In the pinpoint, "strategic" bombing of Frankfort-am-Main, the conspirators arranged to leave both the I. G. office building and the Rockefeller mansion, intact.

As one of the mainstays of Germany's war potential, the I. G. yielded the conspirators high profits. Included in those were the profits derived from the rendering the fat of the concentration camp victims. A war-criminal on trial recently related that Rockefellers' I. G. dictated which of the concentration camp victims should be exterminated and rendered. Since the war I. G., as the key of the worldwide Drug Cartel, has yielded the conspirators enormous profits. The Senate Committee that was headed by Sen. Kefauver brought to light that profits as high as 8,000% to 10,000% on essential drugs are quite usual. More recent events have revealed that many of these profitable drugs are deadly poisons.

Paul Nitze, who now professes to be a pacifist and in

favor of disarmament, was placed by Pres. Kennedy, presumably on the "advice" of Rockefeller, in the strategic and critical position of Assistant Secretary of Defense, in charge of International Security Affairs, a post that parallels that which Alger Hiss previously occupied in the State Department. Subsequently, he was appointed Secretary for the Navy, a vital spot in the nation's defenses. It was the opinion of many members of Congress that this was a strange post for a man of his record and character. But considerable pressure was brought by the conspirators to gain confirmation of his appointment. Nitze is a member in high standing in Rockefeller's Council on Foreign Relations.

CHARLES ("CHIP") BOHLEN has been a "career man" who has filled many strategic posts in the State Department, since his graduation from Harvard U. He is a cousin of the German munitions manufacturer, Krupp von Bohlen, who has been a mainstay of the military might of Nazi Germany, and was convicted as a top war criminal.

Bohlen was a fellow member of Nelson Rockefeller and Alger Hiss in setting up the Rockefeller-Soviet Axis agency, the United Nations. He was appointed to serve as U. S. Ambassador to Soviet Russia, where he could serve as a liaison for the Communazi interests as represented by Hitler's Chief of Staff, General von Paulus (who after his capture before Stalingrad, was appointed by Stalin to the post of Soviet Chief of Staff) and his cousin's interests in Germany. The Krupp industries had been taken over by the conspirators as part of their war booty. Krupp von Bohlen who was imprisoned after his trial and conviction as a war criminal, was released in due time, and put in charge of the operation of the Krupp munitions industries by its new owners. Who those owners are, may be judged by the fact that Krupp was then financed with funds supplied by American taxpayers, through "foreign aid", in the expansion of his munition industries in South America and around the world.

Charles Bohlen now represents the conspirators as American Ambassador to France. Therein may lie an explanation of some of de Gaulle's more recent moves, including the recognition of Communist China.

ALLEN DULLES, brother of John Foster Dulles and fellow member of the law firm, Sullivan & Cromwell, that long represented Rockefeller interests in international affairs, and more particularly in their German interests. His uncle was Secretary of State Lansing, who faithfully served the Rockefeller-Standard Oil interests in the Wilson Ad-

ministration and World War I. John Foster Dulles, who married Janet Pomeroy Avery, a kinswoman of Rockefellers', served the Dynasty in directing the operations of the State Department since the 1920's, as their agent. The firm of Sullivan & Cromwell, headed by John Foster Dulles, secured full payment of German debts for the Rockefellers and their interests in dollars, but all other creditors were compelled to accept worthless German marks in settlement of their claims. John Foster Dulles was enabled to render his kinsmen this service in his dual capacity as their attorney and representative of the State Department. During these dealings, brother Allen was at his side.

When the conspirators launched on the build-up of Hitler and the Nazi Party, Allen Dulles served them as cloak-and-dagger agent. He was joined in this by his sister, Eleanor Dulles, wife of Jewish Professor of Romance Languages at Johns Hopkins University, Jacob Blondheim. (After the birth of their second child, Prof. Blondheim was driven to suicide by the situation; and Mrs. Blondheim resumed her maiden name, Eleanor Dulles, and "adopted" her two Blondheim children and renamed them Dulles.)

Allen Dulles served the conspirators so well in these matters that he was put in charge of the so-called Central "Intelligence" Agency that they set up for their purpose. Its organization was recommended by the conspirators, with the support of their agencies, for the pretended purpose of unifying all the intelligence and espionage services of the Government. It has served, instead, as a private Rockefeller-Soviet Axis agency that has invariably cut off all intelligence from our Armed Forces (insuring their defeat) and from the nation, as in the instances of Korea, Indo-China and Cuba. And more importantly, it has served, under the direction of Allen Dulles, to further the expansion of the Rockefeller-Soviet Axis and Communism around the world, and the betrayal of our military and our country.

Some indication can be had of the nature of the C.I.A. from the character of its personnel. For its virtually exclusive source of "intelligence" from Europe and the Iron Curtain countries, it has employed and depended upon Hitler's Chief of Intelligence, General Reinhard Gehlen. In 1963, a group of von Gehlen's C.I.A. operatives were exposed as Soviet Communist agents by West Germany, and tried, convicted and jailed for their crimes. Under C.I.A. pressure, von Gehlen was permitted to quietly drop out of sight.

Side by side with its Communazi agents, the C.I.A. has

employed as key agents some of the most notorious Reds and even officials of the Communist Party. Among these have been two notorious Red labor agitators, Brown and Lovestone. Khrushchev has boasted that he receives the reports of the C.I.A. before they are received by the President.

The services of the C.I.A. rendered to the Rockefeller-Soviet Axis in furthering the spread of Communism and the Iron Curtain around the world are notorious. Provided with almost unlimited funds and protected from investigation and exposure by Congress, by its cloak of secrecy, it has effected the betrayal of our country and of our allies on virtually every possible occasion. It stirred up riots, revolts and revolutions in country after country, including Iran, Egypt, Algeria, Cuba and Viet Nam. And since it has been given complete control of all military intelligence, it has assured the defeat of the American Armed Forces wherever they have been engaged. The role of Dulles and his C.I.A. in turning over Cuba to Castro and the Communists, and in making Cuba safe for Communism became so blatant, that Allen Dulles felt constrained to resign. He was succeeded as head of the C.I.A. by McCone, another member of Rockefeller's Council on Foreign Relations.

These associates and agents are typical of the multitude that assemble and swarm about "philanthropist" Red, or "liberal", Rockefeller. Many more are presented in the author's ROCKEFELLER "Internationalist", to which the reader is referred for more extensive data on them. They have been integrated into numerous organizations of which they constitute the interlocking nuclei. The plan that has been followed in the setting up of this network is identical with that of Adam Weishaupt's "Reading Clubs". (65, pp. 294-6) And their purpose is the same: to regiment the membership, wittingly or unwittingly, into a force to undermine government and the Constitution, subvert our Republic and convert it into a totalitarian, monarchic and absolute dictatorship. With this nucleus it is planned to follow Jesuit Adam Weishaupt's program of a "One World" dictatorship using a so-called "United" Nations as an agency for a perpetual round of revolutions to accomplish the subjugation and looting of all.

Led by Rockefeller, a host of agencies serve to advance the "cause". Financing is managed at the cost of the taxpayers who are to be subjugated and despoiled, either indirectly through the tax-exempt foundations, or directly through dues. The top echelon and ringleaders have been assembled by Rockefellers in the Council on Foreign Re-

lations, which they completely dominate and control and use as a super-governmental agency and as a "Foreign Office". It is, in effect, as the author first pointed out more than a decade ago, Rockefellers' real governing agency of the U. S. and the world. Located at the southwest corner of Park Avenue and Sixty-eighth Street, in New York City, it stands opposite the building that was turned over to the Soviet partners of the Axis for use as headquarters for their U. N. Soviet Delegation agents (and on occasion, by Khrushchev) close by Rockefellers' "court", their Union Club, their top agency for subverting and Sovietizing local and State governments, their Institute of Public Administration, and their homes. (11)

The male associates and agents mentioned above are all among the thousands of members, past and present, of this top Rockefeller agency, the Council on Foreign Relations. They are there indoctrinated and groomed to serve their Rockefeller masters in government and diplomatic posts in due time. The great majority of policy-making positions and diplomatic posts of our Government have been filled, during the past four decades, by Rockefeller agents who have been primed and trained in the CFR to serve their masters. The Directors of the Council boast in their annual reports about the number of them who have been trained and planted in the Government. (17, 1949-50, pp. 39-40) They also boast about their success in duping the public into accepting the various phases of the conspiracy, about "forming public opinion." (17, 1948-9, p. 36)

In the ranks of the CFR have been included:

1. Some of the most dangerous of the conspirators' Communist agents.

2. Key banking, industrial and petroleum oil agents.

3. Key military and diplomatic agents, domestic and foreign.

4. Key contacts and liaison with the criminal syndicate and underworld.

5. Key columnists, correspondents, publishers, propagandists and Red authors.

6. Key scientists, "educators", college presidents, and Red clergymen.

7. Leading pollsters including George Gallup and Elmo Roper, who are assigned the task of seducing folks to "think right" and "vote right" by playing on their desire to conform and "back a winner."

8. Interlocking officers and directors of "philanthropic" foundations.

9. Key public officials and politicians.

10. A varied array of characters whose services are important for the moment, and who can be depended upon to echo their master's mad treason.

11. The controllers of all media of mass communication, radio, television, stage, motion pictures and numerous others.

Some of the most serious injuries done by these conspirators to the interests and safety of our country included the following:

1. The delivery of Berlin, that was readily within the grasp of the American forces, to the Soviets.

2. Stationing of American troops in Berlin, behind the Soviet lines with all communications cut off, except by tolerance or permission of the Communists.

3. The delivery of the German missile research laboratory at Dora, Saxony, with all of its equipment and personnel to the Soviets, after it had been seized by American Forces. This treasonously gave the Soviets their head-start in this field, and forced our country into a lag in missile and satellite technology.

4. Barring the Army from launching its satellite for many months after it was ready and giving the Soviets a propaganda victory by letting them be first to launch their orbiting missile, the Sputnik.

The limelight cast on this subversive organization and its Rockefeller bosses by this author's exposure of it in his ROCKEFELLER "Internationalist" led to strenuous efforts to present this malign, hitherto hush-hush agency in the light of a "public spirited" organization, in articles appearing in the press and in magazines. Failing in this purpose, the Dynasty's pressagents undertook to camouflage Rockefeller's domination of it by building the CFR up as the master and not the mere agency of the Dynasty.

This last maneuver has had the collaboration of numerous so-called "patriots" who have thus proved themselves mere agents of the conspirators, serving to provide them with a camouflage. In reality, they should be classed as quite as subversive and treasonous as the principals whom they thus undertake to shield.

The latest and most successful of these camouflage jobs was turned out by one of their Red hacks. In one of their low-grade magazines, he dubbed the CFR and other agencies THE ESTABLISHMENT. And he pronounced it to be a "wicked agency" into which the "innocent" Rockefellers have been unwittingly trapped. On Nelson Rockefeller, the darling of all Reds and "liberals", he attempted a "whitewash". The truth is that what he and

others have called **THE ESTABLISHMENT** is an abject creature of Nelson Rockefeller.

Among the numerous subsidiary organizations that interlock with the CFR in serving the Rockefeller-Soviet Axis, is the Rockefeller subsidized and controlled Institute of Pacific Relations. The Senate Internal Security Committee investigators, under the order of Chairman Joseph McCarthy, obtained indubitable proof of the personal involvement of the Rockefellers in the activities of the IPR and its **AMERASIA** subsidiary, that the Committee pronounced to be an agency of Soviet propaganda and espionage, in files of correspondence seized in the mahogany furnished spy-nest camouflaged as a dilapidated barn on the Sunset Farm of IPR Secretary Edward C. Carter, at Lee, Mass. The correspondence there seized offered, in addition to the ample previously known personal activities of the Rockefellers in the IPR, evidence of their frequenting the barn spy-nest. The letters also linked the bosses of the conspiracy with their Communist agents. It would have served to further identify them as the ringleaders of the Communazi cabal. Though this data would have served to fully justify such charge, it was never used by Sen. McCarthy in his televised public hearings, because of odd, connubial pressure brought to bear on him. Failure to use that material may have sealed Senator Joseph McCarthy's fate. He knew too much.

On the domestic scene, numerous organizations, both subversive and subverted, have served the conspirators in perverting national and local governments, Sovietizing and looting them, and converting them to a planned dictatorship. Some of those organizations have been set up with the help of tax-exempt foundations of the conspirators. Others were old and respected organizations that have been taken over by the conspirators and converted to their purposes. Many of them have been subsidized by Nelson Rockefeller and his brothers.

At the "summit" in this group is the Institute of Public Administration which is located at 684 Park Avenue, New York City, as has been mentioned, that is grouped at that locale with the CFR, the former U.N. Soviet Delegation Headquarters and the National Municipal League. The organizations thus grouped together symbolize the real "One (Rockefeller) World" Government, but are generally overlooked by the sightseers who mistakenly turn their gaze to the "United" Nations Headquarters. The National Municipal League is devoted to robbing us "peasants" of our franchise by such devices as City Managers, quasi-public "Authorities" that are privately owned and

operated by the conspirators, stand above all law and are a law unto themselves, and Congressmen and other elective officials "at large" who do not represent the local electorate but do represent the conspirators who dictate their nomination; and to rule by dictation and to looting the "peasants" at municipal level.

Coordination of the organizations that further the conspiracy at its lower levels is provided by the Rockefeller financed and controlled Public Administration Clearing House that is located on the campus of their University of Chicago, at 1313 East Sixtieth Street, Chicago, Ill. It is popularly known by its street number, "1313". It ties in the conspirators' control numerous national organizations in every field of endeavor which are listed in its DIRECTORY. (38) Prominent among them are the GOVERNOR'S CONFERENCE, the UNITED STATES CONFERENCE OF MAYORS, the COUNCIL ON STATE GOVERNMENTS, the INTERNATIONAL CITY MANAGERS' ASSOCIATION, the AMERICAN BAR ASSOCIATION, the CONFERENCE OF CHIEF JUSTICES and numerous others. The local subsidiaries of these national organizations that are thus dominated and controlled, number in the thousands and extend into every nook and cranny of the nation and the world. Through them the conspirators conduct an unrelenting and relentless drive to lay the foundation for the planned dictatorship and Sovietization of the local governments in preparation for the national and international takeover.

**THE ESTABLISHMENT IS THE ROCKEFELLER DYNASTY. AND ITS HEAD IS NELSON ROCKEFELLER.**

## CHAPTER VIII

### **"NEW DEAL": GOVERNMENT "OF, BY & FOR" ROCKEFELLERS**

The Rockefeller acknowledgement and boast that he was the "New" Dealer closest to Pres. Roosevelt, in the magazine article in the New York Times of May 22, 1960, (12) settled any doubt as to its inspiration. There was lit-

the occasion for doubt on this score, however. The "New" Deal bore the obvious earmark of thievish conspirators. Every measure adopted was designed to amplify the monopoly of all phases of the economy that they had sought or established. And at the same time it duped and bribed the "peasants" at their own ultimate expense. It embodied every device outlined by Nickerson, their sociologist, in the blueprint that he had drawn up for the "New" Deal and published in 1930 (39), as the plan for converting our Republic into a monarchic dictatorship. "Relief" was the "crumb" aimed to purchase public support, during the looting, with public funds as in their bogus "philanthropies".

The first move of the "New" Deal made under the direction of Rockefeller and the Chase National Bank, was the "bank holiday". It was designed, and it served to tighten the conspirators' monopolistic control of banking, money and gold that they had attained through their fraudulent agency, the so-called "Federal" Reserve System. (10) It enabled them to bankrupt thousands of banks that competed with theirs, and to mercilessly loot and ruin their depositors. (48, pp. 146-51; 10) Many of the banks that were barred by them from reopening, and destroyed by them, were more solvent and more honestly operated than their own banks that invariably were given Government assistance to enable them to survive.

Their "Gold Order" that is attributed to their agent and puppet, Pres. Franklin D. Roosevelt followed immediately. It enabled them to rob the nation and the people of all gold, and "fence" it through their private stock corporation, the fraudulent "Federal" Reserve Bank. (10) They were thus enabled to complete the thievish conspiracy that had been launched through their agent, Prof. J. Laurence Laughlin, of their University of Chicago, with the so-called "Gold Standard Act" of 1900. (28, p. 3)

Even the man whom the conspirators hailed as one of their leading authorities on the subject of money, Prof. Edwin W. Kemmerer, of Princeton University, decried this thievery of theirs and wrote:

"The continuance of the abandonment of the old gold coin standard at this time, in the judgement of the writer, was not a matter of necessity, but an act of deliberate choice." (55, p. 185)

The "deliberate choice" was that of the greedy conspirators who saw in the bewilderment of the nation in the panic and depression that they had engineered, a chance to make what was probably the biggest gold steal in world history. It was the "crowning climax" of their looting of

the nation and the world up to that time. They managed it by requiring all holders of gold and gold notes to surrender them to their "Federal" Reserve System. This was a flagrant violation of the Constitution that permits confiscation for eminent domain, for surrender to the nation in its interest; but prohibits confiscation for private interest or profit. This author made clear these facts in a letter to the N. Y. Times, at that time. (115: 22: 5) In a move to correct the flagrant violation of the Constitution on behalf of the conspirators, Pres. Roosevelt demanded and obtained the passage by Congress of a bill that required surrender of the gold to the Treasury. But this was merely another fraudulent dodge. For the gold was promptly turned over by the Treasury to the conspirators' "Federal" Reserve.

The gold was taken in by the banks at the rate of twenty dollars an ounce, and immediately thereafter revalued at thirty-five dollars an ounce. The Treasury then under the orders of the conspirators' agents planted in it, including Lauchlin Currie, then proceeded to buy gold in the world market, at thirty-five dollars an ounce, largely from the conspirators and their agents, at the expense of the taxpayers. Thus did the Rockefeller conspirators lay the foundation for their "gold withdrawal" manipulations that with the help of Nelson Rockefeller's pet, highly profitable, so-called "foreign (Rockefeller) aid" project has enabled them to engineer the current threat to the solvency of the Treasury, and the collapse of the value of the dollar. (10)

At the same time, the Government and the nation were robbed of even token, minority representation on the "Federal" Reserve Board, by the ousting of the Treasury Secretary and the Comptroller of Currency, *by an act of Congress*. They had originally been put on the Board for the purpose of duping the nation into believing that the "Federal" Reserve is a public institution. But by this time the myth had become so firmly established in the minds of the "peasants", after the passage of two decades, that the conspirators felt secure in ridding themselves of the "nuisance" of any public official who might "snoop" on their financial racketeering and thievery. (10) That facilitated following the plan of the conspirators' Soviet partner, Stalin (and of his idols, Weishaupt, Marx, and Lenin) of bankrupting the nation as the shortest road to American totalitarianism and Sovietization. Extremely significant was the appearance of the conspirators' agent, Treasury Secretary Dillon, before Congress, March 31, 1964, to oppose the Patman bill that would give control of their

"Federal" Reserve System to the people through the Treasury, at this critical time.

Establishment of a monopoly of industry was attempted by the "New" Deal conspirators, by two approaches. Through the "National Recovery Administration", so named to dupe the "peasants", a direct effort was made by them to cartelize American industry. But the Supreme Court had not been sufficiently "packed" by them and was not completely under their control. It frustrated their monopolist plot by declaring it un-Constitutional in its so-called "Chicken" Decision.

More successful, and more fruitful and effective, was their scheme, for which their agent, Senator Robert F. Wagner served as front, to attain control of industry through the "liberal" device of labor unionism. The Wagner Labor Relations Act, that was drawn up by the conspirators and introduced by their trusted tool, the Senator, provided a license for their takeover of both labor and industry through their gangster and Maffia agents in the capacity of so-called labor "leaders", or more rightly Labor Barons. The so-called Labor Relations Act, in reality, has served as a Magna Charta for their regimentation and virtual enslavement of workers, under the pretense of "protection". Under the guise of "labor rights" these criminal elements have been put above the law, and have been enabled to prey on the nation. Wrongs have been converted to so-called "rights" by the Act, when committed by these goons for their masters, the conspirators. So-called "collective bargaining" is frank and open collective blackmail of industry and the nation. (11, p. 37, 370-4; 48, pp. 208-17)

Rockefeller-controlled industries, including the Standard Oil companies and Rockefeller Center, as might be expected under the circumstances, have been singularly free of such collective blackmail and strikes. The mechanics whereby this has been attained has been related in connection with Nelson Rockefeller's building and operation of Rockefeller Center. These "good labor relations" boasted of in Rockefeller's Presidential campaign material MEET NELSON ROCKEFELLER (44) are quite readily explainable on the basis of the collaboration of such Murder Inc. luminaries as Joe Adonis as "labor leader".

One might expect that even the psychopathic Rockefeller greed would be satisfied by the immense loot gathered in through the "New" Deal. That greed, however, is absolutely insatiable. And the immense loot still did not allay the Rockefeller psychopathic fear of poverty and insecurity. Nelson Rockefeller was introduced into new

and virgin fields to loot, by his subordinates of their Chase National Bank and their Creole Petroleum Co. (Venezuelan subsidiary of Standard Oil) in South America. They took him for a tour of the Orinoco River, in 1937, on a Standard Oil yacht; and fired his greed to such pitch as to bring out his pose of "philanthropist". (61, p. 106) As is the tradition in the Rockefeller Dynasty, that pose was accentuated by acute awareness that other nationals, British, German and Soviet, had spied the loot and "had their fingers in the pie". Such a situation invariably impels the Uriah Heepish Rockefellers to pretend an interest in the "welfare" of their intended victims, especially when it costs them nothing, or little as compared with the obtainable loot; or if the cost can be foisted on the taxpayers by some such device as "foreign aid" and be made to yield them a profit.

Nelson Rockefeller rushed to the Berlitz school to learn the Spanish language, a course that he had "flunked" in school. He became an "ardent admirer" of everything Latin-American. Its backward "culture", its crudest "art", its noisiest and most raucous "music" were imported by the Dynasty at his dictate. And they were foisted by Rockefeller pressagents on our country, as a costless balm to the vanity of the natives. Especially appealing to the "liberal" Nelson Rockefeller have been the political practices and traditions of Latin America: its violent instability, its revolutions with opportunity for looting on a national scale, and its savage, absolute dictatorial regimes. These, it has been and is his purpose to import into the U.S.A. But thus far, he has managed to give us only its corruption, its treachery and its rigged "elections".

Rockefeller's initial predatory moves in Venezuela centered about Creole Petroleum, of which he has been a major stockholder, and at that time an executive. It brought down a prompt attack on him by the "liberal" and Communist elements, including a virulent attack by Romulo Betancourt. In accord with Nelson Rockefeller's craven practise of betraying friends and courting and appeasing enemies (which he has imposed on the U. S. as a "foreign policy") he assiduously has wooed his Communist attackers. (43, p. 118) It was in connection with discussions that he had with Pres. Lazaro Cardenas with respect to the expropriation of Mexican oil that had been effected by the Rockefeller-Standard Oil conspirators for the purpose of checking the glut in the world oil market, that Nelson Rockefeller formulated his initial bogus "philanthropic" scheme of Latin American "aid". He put it into effect during World War II at the expense of Amer-

ican taxpayers. As will be related, it netted for him a fabulous empire in Latin America and saddled on those lands the nucleus of Rockefeller-Soviet domination.

The traitorous plans for the precipitation of a world war for the expansion of the Rockefeller-Soviet Axis power and the involvement of the U.S.A. in it for the purpose of bringing G.I.s to the rescue of Rockefeller-Standard Oil property in China (which was one of the prime purposes of the New Deal, as has been related) was steadily advanced by the conspirators. When the depression, that they had precipitated by means of their control of American and world finance through their so-called "Federal" Reserve System, threatened to clear up, in 1937, the conspirators deliberately precipitated another panic. For the conspirators depended upon the depression to facilitate the involvement of the country in a war.

Additional motives for desire to precipitate war had developed in the interim. Though the Rockefeller-Standard Oil conspirators had attained one of their objectives in World War I, the control of Soviet oil by the deal into which they entered with Stalin (11, pp. 204-31), they had failed to get effective control of the Saudi Arabian and other Near East oilfields. Churchill and the British had made good on their deal with the Rockefeller-Standard Oil conspirators to let their vassal, King Ibn Saud, give them the Saudi Arabian oil concession in payment for bringing the U. S. into the war to fight and finance it. But British resentment at the Rockefeller grab, as war booty, of German industry and especially of the Drug and Dye Cartel that had been regarded by the British as their property, had instigated their blocking the development of the Saudi Arabian concession. (11, pp. 374-89)

Rockefellers plan for breaking this impasse was the buildup of Hitler and Nazi Germany as an ally of the Rockefeller-Soviet Axis. In this plan they were aided by their German Jewish banking agents, the Warburgs, of the Kuhn Loeb crowd, in the initial financing of the Nazis. Hitler's later financing and direction was by way of the conspirators' I. G. Farbenindustrie A. G. The Rockefellers sent their personal publicity and propaganda agent, Ivy Lee, to Germany to advise Hitler and Goebbels on their propaganda technique, and the Nazi Party on the rearmament of Germany in defiance of the Versailles Treaty. The story is succinctly related in the author's ROCKEFELLER "Internationalist", as follows: (11, pp. 378-80)

"The Rockefeller interests turned to their pawns in World War I, the Germans, to set the obstructive British

Empire on its heels. As bosses of the German Dye Trust, I. G. Farbenindustrie, they controlled German industry and German government. On October 30, 1930, for instance, the press announced that the Standard Oil Co. had purchased the German alcohol monopoly. Inevitably, they played a large role in the rise of Hitler and exercised a large measure of control over the Nazi Party and its policies.

"The resurrection of German nationalism and militarism was a crafty move toward the destruction of the British Empire and its elimination as a bitter adversary in the control of the oil reserves of the world. Just as in the 1920's, after the Rockefeller interests had entered into their entente with Russia, they assigned Rockefeller's top publicity man, Ivy L. Lee, to advise the Russians on their propaganda and publicity and to build up favorable public opinion in the U. S. Ivy Lee was also assigned by the Rockefellers, on July 11, 1934, to serve their I. G. Farbenindustrie as publicity agent and to advise Hitler on the rearmament of Germany. It was announced that for this service the Rockefeller interests were paying Ivy Lee the sum of \$25,000 a year. Walter C. Teagle of Standard Oil, and Edsel Ford were on the I. G. board. On August 14 of the same year, it was announced that Standard Oil Co. of New Jersey had acquired 730,000 acres of oil land from the North European Oil Corp., built extensive refineries in Germany for the Nazis and supplied them with oil, for which they were later paid, in June 1936, with 40 million harmonicas and a number of ships.

"The Rockefeller interests played a major, and possibly a key, role in setting Hitler and the Nazis loose on the world. Hitler's *Mein Kampf* echoed the views of John D. Rockefeller's associates, advisers and spokesmen on the topic of social organization and human, or inhuman, relations. The medieval, feudal type of dictatorship that is the essence of Nazism, was laid down as the pattern of perfect government for the U. S. and the world in his blueprint of the New Deal, *The American Rich*, by Rockefeller's associate and fellow member of the Union Club, Hoffman Nickerson, as related elsewhere. In that work is laid out the pattern of subversion and wiping out of all semblance of human freedom, the concept of a superior race ordained to rule a nation of divided minorities, whose racial stock eventually was to be purified by the elimination of "foreign" elements, especially the Jews. This anti-Semitism suited the purposes of the Rockefeller interests, because the directors of the operations of their fierce opposition in the British Empire, namely, the Royal Dutch

and Shell and the Anglo Persian and British Controlled Oilfields, were the Samuels family, the Rothschilds, the Monds, the Sassoons, and other Jewish families.

"Rockefeller's associate, Alexis Carrel, of the Rockefeller Institute, "scientifically" suggested the ruthless murder of "undesirable" and "inefficient" humans, whose existence he regarded as exemplifying that "waste" which the Rockefeller mentality so abhors. He published his views at full length in his book, *Man, The Unknown*. When Hitler took over France, Carrel turned there to help put his ideas into operation, with the cooperation of the Nazis and at their invitation.

"It should be noted at this point that much of the bond of inhuman sympathy between Hitler and Stalin can be attributed to Rockefeller and his agent, Ivy Ledbetter Lee. It was their entente that paved the way for the Nazi conquests.

"It was not until Hitler had arrived at Dunkirk, that the British awoke to the realization that unless they knuckled down to the Rockefeller Empire, their own Empire would face destruction. An agreement was hurriedly reached whereby the Rockefeller interests were given a free hand in the development of Saudi Arabia in exchange for their dragooning the United States into the war to fight it and pay for it, prompt conveying of the British merchant marine by the U. S. Navy, and the intensive launching of the sardonically labelled Lend-Lease program whereby the wealth of the U. S. was poured into the laps of England and her allies.

"Though Hitler could have crossed the channel in a matter of hours, and invaded England, some force deterred him and caused him to turn against Germany's ally, Soviet Russia, in a suicidal invasion attempt. The role played by the Rockefeller and I. G. interests in influencing this decision has yet to be fathomed. But it is clear that since they dominated Hitler and the Nazi party, they did play a role."

The Rockefeller conspirators had been enabled to intensify their stranglehold on the nation and the world by their "internationalist" activities in their League of Nations. They dominated it through its Secretary, their attorney, Raymond Fosdick and his "assistant", John D. Rockefeller the Third. To tighten their control of world finance, they required that every land that sought financial assistance of the U. S., at the expense of the taxpayers, authorize them to set up central banks that served to extend the power of their swindle, the so-called "Federal" Re-

serve System, to those lands as a condition for extending the loans. (10)

Through their League of Nations control, the Rockefeller conspirators were enabled to protect their allies and confederates, and serve their interests. Through it they were enabled to block any Allied resistance to the military aggressions of Nazi Germany and the violations of the Versailles Treaty which through their agents, Ivy Lee and others, they had actually encouraged. Also they were enabled to encourage their agent Mussolini to invade Ethiopia and seize for them the West Fafan oilfields, in the Harrar Province, that King Haile Selassie had refused to turn over to them, and which they now own. They provided Mussolini with financing and oil for the war, and with refineries at the expense of American taxpayers; and assured him that their League of Nations would not cut off the oil that was essential for the war, by the exercise of sanctions.

At home, the preparations for the war to expand the Rockefeller Empire and to "make the world safe" for their Soviet partners, went on apace, under the auspices of the Rockefeller-directed "New" Deal. In the Rockefeller and allied foundations and other subversive organizations established or dominated by them, the plot was laid for the setting up of a "United" Nations to take the place of the repudiated League of Nations.

Nelson Rockefeller, as master of the New Deal and "adviser" or boss of Pres. Franklin D. Roosevelt, and Harry L. Hopkins, played a dominant role in the preparation of "Lend-Lease" legislation drawn up to evade the Johnson Act (that barred American financing of lands that failed to repay their loans). The objective of "Lend-Lease" was to make American "peasant" taxpayers pay for the planned war. In order to make certain that those "peasants" could be dragged into the war to expand the Rockefeller Empire, as "self-employed" and self-paid mercenaries, the conspirators lobbied through the "rubber stamp" Congress their Universal Military Training Bill.

Nelson Rockefeller began laying his plans for evasion of the draft that he had helped impose on the "peasants". He turned to his Latin American scheme to keep him as far away from the military front as possible. His Red employees, Harry L. Hopkins and Anna Rosenberg played important roles in this arrangement; and they were helped by Eleanor Roosevelt. Rockefeller's usual device of a "committee" to echo his wishes included in their number Joseph Rovensky, Beardsley Ruml and Wallace K.

Harrison, among others. Though Rockefeller was, as has been acknowledged since, in the N. Y. Times (12) "closest adviser", or boss, of Pres. Roosevelt, both he and the Administration were fearful about what would be the public reaction to his open emergence into a draft dodging post in the Government.

James Forrestal, of Rockefellers' Dillon Read & Co. was first appointed "administrative assistant on Inter-American Affairs" to Pres. Roosevelt, the job in which Rockefeller was to succeed. Ten days later, it was announced that Forrestal had offered his job to Nelson Rockefeller. Rockefeller, pretending that he was a "Republican," made a show of deferring in the matter to the judgement of his pawn, Wendell Willkie. He flew to join the campaigning candidate at Salt Lake City, to "discuss the matter with him."

After he had made this show of "Republicanism", Rockefeller stepped into the post that Forrestal had "warmed" for him, and Forrestal was shifted to the post of Under Secretary of the Navy. Satisfied with the lack of public protest against his appointment, Rockefeller had Roosevelt officially appoint him, on July 25, "Coordinator" of Inter-American Affairs. Thus Nelson Rockefeller sneaked into an open appointment in the New Deal that he had directed, and into the Government, "through the back door". He had a pretext for evading military service under the draft. (43, pp. 128-33) This draft dodging was depicted by Rockefeller in his 1960 Presidential campaign biography, MEET NELSON ROCKEFELLER, as a magnificent "public service". (44, pp. 9-11)

## CHAPTER IX

### NELSON ROCKEFELLER "COORDINATED" LATIN AMERICA

"The Instances Here Set Forth and Numerous Others Of The Same Character . . . Require The Conclusion That The Authority Granted This Corporation Has Been Exceeded . . ." (116, p. 50)

"(It) Would Permit The Perpetration Of Fraud With Concealment . . ." (116, p. 45)

Quoted From: Report On Audit Of Corporations Of The Inter-American Affairs Group. House Document #165, 81st Congress.

Nelson Rockefeller's draft-dodging evasion of military service, at an age when patriots were volunteering for service, was of exceptional import. For he had been active in lobbying the adoption of the Universal Military Training bill that would provide the Dynasty with self-paid mercenaries for extension of the Rockefeller Empire. It highlights the fact that Rockefeller scorns patriotism as a vice that is to be expected only of the fanatical "radical right". He has repeatedly proclaimed his dedication to the "Internationalism" that is the basic creed of Communism.

Draft evasion left Nelson Rockefeller free to dedicate himself to the task of "making money", that is a very "holy" cause of the Dynasty. He dedicated himself to so-called "coordinating" of inter-American affairs. These activities served to enormously swell his personal fortune, and the interests of the Rockefeller Dynasty, of the Standard Oil, of the Rockefeller-Soviet Axis and of others identified with them. This was accomplished at the expense of American taxpayers and of the Latin-American victims.

Rockefeller adopted a plan of Government corporate organization of his "coordination" that the Dynasty was instrumental in introducing in this country. Nelson Rockefeller and his cohorts have since made frequent and extensive use of it at various levels of government, national and local. We taxpayers now support more than seven hundred of them. The deficits which they designedly and constantly roll up now cost the Treasury and the taxpayers virtually all of the income from the Federal income tax that the Dynasty has imposed on us. If their vampire corporations that drain the Federal government were eliminated, we could dispense with the income tax.

The basic pattern of these corporations was developed by the Communists in Soviet Russia. It consists of a corporation to which are delegated governmental powers and function. An example with which we are familiar, is Amtorg. "Liberals" returning from "missions" to Moscow, such as Joseph Davies and Adlai Stevenson, have held them in high regard. (117) Domestically, the conspirators improvised and improved on the basic Red concept. They set up companies that take over private industry, or compete with it, are financed by the taxpayers through the government, but are given super-governmental status and powers that place them above the reach of either local or Federal laws, and are exempt from taxation. These governmentally financed corporations are given various names, the most popular of which is "authority". They

are ideal devices for looting both the government and the citizenry. And they are completely immune from interference, prosecution or redress.

The setup adopted by Nelson Rockefeller for his "co-ordination" consisted of five government corporations chartered in the State of Delaware which allows widest leeway to corporations. They were:

1. Institute of Inter-American Affairs, which extended the health and welfare programs launched by the Rockefellers through their foundations for the purpose of serving their interests in the lands.

2. Inter-American Education Foundation Inc. which extended the work launched by the General Education Board in those lands to serve the Rockefeller interests and to shift the burden of its cost to American taxpayers.

3. Institute of Inter-American Transportation that spent more than six and three quarter millions American tax dollars "rehabilitating" the National Railway of Mexico. About one third of the sum was spent on "administration". The purpose of this boondoggle came to light when Rockefeller-Standard Oil interests were paid for their expropriated properties almost the entire \$28,000,000 allowed by Mexico, and had some of their property returned.

4. Prencinradio Inc. the stated objective of which was "dissemination and interchange of knowledge and information" which was to be undertaken by this corporation by way of radio and motion pictures. It operated two radio networks in Uruguay; and financed the purchase of motion picture equipment in Mexico.

5. Inter-American Navigation Co. which was to improve transportation in Latin America by the purchase, construction and operation of small tonnage vessels in the Caribbean and Brazil. All of these corporations were supposed to operate in partnership with the respective Latin American governments. Their stock was all held by the "Coordinator" who completely controlled the companies, appointing their directors and members who held their appointments solely at his pleasure.

Among the directors whom it "pleased" "Coordinator" Rockefeller to appoint, were the following members of his Council on Foreign Relations who held posts in the State Department:

William L. Clayton, of the firm of Anderson Clayton & Co. that controls the cotton output of Brazil and was instrumental in reducing the cotton quota of American farmers during the depression in order to enhance the profits on imports. He is reported to be a kinsman of Roosevelt's.

John E. Peurifoy, whose "liberalism" and loyalty later came under fire, as a suspected "security risk" on moral grounds.

William Benton the "liberal" advertising man who, in partnership with the equally "liberal" Chester Bowles, curiously found such rich sponsorship as to amass millions during the depression, became vice-president of Rockefeller's University of Chicago and joined it in taking over the Encyclopaedia Britannica and converting it to their brand of Red "liberalism", and was Alger Hiss's superior in the State Department.

Spruille Braden, who distinguished himself as Ambassador to Argentine.

The account of the outfit included in the above quoted audit (116) is as follows:

"The office of Coordinator of Inter-American Affairs was created in the Office For Emergency Management For the Executive Office of the President by Executive Order 8840, July 30, 1941, for the primary purpose of developing communication and cultural relations between American Republics in the interest of hemispheric defense. Mr. Nelson A. Rockefeller was the first and only Coordinator. In March, 1945, the President, by Executive Order 9532, changed the name to Office of Inter-American Affairs and transferred to the Director of the latter office the duties, powers, responsibilities and functions of the Coordinator. Subsequently, by Executive Order 9710, dated April 10, 1946, the OIAA was abolished and the responsibility for liquidating its activities was transferred to the Secretary of State. At the same time, the order transferred to the Secretary the authority of the Director of the OIAA over the Inter-American Affairs and corporations.

"Under the authority of the 3rd Supplemental National Defense Appropriation Act, 1942 (55 Stat. 819) and subsequent Acts . . . providing funds for the creation and capitalization of corporations to carry out his program in the other American Republics, the Coordinator organized five corporations under the law of the State of Delaware."

The financial potentials of "Coordinator" Rockefeller in administration of his office that were discovered by the audit, are cited at the head of this chapter.

Incidentally to furthering the interests of himself and of the Rockefeller-Standard Oil interests, "Coordinator" Rockefeller did not neglect those of their Communazi partners. As has been related, he chose as his fiscal agent Paul Nitze, the nephew of World War I German agent,

Paul Hilke, and vice-president of the Dillon Read firm that had floated the issues that financed the German interests of the Rockefellers including their I. G. Farbenindustrie A. G. The I. G. chemical and drug cartel interests in Latin America were assiduously protected by a brother of "New" Dealer, Tom Corcoran. This was merely another phase of the deal that led Sen. Harry Shippe Truman in a report to the Senate on March 27, 1942, to accuse Rockefellers and their Standard Oil Co. (N. J.) of treason.

"Coordinator" Rockefeller subsidized the failing Nazi propaganda in newspapers in Latin America with the funds of American taxpayers, by advertising in their publication extensively. (31, p. 87) This he did in spite of the protests of the State Department. Rockefeller pressagent Morris alleges on his behalf that this was merely a "mistake". But it is quite obvious that it was no more of a "mistake" than their acknowledged treason that their kinsman, Sen. Truman, exposed. Nor was it any less so than other acts of "Coordinator" Rockefeller and his clique.

"Coordinator" Rockefeller did not neglect the Communist pawns of the Communazi cause and the Rockefeller-Soviet Axis totalitarian conspiracy. He employed only "liberals", which in this instance meant persons subject to Communist discipline, and cardholding members of the Party. Catholics were brusquely rejected when applying for employment for dealing with their Latin American coreligionists. Through his office, he subsidized their Communist partners in Latin America as liberally as he did the Nazis. In this manner, "Coordinator" Rockefeller made certain that Communist cells and his species of "liberals", exist in all Latin American countries. In those lands where none existed, where the Communists had not succeeded in penetrating, cells were provided. And where Communist cells existed, they were bolstered and reinforced. "Coordinator" Rockefeller sowed the Red wind from which we are reaping such whirlwinds as Jagans in British Guiana, Castro in Cuba, in Venezuela and in Panama, and more on their way.

As one of his top advisers and the head of his political research division, "Coordinator" Rockefeller appointed a notorious Communist agent, who was well known to the State Department as such, Bob Miller. Miller was editor of the Latin American Communist propaganda sheet, THE HEMISPHERE. It was well-nigh bankrupt when Rockefeller came to its rescue. Rockefeller bought the expurgated files of THE HEMISPHERE "for a substan-

tial sum of (taxpayers') money" and rescued it from bankruptcy.

Elizabeth Miller, the confessed Communist courier and spy, reported (63, p. 138; 155) that the Communist master spy ordered Bob Miller to apply to "Coordinator" Rockefeller for the key job. Miller, who knew that his notorious Communist record was well-known to the State Department, was incredulous. But he was assured that his Communist record would constitute no barrier; and that he could apply to Rockefeller with full confidence of getting the appointment. He was appointed without delay.

#### **WHAT COULD MORE CLEARLY REVEAL ROCKEFELLERS' IDENTIFICATION WITH THE COMMUNIST CAUSE AND THE ROCKEFELLER-SOVIET AXIS?**

The "alibi" offered by Robert Silverberg (61, p. 10) for his patron, Rockefeller, that his employment of Miller was "a mistake", is obviously false. For Rockefeller's record clearly indicates his consistent association with Communists and "liberals" of the same stripe as himself. The "explanation" falls flat in face of Nelson Rockefeller's record. **ROCKEFELLER HAS NEVER MADE THE "MISTAKE" OF BEING, OR OF EMPLOYING, A PATRIOT, OR AS HE LABELS THEM IN HIS RED JARGON, "A RADICAL RIGHTIST."** (66) In the "internationalist" histories that he and his foundations subsidize there has been evident the inclination to depict Benedict Arnold as a hero, and George Washington, the "isolationist" as a "radical rightist". In the not-so-distant past, the conspirators ordered the writing of an opera, for production by their "cultural" minions, that would depict Benedict Arnold as its hero, and George Washington as a villain. It is noteworthy that the Rockefellers have been singularly silent regarding Sen. Truman's characterization of their own and their Standard Oil activities as "treason." (11, p. 3)

For the purpose of diverting attention from the treacherous and thievish character of the fundamental activities of his "Co-Ordination" and at the same time subsidizing his crackpot Red followers, Rockefeller launched some of the most absurdly insane of the "cultural" boondoggles of the entire New Deal, at a cost to the taxpayers that he acknowledged to be \$259,000,000. Exposure of these by Sen. Hugh Butler, of Nebraska, in an article in the Reader's Digest brought to light the full extent of the Latin American "aid" graft of the conspirators, that totalled \$6,000,000,000 in three years. (67)

"Co-Ordinator" Rockefeller was summoned to appear

before a Senate Committee investigating the extent of the thievery. He appeared, with numerous charts prepared by his subordinates that serve to mask any manifestations of mental impairment, in an effort to deny the information that he himself had furnished Sen. Butler for his Reader's Digest article. But the Senator saw through the fabrications and followed up his original Reader's Digest article, entitled OUR DEEP DARK SECRETS IN LATIN AMERICA, with a second article entitled THEY ARE STILL DEEP DARK SECRETS.

For anyone acquainted with Rockefeller thievery there need have been no unsuspected "secret". The explanation for the dissipation of billions of the taxpayers' money on Latin American "aid" was the Rockefeller practise of "feathering their nest" and building up their Empire at public expense. Nelson Rockefeller, as "Co-Ordinator", made no secret of the fact that he expected to be richly rewarded for any "aid" from the moneys appropriated by Congress, on his demands, for the supposed "defense" of Latin America.

The Latin American Spanish press, at that time, carried in bold headlines Rockefeller's demands for payoffs to the Rockefeller-Standard Oil interests in return for participation in any of the funds appropriated for their "defense". It was announced, for example, that "Coordinator" Rockefeller had openly informed the Bolivian government it would get no part of the handout unless the loot desired by those interests, including expropriated properties, were handed over to them. Mention has already been made in an earlier chapter of the resultant participation of the Rockefeller-Chase National Bank in the Patino tin mining venture, in the production of an inferior grade of tin that can not be adequately purified because of its arsenic and antimony content; and its enormous cost in money and lives in the World War II effort, and its profits to the unprincipled principals.

In Venezuela, "Coordinator" Rockefeller most successfully and profitably advanced their interests and those of their Company, the Standard Oil subsidiary, Creole Petroleum of which he was officer and large stockholder. He did it so crudely as to elicit Betancourt's wholly justified charge that he was "exploiting our country" with his specious, hypocritical and bogus pretense of humanity, benevolence and "philanthropy". (61, p. 107) A Venezuelan weekly publication commented:

"... it is now required that we open our doors to the Messiah . . . and grant him the exploitation of

hundreds of thousands of hectares of Venezuelan lands."

Rockefellers and their Standard Oil interests ran true to form. They looted Venezuela mercilessly. An indictment drawn up against them by order of President Medina, charged them with the theft of oil valued at two hundred million dollars by the crooked device of false registration of the capacity of their tankers, that had served as the sole index of the amount of oil purchased and the royalties to be paid thereon. The tankers had been listed at half their true capacity.

A settlement of the claim was made by the Rockefeller-Standard Oil thieves. It was reported to be about nine million dollars. Shortly thereafter, Medina was ousted as President in a "revolution" engineered for the purpose. He was replaced by a more "complacent" President. And Medina, exiled, moved to New York City to become a neighbor of the Rockefellers.

"Coordinator" Rockefeller did well for himself in Venezuela. He managed to "acquire" vast, rich land holdings there. They included the highland Monte Sacro ranch, that is described by biographer Manchester as "larger than the five boroughs of Manhattan". (9, p. 11) The land is especially valuable because it has been so long under cultivation. It was owned and developed by Bolivar and appears to have a high military strategic value. It can be reached readily only by plane. It is a Rockefeller duchy much like havens to which Medieval tyrants fled for refuge when driven to flight. It is admirably suited for the flight and refuge of both funds and persons. Nevertheless, when Rockefeller fled there for a honeymoon with his second wife, "Happy", he took along a bodyguard that included a Captain of the New York State Police.

"Coordinator" Rockefeller profited even more handsomely from his activities in Brazil. He acquired vast land holdings there, that centered in the State of Minas Gerais that is fabulously rich in natural resources. He is reported to have had as a silent partner in this acquisition the President of Brazil, Getulio Vargas. A small fraction of this holding is reported to have made Nelson Rockefeller, member of the Coffee House Club, one of the world's largest coffee producers. Thereby hangs the tale of the "coffee corner" that has mulcted American coffee drinkers of many millions of dollars by a manipulation of the coffee market with the money supplied by the victims of this manipulation. This is largely responsible for the disappearance of the five cent cup of coffee.

The story of this deal was published by this author in the February 1954 issue of his news bulletin entitled WAKE UP AMERICA, which is here reproduced.

"The coffee market has been cornered, it is reliably reported, and cartelized. Brazil's largest and wealthiest property owner is Nelson Aldrich Rockefeller, of 2500 Foxhall Road, Washington, D. C. Rockefeller is reported to own over seven billion dollars worth of property obtained largely as a reward for aid given by American taxpayers to the Brazilian government and its coffee growers through various agencies which he dominated, including the Inter-American Affairs Administration, the State Department, the Marshall Plan, the Point 4 Program and other U. S. Government devices; and through the Rockefeller Foundation and IBEC. These foreign holdings of Rockefeller's have additional value as a device for evading inheritance taxes because of a joker that has been written into the inheritance tax laws that exempts from taxation property held in foreign lands.

"Nelson Rockefeller is regarded locally as the real political boss in Brazil, and the power behind Getulio Vargas, its President (just as he is the real power behind our local Administration). His activities have made Americans intensely disliked in Brazil.

"As the largest property-owner in Brazil, Nelson Rockefeller ranks high among the producers of coffee.

"About two months ago, a three hundred million dollar loan that had been extended by our Government to Brazil for its coffee interests, through the Import Export Bank, came due. This money was largely used for the purchase and storage of coffee, to create a corner of the market. The loan was secured by the cornered coffee. Payment of the loan would have required the sale of some of the coffee and would have resulted in a drop in the price of coffee in the world market. To prevent this, the Import Export Bank was "induced" to extend the loan. Since then the price of coffee has been pushed up steadily by the Coffee Cartel, thanks to the help extended to the gougers by American taxpayers through the Treasury Department, at the instance of Rockefeller, who from the beginning has suffered no injury from this "philanthropy."

"The New Deal devices of restriction of crops, bonuses for not producing, and others, which are largely paid for by the American taxpayers and consumers, in both capacities, have been an important aid to the monopolists in setting up their corner. The frost, which they have used as a pretext, was a minor factor. Warehouses bulge with coffee in Brazil, Colombia, Central America, Porto Rico,

Java, Sumatra, Ethiopia and the tropical sections around the world where coffee is cultivated. But the monopolists have done a good job of making the U. S. dependent on their Brazilian coffee, by various devices that they have brought into play in the past decades.

"The cartelization of coffee is but one of the many cartels in which the Rockefeller Empire revels, aside from their oil cartel. Their drug and narcotic cartel, centering about the I. G. and its international agencies and allies, gouge the public mercilessly, and exact the same price for the same dosage of all life-saving antibiotics. Their milk cartel has driven the price of milk from six to twenty-eight cents a quart within a period of months. In the paper and news-pulp industry, the Board of which is headed by John D. Rockefeller III as chairman, the cartel has forced the price from sixty to two hundred and sixty dollars a ton. Now they are not faring too badly in coffee.

"In the meantime, their press agents proclaim the Rockefeller "philanthropy". Will the American housewife believe it? Or will she finally discern that she and her fellow Americans are the real philanthropists and Rockefeller "suckers"?

"Rockefeller's top press agent, Francis A. Jamieson, was sent to Brazil when the storm over coffee prices broke loose and committees were sent to Brazil to "investigate", presumably to keep the Holy Name of Rockefeller out of the press in connection with coffee.

"Rockefeller deals such as these have been materially aided by the usurpation of power by their dummy Presidents under the New, Fair and "Ike" Deals. They have been able to thumb their noses at the people and at those of their elected representatives who might desire to serve them. They do this through "treaties" and "executive agreements" which impose their interests and will on the Nation in spite of the people. Through this device they have made themselves super-dictators who are free to loot and despoil the people and to override the Constitution. Such deals as World Wars I and II, Korea, the Coffee Cartel, and the enormous profits from them, would not be conceivable if a check and balance such as the Constitution provides on dictatorial powers of the President, were restored."

An ugly by-product of the Brazilian coffee corner was the strange, violent death of Pres. Getulio Vargas. He had been induced to intensify the "corner" by buying offerings that came into the market. He was promised that they would be taken off his hands. The financing promised him failed to materialize. When the sharp break in the cof-

fee market was precipitated by a boycott of coffee incited by the American press (controlled by the conspirators), Pres. Vargas found himself over-extended and bankrupted by the betrayal. Frantically, he phoned Nelson Rockefeller, almost every half hour; but was informed, by the secretary sitting at his side, that he was not available. Hours later, Pres. Vargas came to a violent end. The demonstrations by Vargas's followers centered about the Standard Oil office building in Bello Horizonte which houses the American Consulate. The incident added flames to the anti-American feeling in Brazil and materially advanced the cause of Communism there.

The coffee cartel agreement whereby the American market is assigned to the conspirators' Brazilian coffee and the price of coffee will be maintained at an artificially high level, has been renewed in 1963 through the conspirators' "United" Nations International Coffee Council. (102) This will insure the conspirators of a high level of profit for their monopoly of the American coffee market, that will be gouged out of the American consumer for an inferior grade of coffee. The irony of the situation is intensified by the fact that the coffee "philanthropists" have financed their gouging of us "peasants" at our expense as taxpayers, in much the manner of their other swindles.

These are a few examples of "co-ordination", the profits of which have been extremely high. They exemplify the so-called "foreign aid" to which Nelson Rockefeller has whole-heartedly dedicated his most assiduous personal effort, unstintingly, during the past two decades. The costs have been so enormous as to threaten bankruptcy of the Treasury that is being brought on by the resultant unfavorable payment balance. That is being further intensified by the conspirators by the deliberate use of the credits that they have established overseas through the "foreign aid" diversion to transfer to their foreign accounts the gold of which they looted the nation through their New Deal. In short, Nelson Rockefeller's "co-ordination" was merely his device for continuing the despoiling of us American "peasants", in the name of Latin America, that had been practised by the conspirators during the 1920's by the sale to the suckers of bonds. The conspirators had profited handsomely from the earlier "Latin American" bond issues. Often as much as 90% of the moneys raised by those issues remained in the hands of the conspirators. Nelson Rockefeller, as "Co-Ordinator", improved on the technique of the earlier swindle that had been put on the basis of voluntary "investment" (except for "pressure" brought to bear on banks and other agencies to "invest"

and induce their customers to "invest"). Through "co-ordination", every one of us American "peasants", as taxpayers, were levied upon to contribute to the spoils of the conspirators. All of which demonstrates how criminal psychopathy can be "improved" in successive generations by breeding and training!

These and other equally reprehensible activities throughout Latin America, Nelson Rockefeller has the brazen effrontery to have his propagandists represent to the public, in his campaign biography entitled **MEET NELSON ROCKEFELLER**, as attaining "The Result: a Hemisphere Unified" (44, p. 11); and portraying "A New Sort of Capitalist" (44, p. 13). Presidential candidate Dr. Arturo Illia, of Argentina, pointed up the irony of those absurd misrepresentations in his 1963 campaign by advocating cancellation of the Standard Oil Co. concessions obtained in that land by "greasing the palm" of their agent Peron with a "loan" of \$125,000,000.00 from the American taxpayers. Following his inauguration, he cancelled the concessions.

Following the custom initiated by his adored grandfather, Nelson undertook to mask his predatory activities in Latin America, when they were exposed and reviled, by a pose of bogus "philanthropy". This camouflage was set up by him, in July, 1946, as the American International Association for Economic and Social Development (AIA). Through pretense in the welfare of the natives, Rockefeller cunningly forced the governments, particularly in Venezuela and Brazil, to enter into partnership with him. This traditional Rockefeller scheme gave entree to the local governments to the conspirators and served to mask their predatory activities. Then Rockefeller bailed the Dynasty out of these pseudo-philanthropies through the "Point 4" and other so-called "foreign aid" programs. The most recent is his Alliance for Progress that Pres. Kennedy launched at his instance. These so-called "foreign aid" programs are cunningly contrived to serve Rockefeller's interests at the expense of the American taxpayers. The native Latin Americans accredit what little benefits they may receive from them, to Rockefeller. And we, the "Yanqui" taxpayers, who are plucked for this Rockefeller aid, are reviled by the Latin Americans because those meagre benefits are merely cover-ups for gigantic Rockefeller-Standard Oil steals, and for the spread of Communism.

Under the cover of this display of their brand of "philanthropy" Rockefellers engage in cutthroat competition with local enterprise, again at the expense of us Amer-

ican "peasants", through a commercial organization that is largely owned by the members of the family and some associates, which they have named the International Basic Economy Corporation. As the title indicates, its basic purpose is to carry out in the countries involved, the fundamental Rockefeller racketeering scheme of monopolizing and profiteering in all necessities of life from producer to consumer. Recently the Rockefellers have extended IBEC's operations to other lands, including Italy, where its advantages to themselves, and its *modus operandi* have come to light. It will be detailed in a later chapter.

The vicious and malodorous activities of Rockefeller in Latin America, whether "coordination", or "foreign aid" by any other of its titles, operate, unfortunately, with the sanction and cooperation of puppets in every branch of our Government. They are regarded, therefore, as operations of our Government and of ourselves. Many of its aspects, such as the cut-throat competition offered to local merchants and producers by Rockefeller's IBEC, has created intense animosity against us and our Government.

The hatred of the U. S. bred by the ruthless activities of the conspirators who operate in our name, is a significant factor in swinging public sentiment in many of those lands, such as Venezuela, Argentine, and Brazil, toward Rockefellers' Soviet partners, the Communists. They greatly simplify the conspirators' task of national and international looting. Communism makes an absurdly simple appeal to the larceny in the heart of most humans, with its ideology and pseudo-philosophy. This reduces the conspirators' game to a simple formula of: "Heads I win, tails you lose."

That the Latin-Americans are not as gullible as are we domestic "peasants" regarding the Rockefeller pose of "benevolence" and "philanthropy" is evident from the comments in their press on the subject. O SEMANARIO is quoted by Morris (43, p. 243) as labelling Rockefeller "NUMBER 1 ENEMY." If our citizenry could be awakened from their "philanthropic" brainwashing sufficiently to realize that he is also "NUMBER 1 ENEMY" of ourselves, our country and the world, we may be spared the disaster that the conspirators plan for us.

## CHAPTER X

### NELSON ROCKEFELLER, ASSISTANT SECRETARY OF STATE, "SERVED" THE U. S.

Versatility "in making money" is a tradition in the Rockefeller Dynasty. And Nelson Rockefeller, the "Co-Ordinator", proved himself excelling in the "art". He "flitted about South America attending presidential inaugurations and revolutions indiscriminately, superseding the accredited U. S. Ambassadors, assuming the role of Uncle Sam in his high silk topper, embracing a president here and a concession there, magnificently cloaking the Rockefeller Empire with the waning majesty of the United States and expanding it with the squandered funds of the looted American 'peasants'" (11, p. 46) These activities did not deter him from joining his brothers and the Dynasty's Standard Oil and other agents in betraying and looting our country, engaging in the activities that kinsman Sen. Harry Shippe Truman characterized as treason; in engineering World War II for the protection and expansion of the Rockefeller-Soviet Axis and forcing our entry in it by maneuvering the Japanese attack on Pearl Harbor through their agents and spies who were sent by their Institute of Pacific Relations to join the Richard Sorge spying in Tokyo to accomplish that purpose; in forcing their American "peasants" to serve as self-paid mercenaries by their imposition of Universal Military Training and militarism; and in mercilessly looting the U. S. and the world.

In these activities, Nelson Rockefeller craftily operated behind the scenes to avoid being publicly identified with his unsavory activities and to avoid attracting too much attention to his "slacking" and draft dodging. He was, however, the "soul" of the New Deal, and "closest adviser" of Roosevelt in all matters, including the conduct of the war. Sitting in on Cabinet meetings and the various super-governmental agencies that had been set up in the Rockefeller Foundation that he controlled with his family, he was able to place their Rockefeller-Soviet agents in the most strategic posts to serve their interests, and even to

dictate the strategy of the Joint General Staff in the conduct of the war. As might be expected of one of his mentality and training, sight of "profits" was never lost. The fattest war contracts with the largest profits, often not for the best materials and equipment went to industries controlled by the conspirators. These industries, as stressed by Sen. Truman, were as often in the enemy camp as in our own, constituting a potent motive for the treason of which he rightly accused his kin, the bosses of Standard Oil. There was little urgency to bring the war to a close and thereby reduce profits from war contracts and production on both sides of the battle lines. This was merely a repetition of the old Rockefeller custom, of playing both ends against center, of pretending to fight an "enemy" whom they completely control.

As the close of the war drew near, "Co-Ordinator" Nelson Rockefeller moved to be "in on the kill". He "advised", or ordered, Roosevelt to transfer him and his CIAA to the State Department, superseding the career personnel. Pres. Roosevelt had no need to "advise" his newly appointed Secretary of State Stettinius, Rockefeller agent and member of their Council on Foreign Relations, to make Nelson Rockefeller Assistant Secretary of State for Latin American Affairs. (61, p. 113) There Rockefeller joined numerous pals and agents including Alger Hiss, Owen Lattimore, Joseph E. Johnson, William Benton and John Foster Dulles.

The Communazi vermin with which Rockefeller had filled his CIAA literally "crawled out of the woodwork" and further infested the State Department, ready to do his bidding. Paul Nitze, nephew of German agent and spy, Paul Hilke, Rockefeller's CIAA finance director, was quickly transferred to the Defense Department to direct the "strategic bombing" of Germany, with the resultant benefit, or profit, to the conspirators that has been noted, and preservation for them of a major factor in the military potential of Germany. It served to conserve for them the huge wartime profits of the I. G. Farbenindustrie. These included those derived from the rendering of the fat of the concentration camp victims whom Rockefeller, through his Rockefeller Institute employee and agent Alexis Carrel, had "philanthropically" arranged to advise Hitler to exterminate as "unfit". It was the first step in the conspirators' process of fully restoring the martial powers of their German pawns that terminated in freeing and reinstating their State Department agent Charles Bohlen's cousin, Krupp von Bohlen, to control of the Krupp munition plants. Needless to say, Rockefeller's CIAA Com-

munist employees joined their confreres in the State Department. And many of them undoubtedly found their way into kinsman Allen Dulles's espionage agency operated for the Rockefeller Empire, the Central Intelligence Agency (CIA). Allen Dulles used as his exclusive source of espionage information in Europe and the Soviets, Hitler's Nazi chief of intelligence, Gen. Reinhard Gehlen. Three of his top operatives Heinz Felfe, Hans Clemens and Erwin Tiebel were convicted of treasonously serving as Soviet agents, by the Federal High Court of West Germany, on July 23, 1963. (70) This serves to highlight the doubly treasonous character of that Rockefeller agency as a part of the Rockefeller-Soviet Axis. And it serves to explain the disasters our country has suffered in Korea, Cuba and elsewhere.

Many strange developments in the later stages of World War II are undoubtedly traceable to the influence of Pres. Roosevelt's "closest adviser" (12), Nelson Rockefeller and his subversive CIAA crew infiltrated into the State Department to collaborate with numerous agents of the conspirators who filled its ranks. These include:

1. Paralyzing of all investigations of Communist subversion, including the abolition of the War Department Counter Intelligence Corps, the disruption of its system for preventing the penetration of Communists and other subversives into its ranks, and the destruction of its records; the destruction of the records of the House Un-American Activities Committee and the drive on Martin Dies, its chairman; the penetration of Reds through the public relations organization of the Armed Forces and all government agencies.

2. Restraining of Gen. Patton's readliy to be effected drive to overrun Germany and to take it over; and Patton's "accidental" death when he showed an inclination to disregard orders and block the Communists from taking Berlin and East Germany; delivering East Germany to the Soviets for sacking.

3. Stationing of GIs in Berlin behind Soviet lines with no lines of supply and communication except by consent of the Communists, a position in which no loyal commander would place his troops.

4. Turning over to the Communists the missile base at Dora, Saxony, with all supplies, equipment and personnel after they had been seized by American troops. This gave the Soviets, most treasonously, a headstart which we have not been able to overcome. And it has given their Communist cause tremendous propaganda advantages.

5. Betrayal of all allies into the hands of the Rockefel-

ler-Soviet Axis, including Chiang Kai-Shek and the Chinese Nationalists, Mihailovich and the Serbian anti-Communists; the delivery to the Soviets of Russian anti-Communists, for slaughter, and of Poland, Czechoslovakia, Hungary and much of the rest of the world. This betrayal of friends and allies has long been a Rockefeller custom on which they pride themselves. And they have imposed it on our country as its "foreign policy", to serve their own Axis interests. It lies behind the treacherous Yalta Conference which was a deal for betrayal of allies and for the promotion of Soviet Communist expansion around the world. Their objective is looting jointly, in exchange for a free hand in the development of Saudi Arabian oilfields at the expense of American taxpayers.

6. Surrender of the sovereignty of our country to their Rockefeller-Soviet Axis through their "United" Nations agency, a successor of their League of Nations, for the purpose of more effectively looting one and all.

7. Lobbying and launching an endless array of schemes for looting of American taxpayers and bankrupting the Treasury to facilitate their subversive conspiracy, in the name of "foreign aid".

8. The State Department, that John D. Rockefeller had boasted had served him as a loyal agency (7, p. 63) and that had been directed in the service of his interests by kinsman John Foster Dulles, finally came under the personal direction of Nelson Rockefeller.

Paralyzing and putting an end to investigation and exposure of the Communists whom the Rockefellers and their agencies and "philanthropies" had subsidized and infiltrated into all the agencies of their "New Deal" to further plots and plans for the takeover of our country and its betrayal, has been absolutely essential for the Rockefeller Dynasty. (11, pp. 204-31) It amounted to blocking exposure of themselves as the arch-conspirators. Chairman Martin Dies and "reformed" Communist investigator, Dr. J. B. Matthews, had carefully protected the Rockefeller "philanthropists" from exposure of their activities in the Communist cause, in their investigations for the House Un-American Activities Committee (HUAC). The continuation of the investigations of that Committee by the subcommittee of the Senate, that later was headed by Sen. Joseph McCarthy and others, would have led inevitably to the exposure of Rockefellers' personal roles in the fostering of Communism.

Rockefellers' interest in fostering the thorough penetration of all governmental agencies by Communist pawns was vital to them and their "holy" profits. Communism is

the most efficient of thievish devices, that permits thievery on the widest, nation-wide scale. Their interest, for which they had engineered World War I, was control of Russian oil and the development of Saudi Arabian and Near Eastern oilfields without interference from Soviet Russia. That was the nub of the deal that they had made with their agent Stalin, that constituted the basis of the Rockefeller-Soviet Axis. (11, pp. 204-18) Since it is an undeviating purpose of the Communists to spread their doctrine as a device for gaining a conquest of the world, it is obvious that the Rockefeller-Standard Oil negotiators must have agreed to foster Communism in the U. S. and elsewhere; and to promote Communist penetration in the government and all its divisions, especially the Armed Forces. To accomplish this purpose it was essential that Rockefeller eliminate any barriers that had been set up against Communist penetration of the "Popular Front" that they had imposed on the nation in the guise of the "New Deal". Nelson Rockefeller's role as closest and chief "adviser" and boss of Pres. Roosevelt placed him in the key position to enable the conspirators to attain their goal. And his presence in the State Department as Assistant Secretary to direct the activities of the subversive agents of his Council on Foreign Relations insured against any slip-ups. It is noteworthy that the most subversive and treasonous of the orders involved were issued by the conspirators' puppet, Roosevelt, and were carried out by such of their agents of the CFR as Frank Knox, Henry Stimson, Adlai Stevenson, Gen. George Marshall and John J. McCloy.

The first overt move to attain the conspirator's objective was Rockefeller puppet's, Pres. Roosevelt's order to Secretary of War Knox, pressed by Adlai Stevenson, requiring the Navy to permit known Communists to serve as radio operators despite the objection of Admiral Staton, who was in charge, that they constituted a menace to national security. The Admiral was ousted. (71, p. 10)

There followed in more or less rapid succession the destruction of the Armed Forces' records on Communists ordered by Lt. Gen. J. T. McNarney and supported by Gen. G. Marshall; the abolition of the Counter-Intelligence Corps and the sabotage of the counter subversive system of the Armed Forces, under the direction of Assistant Sec. of War John J. McCloy (71, pp. 11-13); and finally, by an order dated Dec. 30, 1944, shortly after Nelson Rockefeller's appointment as Asst. Sec. of State, the commissioning of known Communist traitorous agents in the Armed Forces with the support of his CFR agents John J. McCloy and Maj. Gen. Clayton L. Bissell (who was then Chief of Intelli-

gence in the War Department). (71, pp. 13-4) Subsequently Bissell was transferred to the CIA, where he served the conspirators ably in insuring the failure of the pretended scheme to overthrow their Cuban agent, Fidel Castro, in the Bay of Pigs "invasion".

The conspirators' influence in bringing about the destruction of the files of the House Un-American Activities Committee was undoubtedly facilitated by Pres. Roosevelt's desire to do away with the records of his own and his negroid consort, Eleanor's, Communist activities. Nelson Rockefeller's interest in their destruction did not emanate from any mention of his own Red activities and the support of Communist causes. For any mention of that "philanthropist" was carefully deleted from the records of the hearings, following the usual practise that has been mentioned. The records, however, of numerous of his pals, associates and agents were involved. And their destruction could not be anything other than desirable to the conspirators, as was also the defeat of the Martin Dies and other of the HUAC chairmen who undertook to carry out their assigned duties.

The conspirators' purpose was in some measure defeated by the scheming cupidity of one of their "reformed" associates, Rev. J. B. Matthews, chief investigator for the committee. He had the records of the HUAC printed by the Government Printing Office during the night preceding the receipt of the order issued by the conspirators for their destruction, as APPENDIX IX. So hurried was the job that Matthews failed to remove from the records numerous citations of his own subversive activities. However, APPENDIX IX was withheld from the public and even from governmental agencies such as the Immigration Department. The bulk of the edition was usurped by the conspirators or distributed among their associates. With it, Matthews set himself up as an "anti-Communist authority". He became consultant on the subject to Hearst publications, and enriched himself by selling the citations of persons that the Party had reasons to purge, reportedly for the sum of five dollars per citation. Matthews has consistently blocked the release to the public or to governmental agencies of APPENDIX IX, maintaining that record, that was prepared at public cost, as his private property. He has resorted to court action to prevent its reproduction by an Ohio American Legion Post, alleging that since it was the records of the HUAC the public, other than himself and his friends, had no right to it. And oddly enough, he was upheld by the court in retaining it as a private record. In this manner Matthews has served the

cause of the Party by exposing the record of citations only of those persons who have been purged by it. He has hidden his own unenviable subversive record, and has added to it by blocking the nation from protecting itself from Communists whose records have been investigated and exposed, in vain, at the expense of the taxpayer. (APPENDIX IX has been made available on microfilm by this author and may be had at a nominal cost from CHEDNEY PRESS.)

Continued exposure of the Reds and their collaborators would inevitably have led to the exposure of the Rockefellers themselves. As it is, it is only the mental sluggishness and veneration of the supposed "philanthropy" that blinds the public from identifying Rockefellers as ring-leaders of the subversive causes. Numerous of their agents who have been publicly identified as supporting Red causes have continued to be openly associated in business and industry with their Rockefeller bosses. Thus John J. McCloy has been a Rockefeller-Standard Oil attorney. After his involvement in the adoption by the Armed Forces of the policy of giving commissions to known Communists and after openly testifying that he and his fellow conspirators were content with placing our GI's under the command of officers who were 51% loyal to the U. S. and 49% loyal to the Communist cause, he was promoted by the Rockefellers to head their Chase Manhattan Bank and to dictate monetary policy to the Treasury.

These facts make quite obvious the answer to the question: "Who Promoted Peress?" The ultimate authority in the matter is directly traceable to the Rockefeller conspiratorial agents infiltrated in our government at all levels. Nelson Rockefeller's threats and boasts to "frame" Sen. Joseph McCarthy, whom he had supported, and to destroy him for his repetition of exposure of the conspirators and their agents, is readily understandable.

The almost incredibly traitorous policies followed by the American Armed Forces, on the basis of orders from higher up, transmitted through the Joint Staff headed by Gen. G. Marshall and carried out by the field commander, Gen. Dwight D. Eisenhower, quite obviously served the purposes of the Rockefeller-Standard Oil interests and their Rockefeller-Soviet Axis. The restraining and disposal of Gen. Patton, the yielding of East Germany and Berlin to the Communists, the stationing of our GI's in Berlin with no lines of supply and communications other than those yielded by the Soviet occupying troops, and the turning over to them of the missile base at Dora with all its supplies, plans, secrets and personnel, undoubtedly

earned for the conspirators the gratitude and cooperation of Stalin and the Soviets and served thus the interests of their Rockefeller-Standard Oil partners. But it also served the Rockefellers in other manners.

The Rockefellers, under the direction of Laurance, have taken over the role of Basil Zaharoff as munitions king of the world. The treasonous acts enumerated could be expected inevitably to insure the threat of Soviet aggression and war, and thus prove a stimulus to the munitions business, and to serve as an excuse for looting American, and other taxpayers on both sides of the Iron Curtain. The considerable missile and satellite advances made and planned by the Germans at their Dora laboratory, they had deliberately planned to prevent falling into the hands of the Communists by moving from Peenemunde to Dora, which was in line of advance of the American forces. The conspirators, by frustrating these plans, gave the Soviets the upperhand and an almost insuperable headstart over the U. S. that would be certain to goad it into unlimited expenditure of tax funds in an effort to catch up in this phase of the munitions industry.

Since the major as well as minor companies engaged in the production of missiles and accessory equipment are controlled by the Rockefellers, the profits that have accrued to them from this single aspect of treachery has been enormous. Their profits from the other military advantages treacherously given their Soviet partners accounts for many billions of our annual military budget accruing to them. The advantages in the oil and other industries with which the Soviets have rewarded the conspirators and their industries, include monopolistic control of oil exported from the USSR, that is marketed by Standard Oil Co. (N. J.) under their Esso brand; and freedom of interference in their production and sale of Saudi Arabian and Middle East oil. These items alone enriched them by many more billions of income. The cost of the oil imported into the U. S. from those fields is playing a major role in creating the unfavorable balance of trade that threatens the solvency of our Treasury. This serves as an excuse for their juggling of the gold which they looted from Americans in 1933 through their "Federal" Reserve System. It is preparing the way for their merciless looting of the nation and the world by the device of inflation and a financial "crisis" thereby engineered. The treason with which kinsman Truman charged them proved enormously profitable.

In order to further intensify the missile rivalry, and thereby to greatly magnify the "take" from the taxpayer

on this score, the conspirators blocked the Army from launching its Jupiter missile for a period of more than a year after it was ready to be launched, with the consequence that the Soviets claimed that they had launched their first orbiting missile, their so-called "Sputnik" and profited from the propaganda value of their claim. The conspirators then announced that our Soviet rivals had outstripped us in the missile rivalry and that we American taxpayers would have to hand out unlimited sums to their missile industry in order to attempt to catch up. The conspirators made no mention of the fact that the Soviet's claimed "achievement" was the consequence of their multiple treacheries.

## CHAPTER XI

### NELSON ROCKEFELLER & AMERICA'S BETRAYAL TO AXIS AT "UNITED" NATIONS

"I was wholeheartedly committed to the battle at the San Francisco Conference in 1945 for the inclusion of Article 51 in the United Nations Charter . . ." Rockefeller: *Future Of Federalism*, p. 77 (42)

Not content with looting the nation of its material wealth, the conspirators have undertaken to rob it of its sovereignty; and us, their "peasants", of the liberty assured us by the Constitution. This they have undertaken to do by the device planned by Jesuit Adam Weishaupt, when he revived the Nazarene conspiracy on Mayday 1776, by the so-called "United" Nations. As has been related, this plot was hatched in Rockefellers' "Philanthropic" Foundation Trust and by their CFR agents and associates, as a replacement for their League of Nations that had not only been rejected by this country but had also been discredited as a Utopian agency for peace. The stellar role in the UN fraud had been given by the Dynastic conspirators to their agent, Alger Hiss.

Nelson Rockefeller's dominant role in the betrayal of the sovereignty of our country into the claws of the Rockefeller-Soviet Axis, by way of their "United" Nations was masked in some measure by waiving of his appointment to the original U. S. Delegation to the San Francisco organization conference in 1945. His name does not appear on either the State Department list of the delegation,

or in that of the "United" Nations. After the delegation had been set up from persons selected from among the agents of the Rockefeller Dynasty, Nelson Rockefeller obtained his appointment as behind-the-scene "adviser."

But the key role played by Nelson Rockefeller in the "United" Nations betrayal of our country is clearly revealed by a number of things, that includes a frank statement by Sen. Arthur Vandenberg. The Senator had been leader of the patriotic element on the floor of Congress. He and other patriots had been vilified as "isolationists" in an intensive, vicious campaign in the press and in all media of mass communication controlled by the conspirators, that matched that which they later launched against Sen. Joseph McCarthy. Additional pressure was brought to bear on patriotic Sen. Vandenberg. It reeked of blackmail, in the form of threats of exposure of the sexual deviation of his son who was employed by Nelson Rockefeller in one of his Brazilian schemes. (11, p. 48; 75) (He was later ousted from a boys school in Florida, where he taught.) Sen. Vandenberg was "pressured" into joining the ranks of the "internationalist" conspirators after they had forced our entry into World War II by engineering the Japanese attack on Pearl Harbor.

Sen. Vandenberg is reliably reported to have declared in the course of the acrimonious controversy among the U. S. delegates to the U. N. organization conference:

"Anything Rockefeller (Nelson) wants, is O.K." (11, p. 342)

The immediate topic under discussion at the time was the question whether Argentina, under the leadership of the Communazi dictator Peron, should be admitted to the U. N. Peron was negotiating with the Standard Oil Co. for an oil concession in return for a bribe of a \$125,000,000 "loan" from the U. S. When Peron was later ousted by the conspirators because he exorbitantly raised his price for another concession in Northern Argentina, it was discovered that the \$125,000,000 "loan" had vanished with his other loot. The conditions and terms of the concession granted became the basis of the anti-Americanism that characterized the Presidential campaign of Dr. Illia. Since his inauguration, the concessions have been cancelled.

Mention is made by Rockefeller's propagandists of his role in the organization of the U. N. in his campaign biography MEET NELSON ROCKEFELLER (44, p. 13); but it is not stressed. The objective is obviously to lure the vote of those deluded by the U. N. but not to antagonize the voters who are keenly aware of its treason-

ous character. For the same very obvious reason, no mention is made in that slanted "biography" of Nelson Rockefeller's dominant role in providing the extra-territoriality, that even prostrate China spurned as beneath national dignity, for the site that he furnished the U. N. for its headquarters and pressured them to accept. From this spy nest in the very midst of the industry and commerce of New York and the nation, enemy agents thumb their noses at the country and commit the most atrocious crimes with impunity. The Rockefellers discovered from experience with their League of Nations, that it was more difficult and inconvenient to control their agents from afar. However, the agreement under which the Rockefeller conspirators provided their "United" Nations with the site in Mid-Manhattan stipulates, it is reported, that if and when the U. N. leaves the site, it will revert to the Rockefellers together with the buildings that have cost U. S. taxpayers tens of millions of dollars, at no cost. As usual, Rockefeller's "generous" and "philanthropic" gestures inevitably turn out to be ways of "making money". No mention is made of that in his campaign literature. (44)

Nelson Rockefeller had consolidated his CIAA, IBEC and AIA piracy in Latin America, in the so-called Act of Chapultepec which he had signed as Roosevelt-appointed Assistant Secretary of State, early in 1945. It was as "representative" of Latin America that he sat in on the meetings of the U. S. delegation in San Francisco. Propagandist Silverberg naively wrote that Rockefeller's course at the Conference was beset with "controversy." (61, p. 115) In reality, this was nothing more than the sham shadow-boxing with the "controlled opposition", or "enemy", which is a proud tradition of Rockefeller treachery. Can it be doubted reasonably that the conspirators left nothing to chance, that Nelson Rockefeller's "buddy" and Council on Foreign Relations pawn and agent, Alger Hiss, followed the pre-arranged plan in all that he did, as Secretary of the Conference? Among the betrayals thus perpetrated was the sub rosa agreement that was first brought to light by Trygve Lie, U. N. Secretary General in his book *IN THE CAUSE OF PEACE* (pp. 45-6) that provided that the head of the U. N. Military Secretariat would always be a Communist.

Nelson Rockefeller, when campaigning for nomination as Republican Presidential candidate in the New Hampshire primary, at Manchester, on January 10, 1964, made one of the most startling and shocking speeches ever made by a man seeking public office. As the main speaker at

the 14th annual meeting of the Associated Contractors of New Hampshire, he publicly confessed that the F.B.I. had informed him that they had complete proof that his intimate associate and agent, Alger Hiss, was engaged in betraying our country as a Communist agent. His words, as reported by Jim Stack in the Manchester Union Leader of that date (107, p. 12:4) with the strange preface that the F.B.I. agents had come to him, a mere Assistant Secretary of State, rather than to the officially accredited members of the U. S. delegation, who were also present at the San Francisco U. N. Organization Conference, were:

"They came to me one morning and said, 'We have the goods on Alger Hiss'. He was then secretary general of the conference. This was in 1945, mind you, long before anything else broke".

This report was fully confirmed and amplified by press dispatches that were published by several New York newspapers. A UPI dispatch was carried by the Journal American on the same date, on its front page. (120) An AP dispatch was carried by the Daily News the next day on its second page. (121) And a special dispatch by Cabell Phillips was carried by the New York Times (122) the following morning on its tenth page, that is indicative of the insignificance of national betrayal to its editors. Since the Times is "official organ" of the Rockefeller Empire, there can be no question as to the authenticity of Rockefeller's confession.

The Times gave some details of the speech that were omitted in the other reports. It reported that he was the only State Department official who would meet, "at 7:30 in his room", with the FBI agents who told him, in their role of responsibility for security, "what was going on". All the dispatches agree that he affirmed that the attitude toward the FBI of the entire delegation was that it was "a Fascist organization in our midst".

The clearest picture of the attitude of Nelson Rockefeller toward our country, that he has the brazen effrontery to ask us to elect him to head, of his contempt for our security, is the action that he took to protect us from the betrayal. Rockefeller is reported by his official organ, the New York Times, to have confessed that he suppressed the security information and warning given him by the FBI, thereby shielding Hiss from exposure and aiding and abetting him in his treasonous betrayal of our country.

This confession of Gov. Nelson Rockefeller's forcefully and dramatically corroborates his role, that is confirmed by all his past activities, that have been related, and those of the Rockefeller Dynasty, as collaborators of the

world-wide Communist conspiracy. Can there be any question, in view of his fantastic confession, that he aided and abetted Alger Hiss, and acted as an accomplice, when he has charged himself with that crime? Can it be questioned that Nelson Rockefeller has confessed treason? Is it possible that Alger Hiss was not the master-mind of the betrayal that he accomplished, but was merely a "fall guy" for the Rockefeller conspirators?

**IT WILL BE INTERESTING TO SEE WHETHER THE REPUBLICAN PARTY, OR ANY OTHER PARTY, OTHER THAN THE SO-CALLED "LIBERAL" OR COMMUNIST PARTY, WILL DARE NOMINATE NELSON ROCKEFELLER FOR THE POST OF PRESIDENT, OR ANY OTHER POST. IF IT HAPPENS, IT WILL SIGNALIZE THE END OF OUR REPUBLIC AND ITS REDUCTION TO THE STATUS OF A DESPISED DUCHY OF THE ROCKEFELLER EMPIRE AND SATELLITE OF THE ROCKEFELLER-SOVIET AXIS!**

With the obvious intent of making Alger Hiss a more formidable target for the "Fascist" FBI and others, the Rockefellers arranged to promote him to a number of exalted posts that they control. These included trusteeship of the Woodrow Wilson Foundation and of the World Peace Foundation. The most important of them was that of President of the Carnegie Foundation for International Peace, one of the top propaganda posts at the command of the conspirators.

The Carnegie presidency had a special significance under the circumstances. It placed Hiss in close association with David Rockefeller who had recently completed his education under such distinguished Communists as Harold Laski and Polish Soviet boss, Oskar Lange; John Foster Dulles, who designated himself a Christian Communist; and Columbia University president, Gen. Dwight D. Eisenhower. Pres. Nicholas Murray Butler, of Columbia U. had preceded Hiss in that post. And the offices of the Carnegie Endowment were shared with those of Columbia. It is possible that Gen. Eisenhower was not regarded by the conspirators as sufficiently indoctrinated, evidently, despite the fact that he had been born into the Mennonites, a theistic Communist sect. Eisenhower acknowledged his association with Alger Hiss, in a press conference at the Commodore Hotel on the last day of the first week of his Presidential campaign in 1952. Despite the appearance of John Foster Dulles as character witness for him, Alger Hiss was by then safely ensconced in the Lewisburg Penitentiary for Perjury in connection with treason. Sev-

eral years earlier, Eisenhower had joined the distinguished company of Alger Hiss, the Dulleses and the Rockefellers in their Council on Foreign Relations.

The organization of the so-called "United" Nations on a basis satisfactory to Stalin and the Soviets, including the power of veto and control of its military setup, insured the conspirators of the power to make good on their deal at Yalta and to block any interference with their plot. The Rockefeller-Standard Oil interests had been well represented by their Council On Foreign Relations agent, Secretary of State Stettinius who was craftily advised and seconded by Rockefeller's intimate associate, Alger Hiss. Subsequent events made quite clear the exact nature of that deal. In return for a continued monopoly of oil exported from the Soviets, the Rockefeller-Standard Oil interests received adequate assurance that the Communists would not interfere with their development of the fabulously rich Saudi Arabian oilfields despite the fact that they lay within a radius of one thousand miles from the Soviet border and in what was, physically, well within the Russian "sphere of influence".

During the war Rockefellers' Arabian American Oil Co. (Aramco) subsidiary of Caltex, joint venture of Standard Oil of California and Texas Co., had avoided putting any of their own money into the development of the field or even in payment of the lease rentals. James Moffett, officer of Standard Oil, was again "loaned" to the New Deal for the specific purpose of getting Pres. Roosevelt to provide about \$30,000,000 of taxpayers' funds for the support of King Ibn Saud and his 400 wives, and an additional \$160,000,000 for the geologizing and development of the oilfield. Later Moffett was defrauded out of the 5% commission that he was promised, in spite of his lawsuit to recover it. (11, p. 386) The development of the field was done by a company of drafted GI's under Col. John Zott, entirely at the expense of the taxpayers.

Following the deal at Yalta, Rockefeller's Aramco began developing the Saudi Arabian oilfields actively, with a feeling of security that derived from Soviet assurances that were treacherously bought for the Rockefeller-Standard Oil interests. The Soviets, under the leadership of Stalin, began taking over, as satellites, one country after another with complete assurance that the deal at Yalta for scheduled expansion of the U.S.S.R. would meet with no opposition, thanks to the interference run for it by the U. N.

The Rockefellers felt free to dedicate themselves to "making money" in other directions. John D. Rockefeller

the Third devoted himself to the war booty that had accrued to the Dynasty in Japan and Asia. Laurance devoted his energies to extending their control over the munitions, missile and other industries, and in manipulation in the stock market. Winthrop tried to get control of the finances of New York City by election to the post of comptroller, but failed; married Bobo, and deserted her; and emigrated to "join his Army boy friend," Jim Hudson, an Ebony hero, in Arkansas. David took over the control of the Dynasty's banking system, including their stock corporation, the "Federal" Reserve Bank, national finances and the Treasury. Nelson Rockefeller dedicated himself to consolidating his profitable control of Latin America and the entire Western Hemisphere that he had gained at the expense of the American taxpayer "peasant". It was during this period that Rockefeller launched the major IBEC ventures and associated decoy "philanthropies". After he got them under way, he arranged to expand them and make them more profitable by additional "foreign aid" through his "Point 4" program and "Alliance for Progress". As noted, "progress", in Rockefeller parlance, invariably means "making money".

The impression was broadcast deliberately that Nelson Rockefeller was hostile to Truman for exposing him and his crew. The falsity thereof is indicated by the key role played by the conspirators in the dropping of Henry Wallace as candidate for the Vice-Presidential post at the time that Roosevelt was known to be dying. Rockefeller's role must be judged in view of his close association and friendship with Wallace, who was his steady tennis partner and shared his political views and outlook. (61, p. 110) Harry Shippe Truman, a remote kin of Rockefeller's cousin, Lucy *Truman* Aldrich, had the courage to stand up on the floor of the Senate on March 27, 1942, and characterize the conduct of their Standard Oil as treasonous. He had to be appeased and silenced! What better means of appeasement could be found than the Presidency? And since he lacked the means to live in the White House, he was certain to be as "amenable" as Roosevelt had proved. This plan followed the Rockefeller tradition of betraying friends and courting enemies.

Pres. Truman's mouthing of the Rockefeller-Browder (144) scheme of the "Point 4" program in his inaugural address in 1949 is ample proof of the fact that Nelson Rockefeller's departure from the State Department after setting up the U. N. was his chosen strategy. It was an interlude that permitted him to shed his Democratic, New Deal role, and to emerge in 1952 as sham "Republican",

with some semblance of credibility. The pose of being a "Republican" had become essential for Rockefeller's current quest for "profits", or loot. He was dedicating himself to lobbying through Congress appropriations for his "Marshall" Plan. And Congress was controlled by a Republican majority in the early years of the Truman Administration. Nelson Rockefeller knew that lobbying for his "Marshall" Plan would be easier, even in the "bipartisan" atmosphere that the conspirators had created for their purposes, and would be less expensive, if he were not regarded as a New Dealer, if he masked as a "Republican". He was materially aided in this camouflage by arranging to be "ousted" by the Truman regime.

It was about this time that Rockefeller thought that he had discovered a likely recruit to the ranks of the conspirators in the person of Judge Joseph R. McCarthy. McCarthy had endeared himself to Rockefeller's Milk Trust by disregarding Wisconsin's milk price-fixing laws and dismissing the case against their Quaker Dairy Co. Rockefeller was at that time desirous of defeating Wisconsin's Republican Senator Robert LaFollette, a so-called "liberal" (or Red and of the same camp as Nelson Rockefeller) who had been elected on the Progressive ticket; and replacing him eventually with the husband of his cousin Elsie Rockefeller, Democrat William Proxmire who was LaFollette's publisher. Orders went out to Wisconsin's Republican boss from the conspirators, directing him to support the candidacy of Joseph R. McCarthy for Senator and to drop LaFollette; and funds were supplied for his campaign which fully matched that of LaFollette in its appeal to the "liberals". Rockefeller's support insured the election of Sen. Joseph McCarthy.

Sen. McCarthy was a neophyte in Washington politics, and Rockefeller had little difficulty in securing his support and vote for his "Marshall" Plan and other so-called "foreign aid" measures, in the following year. Shortly thereafter, McCarthy learned some of the well-known facts of Washington life, some of the truth regarding Rockefellers' "foreign aid" swindle, as cited in the editorial of Col. Robert McCormick in his Chicago Tribune.

Early in 1946, this author had warned the members of Congress, in an address that he was invited to give the "78 Club", that the "Marshall" Plan that Rockefeller was intensively lobbying was designed to serve the Communist cause, as had the OPA, by use of its funds to divert the flow of commodities from the normal channels of industry and commerce into the black market; and that the disruptive and inflationary consequences of this subver-

sion would be used by the Reds to discredit capitalism and the Republican Party. It was predicted that if the Party supported and passed Rockefeller's "Marshall" Plan bill, they would be defeated and the Republicans would be ousted from control of Congress. Unfortunately, the lure of Nelson Rockefeller's lobbying was too great; and his "Marshall" Plan bill was passed. This author's prediction was confirmed by the defeat of numerous Republican Congressmen, the loss of control of the Congress by the Party and the reelection of Pres. Truman with the help of "Marshall" Plan and other Rockefeller funds and "influence".

In 1949, Sen. Joseph McCarthy voted with Sen. Robert A. Taft to cut down to half the appropriations for the "Marshall" Plan and other "foreign aid" steals. Nelson Rockefeller's fury knew no bounds at his "betrayal" by Sen. Joseph McCarthy. But when the Senators voted against any "foreign aid" in the following year, Rockefeller vindictiveness assumed the form of a campaign to destroy them. Curtailing Rockefeller loot, traditionally, has been the most serious offense of which a public officer could be guilty. And the penalty for such a "sin" has invariably been destruction. For Rockefeller profits and loot are "holy". And any curtailment thereof calls for as summary judgement as that visited for violating "omerto" by their Mafia agents. The manner in which this vengeance was wreaked on McCarthy and the Republican Party will be related.

The cost to the nation of Rockefeller's betrayal of it, in the "United" Nations subversion, rapidly became evident with the outbreak of the Korean War, the so-called "United" Nations "police action" in Korea. It had its roots in the deal made by the Rockefeller-Standard Oil interests with Stalin, in 1926, that became the basis for the Rockefeller-Soviet Axis. (11, pp. 204-31) An agreement was entered into by the two parties for a division of the world between them, and for the delivery to the Soviets, on specific dates, of specified sections of the world. At that time there gained circulation maps that paralleled the so-called "Gomberg Map" (75), which bore not only the date of the deliveries of the various countries to the Soviets, but notations specifying which nationals would police which countries (which were identical with the current secret plans of the UN Military Affairs program, it appears evident, from the current Congo situation).

North Korea was due for delivery in 1950, to the Soviets for takeover of its many industries that had been established by the Japanese during their rule over Korea, and of its gold, silver, lead, tungsten and other mines. In

South Korea, the Rockefeller-Standard Oil interests have huge holdings in its cultivated alluvial plains which their geologists have determined are probably as rich in oil as Cambodia, Laos and Thailand appear to be. None of these areas have been developed, but are being held as reserves. In view of the Rockefeller-Soviet partnership in oil, it might seem immaterial, and probably is immaterial, which of them control the potential oilfields, except for the division of spoils.

The Communist invasion of South Korea from the North, after it had been delivered to them, was in effect a squabble between partners. So certain were the Rockefeller-Standard Oil interests that the squabble could be settled by negotiations, that their attorney and agent, the actual boss of the State Department who had run it for them for decades, kinsman John Foster Dulles, was on the scene in South Korea to insure that the North Korean invasion would not be resisted. Dulles was assuring the South Koreans that there would be no invasion—*after the invasion had already begun*. In the meanwhile, as has been related, the Rockefeller-Standard Oil conspirators provided the North Koreans and the Chinese Communists with the required oil from the Saudi Arabian oilfields, at the expense of the American taxpayers through their “Marshall” Plan; and with munitions from the Zaibatsu industries in Japan, that they control and John D. the Third directs.

For the Axis partners, the affair in Korea was a “friendly” one, a “quarrel between partners”. It was not a war, but merely a “disagreement” in which their “United” Nations controlled both sides. The North Korean and Chinese Communists were led by the head of the U. N. Military Staff Committee, Communist Gen. Vasiliev, who was given a leave of absence by the U. N. for the purpose of serving as Commander-in-Chief of the invading forces. General Douglas MacArthur, who commanded the South Korean forces, the great majority of whom were American GI’s “loaned” to the U. N., like his successors in command, served under the Military Staff Committee the Secretary of which must always be a Russian Communist, under the oral agreement entered into by Rockefeller’s agents Stettinius and Hiss with Vishinsky and Molotov that was first reported by Trygvie Lie. Under this cozy arrangement, that is quite characteristic of Rockefeller’s “bipartisan” policy that he requires of all governments under his control, the American commanders of the South Korean “United” Nations forces found that their intelligence, plans and orders were sent directly

to the Communist commander of the North Korean Communist forces. This treachery was ideally designed to assure the Communist forces of victory. Especially assuring of victory of the Communist "United" Nations-led forces was the unlimited reinforcement of the North Koreans by Chinese Communist forces that swarmed across the Yalu River; and the haven offered the retreating North Koreans across that river, in China.

The failure of the North Korean Communist forces to win the Korean "Police Action" can be attributed solely to the inferiority of the Communists, and to the military superiority of the American troops and their Commander, who were undoubtedly aided by superior logistics furnished by the Rockefeller-Standard Oil outfits in South Korea because, though their interests were involved on both sides, their higher interests were at stake there. The superiority of the American "United" Nations forces rose to the point where Gen. MacArthur found it possible to plan to drive the enemy forces across the Yalu and to invade the haven which they were there offered, thus leading his forces to decisive victory.

In sharp contrast with the situation that was later created by the conspirators in the Congo, victory gained by defeat of the North Korean Communist forces was the one thing that the conspirators did not want, and could not afford without serious financial losses. For driving the Communists out of North Korea in the course of this "friendly disagreement" between the Rockefeller-Soviet Axis partners would have been a violation of the agreement that had originally been entered into with their pawn Stalin; and that would have meant loss of control of Russian oil exports and loss of immunity from harassment by the Soviets in Saudi Arabia where their profits, made at the expense of the American taxpayer, amounted to millions of dollars each day.

When Gen. MacArthur found that his forces were in position to drive back the North Korean Communist forces and gain a complete victory, pride in his career, if not his patriotism, impelled him to do so. But he received strict orders from the conspirators, both by way of the UN and the Administration in Washington, NOT TO WIN THE WAR. MacArthur resolved to disregard the traitorous orders that he had been given, and to win the war by a decisive military victory. This confronted the Rockefeller-Standard Oil conspirators with "dire disaster", the possibility of financial losses. The situation demanded emergency action!

Under Rockefeller's direction, the State Department,

that has long been dedicated almost exclusively to the Rockefeller-Standard Oil interests and more recently the Rockefeller-Soviet interests, acted promptly. Pres. Truman, basically a patriot when "internationalist" pressures were not too forcibly brought to bear on him, admired Gen. MacArthur's "insubordinate" resolution to wage the Korean War to a victorious conclusion and to decisively defeat the Communists. He resisted the demands of the conspirators to "fire" MacArthur from the post of Commander of the "United" Nations troops. Before MacArthur could get into action, Rockefeller Council on Foreign Relations agents, Secretary of State Dean Acheson and his Assistant Secretary, Dean Rusk, plied Truman with liquid refreshments until the small hours of the morning, it has been reported, and "mellowed" him to the point of signing the order dismissing Gen. MacArthur. The order had previously been drawn up, at the behest of the conspirators, by Rusk.

Rockefeller expressed his delight with Rusk's "accomplishment" by appointing him, as has been related, to one of the highest posts in the Rockefeller Empire, President of the Rockefeller Foundation. Directly from that "exalted" post, he was subsequently transferred by Rockefeller orders, to the Kennedy Cabinet, as Secretary of State, though he is reported to have been unknown to Pres. Kennedy before the appointment, and Rusk was registered as a "Republican".

One of the results of Rusk's "accomplishment" in carrying out his boss's orders is that we are still at war in Korea, and our drafted GI's are being shot down there with some regularity. But the Rockefeller-Soviet Axis flourishes and continues its victorious march around the world. The Rockefeller-Standard Oil interests are intact in South Korea. Our country pays for this deal by being forced into ignominious defeat in a war that cost us 145,000 casualties and deaths, billions of dollars in taxes and debts, and endless humiliations, to serve the Rockefeller interests. More important to the conspirators, however, is that the Korean "police action" served as a tryout of their plot to use American troops, and other non-Communists, to expand the Rockefeller-Soviet Axis and to make the world safe for Communism through their "United" Nations.

Gov. Rockefeller, despite his notorious Red record and his confession of betrayal, with complete irrationality that is so characteristic of his mental state and activities, has assumed the bogus pose of being "anti-Communist" in his New Hampshire primary campaign while engaged in

promoting the Communist Party Line as his "Republican" platform. This can only be explained on one of three bases: first, the assumption that the "peasants" have been so completely brainwashed by the Rockefeller so-called "educational philanthropies" as to be reduced to complete idiocy; second, that the immensity of Rockefeller swag arouses their cupidity and admiration, their worship of Mammon, to the point where "a Rockefeller can do no wrong"; or third, the Governor's mental state is so confused that he does not recognize the absurd contradiction of his statements and speeches that have been written for him by his ghost writers who are in opposite camps. The effect is much as if he attempted to speak simultaneously "out of both sides of his mouth", in complete disregard of the notorious truth.

In view of these and other activities of Nelson Rockefeller on behalf of the conspirators' Soviet partners, the advertisement that Nelson Rockefeller has run in newspapers around the country are particularly and ludicrously false. The advertisements of NELSON ROCKEFELLER, a frankly "political biography" that was written by his pressagent, James Desmond, filled full pages in the book review sections of the New York Times and the Los Angeles Times. Paid for by Rockefeller, half the page was filled with a portrait of himself. Beneath the portrait, in bold type appeared the line: "WHY DOES KHRUSHCHEV WANT TO KEEP ROCKEFELLER OUT OF THE WHITE HOUSE?" In doing this, Rockefeller is obviously following the Rockefeller pattern of pretending to fight an organization and agent whom he controls. Certainly no one has done more by deed, speech and financial and political support to make a success of the Communist conspiracy, both in the Soviets and here, than has Rockefeller.

Rockefeller's advertisements raise the question: "Why should Khrushchev wish to keep Rockefeller out of the White House?" The record of Rockefeller support of the Soviets and collaboration with them makes the statement in the advertisement incredible. If Rockefellers had given the Soviets slightest cause for dissatisfaction, Khrushchev has had a potent remedy at hand. He would certainly have cancelled the monopolistic concession for the sale on the world market by Rockefellers' Standard Oil Co. (N. J.) of Soviet oil. But Soviet oil has been selling on the world market, since the original 1926 deal, under Rockefellers' Esso brand. This bears out the fact that the Rockefeller interests have given their Soviet partners everything that they demanded or desired, whether it was domina-

tion of the UN, de facto victory in Korea, Laos, Viet Minh or Cuba.

Certainly the Rockefellers could not possibly have served the Soviets better than they have. And since Khrushchev has been happy with Rockefeller as behind the scenes U. S. boss and dictator, why should he not be happy with him in the White House? Not even Earl Browder has served with more loyalty. This is reflected in the embrace and the cordial amity portrayed in the Wide World photograph of Gov. Rockefeller's visit on Khrushchev at the Waldorf Towers, New York, on the occasion that he invited him to visit the U. S. after writing a well paid article for FOREIGN AFFAIRS in which the Soviet premier was invited to tell what he wanted of the U. S. (51, p. 79; 38)

## CHAPTER XII

### NELSON ROCKEFELLER'S "FOREIGN AID" SCHEMES HIT NEW HIGHS IN LOOTING

"How Are We Going To Preserve Security & Stability In The World If We Cut Off All Foreign Aid?"  
Rockefeller's Campaign Speech, Concord, N. H.,  
January 4, 1964 (125)

Answer: By Stopping Rockefeller Looting & Betrayal;  
& Arming Ourselves

Nelson Rockefeller attained new and record highs for the Dynasty in the looting of American taxpayers. One of the more profitable of his schemes for the purpose has been so-called "foreign aid". During more than two decades it has been the program closest to his heart that has commanded his complete dedication. Contrary to popular belief, John D. Rockefeller was materially less miserly than his grandson, Nelson. John D. gave away dimes that were actually his, to purchase public esteem. But Nelson Rockefeller gives away only "other people's money", of which he has delightedly given, or ordered given, considerably more than one hundred billion dollars through so-called "foreign aid". The secret of his dedication and delight is that most of those billions have found their way into Rockefeller coffers. This is in accord with his "principle" of making everything that he does, in any capacity,

pay him high "profits". That he could not bear to hand out those billions to others is made apparent by Mrs. Nelson Rockefeller in her interview commenting on her husband's mental state that was given on November 19, 1961, to the New York Journal American. She related:

"... her husband has become like his grandfather in his tight control over personal expenditures." (95)

For the miserly, handing out money in any direction other than their own, is a very painful process that is carefully avoided. The "foreign aid" brigandage has an especial allure for the conspirators. **"FOREIGN AID" LOOT** (possession of which is taken control by them overseas and deposited in their foreign enterprises and banks of issue) **IS ENTIRELY TAX-EXEMPT UNDER THE LAWS THEY HAVE HAD WRITTEN FOR THEMSELVES.**

Rockefeller's kinsman, Col. Robert McCormick, exposed what might have been suspected, a priori, in view of the insatiable, psychopathic greed of the clan. On the basis of the ECA report of the initial stage of Rockefeller's so-called "Marshall" Plan, McCormick published an account of some of the earlier and relatively minor loot derived by the so-called "foreign aid" that had been lobbied through Congress and directed by Nelson on behalf of the Dynasty. In an editorial in the December 13, 1948 issue of his Chicago Tribune, the Colonel described briefly a few of the more flagrant bits of looting by Rockefellers and their Standard Oil interests that were listed in the report:

"**THE TRIBUNE** has examined official records of Marshall plan business for the 45 day period ended September 15—one-eighth of the first year of the plan. It appears, for example, that the Anglo-American Oil Company, Ltd., obtained permission from the British government to go shopping for petroleum products in America. The record shows that it was able to buy \$7,258,332 worth of products from the Esso Export corporation and the Standard Oil Export corporation, both of New York. Thus the British concern got the oil it was after, and was doubtless able to make a good profit selling it to its customers. The two American companies were paid in dollars in New York for the oil supplied to the British companies, likewise on a remunerative basis.

"What makes the transactions notable is that the British buyer, Anglo-American, is owned 100 per cent by the Standard Oil Company of New Jersey. The American sellers, Esso Export and Standard Oil Export, are also owned 100 per cent by Standard of New Jersey. Thus

what the Marshall plan actually did was to enable the biggest American oil company to shift some merchandise from one department to another, collecting two profits on the operation, at the expense of the American taxpayer.

"Esso Export corporation also sold \$4,020,210 worth of its products to a certain French concern, called Standard Francaise des Petroles, with ECA footing the bill. This French concern is 83.63 per cent owned by Standard of New Jersey. Other subsidiaries of the leading Rockefeller concern, operating in Norway and other countries, also made deals with sister companies. If Standard Oil of New Jersey continues such transactions all year at the rate attained in the 45 days covered by our study, it will buy and sell itself \$120,000,000 worth of oil in the period, at the expense of the American taxpayer.

"Meanwhile, another French concern, Les Raffineries de la Vacuum Oil, got permission to go shopping for some crude oil, too, and wound up making a deal with its parent company, Socony-Vacuum Oil Company, formerly the Standard Oil Company of New York. The transactions amounted to \$2,249,877 in a 45 day period. If this rate is continued for a full year under the Marshall plan, another huge Rockefeller concern will buy and sell itself \$18,000,000 worth of oil at the expense of the American taxpayer.

"This lucrative oil business, with the Rockefeller companies collecting double profits, is the real Marshall plan in operation. It is undoubtedly true that if the plan to aid Europe never had been conceived, the Rockefeller interests would have found means to carry on their export business in petroleum, tho not as profitably, of course.

"It should not escape notice that members of the Rockefeller family played an important part in getting the Marshall plan thru congress. They worked thru an organization called the Committee for the Marshall Plan to Aid European Recovery. Winthrop W. Aldrich, brother-in-law of John D. Rockefeller Jr., the demonstrated boss of all Standard Oil companies, was on the inner executive council of the committee. Nelson A. Rockefeller, the son of John D. Jr., was on the main body of the committee.

"Here is more evidence that the people who put the Marshall plan over on the American people are cashing in on it. It already has been revealed that Anderson, Clayton & Co. has received more money from the Marshall plan in operation than any other concern. The head of that company is William Clayton, who, while a top figure in the government, did more to shape the foreign aid program than any other individual.

"The big New York banks, whose directors also played an important role in promoting European aid in congress, have been repaid with a nearly exclusive franchise on the letter of credit business resulting from the program. Banks in the interior of the country were formerly very active in financing exports. The interior banks had no part in promoting the Marshall plan and they have been cut out of this highly profitable, risk-free business.

"A leading member of congress, Chairman Walter Ploeser of the house small business committee, issued a statement Wednesday calling upon congress for an investigation of the circumstances under which Clayton has been able to monopolize the ECA cotton business. Reports are current that the senate will be asked to look into the monopoly of the Wall st. banks in ECA transactions. The investigation also should cover multiple commissions and profits under the Marshall plan, such as those enjoyed by the Rockefeller oil companies."

At the time that Col. McCormick wrote, the more treacherous aspects of the conspirators' uses of the "Marshall" Plan funds had not come to light. During the Korean War, the conspirators and their Standard Oil Co. of California in conjunction with the Texas Co., through their Caltex joint subsidiary, provided the North Koreans and Chinese Communists with the oil that they required to drive the planes, tanks and cars that slaughtered our GIs fighting with the South Koreans. The oil was paid for at the expense of American taxpayers, often the very GIs who were slaughtered and maimed, by the "Marshall" Plan!

All of the numerous "foreign aid" plans have been promoted by Nelson Rockefeller, as has been related, to serve the Rockefeller interests and the expansion of their Empire, with the added purpose of bankrupting the nation for takeover. At the same time they have served the interests of Rockefellers' Soviet partners. Most of the conniving and plotting in preparation for the launching of these steals was done, or subsidized, as has been related, by their agents in their "philanthropic" Foundation. An important object of the scheming was evasion of the Johnson Act, which prohibited the issuing of bonds and loans to the American public by countries who had defaulted on their loans of the post-World War I era. The lands in the names of which the bonds had been issued had, as a rule, received little or none of the monies derived therefrom (except for payoffs to their key politicians). Most of the money had been stolen by the conspirators. The investors had been duped into voluntarily

buying the bonds on the basis of false representations.

The conspirators, who were aware that the American "peasants" could not be induced to buy the bonds voluntarily, undertook to force American taxpayers to involuntarily finance their swindle by way of U. S. Government "loans". In most instances, the lands in the name of which the "foreign aid" was engineered by the conspirators were apprized that they were not expected to repay the "loans", either in part or in full; or they were told that they could repay in their own currency, however worthless, into "counterpart funds" that were to be expended within their own countries. The use that the Rockefellers' IBEC made of counterpart funds in Italy to finance a chain of supermarkets has been recounted, as an example of this phase of the swindle.

The never ending series of these "foreign aid" swindles put over by Nelson Rockefeller and his associates and agents started with the so-called "Lend Lease" program that served the purpose of inducing England and France to launch World War II, for the conspirators, by furnishing them with materiel of war, naval vessels and arms, This was followed by the UNRRA (United Nations Relief and Rehabilitation Administration) launched on November 9, 1943. It followed the usual Rockefeller "internationalist", "One (Rockefeller) World" pattern. Financed almost entirely at the expense of American taxpayers, it was controlled and operated by Rockefeller Reds and headed by their "liberal", or Red, Council On Foreign Relations agent, ex-Governor Herbert Lehman. It clearly indicates that the conspirators had begun their plot to replace their discredited League of Nations with the so-called "United" Nations as the agency for establishing the world-wide dictatorship, "grandiose idea" of Nelson Rockefeller and his fellow "planners". The cost to the American taxpayer of this "United" Nations tryout was four billion dollars. THE INSIDE STORY OF UNRRA, by Marvin Klemme, a participant, reported that it was characterized by "graft, and fraud and phony bookkeeping", by the usual thievery and swindle that characterizes all Rockefeller inspired and directed "philanthropy". (72, p. 297)

The next significant thievish move of the conspirators was the Bretton Woods Monetary Conference that was designed to fasten their hold on the Treasury and finances of the U. S. and of the rest of the world, by tying in all currencies with their looted gold, through their International Monetary Fund and International Bank For Reconstruction & Development. The initial subscription to

the former cost the American taxpayer two and three quarter billion dollars; and to the latter, another billion dollars. They have materially helped the conspirators bring the U. S. Treasury to the verge of bankruptcy and to place the nation at the mercy of the Rockefeller-Soviet Axis. The program was drawn up by Nelson Rockefeller's associate and agent of the Council on Foreign Relations, the notorious Red, Laughlin Currie, acting through his pawn and pupil, Harry Dexter White, Assistant Secretary of the Treasury. (10)

Nelson Rockefeller personally inspired and lobbied through Congress the biggest "foreign aid" steal, that was camouflaged with the name of the conspirators' puppet, Gen. George C. Marshall, the "Marshall" Plan. The facts regarding "foreign aid" in general and the "Marshall" Plan in particular were clearly stated by this author in his "ROCKEFELLER, Internationalist: The Man Who Misrules The World" as follows: (11, pp. 417-23)

"... the Rockefeller Empire is supporting the Kremlin in the various phases of the 'Cold War' and the Korean 'Crusade', directly and indirectly, at the expense of the American taxpayers through the UNRRA, the Marshall Plan, the Point 4 program and the North Atlantic Treaty Organization. With the usual cunning of the schemers, all of these plans are being presented to the 'peasants' as devices for 'stopping Communism'." For fuller data on the "foreign (Rockefeller) aid" plans, the reader is referred to the more extensive account in ROCKEFELLER "Internationalist".

The "foreign aid" swindle has proved so enormously profitable to the Rockefellers, their interests and their Axis partners, that they have announced that they plan to force us to continue it for the balance of the century. Standard Oil refineries have been rebuilt and enlarged around the world, with the swindled funds. Saudi Arabian "foreign aid" funds supplied by American taxpayers, in the amount of \$4,000,000 have been used to build a natural gas recycling plant for the purpose of increasing the tax-exempt profits of Rockefeller's Arabian American Oil Co. Point 4 moneys have been used to train Rockefeller employees in the Japanese electronic plants of the Zaibatsu, control of which was part of the Rockefeller booty of World War II that was paid for by the blood, sweat and taxes of our GIs. American electronic plants and their employees have been driven to the wall and thrown into the ranks of the unemployed by this cut-throat Rockefeller-controlled "foreign aid" competition that they have been taxed to maintain. Foreign branches

of industries that are controlled by the conspirators have been financed by this so-called "foreign aid". To make the competition more ruinous to American industries and workers, the conspirators have arranged a lowering of American tariffs for their overseas production under GATT "favored nations" agreements. As added advantages for themselves, the conspirators have arranged for themselves freedom from taxation on the profits of their foreign plants. And they have put through Congress bills that force the American taxpayers to guarantee the billions of dollars of "foreign aid" funds, that they have filched and fenced, "invested" in their overseas industries and plants.

To insure a continued and ever increasing flow of this loot from the purses of American taxpayers into their own, the conspirators eternally advance new schemes of "foreign aid". Among the most recent are "Administration for International Development" and the "Alliance For Progress". The latter, which is a continuation of Nelson Rockefeller's thoroughly exposed and discredited "Co-Ordination" of Inter-American Affairs boondoggling Communist-pampering that has been represented as a device to counter the activities of their agent, Fidel Castro, in Communizing South America. It is proving eminently successful in hastening the spread of Communism and the expansion of the Rockefeller-Soviet Axis throughout the continent. British Guiana, Brazil, Bolivia and Chile have been made "safe for Communism" with AFP and AID funds. It is becoming steadily more obvious that when the conspirators use "progress", favorite term of Nelson Rockefeller's, they mean "the progress of Communazism and Rockefellerism, hand in hand". This "progress" is most recently illustrated by the election of the Red, Dr. Illia, President in Argentina, and the rapidly growing strength of the oldest Communist Party on the American continent in Chile, which Victor Riesel predicts will win the 1964 presidential election. (74)

Since Nelson Rockefeller took over the governorship of New York, the control of the Republican Party and reached out for the Presidential nomination, he has devoted less time to personally lobbying through Congress his favorite "foreign aid" schemes. He has entrusted the lobbying and the administration of them to his trusted and tried agents. With the examples before them of the sudden "mysterious" deaths of Sen. Joseph McCarthy and Sen. Robert A. Taft, after opposing Nelson Rockefeller's "foreign aid" bills, Congressmen who value their lives shrink from fighting those bills except with token "oppo-

sition" demanding minor cuts in the appropriation which are agreed upon by the conspirators for the sake of appearance. Invariably the Presidential incumbent can be depended upon to demand passage of the "foreign aid" bills in their entirety and put up a "fight" for them.

It matters not that the "foreign aid" appropriation, demanded, represents the entire amount of deficit in U. S. international trade payments. That is an important function of "foreign aid" in the plans of the conspirators to destroy our Constitutional Republic. And its effectiveness is enhanced by the huge amount of payments required for the oil and other commodities and the production of their "foreign-aid"-financed plants that the conspirators arrange to import. They aid materially in drawing off their gold from their domestic accounts to their "foreign" accounts and bringing about a debacle of the dollar that will bankrupt the Treasury and the nation.

The cost of this fraudulent so-called "foreign aid" to our country has been more than one hundred billion dollars since World War II. More than eleven billion dollars have gone directly to Soviet Russia to finance the spread of Communism and of the Rockefeller-Soviet Axis. Untold billions more have gone to other countries behind the Iron Curtain or to build up and fatten lands for takeover by the Soviets. Secretary of State, Dean Rusk, a top Rockefeller agent and former President of the Rockefeller Foundation and Rockefeller lobbyist, nevertheless had the brazen effrontery to accuse, on behalf of the conspirators, anyone who opposed "foreign aid" of "cooperating with global Communist strategy".

What small measure of opposition there is offered by the meek and intimidated Congressmen has been led by Otto E. Passman (Democrat from Louisiana). In an article entitled WHY I AM OPPOSED TO FOREIGN AID, published in the July 7, 1963, magazine section of the official organ of the Rockefeller Empire, their New York Times, he replied, discreetly and carefully, avoiding any personal reference to the conspirators and their activities, to the inquiry regarding his steadfast but mild opposition to the "foreign aid" conspiracy. (p. 16)

Passman pointed out that "foreign aid" has resulted in the accumulation in overseas accounts of billions in gold and dollars. To be sure, he attributed these holdings to "recipient nations" though he makes it clear that those nations received little if any of the funds. He can not help but be aware of the fact that the credits which are the basis of the withdrawals of gold, as well as the gold itself, are the converted property of the Rockefeller conspira-

tors and are held earmarked in the vaults of their "Federal" Reserve Bank of New York. He pointed out that the domestically accredited gold is rapidly approaching the point at which insolvency of the Treasury will be obvious to any moron. And he notes that our national debt exceeds that of all other nations of the world by \$24 billion and that some of it will have to be repaid or else repudiated through inflation.

Passman advanced the amusing and obviously false idea that "foreign aid" can be construed as "international charity", rather than a swindle domestically perpetrated by the conspirators. A brief talk with the natives of the foreign lands involved, other than their key, corrupt politicians, can not fail to have disillusioned him of that idea. His article appeared a few days after the report of the disappearance of wheat shipments to Austria valued at more than twenty million dollars, behind the Iron Curtain. It served to stress the absurdity of his naive representation!

Passman rightly stressed that the "aid" program is a tax on domestic producers and a subsidy of their "foreign" competitors that is depleting our wealth and pricing our industry out of the world market. But he failed to point out that the conspirators are the so-called "foreign" competitors; and that they are fleecing our country and battenning on enormous profits which they have seduced Congress into exempting from taxation!

Passman rightly concluded that the conspirators' "foreign aid" program that has been represented as gaining for us friends and allies, is serving, under their treacherous management, to make us universally detested because of their grasping, insatiable, psychopathic, criminal greed and their ruthless treachery and thievery that are attributed to us as a nation.

As a solution of the problem, Passman suggests merely cutting down on the "foreign aid" thievery instead of shutting down on it and prosecuting the traitorous conspirators. Evidently one must not lose sight of the fact that political campaigns cost money; and though a bit of opposition might be forgiven, the truth might be fatal.

This "foreign (Rockefeller) aid" achievement Nelson Rockefeller has the mad temerity to claim in his campaign literature and speeches as his "outstanding achievement" in public life. His pressagents describe it in page after page of his campaign publication, MEET NELSON ROCKEFELLER (44) in much the same spirit as if they also were enjoying some of the loot. Probably they are being paid therefrom. Little do they lead the reader to

suspect that the treacherous culprit should be "drawn, hung and quartered", or shot at sunrise for betrayal of the nation and the world.

So completely effective has been the censorship of all media of mass communication controlled by the conspirators, that a large part of the nation accept the representations of the Rockefeller pressagents to the effect that he is a "public-spirited philanthropist". This is blinding of the nation to the truth about the malign conspirators who have been publicly castigated as such by the Supreme Court and by a chairman of the Senate Committee, Sen. Harry Shippe Truman. This situation has reached such an absurd stage that Gov. Rockefeller proceeded with one of his most blatant "foreign aid" grafts in the midst of his campaign for the Republican Presidential nomination. The story is related in detail in a later chapter dealing with "NELSON ROCKEFELLER'S CHICKEN WAR".

## CHAPTER XIII

### NELSON ROCKEFELLER PROGRESSIVELY ELIMINATED REPUBLICAN LEADERS

Nelson Rockefeller presents a curious version of the American tradition that any youngster can aspire to become President. From the very start, the conceited whipper-snapper who volunteered to "teach the ropes" to his teacher had the "grandiose idea" of being "top man on the totem pole". Significantly, totem poles are topped by buzzards and wolves. It is understandable that for such a person, becoming President of the U.S.A. would merely be a stepping-stone to something more "grandiose", such as "One (Rockefeller) World" Dictator. For him, with all of the swag of the psychopathic, criminal Rockefeller Dynasty at his command, attaining the Presidency of the U.S.A. could be conceived as a mere matter of plotting, planning and purchase. Up to the present stage of his enterprise, every step of the way has been planned to convert the nation to a monarchic and absolute dictatorship the Presidency of which will directly lead to world dictatorship.

The plot and plan that has been followed is that of the

master conspirator, Jesuit Adam Weishaupt and of his disciple, Karl Marx, of the Illuminist-Fourrierist-Marxist-Socialist-Communazi conspiracy and its adaptation to the American scene by Clinton Roosevelt (1) and Hoffman Nickerson (39). Each step of the conspiracy has been cautiously carried out with all the resources and personnel at the command of the Dynasty.

The undermining of our Republic and its replacement with a "proletarian", totalitarian, boss-dominated regime has been the traditional objective of the Democratic Party. The so-called "New Deal", fronted by a Roosevelt and directed by Nelson Rockefeller (12) and his Dynastic agents and puppets, served the conspirators perfectly in "molding" our government and the people into dumb acceptance of the plot.

The Dynastic conspirators had even less difficulty in keeping the nation in "the main-stream" of the plot than their "mastermind" Nickerson had anticipated. In 1930, he had written:

"The case for hereditary monarchy is referred to only to indicate its great strength. In disputing it the American defenders of the elective principle can hardly do better than take the traditional ground; since no trace of hereditary political power exists in the Republic it is much better not to innovate unless compelled. NOR IS IT EASY TO IMAGINE CIRCUMSTANCES CAPABLE OF SOON COMPELLING US." (31, pp. 301-2)

Nickerson had underestimated the vast power of the control of education and propaganda by Rockefeller's General Education Board and of all other media of mass communication by their other tax-exempt, bogus "philanthropies" in subverting and perverting the nation. Within little more than a decade after the above statement had been published, it had become an accepted fact as has been related that when a Senator died, the "right" to succession is vested in his wife. When Sen. Wagner's mental incompetence became too widely known and notorious, his "right" to public office was nevertheless vested in him. Only after agreement had been reached for succession by his son, Robert Jr. did the family agree to "retiring" him to custodial care, vacating his post as representative of the people of New York State. And following the death of the Dynasty's puppet, Franklin D. Roosevelt, no question was raised to the hereditary "rights" of "Queen" Eleanor and other members of their self-styled "Royal Family" (48, p. 10) to succeed to some public office.

Interruption of "the main-stream" of the plot was avoided, as anticipated by Nickerson, by insuring the re-

election of puppet Roosevelt. This was readily accomplished by the Dynasty through their control of the nominating machinery of the Republican Party coupled with that of the media of mass communication. It was a simple matter to fake "opposition", using as a candidate a nonentity whose defeat they could easily arrange. The conspirators robbed the people of any voice in the Government by making it bi-, or omni-, partisan, with all parties, including the Communist, accepting their dictates and bribes. They accomplished this by nominating their agents as candidates of the "opposition", the Republican Party. Thus in 1940, they steamrolled the Republican convention at the expense of the duped "peasants", or "mass men", using for their purpose, in flagrant violation of the laws with regard to tax-exempt funds, the tax-exempt funds of their foundations. They imposed on the Republicans a virtually unknown New Deal Democrat, Wendell Willkie, as a "me too" candidate who favored and supported our entry in the war they had planned. Then they arranged his defeat in order to continue their puppet Roosevelt in office and carry out their plots and plans. The majority of the nation were opposed to being dragged into the openly plotted war. But they were thus effectively denied any voice in the matter.

In 1944, the conspirators used their New York State Governor, Thomas Edmund Dewey, a kinsman of Roosevelt's, and a Rockefeller henchman, as Republican candidate. Dewey had served the conspirators in covering up their involvement in the heinous American Bond & Mortgage fraud (48, p. 135-7). This was accomplished by appointing Dewey special prosecutor of a number of "fall guys" among the conspirators' Crime Syndicate and Mafia agents. Enough information regarding their vicious activities was placed within the reach of himself and his investigators to enable effective prosecution of the criminals.

The most lurid of these gangsters was "Lucky" Luciano, their ringleader in the prostitution and dope rackets. His prosecution served as sensational, rigged diversion to take the headlines away from the American Bond & Mortgage frauds, and enabled a change of venue and desired quashing of that case. It also provided the headlines that enabled the conspirators to sweep Dewey into the post of Governor of New York, as successor to their Red banker pawn, and member of their Council on Foreign Relations, Herbert Lehman.

After he had served the conspirators in electing Dewey, Luciano was pardoned by the Governor. The man who

acted for the conspirators in securing Luciano's pardon was the same person who had been most active in securing his conviction, District Attorney Dewey's assistant, Murray I. Gurfein. For the "distinguished service" that he thereby rendered in securing the release of Luciano in order to leave him free to carry on for them, the conspirators showed their appreciation by inviting Gurfein to join their Council on Foreign Relations. He became one of their important legal pawns in the Republican Party.

Luciano was deported to Italy after a "victorious" reception by his Maffia colleagues on board the ship on which he later departed. In Italy, he became the key man in flooding the American market with their narcotics and the promotion of dope addiction, especially among schoolchildren for the purpose of creating juvenile delinquency and adult criminality that would serve their malign designs. When the Narcotic Division of the Treasury Department arranged for the return of Luciano to the U. S. to testify in a major narcotics case, the conspirators took no chance of his "squealing". He was exterminated by a trusted associate, shortly after he was served with the subpoena.

Gov. Dewey succeeded Willkie as controlled candidate for the Presidency on the Republican ticket in 1944 and 1948. He was acceptable as a candidate to John D. Jr. and his brother-in-law, Winthrop Aldrich. But he was feared by New Dealer Nelson Rockefeller as a relatively youthful rival and barrier to takeover of the Republican Party when it would suit his plans to use it for his own Presidential objective. It was a simple matter to arrange to have Dewey falsely advised and to "manage" his campaign in such manner as to insure his defeat, and the undisturbed progress of the conspiracy.

In 1944, tensions created by the war status and the fatal illness of Pres. Roosevelt were of material help in engineering Dewey's defeat. The author was called upon, by the patriotic element among the Dewey forces, to make a number of radio broadcasts attacking the New Deal and exposing Roosevelt's fatal illness. But no advantage was taken during the campaign of the potentials offered by the data presented. (48, pp. 7-9)

In 1948, Dewey's defeat was readily brought about by instilling a feeling of overconfidence in the candidate and the Party, and inducing him to disdain campaigning. In the meantime the conspirators' propaganda machine turned out false polls to bolster the feeling of overconfidence and "justify" it. At the same time there was created

a sentiment for Pres. Truman as the underdog; and every crooked device at the command of the conspirators for "fixing" the election was brought into play.

At this juncture, disaster befell the conspirators. Except for their power of corruption, it might have proved fatal. Richard Nixon, a novice Congressman, following a trail of espionage and treason, exposed one of the conspirators' top agents, Alger Hiss. Hiss, as has been related, long had been a Rockefeller pal, intimate, key agent and member of their Council on Foreign Relations, who owed all of his important appointments to the Dynasty and kinsman John Foster Dulles. Rockefellers had chosen Alger Hiss to join their agents, Dulles and Stassen, to head their World Council on Churches which issued the call for the current Ecumenical Congress, that planned to effect a reunion of Christian sects and faiths for the purpose of aligning them behind the conspiracy. Shortly before his exposure, David Rockefeller and John Foster Dulles, as dominant Trustees of the Carnegie Endowment for International Peace, had appointed Alger Hiss to the post of President of this key pseudo-philanthropic propaganda agency.

Nelson Rockefeller has publicly acknowledged, as has been related, that he had been informed by the F.B.I. that Alger Hiss was a Communist agent, at the time when they jointly had dominated the 1945 San Francisco "United" Nations Organization Conference. (120, 121, 123) Rockefeller did not need the report of the F.B.I. For, Alger Hiss had served the Rockefeller-Soviet Axis from the first day that he was placed in Henry Wallace's "New Deal" Department of Agriculture as a member of the Communist cell named after Hal Ware. It was common knowledge in the Roosevelt Administration and in the State Department where Hiss was transferred to join Rockefeller and numerous Reds and subversives. Later developments made it obvious that Hiss owed his preferments to the fact that he was known to be under Communist Party discipline.

Alger Hiss's predecessor as President of the Carnegie Endowment had been Nicholas Murray Butler, President of Columbia University. When the conspirators appointed Gen. Dwight D. Eisenhower President of Columbia U. Eisenhower, evidently, was not trusted as being sufficiently well indoctrinated to place in the higher and more important propaganda post in Carnegie Endowment, that had operated out of the same office since its founding. Consequently Hiss was placed in the higher post and Eisenhower in the lower.

Eisenhower acknowledged his association with Alger Hiss in the first press conference of his campaign for the Republican Presidential nomination held at the Commodore Hotel in July, 1952, in an evasive response to questions asked by the author, to wit:

1. Explain your association with Alger Hiss in Rockefeller's Council of Foreign Relations?

2. What was the deal that you made in the Long Island home of William Paley, with John D. Rockefeller Jr. and Thomas J. Watson?

Eisenhower was thoroughly taken aback and visibly disturbed by these questions. The Council on Foreign Relations, which as a result of this incident has become notorious, was then a sacrosanct, secret agency the name of which was practically unknown to the rank and file of the public. The deal with John D. Jr. had been reported as an understanding that Eisenhower would get the 1952 nomination of the Republican Party if he would reject nomination in 1948. The apparent objective of this deal was to reward Pres. Truman for refraining from a further exposure of the Rockefeller-Standard Oil treason that he had exposed on March 27, 1942. Though Eisenhower evaded answering the two direct questions put to him, he did reply after recovering from his obvious shock and regaining some semblance of composure, that he had served as Trustee of the Carnegie Endowment under Alger Hiss. This fact had not previously been broadcasted.

The conspirators' distrust of Eisenhower's indoctrination was completely without justification. Eisenhower had been born into the Mennonite sect, one of the numerous Nazarene, or Christian Communist sects that have played such significant roles in American history. Later in life his mother joined Jehovah's Witnesses and became sufficiently prominent in their activities to justify the hanging of her picture in the Brooklyn Office of the Watchtower Publishing Co. Eisenhower's brother, Milton, upon whose guidance he leaned heavily was in the front ranks of the New Dealers in Henry Wallace's Department of Agriculture that lodged Alger Hiss and the Hal Ware cell. Subsequently he became official of UNESCO, prior to becoming President of Johns Hopkins University that proudly harbored Owen Lattimore.

Eisenhower manifested a preference in his choice of associates for persons identified with the Communist Party. Thus, as ghostwriter of his *CRUSADE IN EUROPE*, Eisenhower chose Joseph Barnes, a notorious Red associate of Frederick Vanderbilt Field, editor of the Communist publication, *THE NEW MASSES* (whose wife he took

over). Following the indictment of Alger Hiss for perjury in connection with treason, Eisenhower, in 1949, joined Hiss, Rockefeller and the galaxy of Communists in the membership of the Council on Foreign Relations.

Eisenhower, in his leadership in World War II, did effectively serve to make the world safe for Soviet Russia and Communism. It is significant that he never rejected an order that betrayed the forces in his command to the Soviets, that turned over territory conquered by American forces to the Communists, or gave them advantages over ourselves and our Armed Forces. He acquiesced in placing American and other Allied forces behind the Communist lines in Berlin, with lines of communication cut off except by consent of the Reds. And by thus betraying his troops, he helped create the Berlin problem that has plagued the world since. Eisenhower is a dedicated "internationalist". And as is the case of his patron and fellow "internationalist", Nelson Rockefeller, the point at which he departs from the Weishaupt-Marxist pattern is problematical.

Eisenhower's naive self-exposure at the Commodore Hotel press conference, that was repeatedly broadcast and published throughout the nation in the days that followed, presented Rockefeller and his henchmen with a serious dilemma. Rockefeller's plan for the takeover of the Republican Party openly, as its Presidential candidate, after he had dissociated himself from his "New" and "Fair" Deal identification, required the elimination of all real Republicans of national stature who might stand in his way. Especially did it call for extinction of any odor of "divine right" of the members of the Roosevelt-Delano Dynasty (self-termed America's Royal Family) that has given the nation a third of its Presidents. (48) However, all the candidates for the 1952 nomination of both major parties, other than Eisenhower, were more or less distant kinsmen of Roosevelt's. These included Taft, Dewey, Barkley, Russell, Kefauver and MacArthur.

The prime favorite of Republicans for the Presidential nomination was Sen. Robert A. Taft. At the opening of the convention, Taft had the majority of the delegates pledged to his support. Taft, though a supporter of important Socialist bills, such as the Federal Housing Bill which bore his name, rendered lip service to patriotism and was a grudging "internationalist".

Taft had voted for cutting appropriations for Rockefeller's "foreign aid", although he was attorney representing the interests of Rockefeller's sister, Abby Rockefeller Milton, in the Charleston and Savannah wartime shipyard

deals. Quite as detestable to Rockefeller as Taft's opposition to his "foreign aid", was the fact that Taft was a kinsman of Roosevelt's and shared the odor of that Dynasty of "divine right" to rule the U. S. Taft's ascendancy might well have blocked Nelson Rockefeller's plot to seize the Presidency. An added element in Rockefeller's detestation of Taft was the support which he had from the patriotic element in the Republican Party, that is a thorn in the side of Rockefeller and his "internationalist" cohorts. Only Taft's subsequent, untimely death from a mysterious ailment eliminated his threat.

No secret was made of the fact that Nelson Rockefeller's uncle, Winthrop Aldrich, during the Chicago Republican Convention opened headquarters at the Blackstone Hotel and bought off numerous delegates from their support pledged to Taft. Sums as high as \$25,000 are reported to have been paid, in bundles of cash, to induce delegates to change their vote from Taft to their agent, Eisenhower. Eisenhower, though no more Republican than Nelson Rockefeller himself, received the nomination, bought and paid for. This corrupt affair inevitably could be expected to alienate a large proportion of true Republicans.

The only solution for the dilemma of Eisenhower's acknowledgment of his association with Alger Hiss, that Rockefeller and the conspirators conceived to relieve him of the "curse" of the Red association, was to pick as his Vice-Presidential running-mate, the man who had exposed Hiss, Sen. Richard Nixon. For Rockefeller, this was an ugly but necessary solution, Rockefeller has bitterly detested Nixon for the role in exposing his pal and agent, Alger Hiss. In addition, young Nixon presented a threat to Rockefeller's plot to seize the Republican Presidential nomination when he was ready to do so—unless Nixon could be eliminated. This was weighed, however, against Nixon's lure for patriots. And it was resolved upon as a desperate measure.

A curious phase of the situation came to light in later years. Nixon has proved to be such a worshipper of Rockefeller wealth, of Mammon, that it appears inconceivable that he would have exposed Hiss had he known of his relationship with Rockefeller. That veneration still persists despite the fact that Rockefeller later virtually destroyed Nixon as a public figure by betraying him in manners that will be related. He nevertheless approved the nomination of Nixon as Vice-Presidential candidate in order to swing the patriotic vote to Eisenhower. In the course of the ensuing campaign, the conspirators made their first move to

destroy Nixon by releasing information that they had had from the start about his questionable financial dealings.

Directly after Eisenhower's election, Nelson Rockefeller collected his reward for purchasing the nomination. Eisenhower appointed him chairman of the President's Advisory Committee On Government Organization, and incidentally, it is reported, to dictate all policy-making appointments. Nelson Rockefeller promptly moved to Washington with his staff and took up residence in the midst of the rosy-Red colony of New Dealers, at 2500 Foxhall Road. To this address, he did, in effect, move the White House. It was widely rumored that any "fixes" in the Administration had to go through those channels.

The only aspect of Government reorganization that appeared to have interested Nelson Rockefeller was the Defense Department. Rockefeller involvement in the munitions and war industries as a source of profits has been related. The key feature of the Defense Department "reorganization" was to place its control in the hands of the conspirators' civilian agents. After bringing in his plan, Nelson Rockefeller resigned. Following the usual Rockefeller pose, or "odor", of "philanthropy" as a coverup for skulduggery, he had himself appointed Assistant Secretary of the newly organized "social service" boondoggle, the Department of Health, Education and Welfare that he had dictated to take over functions of their subversive Foundations, freeing them for other conspiratorial purposes. Morris relates that at the same time "he had lots of big jobs". (43, p. 289) The tie-in of HEW with the highly profitable Drug Trust, that Rockefellers control, sheds some light on the possibilities of "making money" there.

As soon as Rockefeller had accomplished his purposes in HEW, and, following his usual practise, had planted his personal agents in key positions to serve his interests and profits, he had Pres. Eisenhower transfer him to the post of Special Assistant To The President For Foreign Affairs. He was motivated by a number of purposes, first and foremost of which was "making money". This took the form of his favorite practise of promoting greater expenditures by the Administration of "other people's money", the taxpayer's money, in the channels that would serve the interests and profits of the Rockefeller Empire and its Soviet partner—so-called "foreign (or Rockefeller) aid". He wanted also to increase spending on national defense, where the money would flow into Rockefeller defense industries. (43, p. 297)

The "foreign aid" projects which Nelson Rockefeller

was particularly active in promoting were two in lands that were particularly antagonistic to the U. S. in spite of all efforts to purchase their cooperation and support—India and Indonesia, that were of especial significance to the Rockefeller-Soviet Axis. In both lands the Rockefeller-Standard Oil interests as well as their Soviet partners have been especially favored. In India, the Rockefeller-Standard Oil interests have been given a dominant share of the oil market, as well as concessions. And they have built oil refineries whose output capacity exceeds the needs of the India market and could find a market only in neighboring Soviet Russia and China.

Rockefeller demanded a “loan”, or gift, of taxpayers’ funds through the Import-Export Bank (which consequently would have to be repaid by the taxpayers if defaulted) to expand the vast Tata steel mills, in which the Rockefellers are reputed to have an interest. Eventually they will probably fall into the hands of their Soviet partners, as will the refineries. Under the leadership of Nehru and his “better half”, Krishna Menon, India has been consistently in the Soviet Russian Camp; and still is in spite of the invasion of India by Communist China and in spite of the billions of dollars of “foreign aid” which the U. S. has extended to the country at the dictate of the conspirators and their agents of the stamp of Chester Bowles and Prof. Galbraith. Fortunately, there was enough intelligently antagonistic opposition in the Administration to block this deal. (43, p. 298) But the Rockefeller conspirators never throw up the sponge. They persisted in their attempts, through their agents in the Kennedy Administration, to pick the pockets of American taxpayers to the tune of a billion dollars to build a steel plant that supposedly would be owned by the Indian government.

Another item to which Nelson Rockefeller devoted himself as assistant to the President, that would serve the interests of the Rockefeller-Soviet Axis, was unlimited economic aid to Communist Indonesia. The Rockefeller-Standard Oil interests had secured an interest in the Dutch East Indies oilfields in a post-World-War I deal that involved, among other treacheries, blocking production of American tin in the interest of the British-Dutch Tin Cartel. It left our country stripped of the tin essential for industry and defense in World War II. (11, 394-5) As is usually the case with those who enter into partnerships with the Rockefellers, the Dutch were ousted from their East Indies colonies by the Rockefeller-Soviet Axis through the agency of their “United” Nations and delivered to their local Communist pawns under Sukarno.

American taxpayers' pockets were picked of many hundreds of millions of dollars, at the instance of Rockefeller, for "foreign aid" to support this Standard-Oil-Co.-serving treachery of theirs that established the Communist regime in Indonesia and furthered the advance of Communism around the world, while enriching the conspirators. Fortunately Rockefeller's efforts to effect additional "foreign aid" deals by Congressional appropriations were temporarily blocked. A later development of this Indonesian deal was the "expropriation", or theft, of its entire oil industry for the Rockefeller-Soviet Axis partners.

Another purpose of Nelson Rockefeller in ordering his appointment by Pres. Eisenhower as his "Special Assistant" was to create for himself a buildup as an "authority" on foreign affairs. For during the last hour of the last Congress session of the Truman regime, the conspirators had effected a change in the law concerning the succession to the Presidency in case of death, which put the Secretary of State in line for the office in case the President, Vice President, and the Speaker of the House should die. Since John Foster Dulles was a Rockefeller kin and agent, subject to their orders, Nelson Rockefeller might have hoped that in case of such series of deaths, Dulles might step aside to permit him to assume the post that would put him in line of Presidential succession. A record of "experience" in foreign affairs would serve to justify his appointment in the eyes of the "peasant" public.

It is a curious fact that Eisenhower, throughout his vicissitudes in the Armed Service and his other activities, as well as in the period following his Presidential terms, enjoyed the best of health. But during his terms in office of President, he repeatedly suffered from curious ailments. Within a week after his inauguration he attended a reception and luncheon following which he, alone, suffered from a gastrointestinal ailment that was diagnosed "food poisoning". Then, following a snack that he and George Allen had after a game of golf, which gave both of them an attack of "acute indigestion", Eisenhower developed a sudden acute attack of transient blindness and, towards morning, a chest pain that was represented to be an attack of "coronary thrombosis". It is incredible that his physician, Dr. Snyder, would permit him to walk to his car to ride to the hospital if he truly believed that the ailment was coronary thrombosis. Exertion is often fatal in that condition. And for a physician to permit his patient to exert himself during such an attack would be gross negligence and malpractice.

There were other curious features about Eisenhower's

"coronary thrombosis". Xrays of his lung were clear, ruling out the possibility that the peculiar sequence of symptoms were due to pieces broken off a bloodclot, or embolism, could account for the condition. And in the end, it was reported that Eisenhower's electrocardiogram showed absolutely no abnormalities, which is a rare occurrence in coronary thrombosis. Also there was to be taken into consideration the curious simultaneous onset of the transient illness of Allen's. It was quite obvious that the illness of Eisenhower and Allen could best be accounted for by a diagnosis of "poisoning". The Secret Service was warned to watch for an attempt to poison Eisenhower.

Sometime after Eisenhower's recovery, he was slated to go to a midwestern town to give a talk. A private car was loaned him by a railroad president; and it was parked in the Washington railroad yard, pending its use. A railroad hand took his family aboard the train to show them the car in which the President would travel. They became thirsty, and drank some bottles of soft drinks that had been placed aboard the train for Eisenhower's use. They all became acutely ill, stricken by arsenic poisoning. The Secret Service seized the rest of the bottles and reported that they were laden with arsenic. The story was briefly reported in a number of newspapers, that related that Eisenhower dismissed the incident with a shrug.

When, at a later date, Eisenhower was again stricken with an intestinal disorder, he was rushed to the hospital. No record has been published of an examination of his stools for arsenic or other poison before he was rushed to the operating room with a diagnosis of "ileitis". Ileitis and other forms of intestinal inflammation can be brought on by poisoning.

Subsequently, when Eisenhower went to Toronto, Canada, for an international conference, he took time out for a game of golf. A local taxi driver notified the Toronto police that he had taken to the golf course two men armed with rifles. An alarm was sent out.

In anticipation of defeat in his effort to obtain the nomination by the Republican Party in 1964, because of aroused public indignation, Gov. Rockefeller has undertaken to open a way into the White House by a new appointive route. On February 21, 1964, he proposed in a letter sent to Sen. Birch Bayh (Democratic, Indiana) who is chairman of the Senate Judiciary Committee's subcommittee on Constitutional amendments, that there be created a new appointive Cabinet post with the title of First Secretary of Government, who would also head the super-governmental National Security Council. Rockefeller

proposed that this new post would constitute a short-cut to the Presidency that would require the elimination of only two officers, the President and the Vice President. It would bypass the third elective figure, the Speaker of the House, who would be next in line of succession under the bill for succession that he and his agents had put over at the end of the Truman Administration.

Is Rockefeller satisfied that he could force his appointment to the post of First Secretary of Government in either Democratic or Republican regimes, since he has managed to usurp what has been, in effect, that post since the early days of the New Deal? May it not be a possibility that we shall witness, in that event, the familiar Latin American spectacle, of "Government by Assassination"?

## CHAPTER XIV

### ROCKEFELLER AGENTS FRAME SEN. JOSEPH McCARTHY & DOOM REPUBLICAN PARTY

Nelson Rockefeller's vindictiveness and fury were sadly underestimated by his defected and unwitting collaborator in "foreign aid" looting of American taxpayers, Sen. Joseph McCarthy. As Chairman of the Senate Government Operations Committee, McCarthy conducted an investigation of Communists and their infiltration of the Government. Much of the ground that he covered was merely a reinvestigation and repetition of the exposures that had been made by the House Un-American Activities Committee and other Congressional committees investigating Communist and other forms of subversion. The investigation was absolutely essential for the security and survival of the nation in spite of the fact that it was once again covering previously explored ground.

Despite earlier exposure, the subversives then brought to light were, as at present, even more firmly entrenched in key Government positions because of their survival and the extended length of their tenure. In this they were aided by the support of their activities, and their defense, with public funds including the tax-exempt funds of the conspirators' foundations. All previous investigations, as well as all undertaken since then, were stopped in their

tracks as soon as they approached the master conspirators and their foundations. Mention has been made of the Rockefeller role in ordered destruction of the records of the Dies-led HUAC, that fortunately has survived, as Appendix IX, because of defection in the rank of the conspirators; and of the destruction ordered by Rockefeller associates and henchmen of the Armed Forces records of subversives to prepare the way for their infiltration and promotion in the Services.

The Dynastic leaders of the conspiracy exert all their immense powers and their enormous plunder, including that put into their foundations to escape the tax collectors, to protect themselves from exposure and prosecution by protecting their subversive agents whom they have planted in Government and other strategic positions. The extent of this infiltration of their trained agents into the Government is, as has been mentioned, the subject of boasting by the Director of one of many of their foundation-subsidized, tax-exempt organizations, their "Foreign Office", the Council on Foreign Relations. (17, 1949-50, p. 39; 1952-3, p. 42)

The Dynastic conspirators use the onslaught of their vast Rockefeller-Soviet Axis propaganda machine that parades as "educational philanthropy" as well as its numerous other subversive-laden bogus "philanthropies" to destroy anyone who undertakes to investigate and expose their agents, in order to avert exposure of themselves. It was from them that there emanated the attacks that destroyed previous investigators of subversion, including Hamilton Fish, Martin Dies, J. Parnell Thomas and Harold D. Velde, among the Chairmen of the HUAC; Robert Stribling, David Schine and Roy Cohen, among the counsellors of the various committees; and Whittaker Chambers when he exposed Rockefeller's associate and agent, Alger Hiss.

Sen. McCarthy extended his investigation in so much greater depth than the earlier investigators, that he was in a position to expose the Dynastic master conspirators themselves. He ordered a raid on the Sunset Farm of Edward C. Carter, Secretary of Rockefeller-controlled and financed Institute of Pacific Relations, the mother organization of AMERASIA (and of the Y.M.C.A.), and seizure of the records of those dangerously subversive organizations that had been secreted in the dilapidated barn that camouflaged a modern mahogany-furnished office. There was discovered data regarding subversive and treasonous activities, that led McCarthy to pronounce it to be the most dangerous spy-nest in the world.

The seized correspondence indicated that the Rockefellers not only financed the subversive activities of these organizations, but also participated personally in their direction; and that at least one of them, John D. the Third, attended meetings of the organization in the barn. This meant that McCarthy was in the position to expose the Rockefellers, personally, as ringleaders in the treacherous activities of the IPR and its Amerasia subsidiary. This correspondence was shown to this author by an employee of the Committee, and has since come into his possession.

Rockefeller's fear and hatred of McCarthy was in no wise mitigated by the following that he had gained among patriotic Americans. To the entire treasonous breed of "liberals" and "internationalists", McCarthy and his patriotic activities were an anathema. Especially is this true of Nelson Rockefeller, who has never missed an opportunity to give vent to his rabid detestation of the patriotic citizenry whom he characterizes as the "lunatic fringe of the radical right." By his definition, as has been related, he places George Washington in that category.

Rockefellers, and especially Nelson, have made special and persistent efforts to hound all patriots out of public life as menaces to their "internationalist" conspiracy. Through their control of education and all media of mass communications, especially those financed through their bogus "philanthropies", they have been able to inculcate in the younger generation their "principle" that "treason is a virtue of which only 'liberals' are capable", and "patriotism is a vice". These "principles" have been given a pseudo-philosophic and psychoanalytic basis in Rene Allendy's TREASON COMPLEX that was published by the conspirators' Social Science Press. (113)

There appears to be in Nelson Rockefeller's intense hatred of patriots in the Republican Party, a large element of mixed political and financial concern, that particularly centers about their rejection of treasonous "internationalism" and jeopardy to the "foreign (Rockefeller) aid" profits that derive therefrom. Vis a vis the Democratic Party, he has no fears. For from its origin, it has accepted as its basic platform unrelenting opposition to the clauses in the Constitution that make "internationalism" and the taxation of the American people on the pretext of support or defense of another nation, not only un-Constitutional, but also treasonous. And throughout its history, the Democratic Party has adhered to the sham of "democracy", not rule, supposedly by the people, but actually thinly masked dictatorial rule by demagogues who have been ever ready

to adopt the various doctrines of the Nazarene, Weishaupt-Marx-Nickerson totalitarianism.

The Republican Party came into being about the time of the Civil War for the express purpose of preserving the Union, our Republic and the Constitution on which it is based. To be sure, it was largely infiltrated from the start by the Red adherents of the Jesuit-Weishaupt-Marx program of destroying the Union for the purpose of seizing control of our country and converting it to the totalitarian dictatorship that has always been their criminal objective. They carried on the plot that had been fostered by even some of the signers of the Declaration of Independence and reluctant supporters of the Constitution. From the start they fostered "bipartisanship" that linked their malign activities with those of their fellow conspirators in the Democratic Party. The history of the Republican Party has been one of its takeover by these "bipartisan" conspirators. The most active of these on the current scene has been Nelson Rockefeller. Red and "Liberal", he has been a "Trojan Horse" in the Republican Party and has led the conspirators, with the support of the Dynasty's tax-exempt loot, in taking it over. Frank Lynn, in a brilliant series of articles in the N. Y. World-Telegram & Sun on the subject of Rockefeller's campaign, aptly said: "SCRATCH NELSON ROCKEFELLER AND IT IS VERY LIKELY THAT YOU WILL FIND A DEMOCRAT." (122)

Every Republican who has shown the slightest sign of Americanism, or opposition to unlimited looting of the taxpayers through "internationalism" and "foreign (Rockefeller) aid", has been purged. Many of them lost their lives in the process of purging. Fatalities have occurred with curious regularity in the purging of defected agents of the Catholic faith. Even more curious is the fact that two of them died by supposedly "committing suicide", as the police blotters read, by jumping out of upper story windows.

James Forrestal was closely associated with Rockefeller. As head of Dillon Read & Co., he effected the financing of Rockefellers' German interests, including that of their I.G. Farbenindustrie A.G. office building. He came under Rockefeller-Soviet discipline in Rockefeller's CFR. It was Forrestal, appointed for the purpose a special assistant in charge of inter-American affairs, who served to cover up Rockefeller's appointment to his draft-dodging, lucrative post of "Coordinator", (131-2) with the help of Harry L. Hopkins and Anna Rosenberg. Forrestal turned over his position to Rockefeller, and was given the

post of Assistant Secretary of the Navy. Later he became the first Secretary of Defense where he was in a position to sluice off arms contracts to firms controlled by his Rockefeller patrons.

As Defense Secretary, Forrestal first became alert to the treasonous tie-ins of the conspirators with the Soviets, and of their significance. He instituted an investigation through his Department that revealed the key role of his patrons in our betrayal to the Reds. An initial report of this investigation was published on his order. Shortly thereafter, Forrestal was invited to the Georgia home of an associate in the CFR, Robert A. Lovett. There it has been reported he was seized, declared insane, and committed to the psychiatric wards of the Bethesda Naval Hospital, under close guard in a room with barred windows. Later it was announced that Forrestal had "committed suicide by jumping out of his room window". Forrestal's investigation of the Rockefeller-Soviet Axis was dropped by his Rockefeller-CFR-trained successor (123), Lovett.

Laurence Duggan was a grandson and son of members of Rockefeller's CFR. An associate of Nelson Rockefeller, Alger Hiss and others of that "select" crew in the State Department, he was appointed Director of Rockefeller-subsidized Institute of International Education. Following questioning by the HUAC, in closed sessions, of his activities in planting Communists and other subversives in schools, colleges and universities, during which he broke down and acknowledged following the directions of the conspirators, he returned to his sixteenth floor office in New York, close by Rockefeller Center. He "died, as have so many other associated in this conspiracy, in a highly suspicious plunge from the window of his sixteenth floor office . . ." (11, p. 288) Despite the fact that he left no suicide note, that folk who plan to commit suicide by jumping from a window do not dress up for the occasion, that people who begin to dress usually complete the act before going on to other acts, and that there was evidence of a scuffle in his office, no question was ever raised by the authorities and his death was instantly and definitively declared to be 'suicide', without an investigation by the police, as if by pre-arrangement." (11, p. 39) But, it is reported, Duggan's widow still receives salary checks from his employers, a highly unusual and suspicious gesture. Guilt?

Sen. McCarthy's investigations had furnished him and his committee with indubitable proof of the identity of the ringleaders of the subversive conspiracy. And in his hear-

ings, he was coming dangerously close to exposing them. Probably fear of exposure accentuated Rockefeller's rage at McCarthy joining Sen. Robert Taft in voting against the "foreign (Rockefeller) aid" bill that he had intensively lobbied. Members of his staff report that he raved and vowed to destroy McCarthy; that he made no secret of it.

A vicious campaign of vilification of McCarthy was launched in every medium of mass communication, here and abroad, which is controlled by the Dynasty. Their tax-exempt foundations and other agencies were brought into play. All of the overshadowing power for subversion and propaganda of the Rockefeller-Soviet Axis were brought to bear on the vicious and virulent campaign to destroy McCarthy. The propagandists quickly converted his name into the epithet of "McCarthyism" that was soon on the lips of all "Liberals" as well as of folks who should have known better, as an expression of contempt. In reality, the contempt was directed against the manifestation of patriotism that his activities represented.

Within minutes after a statement or release by Sen. McCarthy or of his Committee, the gigantic propaganda machine that the conspirators have built up during more than a century, went into action to brainwash the "peasants" into a mass hysterical reaction to so-called "McCarthyism" that might well have proved their salvation if heeded. Cowardly members of McCarthy's Committee flinched and deserted him, as did many of his so-called "patriotic" friends.

When Sen. McCarthy undertook to investigate the granting of commissions in the Armed Services to notorious Communists, and announced his plans to investigate the infiltration of Communists and the use of Communist textbooks in the Academies at West Point and Annapolis, the conspirators "saw the handwriting on the wall". The facts, as related, were notorious, as was the destruction of the Armed Forces' records of Communists and other subversives by order of such Rockefeller agents as John J. McCloy. (71) Earl Browder made no secret of these facts; and he widely published boasts of these "accomplishments" of the Communist Party.

The trail of a thorough investigation of "WHO PROMOTED PERESS?" would have led ultimately to the orders authorizing such promotions by Rockefellers' close CFR associate (later head of the Chase National Bank) John J. McCloy. And ultimately, it would have led to the Rockefellers themselves. And it would have led, in particular, to their "Fuehrer", Nelson Rockefeller, the dedicated champion of Reds and their cause, and the virulent,

venomous hater of patriots ("fanatics of the radical right, more dangerous than the radical left") and of the "ugly vice" of patriotism that is so detested by all dedicated "internationalists".

"Defense of the Army" and an absurd pretense of "patriotism" were the pretexts used by the conspirators to block their exposure by McCarthy and his Committee. The pawn in this move was a Rockefeller employee, who had been recently appointed Trustee of the Rockefeller Foundation, Robert Tenbroek Stevens. Stevens was President of the textile firm, J. P. Stevens & Co., which it is reported had fallen into the clutches of the conspirators during the depression. Col. John Zott, West Point graduate who was sent by Rockefeller's Caltex subsidiary, Aramco, with drafted GI's, to geologize and drill their Saudi Arabian oilfield, informed the author that when, on his return to the U. S., he was placed in charge of Army procurement, he was instructed to give almost three quarters of the contracts for Army uniform cloth to J. P. Stevens & Co. In view of conflicts that invariably arise in connection with procurement, it is quite obvious that the appointment of Stevens involved a flagrant conflict of interest that should have made him a very vulnerable target.

The objectives of the conspirators in their attack on Sen. McCarthy were primarily three:

First. To make an object lesson of Sen. McCarthy in order to intimidate any official who might consider exposing them or demanding their prosecution for their crimes.

Second. To wear out public patience and interest in exposures, thereby averting being exposed.

Third. To cover up their conspiratorial trail by playing on patriotic attitudes of the "peasants" with regard to the Armed Services and on their emotions.

For these purposes they employed as counsel for the Committee of the Senate appointed to hear the charges, a ham actor who doubled as an attorney, named Welch, who was given full leeway in the display of his dubious talents. (He later was rewarded by the conspirators by given the stellar role in a motion picture to "glorify" himself.) And the conspirators arranged televising the hearings on a nationwide scale, making a circus of them. In order to make sure that Sen. McCarthy would not dare to present to the nation evidence that was available to him for exposing them and their conspiracy, they effectively intimidated him by various devices at their command.

The conspirators rigged the televised hearings before a Senate Committee of their Congressional agents and ac-

complices, on vague charges of harassing subversives in the Government service. In other words, McCarthy was tried for performing ably, courageously and patriotically, the duty for which he had been appointed. Simultaneously, they utilized every means at their command, which are almost limitless, to intensify their campaign of hate against him; and redoubled the cry of "McCarthyism", with the help of their illiberal, brainwashed, so-called "Liberal", pink and Red henchmen. A curious and extremely interesting phase of this "McCarthyism" campaign of hate was that it was joined in by his Catholic coreligionists, including numerous priests and prelates, and especially by the Jesuits who have distinguished themselves by their "liberalism" to the point of becoming leaders of the Red movements.

McCarthy and his attorneys had available to them evidence that would have exposed Rockefeller and his associates as ringleaders in subversion and treason, and in the conspiracy to destroy him and discredit his patriotic following. Exposure of Army Secretary Stevens as a Rockefeller employee and of the conflict of interest in his appointment, alone, would have raised grave doubts in the public mind. Among the witnesses who were prepared to volunteer to testify on behalf of McCarthy, were some of Rockefeller's confidential employees who had been present when he had expressed himself in the matter.

But the conspirators had a throttlehold on McCarthy that blocked him from entering a valid offensive against his principal enemies and openly exposing to public gaze their too obvious subversiveness and malice. The Senator did this in spite of the fact that he was warned and he knew that his failure to do so would be fatal. Whereas, as was pointed out to him, if he followed the example of Sen. Truman and exposed the conspirators as traitors, he also would be on his way to the White House. For the craven spirit of the Dynasty impels them to court their enemies and betray their friends. There has been some suggestion that McCarthy's reluctance to use some of the data available for his defense and his "pulling his punches" may have involved his marital situation.

McCarthy's failure to use the means at his command to counter the attack of the conspirators on him facilitated their propaganda in building up a crushing antagonistic sentiment among the brainwashed elements among the peasants, as well as among his fair-weather "friends" and cowardly supporters. Extremely telling was his abandonment to the wolves by his coreligionists, in and out of the Senate and Congress, by many clergymen, and especially

actual condemnation by some prelates. Even Sen. John F. Kennedy, in whose name there appeared a volume entitled **PROFILES IN COURAGE**, lacked the courage, and possibly the desire, to support Sen. Joseph McCarthy's outstanding patriotic services to the nation that he rendered at the actual sacrifice of his life. For his valiant patriotic activities, he certainly deserved better treatment by the nation.

The conspirators' agents on the Committee and the cowardly members of Senate who were scared to defy the "McCarthyism" propaganda flood that was loudly echoed by the Red and Communist press and communications media, traitorously condemned and censured McCarthy. They thus destroyed the effectiveness of the only man in their midst who had the courage and patriotism to defend the country against the conspirators. And they aided and abetted the destruction of the man himself.

In censuring Sen. McCarthy, his colleagues made it possible for the conspirators to intimidate themselves and all men in public life. It enabled them to serve notice on all the nation: **BEWARE OF EXPOSING OUR PLOT, OR FACE DESTRUCTION.** "McCarthyism" was made by the subversive conspirators an epithet synonymous with "patriotism" and equally "reprehensible." (11, pp. 327-8)

Shortly after the hearings, Sen. McCarthy's health began to fail. This is not an unusual experience for those who oppose the conspirators, which is a distinctly unhealthy occupation. It is the trail of a multitude of deaths. His illness "baffled" the physicians who treated him at the Bethesda Naval Hospital, the same institution where Forrestal was hurled to his death. (123) McCarthy's health went steadily and rapidly downhill to his death in the institution.

McCarthy's medical attendant issued a death certificate and a statement to the press that indicated to the informed that he had been murdered in some unknown fashion. The death certificate read:

"Cause of death: Acute hepatitis, **CAUSE UNKNOWN.**"

Simultaneously the physician released a statement to the press that Sen. McCarthy had not suffered from an infection that caused the symptoms of hepatitis. To understand the medical significance of these facts, one must bear in mind that hepatitis may develop as a manifestation of either an infection or of poisoning. Since the Hospital made it quite clear in its press release that the cause of the hepatitis and death was not infection, the inference to be

drawn from the death certificate is obvious. THE CAUSE OF McCARTHY'S DEATH WAS, IN EFFECT, CERTIFIED AS POISON, BY THE BETHESDA NAVAL HOSPITAL, WHERE HE HAD BEEN UNDER TREATMENT. (See frontispiece)

The obvious question raised by McCarthy's death certificate is: "WHAT IS THE POISON THAT CAUSED THE DEATH?"

The laws of the land dictate that the deaths due to unknown causes must be investigated by postmortem examinations to eliminate the possibility of murder. Such postmortems are compulsory and routine. There may be no interference with them by anyone. And no consent is required of the surviving members of the family. Burial of the corpses without postmortems is a felony under both local and Federal laws.

No move was made by the conspirators to comply with the law and determine by postmortem what caused McCarthy's death. A number of McCarthy's associates and intimates, including his hometown friend, Mr. Engel who acted on behalf of his family, approached this author with the request that he attempt to induce the authorities involved to order that an autopsy be done on the corpse to determine the UNKNOWN CAUSE of his death and to eliminate the possibility of murder as the cause of death.

This author requested compliance with the law, by phone, of all the officials in the various parts of the country who were involved, including: officials of the Bethesda Naval Hospital; officials of Montgomery County, Maryland, where the hospital is located; officials of the District of Columbia; Federal officials; officials of the State of Wisconsin; and officials of Appleton, Wisconsin, McCarthy's home town. These efforts to secure compliance with the law met with no success. Each official "passed the buck". The excuse that they offered for their violation or disregard of the law was:

"MRS. McCARTHY OBJECTS TO AN AUTOPSY."

None of them explained why it was that the wishes of any McCarthy, including his recently acquired wife, superseded the criminal laws of the land. It did not seem to matter to the responsible officials that their failure to comply with the law put them in the position of being accomplices after the fact in a felony, in a possible murder. Obviously extremely powerful influence bore on the matter.

WHY? WAS McCARTHY MURDERED BY HIS ENEMIES, BY THE CONSPIRATORS WHO FEARED HIS KNOWLEDGE OF THEIR ACTIVITIES? IS IT A MATTER OF CHANCE THAT THE KEY MEN WHO

**BLOCKED THE CONSPIRATORS' PLOT TO SEIZE THE PRESIDENCY, INCLUDING SEN. ROBERT A. TAFT, HAVE MET MYSTERIOUS DEATHS? CAN THIS BE AN EXPLANATION OF THE KENNEDY ASSASSINATION?**

An extremely interesting but assiduously neglected phase of the Kennedy assassination and its "investigation", or "whitewash, was presented in a story published in the N. Y. Daily News of November 10, 1963, by Joseph Cassidy and Lester Abelman. (136) They related that Pres. Kennedy visited New York on the preceding day, shortly after Nelson Rockefeller had announced his candidacy. He stopped at the Carlyle Hotel, that is reported to be jointly owned by the Rockefeller and Kennedy interests. They reported that the Secret Service maintained the "tightest vigilance on a New York visit in recent years"; and that no one, even newspaper reporters, were permitted to approach the President. No explanation has been offered, or sought by the "investigators", for this extraordinary vigilance by the Secret Service in New York as contrasted with the lack of vigilance in Dallas. Was the service warned that Kennedy's life was in danger in New York? Did they have reason to believe that an attempt would be made on his life in New York? A clarification of this matter might throw considerable light on the unexpected assassination in Dallas.

To set at rest the suspicions of murder raised by the McCarthy death certificate and the inquiries launched into the matter, Drew Pearson falsely alleged in his syndicated column that the hepatitis had been caused by alcoholism. In so doing, he cast a serious reflection on the reputations of the Bethesda Hospital physicians. For they would be poor specimens of the profession if they could not recognize cirrhosis resulting from the vitamin B deficiency caused by alcohol, and treat it accordingly. Sen. McCarthy's associates vouch for the fact that he had not been able to take liquor because of his illness for many months prior to his development of the hepatitis. Whatever poison precipitated his death, they attest that it was not alcohol. The obvious purpose of the Pearson column was to draw a "red herring" across the conspirators' trail.

Nelson Rockefeller has been insistently and dictatorially vocal on all matters that would swing the Republican Party into full "bipartisan", or "omnipartisan," support of all so-called "liberal", New Deal and pro-Communist subversions. These he absurdly calls, in the words of his Red ghostwriters, "the mainstream of Republican thought". He insists that they are essential for attaining his goal: "To

make Democracy live". With the characteristic semantic perversion of Reds and so-called "liberals", he alleges that they are "... the sound and honest conservatism that has firmly based the Republican Party in the best of a century's traditions . . ." In short he campaigns on the insane premise that Communism and New Dealism are Republicanism. And it is his "grandiose idea" that brainwashed American peasants must accept the thievishness of Communist "internationalism" and its "New Deal" counterfeit as the basis of their political organization, instead of the Constitution and patriotism. This is a frank expression of his, and his fellow conspirators' purpose, to reduce the nation to the totalitarian device of a single political party, the REPUBLICOCRATIC COMMUNIST PARTY, with himself as its dictator.

This explains why Nelson Rockefeller, as the real behind-the-scene, omnipartisan political boss of the nation and as overt New Dealer and Trojan Horse who has planted himself in the Republican Party, has made every move in the past several decades that has sapped, undermined and defeated the Republican Party from within. It explains the imposition of a Democratic unknown, Wendell Willkie, for example, on the Republican Party in 1940, as its Presidential candidate. It explains why he and his fellow conspirators destroyed Sen. McCarthy with their "McCarthyism" campaign which was joined by every medium of mass communication controlled by them; and his unusual silence in the matter.

The treatment accorded Sen. McCarthy by them was effective in splitting the Republican Party wide open. Much to their delight, it gave their Democratic henchmen control of Congress. The success that crowned his efforts encouraged Rockefeller to continue his wrecking activities from within the Party, as a bogus Republican. He continued to force on the Party his "internationalism" that is reviled as treasonous by true patriot Republicans.

An expert at the art of cuckold, he has undertaken to drive true Republicans out of the Party and embrace it in wedlock with Red subversion, with himself as Presidential candidate. With this purpose, he launched on a campaign to destroy any and every candidate who remotely resembles a Republican. By the traditional tactics of the Dynasty, Nelson Rockefeller has barred them from any voice in the Party or in the selection of its candidate. Taft, Knowland, Knight, Jenner, Nixon and any other possible rival for the Presidential nomination of himself as Republicocratic Red Presidential candidate on the Republican ticket has been craftily destroyed politically. One can imagine Nelson

Rockefeller's glee at being rid of so formidable a rival as Sen. Joseph McCarthy.

There is no need for conjecture regarding the conspirators' plot to assassinate McCarthy. It was openly promised by one of their agents, a delegate to the secret, higher level "internationalist" conferences for the sell-out of our country, that was arranged for the conspirators by their Polish double-agent Dr. Joseph H. Retinger, was fronted by Prince Bernhard, Dutch Royal consort, and was held near Arnhem, Holland, under top security, at the Hotel de Bilderberg.

David Rockefeller, personally represented the Rockefeller Empire at this conspiratorial Bilderberg Conference, the members of which were later to play key roles in the rape of Congo. Rockefeller was accompanied by a group of their CFR agents, including a number of them who who had been planted in the Eisenhower Administration. Among them were Dean Rusk, President of the Rockefeller Foundation; Joseph E. Johnson, President of the Carnegie Endowment for "International Peace"; and C. D. Jackson, Assistant to President Eisenhower who was picked for the job by the Secretary of State Gen. Bedell Smith, former head of the conspirators' CIA.

Charles Douglas Jackson was the most vociferous of the Rockefeller agents in the group and one of the few of its members who spoke in official capacity, as Assistant to President Eisenhower. He had won his position as a leader of Red fronts. Assistant to the president of TIME and then general manager of LIFE, in the 1930's, he found his way to the top of the Red front, as President, in 1940, of the Council For Democracy. From there he rose rapidly in the ranks of New Deal Reds as assistant to the U. S. Ambassador to Turkey, deputy chief of the Office of War Information, and deputy chief of the Psychologic Warfare (propaganda) Division, SHAEF. Returning to Time Inc. he became the editor of the most "liberal" of its publications, FORTUNE, in 1952. From that post, he quite naturally drifted into Eisenhower's Red entourage, with which he usually seemed most at ease. He was quite at home in Rockefeller's Council on Foreign Relations.

The Rockefeller delegates to the Bilderberg Conference found their European fellow conspirators quite alarmed about Sen. Joseph McCarthy's exposure of their Red agents. They were even more alarmed about his attack on "foreign (Rockefeller) aid" in which they presumably shared some crumbs that fell from the Rockefeller table, some payoffs. C. D. Jackson, acting as spokesman for his bosses, assured the alarmed foreigners, at the first meeting

in May, 1954, that Sen. McCarthy would soon be eliminated. His words, reported by Alden Hatch, among others, in his book **BERNHARD, PRINCE OF THE NETHERLANDS** (140, p. 242):

**"WHETHER MCCARTHY DIES BY AN ASSASSIN'S BULLET or is eliminated in the normal American way of getting rid of boils on the body politic, I PROPHESEY THAT BY THE TIME WE HOLD OUR NEXT MEETING HE WILL BE GONE FROM THE AMERICAN SCENE".**

It was not long thereafter that Rockefeller employee, Trustee of the Rockefeller Foundation, Robert Tenbroek Stevens was appointed Secretary for the Army and brought the drummed up charges against Sen. McCarthy that were used by the conspirators to assassinate him politically. Three years later the physical assassination of McCarthy was accomplished.

There is occasion for interest in the relationship between the conference held at the conspirators' Sea Island domain by the Bilderbergers on March 28-29, 1964, and the recently accomplished assassination of Pres. Kennedy and the plotted withdrawal of any gold reserve for the dollar.

Henry Cabot Lodge Jr.'s role in the McCarthy purge is of special interest. As one of the top-ranking "liberal", or Red, "internationalist" agents of the conspirators and UN delegate, he participated in the cabal's White House conference at which the plot was laid.

## **CHAPTER XV**

### **THE ROCKEFELLER REPORTS NELSON ROCKEFELLER "MUSCLES IN" AS REPUBLICAN DICTATOR**

**"Nelson . . . Preferred To Change Not His Affiliation But The Philosophy of HIS Party . . . And Has . . . Succeeded . . ."**  
**(THE FABULOUS ROCKEFELLERS, Silverberg, p. 109)**

Nelson Rockefeller has been insistently and dictatorially vocal on all matters that would swing the Republican Party into full "bipartisan" support of all "liberal", "New Deal"

and pro-Communist measures—in terms of his own favorite expression of purpose: “**THAT WILL MAKE DEMOCRACY LIVE**”. It is noteworthy as a revelation of his true attitude and purpose that he rarely, if ever, refers to our government as a Republic; but always refers to it as a “Democracy”.

Rockefeller is even more stridently vocal in attacking things of which he disapproves. In the McCarthy persecution that was certain to disrupt the Republican Party and effect its defeat at the polls, Nelson Rockefeller was curiously silent. It is a Rockefeller tradition to mask by silence and pretended indifference their most vicious treacheries. This serves to hide their key role played and their hearty approval. This approval was fully confirmed by the Rockefeller-controlled media of mass communication with their insistent, strident attacks on “McCarthyism,” which has been the conspirators’ pet term of derision of patriotism, that displaced their epithet “isolationism”, and by their condemnation of Sen. McCarthy.

The elimination of Sen. McCarthy, the split in the Republican Party that it caused, and the consequent victory of the Democrats that gave them complete control of Congress, perfectly fitted into Rockefeller’s plan to seize the Party and make it more completely serve his purposes. There remained, however, a number of Republican leaders who might block his absolute domination of the Party and dictation to it, and might themselves be his rivals for the Presidential nomination. They were not wholeheartedly “internationalist” but though less reluctant than McCarthy and Taft to support “foreign (Rockefeller) aid” thievery, they did not favor it; and they were inclined to be patriots, or “isolationist,” and were squeamish about betraying our country.

Prominent among these potential rivals was Vice-President Nixon’s California colleague, Senate majority leader, William F. Knowland. He stood out as an opponent of Rockefeller’s “liberal” cohorts and as possible Presidential timber of the same calibre as Nixon. A cunning scheme was hatched by the conspirators, in which both Rockefeller and Eisenhower undoubtedly had a hand, to eliminate both Knowland and Nixon as possible threats, by setting them against one another. It involved losing California for the Republicans. But in Rockefeller plans that was not a material objection. The plotters had Vice-President Nixon convey to Sen. Knowland and California Governor Knight the order to switch places on the Republican ticket in the forthcoming election, “for the good of the Party”. Though both were certain of reelection to the posts which

they held, Knowland became candidate for Governor and Knight, for Senator. With powerful assistance and financial support of the conspirators, the Democrats defeated both candidates. And Rockefeller was rid of Sen. Knowland, a powerful rival for the Presidential nomination.

But Rockefeller and his "liberals" had gained an even greater advantage. Craftily, the "deal" had been arranged to make it appear that the plan had originated with Nixon, to eliminate rivals for control of the Party in California. The Rockefeller-controlled press and mass communication media announced this as the objective. As a result, the defeated candidates, and their numerous followers vented their resentment and their hatred on Nixon. Nixon was as effectively destroyed politically in California by this crafty maneuver as was Knowland. Subsequently Nelson Rockefeller put the finishing touches on Nixon's political career.

There was an ironical but amusing denouement to this California treachery. Former Gov. Knight has had no suspicion that he was a victim of a master conspirator, and not of Nixon's design. He has become an ardent supporter of the man who brought about his political debacle. His subservience to Nelson Rockefeller is so abject that in 1963 he embarrassed his idol by prematurely opening headquarters for the 1964 Presidential nomination campaign.

By 1955, Nelson Rockefeller decided that he had sufficiently identified himself with the Republican Party to camouflage his Red, Democratic "New Dealism"; and that he had attained sufficient stature and influence in the Party to force on it the acceptance of his Marxist revolutionary and pickpocket dedication that had made his path a bit rough, at times, during his appointive tenures when he had encountered officials who were truly Republican. It had frustrated and irritated him to discover that they were not dedicated to the Rockefeller-Soviet Axis conspiracy of bankrupting the nation and subverting and destroying our Constitution and Republic. As has been noted, Rockefeller and his Red ghostwriters never express a desire to have our Republic prosper and survive. Their insistent desire is: "TO MAKE DEMOCRACY LIVE".

Rockefeller resigned his official post in the Eisenhower regime and proceeded to force his "liberal", "New Deal" program on the Republican Party and to prepare the way for attaining his goal by the normal elective route: "entering the White House through the front door". This blatant political propaganda of Rockefeller's took the

form of what was sardonically labelled by him a "Special Study Project" by one of the usual so-called "committees" of his agents, pawns and dupes that he sets up to echo his dictates.

In flagrant violation of the law, he financed this frankly political activity of his with the tax-exempt funds of his foundations. This means, in effect, he forced the taxpayers to pay for his campaign to further his plans to subvert the nation. Curiously, the Internal Revenue Service which is charged by the law to prosecute such diversions of tax-exempt funds to political uses and to shut down on the violators, jail them and confiscate the tax funds that have been entrusted to their foundations, has failed to comply with the law. Even when at a later date, as will be related, a naive IRS investigator exposed another such violation by Rockefeller, the Government failed to comply with the law. Clearly it is the attitude of our Government dominated by Rockefeller, that he and his psychopathic whims and lusts are the law; that "the King can do no wrong".

The illicitly financed political propaganda that embodied Rockefeller's dictates were published at the expense of the Rockefeller Brothers Foundation and were publicized as the ROCKEFELLER PANEL REPORTS. These so-called "REPORTS" are represented by Rockefeller press-agent Morris on behalf of his patron, as "an effort to provide a blueprint for approach to future national problems." (43, p. 308) Developments proved them to be propaganda to impose the conspirator's schemes for totalitarian subversion, as a "bipartisan" device, on the Republican Party and its platform, thus bringing it into full conformity with the Democratic.

The personnel of these panels cast a clear light on the political purposefulness and uses of the reports. All of the panel members are "internationalists" of the same stripe as Rockefeller, who have been his employees, stooges, pawns and sycophants. (78, pp. xxiv-v). They include such "Republicans" as:

ANNA M. ROSENBERG (now married to another Rockefeller CFR associate) the fiery Red import from Hungary, who long has been on the Rockefeller payroll, reputedly at a salary of \$5,000 a week, as go-between for Labor and the Party, whose record has been related.

CHESTER BOWLES, the "liberal" advertising executive who made his "liberalism" pay off with a multi-million fortune in the advertising game while the nation was held in the throes of a depression; who is "at home" in many

Rockefeller supported Red fronts and has well served the Rockefeller-Soviet Axis and its satellite, India, in the capacity of "American" Ambassador for India. He played a key role in writing the 1960 Democratic Presidential campaign platform in conformity with the Rockefeller Reports.

CHARLES H. PERCY, president of Bell & Howell Co., Trustee of Rockefeller's University of Chicago, Chairman of the Board of the "liberal" Fund for Adult Education of the Ford Foundation. He played the key role in writing the Republican Presidential campaign platform, in 1960, in conformity with the Rockefeller Reports. He now seeks election as a "Republican" governor of Illinois.

LESTER B. GRANGER, executive director of the heavily Rockefeller subsidized, "liberal" organization for agitation among the colored folks, the National Urban League (the headquarters of which, at 14 East 48 Street, New York City, was given to it by Nelson Rockefeller's "odd" brother, Winthrop, as a memorial to their abolitionist mother) whose name and activities are not unknown to the House Un-American Activities Committee.

JOSEPH E. JOHNSON, President of the Carnegie Foundation For International Peace, associate and successor of Alger Hiss in various of his posts, whose identification with the Rockefellers and dubious State Department record have been related. (62, p. 121)

DEAN RUSK, who according to Freda Utley (62, p. 121) owed his appointment as Under Secretary of State to his association with Rockefeller, Alger Hiss and Joseph E. Johnson; who as related, "distinguished" himself and won the gratitude of the conspirators by "patriotically" insuring American defeat in Korea by his role in forcing the dismissal of Gen. MacArthur, and was rewarded by Rockefeller with appointment of President of the Rockefeller Foundation. His appointment by Pres. Kennedy, who was unacquainted with him personally, he owed to the Rockefellers, who gave him a leave of absence from his Rockefeller Foundation post. As Secretary of State, he undeniably has served the Rockefeller-Soviet Axis with devoted singleness of purpose.

PHILIP E. MOSELY, whose mentality and "patriotism" are most indicative of the character of the panels, director of "studies" of Rockefeller's Council on Foreign Relations, disciple of Hoffman Nickerson, Rockefeller subsidized Professor of International Relations at Columbia U. and officer of its Russian Institute, and Assistant Director of Social Sciences of the Rockefeller Foundation. The views of the conspirators and the objective of their subversive

propaganda was clearly stated by him in a pamphlet of the Headline Series of their Red, Foreign Policy Association, as follows:

"Over the long run, great numbers of people will judge both the Soviet and American systems, *not by how much individual freedom they preserve*, but by how much they contribute, *in freedom or without it*, to develop a better livelihood and a greater feeling of social fulfilment." The attitude of Mosely, like that of his Rockefeller boss, is that for American "peasants" as for the Russian moujik, freedom is non-essential. Only "security" counts. They do not go on to relate their "liberal" sentiment that maximum "security" is most readily available to three groups: slaves and subjects of a totalitarian dictatorship; prisoners in jails; the dead. This is the "PROSPECT" that the conspirators offer us and seek to give us, with sugar coating, in their political platforms. It is the effluvia of psychopathic minds, and certainly not Republicanism.

EMMETT JOHN HUGHES, Red, Democratic, tricky Rockefeller employee who serves as his alleged "brain" and ghostwriter after serving Eisenhower in the same capacity and then betraying him in so-called MEMOIRS (76), director of their shady "philanthropic" IBEC and member of their CFR.

Those are representative of the characters who dictate what Rockefeller represents is "the mainstream of Republican thought". If any mention is made anywhere in the "REPORTS" of our nation being a Republic that has been eminently successful in enabling us to lead the world, the author has not been able to find it. An entire section (78, pp. 395-469) is devoted to the "POWER OF THE DEMOCRATIC IDEA", in which is made a casual reference "to the conception of the United States as a constitutional republic". (434) But it disdainfully relates that "it conforms to the formal mechanism of existing democratic governments".

Communist propagandists rightly represent that Soviet Russia is the only true "democracy". They define "democracy" as being synonymous with Communism. And in a practical sense, that is true. For pure democracy is mob rule. It invariably degenerates into the seizure of power by the most ruthless, violent and criminal gangster in the mob, as it has in the Soviets and wherever else it has been tried. It becomes rule by force and violence, by gangsterism. One can readily understand, therefore, the paeans sung by the Rockefeller racketeers and their minions on the theme of "democracy"; and why Nelson Rockefeller insistently proclaims that he wants to "make Democracy

live", and to "change . . . the philosophy" of the Republican Party to make it a rubber stamp of the Democratic. Looting would be materially facilitated thereby, though there is no evidence that it requires any facilitating. One can also understand his insistence that he, a dyed-in-the-wool Democratic Red is the only true Republican; and all others are the "fanatic radical right".

Nelson Rockefeller expressed the "grandiose idea", in the "modest" volume of his views assembled and edited by his pressagent, James Poling, under the title of ROCKEFELLER RECORD, (79, p. 35) that he assembled the nation's "best brains" to make the "Reports" to guide the nation. (79, p. 35) But biographer Morris makes clear whom Rockefeller meant when he demurely speaks of the nation's "best brains", when he reported that Nelson imposed on the panel "agreement". (43, p. 309) Agreement with whom? With Nelson Rockefeller, naturally! In short, Nelson Rockefeller adhered in this matter to the tradition of the Dynasty that is expressed in John D's "encyclical", Occasional Letter No. I, that stated the purpose of subverting our Republic as the determined purpose of his bogus "philanthropy", the General Education Board:

"In our dreams we have limitless resources (the wealth of the nation) and the people yield themselves with perfect docility to our molding hands."

Nelson Rockefeller has always been certain that his is "the best brains in the nation". Is not the largest pile of loot derived from generations of the rawest gangsterism, brigandage, piracy and incited warfare adequate proof of that? As for his "committees" and "panels" we have the acknowledgement of his pressagent, Morris, that they "yield themselves with perfect docility" to his "molding hands", in "achieving agreement" (43, p. 309).

The conclusion which Nelson Rockefeller made certain that his "handpicked" committee bring in, is his glib expression:

"Democracy is a powerful idea . . . because it draws much of its strength from religion . . ." (78, p. 395) This is the "change" in "the philosophy of HIS Party" that he decrees is "the main stream of Republican thought". Quite clearly, Nelson Rockefeller is a "Trojan Horse" who has planted himself in the Republican Party for the purpose of imposing his predatory, Red, "New Deal", Democratic platform on it to further his dictatorial purposes. He should carry the tag RED ROCKY, THE REPUBLOCRAAT.

## CHAPTER XVI

### THE PLOT EVOLVES: ROCKEFELLER SEIZES NEW YORK GOVERNORSHIP

After romping through the Administration of reverent Eisenhower, who gave him a free hand, as the boss who had bought him the Presidency, Nelson Rockefeller arrived at the decision that the time was ripe to emerge entirely into the open and launch on the first step of the end stage of the plan to openly take over the country as its elected, "indispensable" Presidential dictator preliminary to establishing the "internationalist" so-called "One World Federalism" under his dictation. The conspirators had satisfied themselves that the nation had forgotten the long record of crimes of the Dynasty and the prediction made by the Supreme Court, in 1911, of its menace to our Republic; and that the people had been duped into the belief that Rockefeller is a benevolent "philanthropist" and not a "Robber Baron". For had he not carried off the boondoggling racketeering of the CIAA, the wartime treachery in the State Department, the United Nations betrayal, an endless series of "foreign (Rockefeller) aid" deals, numerous malodorous behind the scenes and open maneuvers, without creating widespread suspicion or alarm?

The elaborate and well-laid plot lay well beyond the limited mentality of Nelson Rockefeller himself. Basically it followed the centuries old scheme for world conquest and domination conceived by Ignatius Loyola and his Marrano followers (14, p. 95) that was formulated by Jesuit Adam Weishaupt in the Illuminist-Communist plot to force the Vatican to reestablish the Jesuit Order after it had been abolished by Pope Clement XIV as immoral and a menace. It was aped by Weishaupt's paranoid disciple, Moses Mordecai Marx Levy alias Karl Marx, after it had become the basis of American and French "democratic" political organization. And it was adapted and formulated for the early American scene by Clinton Roosevelt (1), and for the current scene by the unsocial "scientist", Hoffman Nickerson. (39)

Trillionaire "philanthropist" Rockefeller was enabled by the power and resources of the Dynasty, to indulge one of his "grandiose ideas", to be super-Napoleonic world dictator. His favorite portrait of himself, that he distributes to his friends, is one by Yussuf Karsch that depicts him in a Napoleonic pose, holding a globe in his hand, as world dictator. Pressagent Morris explains that Rockefeller has sufficient insight into his mental limitations to leave the details of carrying out his "grandiose ideas" to others. (43, p. 289)

Honest self-expression has become a thing of the past in public life. Employment of ghostwriters and doubles has become "accepted practise". It is curious that when a student employs a ghostwriter to turn out his themes and theses, the courts hold both guilty of fraud. It is no less fraud for men who control the destinies of nations to employ ghostwriters to dictate their thoughts and write their speeches. However, the number of public figures of the present era who do their own thinking and writing can be counted on the fingers of one hand. Still fewer are the number who can deliver an extemporaneous address. Most men in public life today are bogus "images" created by advertising talent, pressagents, ghostwriters and other fraudulent devices.

Nelson Rockefeller, whose biographers are advised to acknowledge that he is incapable of abstract thought or of planning, unable to spell and read correctly and otherwise incompetent, is of the latter class. The key man who was originally employed by him to do his thinking, planning and writing for many years, was political reporter Francis A. Jamieson. A shrewd politician, he served as Rockefeller's "brains". His death created a glaring void in the Rockefeller "image".

A veritable army of ghostwriters, theatrical producers, advertising men, propagandists, newspaper publishers, medicine show barkers, columnists, shills, pollsters, fixers and run-of-the-mill strong arm men and gangsters serve to create the Rockefeller bogus "image" and to cater to his whims. If he should get the notion that he wants a piece of the moon, there are certain to be a host of minions ready at hand to serve in that cause. Quite frequently, if not regularly, they are paid to serve him by the unwitting taxpayers, often, as will be related, in complete disregard of the law. For the Rockefellers seek "to make money". And the use of their own money to pay their expenses, rather than "other people's money" is not the path to a trillion dollar income or loot.

The "ghosts" who write his speeches and other public

utterances and publications are a motley crew among whom his "soul mates", "pinks" and Reds, predominate. One of the most "liberal" of these is Jamieson's successor, Emmett John Hughes, who is also an employee of Rockefeller's IBEC. Hughes, as has been related, acknowledges himself to be a New Deal Democrat and "internationalist" and hostile to patriotism and Republicanism. His latest published work is a vicious, treacherous attack on the program that he was employed by the conspirators to enunciate as the policies of Pres. Eisenhower as his ghostwriter, before he was taken back by Nelson Rockefeller to serve him. (76)

At the same time that Nelson Rockefeller was romping through the Eisenhower Administration in Washington, he was also busily guiding the activities of the Democratic Party back in New York, through his agents. His purpose was to ensure his election as Governor of New York, as a steppingstone to the White House, by disrupting the opposition. His control of the Democratic Party and its auxiliary, the so-called "Liberal" Party, was assured by his Council on Foreign Relations associates and agents who included Sen. Herbert Lehman, W. Averell Harriman, Thomas K. Finletter, David Dubinsky and numerous others. Control of the Red, "Liberal" Party also was assured him by his participation through his wife, Mary Todhunter Clark Rockefeller, in its organization.

It was as simple a matter for Rockefeller to arrange disruption of his Democratic opponents as it was for him to dictate his nomination by the Republicans. It merely required a bit of Machiavellian planning. The first step was to bolster the plutocratic tradition in New York's Governorship, following in the line of Roosevelt and Lehman. This was done by arranging the nomination of W. Averell Harriman and his election on the Democratic ticket. All had been "liberal", or Red, "do-gooders" and New Dealers, trusted stooges who served to delude the "peasants".

Rockefeller's CFR agent and associate "broke the ice" for Nelson Rockefeller's seizure of the Governorship and looting of New York State. Rockefeller's agent Gov. Harriman furthered the conspirators' objective and his boss's career, by taking his orders and appointing him chairman of the Temporary State Commission on the Constitutional Convention to rewrite New York State's Constitution. Chairman Rockefeller could be depended upon to dictate to the Commission a Constitution that would serve him and the Rockefeller Empire most effectively in "making money", their avowed constant objective. It can be safely

assumed that Rockefeller initiated the plan for rewriting the Constitution. It is his express conviction that all Constitutions, including that which was made the basic law of the land, must be rewritten at frequent intervals—whenever it suits his purposes and interests to remove any barrier which stands in the way of “making money”.

Shortly thereafter, puppet Gov. Harriman proposed the nomination of Rockefeller by the Republican Party for the Governorship as his opponent and successor, in a speech given, in March 1957, before the legislative press correspondent's dinner in Albany. Following the intensive publicity, Rockefeller's agents led by his campaign manager, Judson Morhouse, and John Roosevelt who rigged and organized, at his instance, a “Draft Rockefeller” committee, Rockefeller arranged his “draft” as nominee.

A more correct statement of the situation would be: “Nelson Rockefeller made a highly profitable purchase of the Republican nomination.” For the “Rock Mob”, (as the Rockefellers were nicknamed by their kinsmen in their New York Daily News as a tribute to their aptitude in racketeering) have managed to make the quest for public office as costly to others as it is profitable to themselves. These costs and profits from political campaigns derive from innovations introduced by the conspirators.

Political campaigning and the quest for public office has become, in steadily increasing degree, a matter of brainwashing and duping the electorate, the so-called “peasants”. The process that is mockingly called “education”, has become in increasing degree under the direction of the bogus “philanthropic” conspirators’ direction, a device for conditioning the rank and file of the people, whom they label “the masses”, to accepting brainwashing from their so-called “liberal” sources and responding hysterically to the dictates and order of the conspirators only, with a conditioned reflex that is instant, compelling and irresistible.

Radio and television have become the most important of the mass media for “conditioning the masses” to automatic, reflex response to the dictates of the conspirators. They are used as media for persistent, repeated and constant suggestion that “molds the minds” of even some of the more intelligent elements in the community. They have largely taken over the pristine role of religions for this purpose. And they are used with great effectiveness by the “planners” and plotters to create delusions regarding office seekers that are called “images”.

Nelson Rockefeller, by nature a dictator, is ever bent on imposing his will and views on others. He did not fail

to recognize the value of control of the air for attaining his dictatorial objectives. His Rockefeller Center deal with Radio Corporation of America gave him effective control of that organization. He was largely instrumental in usurping the air channels which are rightly the property of each and every one of us and of the nation, and in incorporating that monopoly of the air into networks controlled by himself and fellow conspirators.

Once the monopoly of the air had been established with the aid of a Government agency set up for the purpose of maintaining it, a major problem in Rockefeller execution of the Nickerson program of converting our Republic into a plutocracy, in which the wealthy would dominate all public offices, as a step toward an absolute, monarchic dictatorship became readily soluble. The use of the air channels and networks was barred to almost everyone except the conspirators. They set up "regulations" that suited their purposes and were ratified by their agents in the Federal Communication Commission. Among the regulations were those that made every statement other than those that accorded with their own subversive mouthings, "controversial", and barred from broadcasting and publication. The air channels and networks have become an integral part of the monopoly of mass communications created by the conspirators, following the precepts laid down by Adam Weishaupt, for subverting the nation. (103, pp. 291-7; 104)

That life-blood of the Rockefellerers—loot, or "profits"—that they assure us are never lost sight of in whatever they do, were amply attained by making access of the public who are allowed it by the conspirators, to the air channels that had been stolen from them, enormously costly. The situation enabled the conspirators to attain two objectives: First. To reach exclusively the large captive audiences that can be reached only by radio and television. This means that only a person possessed of great wealth, or one who is supported by great wealth, can reasonably hope to succeed, in most instances, in winning nominations and elections. For the moneys that can be derived from the rank and file are inadequate. There are few persons or groups who can manage the enormous sums required for electioneering for an office of importance, after paying their income taxes. Those individuals or groups are to be found mainly among those who pay no taxes: either the criminal and labor elements, or the so-called "philanthropists" who are exempt from taxation and require the rest of the community to pay the taxes that they evade. And even the tax-exempt persons must

violate the law and commit a felony if they use exempted foundation funds for political purposes. In short, the expense of a major campaign can be afforded only by the criminal element whom Hoffman Nickerson designated "The Permanent Type Of Rich Man". (39, pp. 9-24) And his plot and plan laid out for the conspirators of a monarchic dictatorship, or elective monarchy (39, pp. 274-302), is brought more readily within range of attainment, by the conspirators' monopolistic control of the airways and the other media of mass communication.

Second. Rockefeller's control of those media also nets enormous profits for him and the Dynasty, which revert to their own purses. Money spent by Rockefeller on campaigning flows from one of his pockets to another of his pockets. In addition, the money subscribed by the public for the support of his campaigns flows into the same pockets, as do also the funds expended on the campaigns of his adversaries. Obviously, his campaigns and those of his henchmen are not an expense, but a rich source of profits and loot.

Rockefeller pressagent Morris reports that a reporter covering his gubernatorial campaign remarked:

"The secret ingredient of this campaign is money."  
(43, p. 327)

He did not make it clear that the money does not flow *out* of the Rockefeller purse, but *into it* in the form of profit and tribute. At a later date it was discovered by the Internal Revenue Service that much of the money used by Rockefeller in campaigning has been tax-exempt foundation funds used criminally, in violation of the law.

The complaint voiced by members of Congress and other independent candidates for public office, that the enormous and mounting costs of campaigning now bars all but the extremely wealthy or the extremely venal from public office, is readily understandable in view of these facts. (135) It also makes it quite apparent how successful have been the conspirators in transforming our Republic into a plutocratic autocracy. This device for attainment of the objective is, in reality, Nelson Rockefeller's improvement on adviser Nickerson's plan, that he effected when he obtained a controlling block of RCA stock when renting space to it in Rockefeller Center.

With the start made by Nelson Rockefeller, the conspirators had no more difficulty in establishing a monopoly of the air channels than racketeering John D. the First had in establishing his illicit oil and other monopolies. Indeed, the conspirators found their task far easier and

simpler. It merely required a bit of corruption at the top levels of the Government. They placed their agents in key Government posts that they set up to establish and maintain their monopoly, including the Federal Communications Commission. This has given them almost complete and absolute monopoly of the air channels, of radio and television, the most effective media of mass communications.

The consequence of the Rockefeller monopoly of the air is, in effect, the sale of the highest offices in the land to the highest bidders, subject solely to the approval of the conspirators. To reinforce their powers, the monopolizers of the air channels have set up a rigid censorship to serve their conspiratorial purposes. One of the basic rules of that censorship is that only "liberalism", or Communism, is "non-controversial". Any attack or exposure of the conspirators and the subversions that they use the air to disseminate, is "controversial" and is therefore barred from the radio and television channels except under very exceptional conditions.

Thus when this author was requested to broadcast in connection with the 1948 Dewey campaign by the Republican Party, he selected the topic Communist penetration of "education" under the New and Fair Deals, especially as illustrated by the administration of a women's college in New York City, Hunter's College. Shortly before he was supposed to go on the air, the authorities of the network demanded that the talk be turned over to them for censorship. It was rejected because of exposure of Communism, and activities of notorious Communists, which rightly should have been major issues in the campaign. The author was asked by Republican officials to submit to censorship by columnist George Sokolsky. He consented in the hope of getting some of the facts before the public. Sokolsky explained that he was steadily subjected to such censorship. And he advised eliminating from the text some of the most vital material, as the price for getting some of the facts to the public. But, he pointed out, on occasions other than a political campaign, it would be virtually impossible to get by the censors with any comments on the situation.

The publications and media of mass communication that are not directly amenable to censorship and control by the conspirators have been forced into subjection by schemes directed at their jugular veins—monopolies of press services and syndicates, of paper and advertising, of equipment and of labor through control of unions involved. During the period of critical shortage of paper

and the extortionate increase in price of pulp fixed by the newsprint monopoly, John D. Rockefeller III was chairman of the Paper Industry Board; and the conspirators established a throttle-hold on the newspaper industry.

During the same period huge advertising agency monopolies, such as McCann Erickson that controls most Standard Oil advertising and Foote, Cone, & Belding were built up. They have been merged, more recently, into a vast and powerful super-monopoly of advertising, press-agentry and publication. This monopoly bears the name Interpublic Inc. Its rapidly multiplying accounts now total close to half a billion dollars. Its financial power is such that it can throttle even the most powerful publications by withholding advertising accounts of such magnitude as to threaten insolvency. And it has done so, in the process of reaching out for direct control and monopolistic ownership of the publications for the purpose of establishing vertical monopoly of the advertising and publishing fields for the conspirators, the Saturday Evening Post is an example, such as was originally conceived by Weisaupt. (104; 103, pp. 291-7)

Recently Rockefellers' tax-exempt AIAESD reached out for control of the press with purchase of 100% preferred stock of the Oceanside Blade Tribune. INTERPUBLIC is reported to have been responsible for the lukewarm support of Nixon and the Republican Party in California in the 1962 gubernatorial election, as well as in the Presidential election in 1960, at the behest of Rockefeller principals.

A tremendous improvement on the device of stealing elections by "repeating" perpetrated by their gangster agents, invalidating ballots by marking them in the process of "counting", miscounting them, "stuffing" ballot boxes, and the numerous other devices that had become traditional, was effected by the conspirators with their introduction of voting machines. These machines are essentially nothing more than interlocked multiple counters. And they readily could be constructed in such manner as to enable the voter to see his vote record for the candidate for whom he casts it. Actually the voter on the present day voting machines has no way of knowing for whom his vote registers. He merely knows that the levers that he pulled down represent his choice. The reason for this situation is that the voting machines were introduced by the same "honorable" elements who traffic in slot machines and other gambling devices. And the very last thing they and the conspirators desire, the thing that is

furthest from their minds, is to give the "peasant suckers" a break.

Only two persons know how and when a vote cast on a voting machine records. One is the employee of the voting machine company who services and sets up the machine. The machine can be "rigged" to do all sorts of tricks. The second is the election judge in charge of the machine. It is he who pulls the cord, or raises the button, that releases the lock of the machine and permits the voter to enter. If, however, he holds the cord taut and does not release it, or if he leaves the button up, on some of the machines, the vote will not be recorded in spite of the depressed levers. Classes are held in some sections of the country, for instruction of the election judges in the art of "fixing" the voting machines. The advantage of stealing an election by use of voting machines is that there is no possibility of the public detecting it, and still less possibility of correcting it by recount. It is the ideal device for stealing elections, frustrating the will of the people, and furthering criminal political conspiracies. The Louisiana Legislature, in the course of an investigation into voting machines and the potentials of their corrupt uses, was given a demonstration of "fixing" of the machines. There is now coming within the range of possibility the use of remote electronic controls in the machines with which the vote of each person may be immediately known to the conspirators and automatically changed to conform with their wishes. They would make it possible that a man be elected even if everyone votes against him. (139)

Several months before Rockefeller seized (bought and paid for) the New York Republican gubernatorial nomination, control of the only company then supplying voting machines to the State, the Automatic Voting Machine Co., was quietly purchased by the Rockwell Manufacturing Co. (Redistribution of this stock to stockholders has been announced recently.) After the election, satisfaction was so great with the results obtained, that all the remaining stockholders were forced out and compelled to accept twenty dollars a share for stock that long had not sold higher than four dollars,—which is a good measure of the degree of "satisfaction".

Subsequently the only other company manufacturing a voting machine, AFTER DEMONSTRATIONS IN LOUISIANA OF ITS READIER MANIPULABILITY (139), Shoup, was taken over by General Battery & Ceramics Co., the stock of which company is traded on the American Exchange. Shortly thereafter it was introduced

in New York and was "successfully" used in a hotly contested New York City election which the conspirators' henchmen duly won.

Rockefeller enjoys an especial advantage in seeking office and in elections in general. Due to his holdings, the more there is spent on elections, the greater are the profits of his interests. No matter how much money he may personally contribute to a campaign, he is certain to indulge in his favorite vocation of "making money". The more the sucker public contributes, the more numerous the contestants, and the more hotly an election is contested, the more there is spent on the campaigns, including his own, the greater are the Rockefeller profits.

Polls of voter preference prior to elections are increasingly being used to influence the votes of the "peasants" in the direction desired by the conspirators. Their propagandists are using such polls with constantly greater cunning in brainwashing the electorate. The effectiveness of widely publicized voter polls is based on an elemental bit of psychology, the desire that has been increasingly inilled in the "peasants" to conform and to be on the winning side. Coupled with this is the naive acceptance of propaganda that is repeated often enough. In the parlance of their propagandists, as repeated by one of their pawns, Hitler's agent, Goebbels:

"A lie will come to be believed the truth, if repeated often enough".

How craftily the conspirators manipulate public opinion is the subject of an exultant boast by the Director of Rockefeller's Council on Foreign Relations, in his annual report of 1948-9 (17, p. 36), of their success in duping the public into believing that our country has "a 'moral commitment' to give military help to the free nations of Europe." He amusedly recounts that the conspirators had succeeded in imposing their views on the nation through the broadcasting of their own conspiratorial views as "authoritative" and emanating from "leading citizens" by their official propaganda medium, the New York Times. George Gallup and Elmo Roper, two of the principal pollsters, are both members of Rockefellers' Council on Foreign Relations, their "agents". Is it unreasonable to believe that they operate in the same manner as their CFR, and serve their master loyally?

The conspiracy to convert our Republic into a plutocracy, in which public office will go increasingly only to extremely wealthy individuals, had so far succeeded by the late 1950's that the Republican Party officials openly sought a candidate who could outspend millionaire "lib-

eral" Gov. Harriman in the campaign. The situation was "made to order" for trillionaire "liberal" and "philanthropist" Nelson Rockefeller who would not have to spend a penny of his own, only tax-exempt public funds. It was exactly as had been planned.

Having attained the nomination, the next move of the conspirators was to split wide open the Democratic Party, at its convention, through Rockefeller's "liberal" agents in that Party. The split was created by Thomas K. Finletter's demand that he be nominated Senatorial candidate and that the Democratic choice, able District Attorney Hogan, be cast aside. Finletter was supported by fellow "liberal", or Red, Council On Foreign Relations member, former Gov. Lehman, and by Red, subversive Eleanor Roosevelt. Presumably by pre-arrangement, Tammany Leader Carmine DeSapio, a "liberal" who had never failed to collaborate with the Rockefeller interests, made a show of opposing "liberal" Finletter and created for Nelson Rockefeller, the Republocratic boss during several decades, the trumped-up issue of "bossism" that served him in two elections.

The campaign "battle" was cunningly "rigged" to delude the "peasants". Theatrical and television producer "Pat" Sylvester Weaver was called in to train Rockefeller in the delivery of his ghostwritten speeches and to coach him in "acting human". Among the stunts he was trained to do in order to prove qualified for the Governorship was to eat blintzes in the Ghetto and spaghetti in Italian districts, to wear a continual grimace that passed as a smile and indication of "happiness" and confidence, to engage in pre-arranged impromptu talks with "the public" and to pretend to "mix with the crowd".

The deceit and fraud of this "mixing with the crowd" was forcibly brought home to this author by his effort to speak to Candidate Rockefeller at one of these bogus "public mixings" of his at Court Square, Brooklyn. It had been difficult to get at him, because contrary to the usual campaign practise, information was withheld from the public as to his whereabouts at any particular time, apparently to avoid confrontation. But a friend had notified the author that messengers had come to the doors of the offices in buildings in the neighborhood to notify them that "Philanthropist" Rockefeller would condescend to "mix" with them in Court Square at 11 A.M.

On arriving at Court Square, a group of about two dozen persons was found to be standing in a circle about a clearing, waiting for the appearance of the candidate. Questioning revealed that many of them were Rockefel-

ler's employees, who had been sent there to assure him of an audience. In due time, Nelson Rockefeller arrived at the Square in a car driven by his son, Steven. They were accompanied by a black-shirted roughneck attired as an American Nazi, who walked through the crowd protecting his bosses. Nelson and Steven Rockefeller walked around the circle shaking hands and speaking with certain of the crowd. Anyone else who attempted to speak to the candidate was seized by the Black-Shirt, roughly dragged out, beaten and turned over to police officers standing nearby. The author was among those who experienced this treatment. He extricated himself by presenting his credentials as press correspondent.

The same situation presented itself at the subsequent opening of the Brooklyn headquarters on the Square. Rockefeller gave one of his prepared "extemporaneous" talks before the assembled Party faithful on the "glories of our freedom" and his desire "to make *democracy* live". The author meekly asked if he had the freedom to question Rockefeller regarding his record. He was immediately jumped on by the Bundist Black-Shirt and dragged out.

Nelson Rockefeller's affection for the Bundists led him to sponsor the first public parade in New York after World War II, of the German-American Bund, operating under the alias "German-American Committee", on the last Saturday in September prior to his election. It was held under his sponsorship in connection with his campaign. Starting on East 61st Street, it turned up Fifth Avenue past the reviewers' stand at 72nd Street, where Rockefeller did the honors with his puppet, Mayor Robert A. Wagner Jr. and continued up Fifth Avenue to 86th Street, where it turned East through the German colony in Yorkville. No mention of it was made in the newspapers in order to avoid rousing patriotic ire. Since then it has become an annual event under the same auspices.

Nelson Rockefeller followed what has become his customary routine, or "line", in campaigning. He attacked his submissive agent, Harriman, but failed to mention that the Governor had been following his orders; and charged him with being fearful of his "boss" Carmine DeSapio. He promised all who would vote for him, whatever their hearts might desire. He undertook to be "everything to everyone". To the negroes and Porto-Ricans he promised "desegregation", preferential treatment in everything including endless and unquestioning "Relief" payments and subsidy of illegitimate breeding; to the politicians in Rock-

away Beach, he promised a new pier that never materialized; to the taxpayer, he promised lower taxes and economy. Once elected, none of them other than the vociferous Reds were ever able to reach him, even on the phone; and every promise was observed only in its breach. Biographer Morris quoted a reporter's characterization of Rockefeller's campaign, in the words:

"The secret ingredient of this campaign is money". (43, p. 327)

In other words, it was characterized by the corruption that prevails in all Rockefeller activities. And as usual, the funds involved were largely, if not entirely, "other people's money", not the least of which was tax and tax-exempt funds.

In spite of the fact that he had been nominated by the Republicans, Rockefeller refused to run as a Republican. The name of the Republican Party was conspicuously absent from his campaign literature. "Red Rocky", the Trojan Horse within the Republican Party, insistently proclaimed his desire "to make Democracy live". And he assiduously courted and won the support of the Reds, of the so-called "Liberal" Party the organization of which he had supported through his wife.

Nationwide, disgusted Republicans stayed away from the polls, driven away by the "New", "Fair" and "Ike" Deals that had been imposed on the Party by Rockefeller and his Red cohorts. But with the help of the split that his agents had created in the Democratic ranks, of his submissive "opponent" and of the Reds and "liberals" he was one of the few candidates on the Republican ticket to win the election. What role was played in the election by "fixed" voting machines, is not known. An important factor in this "standout" victory of Rockefeller among the Republican candidates in the nation at large, was the treacherous campaign of Rockefeller and his henchmen in disrupting the Republican Party and undermining its leaders. The "framing" of McCarthy, Knowland, Knight and Nixon, which has been recounted, did not exhaust the list.

Gov. Rockefeller was provided by his ghostwriters and coaches with an inaugural address that cleaved close to the entire Red, "internationalist" Party Line. He spouted it falteringly, but never gaged on it. He pledged his "services" not to the State of New York, but to "One (Rockefeller) World". And in effect he proclaimed himself its "Fuehrer". His biographer Morris quotes the Press as noting that the speech was that of a would-be Presi-

dent, and not that of Governor of New York State. It dealt chiefly with foreign affairs, that are no concern of a Governor, in a dictatorial manner. (43, p. 331)

## CHAPTER XVII

### GOV. ROCKEFELLER "MAKES MONEY" & ROLLS UP RECORD OF CORRUPTION

Immediately following his inauguration, Gov. Rockefeller's psychopathic lust for "making money", for looting the "peasants", and his chicanery went into full play. He had campaigned on a platform that promised economy, pay-as-you-go budgets and "fiscal integrity".

During the campaign, the author and his associates questioned the honesty and sincerity of his intent in a petition that challenged him to disavow the tax-exemption that permits him and his clan to virtually avoid taxation, which read as follows:

Governor Nelson Rockefeller,  
Albany, N. Y.

Sir:

We note that you are gravely concerned with the fiscal problems of the State; and that you propose the adoption, locally, of the device that you and your associate, Beardsley Ruml, originated and applied on the national scene to make sure that none of us "peasants" who work for a living can possibly escape the privilege of paying taxes, to lighten the burden of our pay envelopes. With a view to lightening the burden that you carry, we urge on you the adoption of a simple and effective fiscal remedy that has probably never occurred to you. We urge that you and your kin and associates abandon the numerous dodges and devices that you have had written in our laws, that enable you to evade the privilege of paying taxes on billions of your income. We urge that you stop evasion of taxes by yourself, your kin and your interests, and that you all pay your full share of the tax burden which you have imposed on us in two decades of your public career in an endless array, starting with hemispheric "defense", right down to your most recent "foreign" aid promotion. It has not escaped us that all of those measures have

greatly profited you and your interests. And we condemn the ruthless greed that has impelled you to shift the burden of taxation that is and should be yours, onto our shoulders, by such dishonest devices as: foundations that promote your business and political interests; "art" museums filled with trash that serve to gain tax exemption for your property after a certain number of years; "gifts" to tax exempt institutions that you control, such as that of Rockefeller Center property to Columbia University, that enabled you to shift the entire burden of property taxes on your highly profitable property on to us; your flight of capital, that you have extracted from us by numerous devices, to such lands as Venezuela, Brazil, Argentina and Saudi Arabia; and the ironic legal device whereby you force us taxpayers to guarantee the safety of that loot from expropriation in those lands.

"We demand that you promptly put an end to these dishonest tax evasions and that you all pay up the taxes you have evaded, while looting us, during the many decades past. We have estimated that it would make our City, State and Federal Governments solvent once again, and would make possible the reduction of our taxes to a small fraction of the present levy. This honest act would wipe out the shame of your fake "philanthropies" and would be deemed by us a redeeming evidence of a newly awakened sense of probity in you. It would earn for you the sobriquet "Honest Nelson", in place of "Tax Looting Nelson". It would materially further your ambition to make yourself Dictator of the U.S.A. and of the Western Hemisphere.

"The Greater New York Committee Opposing Tax Looting by "Philanthropists" Signed

Instead of meeting the challenge that he and his cohorts pay their fair share of the tax burden and end their tax evasion, which would probably completely remedy the budget deficit, Gov. Rockefeller demanded that the Legislature pass a bill that greatly increased the burden of honest taxpayers. It also imposed his favorite device of "withholding", to insure that no one who honestly works for a living can join the bogus "philanthropists" in evasion of taxation. Payment of taxes was speeded up by advancing the dates for payment of installments. The income tax base was changed to conform with that of the Internal Revenue Service so as to give the conspirators the benefits of the tax evasion measures that they had introduced in the Federal tax administration. And the paperwork involved in the keeping of records by the taxpayer was enormously increased.

Nothing could have served to make it clearer that Rockefeller and his cohorts were not paying their fair share of the taxes than did the measure imposed on the State at his insistence. The law prior to amendment had required that persons like himself, who were in the highest tax bracket, pay in addition to the 91% Federal tax, a 7% State income tax, making the total 98% of income. The law imposed by Gov. Rockefeller served to increase the State tax in the highest bracket to 10%, making the total tax that he himself would be liable for, if he did pay his legitimate tax on his income, 101%. Can one conceive of a miser deliberately undertaking to increase his own taxes?

The tax increase imposed by Rockefeller was a clear-cut expression of the purposeful itch to "loot the peasants" in order to bring them closer to a submarginal existence. The purpose is facilitating their subjugation and submission to a totalitarian, "welfare" State, in furtherance of the subversion of our Government to a monarchic dictatorship. This serves to carry out the conspiracy that was aptly enunciated by Lenin and Stalin: "The path to Sovietization of the U. S. lies in bankrupting it and its people." New York State Comptroller Levitt pointed out from the start that the increased tax was not requisite for balancing the budget; that its objective was merely further looting of the citizenry and of the State. By the end of the year, the accuracy of Levitt's prediction was fully confirmed. A surplus of approximately one hundred million dollars over and above budget requirements had developed.

As might be expected, the tax increase drove many industries out of New York, and materially increased unemployment. This clearly proved the fraud of Rockefeller's favorite pretense that he aims to "increase the rate of growth" in the State. Whole sections of New Jersey have been built up by industries fleeing New York taxes, which were "the straw that broke the camel's back". Among them are units of the Rockefeller-dominated Drug Trust including American Cyanamid.

Rockefeller's dedication to increasing the cost of living for the "peasants", his New York subjects, found expression in the field of education. Many colleges, both State and local, have long provided higher education free of any charge. This permitted many men and women from poor and middle class families to secure an education. That enabled numerous of them to rise to positions of responsibility and leadership. When Soviet Russia's "Sputnik" was given priority by the conspirators, the occasion

was used to exaggerate the "excellence" of Russian education and the rapid growth of Soviet scientific and technologic personnel under the system that provided free education to whomever had the capacity to learn. The conspirators made loud outcries on the need for greatly increasing the ranks of our scientifically trained personnel to meet the challenge. Gov. Rockefeller did not fail to take advantage of this chance to make himself heard.

Rockefeller took advantage of the situation by once again fleecing the "peasants". He demanded of Legislature that it pass a bill that would make it possible to stop providing a free college education to students in New York's colleges. It mattered not to him that this measure would reduce the number of those able to secure college educations and would run counter to national interest that demands a tremendous increase in trained, scientific personnel. In view of his record of betrayal of our national interest and his scorn of patriotism, is it not conceivable that this may have been his malign purpose?

Rockefeller demanded the enforcement of all measures advocated by the DAILY WORKER and by the Communist Party and its "Liberal" counterpart. He vigorously opposed any attempt to reduce the staggering and steadily mounting costs of Relief and Welfare to the taxpayers, resulting from deliberate colonization of New York by the conspirators, with idlers, incompetents and criminal scum, that has made of New York a hotbed of vice and crime. He fought and opposed measures that would impose residence requirements as a condition for being placed on the Relief roles; that would deny Welfare payments to mothers breeding illegitimate children, that is rapidly increasing the State's population of those elements to the point where they will rapidly outstrip the more desirable elements, and will soon make an accomplished fact of the Communist plan to convert the U. S. to a second Africa. At the same time it bids fair to bankrupt the State and many of its desirable citizens.

Rockefeller demanded and lobbied through Legislature so-called "desegregation" laws that will accomplish a number of purposes of the conspirators and their Red allies, whose support he assiduously courts. His housing "desegregation" law bars property owners from rejecting undesirable tenants and neighbors. It penalizes them for refusing to rent to objectionable tenants. Coupled with rent control laws and regulations that prevail in New York, that force some landlords, other than themselves, to subsidize tenants and deny them the right to protect their properties from damage, or even destruction, by the

tenants, Rockefeller and his Red cohorts have virtually destroyed for a large proportion of landlords all rights of private ownership of property that are assured by the Constitution. These laws insure the development of new slums by destructive tenants, that the conspirators can later steal. The packed and prostituted courts support this subversion of justice and the Constitution; and support the conspirators in their land and property grabbing thievery.

The communist publication, the **DAILY WORKER**, in its issue of March 13, 1956, urged the prompt adoption of water fluoridation by New York in its boldly headlined lead article. (126, p. 1) Gov. Rockefeller, shortly after his inauguration, led a delegation, in his official capacity, that demanded of his puppet, Mayor Robert F. Wagner Jr., that he order pollution of New York's water with fluorides. (127, p. 1; 128, p. 1)

Some understanding of Rockefeller's intent "to make Democracy live", as do the Soviets, can be had from an examination of the water fluoridation conspiracy that he intensively pushes. One of his manias is his notion that there are too many people in the world for him to "manage". He and his pseudo-scientific minions regard the rising birthrate that prevails among some peoples, as a "population explosion". The Rock Mob (the name applied to the Rockefeller brothers by the N. Y. Daily News as a tribute to their gangsterism) has been sold on the idea that there must be restriction of the number of children brought into the world by people other than themselves and the persons on Relief who bear illegitimate children promiscuously. (The NAACP and the Urban League demand this as a "civil right" that they value highly: and the Rockefellers can not deny those "abused" and over-privileged groups anything. The subsidy by Relief and Welfare agencies of selective breeding by this element is rapidly making a reality of the Communist scoffing that the U.S.A., like Africa, will soon become a black nation.)

Population control has become one of the prime purposes and, indirectly, the most profitable project of the bogus "philanthropies" controlled by the conspirators. To further this purpose they have subsidized a wide array of organizations manned by like-minded or prostituted "scientists". Their propagandists have flooded the nation's press with stories headlined: "BABIES MORE DANGEROUS THAN ATOM BOMBS!" (N. Y. World-Telegram & Sun)

The chief opposition to the birth control conspiracy are the churches and religious sects that accept the Bib-

lical verse, "THOU SHALT BE FRUITFUL AND MULTIPLY", as a divine dictate rather than a priestly assurance of fertility at a time in human development when offspring were rated as commercial assets. The most formidable opponent in the Western world is the conspirators' pet detestation, the Catholic Church.

Water fluoridation is especially valued by the conspirators as a device for outwitting the Church. For relatively few persons other than scientists engaged in the work are aware that it had been definitely established, shortly prior to the launching of the fluoridation conspiracy, that fluorides inhibit ovulation as well as development of the ovum and fetus, and is a birth control measure.

The intensive study of the poisonous action of fluorides was first launched by the U. S. Department of Agriculture and others in the early 1920's. It was discovered that fluorides used in insecticides contaminate feeds of farm animals and prevent their reproduction. Pregnant sows fed the fluoride containing feed lost their litters; and hens failed to lay eggs. This was a serious matter; for pigs and chicks have commercial value. Phillips, Halpin & Hart, a research team, reported in 1935, in an article in the *Journal of Nutrition* (p. 93) that fluorine behaved like lead in poisoning the egg by concentrating in and combining with fatty substances in the yolk of the egg, and inhibited laying. They reported that the fluorine in the yolk increased from three parts per million to more than fourteen parts per million. (137) Numerous studies proved that fluorides are largely retained in the body and build up to poisonous concentrations even when minute amounts are ingested. In addition to its birth control action on the female, fluorides poison and sterilize the male. And it has long been used for that purpose on mean, ugly bulls, in some regions. Alarmed by these findings, the Department of Agriculture tried to secure the passage of legislation barring the use of fluorides as insecticides, to protect farm animals from poisoning and protect the farmer from losses.

Rockefeller is acutely aware of the poisonous and birth-control action of fluorides. For the Rock Mob, through their Foundation, subsidized research on it, at that time. They distributed a publication by a Scandinavian researcher, named Hans Borei, that was published abroad, to the medical and research libraries in the U.S.A. (129) Hans Borei offered an explanation for the findings of Nobel prize winner, Prof. Otto Warburg, on the effect of fluorides in changing the chemistry of a normal cell to that characteristic of a cancer cell.

Professor Warburg's researches on cell metabolism revealed that the cancer cell differs from the normal cell in that it can not oxidize its food, as does the latter. Instead, the cancer cell ferments its nutriment. In his search for a chemical that converts the metabolism of the normal cell to that of a cancer cell, and causes it to ferment nutriment instead of oxidizing, Prof. Warburg discovered that sodium fluoride was effective in bringing about this change in cell metabolism. This was the first intimation, about half a century ago, that fluorides can cause cancer.

The effect of water fluoridation in causing cancer in humans was confirmed in a report made, in 1954, to the House Interstate & Foreign Commerce Committee by Dr. John W. Knutson, Chief Dental Officer of the U. S. Public Health Service. (80, p. 375, Chart 8) He presented evidence in the form of his Chart 8, on DEATHS FROM CANCER, U. S., GRAND RAPIDS & MUSKEGON (1943-50) that after seven years of fluoridation beginning in 1945, the incidence of cancer in Grand Rapids increased more than 25% over its incidence in the control, unfluoridated Muskegon; and more than 30% higher than the average incidence of cancer in the U.S.A. Newburgh, New York, another town in which fluoridation was tested, has had an equally shocking increase in its cancer death rate, according to the information obtained from its health officer.

Water fluoridation is an ideal device for controlling the so-called "population explosion" that so gravely concerns Nelson Rockefeller and his cohorts, underhandedly and without raising suspicion or alarm among the "peasants" and their religious leaders. It reduces the number of births, thus cutting down the population increment. At the same time, it increases the incidence of cancer and cuts down the population by hastened deaths. In the latter, it is slower in its action than wars engineered for the purpose. But judging from the intensity of effort put by the conspirators into imposing it on the nation's communities, they regard it as steady and reliable in trimming man's numbers to a figure satisfactory to themselves.

Water fluoridation serves the conspirators in another manner that suits their purpose. By inhibiting the action of the enzymes that are especially essential for the metabolism and function of the nervous system and the mind, it poisons and "tranquillizes". This action has been especially valued by the Rockefeller-Soviet Axis. It makes their victims more suggestible, docile and submissive. Anna Pauker, the Communist leader of Roumania, is reported to have boasted: "Give me enough fluorides, and

I can keep any people in submission". Fluorides have been extensively used in Soviet slave-labor and prisoner-of-war camps. During World War II, it was reported by Major George Racey Jordan, (81) that enormous amounts of fluorides were shipped to Russia, by plane, through the Great Falls, Montana air base, for that purpose. In view of the current increase of the rank of patriots, whom Nelson Rockefeller denounces as "fanatics of the radical right . . . more dangerous than the left", one can understand the desire of the conspirators to resort to "tranquillizing" their American "peasants" to supplement their brainwashing efforts.

The Rockefellers do not suffer financially from fluoridation. Among the largest producers of fluorides are their American Agricultural Products Co. and Hooker Chemical Co. The former produces enormous quantities of fluorides in Florida, as a waste in the preparation of phosphate fertilizers from a fluorophosphate rock. Most of the fluorides must be removed to avoid killing the crops fertilized with the phosphate. Fluoride is a waste product for which use in insecticides provided a market until the Department of Agriculture acted in the 1930's, to protect farm animals from its poisonous effects. Disposal of the waste by dumping it into the streams and the ocean was instituted. It caused death of fish and other marine life, and gave rise to a "red plague". The government ordered the dumping into water stopped. The wastes were then buried in pits in the ground. This caused death of vegetation over an area of many square miles due to fluoride poisoning. The Department of Agriculture intervened to stop burying of the fluorides. The solution of building concrete blockhouses for storing of the fluorides was costly.

The pollution of drinking water with fluorides for the sterilizing and "tranquillizing" of the peasants proved to be ideal for the purposes of the conspirators, and enabled them to "make money" thereby. American Agricultural Chemical Co., however, is not the only avenue through which profits from fluorides flow into Rockefeller coffers. Fluorides are a source of profit also to the Hooker Chemical Co. The former Miss Blanchette Hooker is Mrs. John D. Rockefeller the Third.

The "population explosion" and birth control agitation provides the conspirators an opportunity for "making money" on an enormous scale from the sale of the steroid products of their Drug Trust as contraceptive pills. The pills have been proved to cause death by venous thrombosis; and ample evidence proves that the steroids cause profoundly injurious disturbance of the endocrine glands,

body metabolism and health, as well as causing cancer. Nevertheless that conspirator-dominated Food & Drug Administration has falsely certified these drugs as "safe"—until such time as the number of victims has become sufficiently great to cause widespread recognition of their danger.

In the meantime, the conspirators are netting enormous profits from the sale of these poisons by their Drug Cartel. "Internationalism" and "foreign aid" add tremendously to these profits. For the conspirators compel American taxpayers to defray the cost of providing these "contraceptive" steroids through "foreign aid" channels to be distributed free of charge to the women of Asia and Africa, for alleged "birth control" there. Fortunately, however, the native women sensibly refuse to take the poisonous pills and cause their "philanthropic" benefactors much concern because of fear of loss of profits from this phase of "foreign aid". Stocks of the companies that supply these steroids have soared on the basis of the outrageous profits derived, and have given the conspirators enormous profits. Thus Syntex stock has risen from a few dollars to four hundred dollars a share on the basis of this skulduggery.

Another phase in which "liberal" Republocrat Gov. Rockefeller has followed the Communist Party Line is in absurd exaggeration of the so-called "atom bomb" and "end of the world" propaganda in which our own bombs have been used as bogeys to scare the more imbecilic amongst us and to effect our submission to the conspirators. This scare is being craftily used as an excuse for the policies of appeasing the Soviets and for increasing purchases by our Defense Department from the industries controlled by the Dynasty. Also it served as a pretext for Gov. Rockefeller's attempt to force all property owners to buy and install so-called "bomb shelters" that would be more likely to serve as tombs than as shelters.

It is possible that Rockefeller's attitude was in part influenced by cowardice. HUMAN EVENTS mockingly commented that Rockefeller was undertaking the role of "General Mole" and attempting to lead the nation into a cowardly retreat underground. However, the scandal surrounding the exposure of the corrupt financial involvement of Rockefeller's adviser and associate, one of the leaders of his Administration, Joseph Carlino, in a company, Lance Inc., a firm that engaged in selling glass fibre "shelters", throws some light on a monetary motivation of Rockefeller's bomb shelter agitation. Since the scandal was brought to light, there has been curiously lit-

tle mention by him of bomb shelters. But there has been no evidence of the conspirators' change of heart with regard to their view that "BABIES ARE MORE DANGEROUS THAN ATOM BOMBS!"

Gov. Rockefeller unblushingly made the first objective of his Administration the lobbying of bills that would directly promote the financial interests of his Dynasty, and enable it to "make money". He has never hesitated to use his public office for the promotion of private interests and nepotism. The very concept of "ethics" has been repudiated and scorned by him. Among the first bills that Rockefeller demanded be passed by the Legislature were two that were of especial interest to the Dynasty for "making money". The first was a bill that allows Rockefeller's New York City banks to expand throughout the State by establishing branches. This had been barred by laws that aimed to prevent their monopoly of banking in the State. Under irresistible pressure applied by Gov. Rockefeller, the bill was passed by the Legislature.

A second bill that has a high financial interest for the Dynasty is one that permitted the sale of stale and often putrid milk in the City of New York. Mention has been made of Rockefeller's takeover of the milk distribution industry during the second and third decades and setting up a monopoly that initially centered about their control of National Dairy Products and Borden Companies, that Henry Wallace dubbed in the WALLACE FARMER, the Milk Trust. (26, pp. 93-120) As in the case of all Rockefeller Trusts, the consumer has been mercilessly looted. Shortly after their takeover of the industry, the price to the consumer was increased several hundred percent, and the price paid the dairymen who provided the milk was proportionately lowered. At the same time the quality of the milk was lowered by adulteration.

In the effort to control the deterioration in the quality of the milk provided by the Milk Trust, New Yorkers prevailed on the health authorities to require the companies to date the milk to check the sale of superannuated, stale and putrefying milk. Inability to unload their stale milk on New Yorkers resulted in a cut in the profits of the local distributors of the Trust. Such a check on their "making money" is viewed with grave alarm by the Dynastic conspirators, as a threat to their "security".

Gov. Nelson Rockefeller had no sooner been inaugurated than he launched on a drive to eliminate the stamping on milk containers of the date when it had been pasteurized, that was required by the officials of New York City. He lobbied the bill with all the intensity and

force that Rockefellers summon to fight any check on their "making money". The Legislature obediently passed the bill that stopped the dating of milk.

As a result of the elimination of dating, the quality of the milk that was delivered in New York deteriorated rapidly. No matter how old and stale the milk, it now could be foisted on the public by Rockefeller's Milk Trust. (11, pp. 93-120) The complaints grew so loud and insistent from householders, and from mothers who found that the milk was too putrid to feed their infants, that the Republican Party decided that something must be done to relieve it of the blame for the deterioration of the milk. And the measure decided upon under the pressure of public opinion was restoring the dating to insure relatively fresh milk.

Rockefeller bitterly opposed the plan of the Republicans to restore milk dating, obviously because of the adverse effect it would have on Milk Trust profits. His contempt for public opinion, of the "peasants", as the conspirators speak of us among themselves, showed most clearly. He issued releases in which he took a firm stand against restoring milk dating. He blamed the putrid and sour milk on his Democratic enemies. And he alleged that the Democrats had gone around town and put vinegar in the milk containers. However, he never adduced any proof of this obviously puerile and false allegation. Eventually, Rockefeller's political advisers were able to secure from him a grudging agreement not to veto a bill restoring dating of milk.

This instance illustrates the fact that Rockefellers bitterly oppose anything that might impede their "making money". They determinedly fight to continually increase their loot, no matter what may be the resultant suffering to others, with not the slightest concern about ethics, morality, decency or honesty.

By far the richest plunder of the Dynasty from the Administration of Gov. Rockefeller is derived from his favorite device, that he has used to maintain a pretense of "balancing the budget" and maintaining a "pay as you go" policy, from private corporations, or "Authorities", financed by the taxpayers and operated under charters that place them above the law. It is the same device that he introduced on such vast scale into the "New Deal" "coordination" boondoggling thievery. More than seven hundred of them, almost all of them operated at a deficit, consume virtually the entire income derived from the conspirators' Federal Income Tax device.

These "Authorities" are exempted from taxes. In addi-

tion to any funds with which they are provided by the taxpayers, they are financed with bond issues that are guaranteed by the taxpayers through the government, bear relatively high rates of interest, and are tax-exempt. In addition to the high tax-exempt income derived by the conspirators through the bonds with which they have provided themselves, a rich profit is derived by them from control, operation and manipulation of the "Authorities". Despite the public financing, the conspirators bar public checking or investigation of their operation, as exemplified by the case of their Port Authority of New York-New Jersey. And to cap the climax, these "Authorities" loot the public mercilessly and perpetually for any services that they offer.

The Rockefeller Administrations of New York State have been the costliest and most corrupt in its history. Within a period of six years, Rockefeller has doubled the State's budget to almost three billion dollars. Instead of economizing, which was his campaign promise, the State's payroll was heavily padded. Not the least of the additions to the payroll have been his numerous retinue of personal retainers and employees, his so-called secretaries (his present wife "Happy" is reported to have been among them), his kinsmen (including his brother and cousins), his ghostwriters, his "yes men", his "braintrusts" and numerous others, whom he has made an invariable practise to saddle on the payroll of every government agency with which he has been connected. They are his "royal court". In some instances, these persons whom he places on the public payroll devote most or all their time and energy to his personal and private interests. The Aldrich cousins are being used by the conspirators for political promotion because they escape the stigma of the Rockefeller name.

This corrupt nepotistic practise was the basis of charges of violation of the law made against Gov. Rockefeller by this author to Attorney General Lefkowitz. The charges are stated in the following letter.

February 24, 1960

Attorney General Lefkowitz,  
Albany, N. Y.  
Sir:

I write in behalf of a group of associates, and of myself, on a matter that vitally concerns the taxpayers and citizens of the State. It is our attitude that corrupt acts of public officials are as culpable in a white man as in a colored, as reprehensible in a high official as in a low, as excusable in a man of American origin as of Italian,

and certainly as heinous in a man of wealth as in a poor man. The law is no respecter of persons. It is your duty to act. Have you the courage to do your duty and apply the law indiscriminately?

The corrupt practise to which we refer, is a matter of public record, which makes us a bit surprised that you have not acted on your own initiative, without our complaint. The New York Times published the facts in its issue of December 24, 1959, under the headline: **BIG STAFF PUSHES ROCKEFELLER DRIVE**. The article states that four officials on the State's payroll for an aggregate salary of more than sixty thousand dollars, have been used by Gov. Nelson Rockefeller in his private enterprise—in his effort to force the Republican Party to make him, a Red New Dealer, its Presidential candidate. This story has not been denied by Gov. Rockefeller or any of the other persons involved. The Times stated, truthfully:

"Fabulous and fantastic are the words . . . used to describe the organization now in readiness to advance Gov. Rockefeller as a candidate for the Republican nomination for President . . . A FEW OF THOSE ENGAGED IN THE ROCKEFELLER POLITICAL OPERATION HAVE STATE JOBS. MR. (R. BIRDELL) BIXBY AND MR. (L. JUDSON) MORHOUSE ARE BOTH MEMBERS OF THE (STATE) THRUWAY AUTHORITY AT \$17,000 A YEAR EACH. MR. (RICHARD) AMPER (NOW DECEASED, WHOSE SALARY WAS QUOTED BY THE N. Y. HERALD TRIBUNE, ON FEB. 9, 1960, AS \$18,700) AND MR. (ROBERT T.) McMANUS ARE ON THE STATE PAYROLL (AS PRESS SECRETARY AND ASSISTANT PRESS SECRETARY, RESPECTIVELY)"

The Times of Feb. 13, 1960, in its obituary, stated:

". . . Mr. Amper accompanied Mr. Rockefeller virtually everywhere he went."

Thus it is an undenied fact that Gov. Rockefeller has used persons whose salaries are paid by the taxpayers of the State for the conduct of his private business, his campaign. This is as dishonest, and unfair to the taxpayers of the State as stealing the money involved from them. One might think that a person whose income runs into billions, who manages to minimize or completely evade the payment of taxes on most of it by various dodges, and who has consistently made use of tax-exempt foundation

moneys for political purposes, in violation of the law, and who thereby increases the burden of taxes for the rest of us, would pay the salaries of persons he employs in his private business. Not to do so is more reprehensible and criminal than accepting bribes from private individuals, that places no direct burden on the taxpayers.

I demand on behalf of my associates that you bring action against Gov. Rockefeller on the charge of corrupt practises, as you are required to do under the law.

Very truly,

Emanuel M. Josephson

The reference in the first paragraph to "colored" was a timely one. At the time, Hulan Jack, colored Borough President of Manhattan, was under fire for a lesser offense, for accepting services in the redecoration of his apartment that were valued at about four thousand dollars, from a contractor doing work for the Borough. The case did not involve the diversion of services of a public employee at the cost of the taxpayer, which is an even more flagrant violation of public trust, as in the case of Gov. Rockefeller. Hulan Jack was ousted for his lesser offense. In the case of Gov. Rockefeller, no action was taken by the District Attorney in spite of a letter received in reply from him in which he promised to "investigate" the case and report on it.

The complaint in no wise deterred Gov. Rockefeller from repeating the offense. Thus when he flew to Venezuela to honeymoon with the divorced wife of his employee, Dr. Murphy, his second bride, he took with him on this "public business", a captain of N. Y. State Police and two bodyguards. This, incidentally, belies Rockefeller's attitude that his private affairs are no concern of the "peasants". What affair is more private than a honeymoon? Nevertheless, he made that a charge on the public, and deprived the State of New York of the services of a State Trooper, Captain Galvin, in company of a security officer, Hugh Blondary and Stephen David, an aid, during his "royal" honeymoon on his 112,000 acre Venezuelan duchy. (119)

Of all the scandals exposing the widespread corruption of the Rockefeller Administration in New York, the collection of bribes and the blackmailing of retail liquor licensees by his appointees, State officials and the State Liquor Authority, most clearly revealed his corrupting influence. Fronting for the Rockefeller Administration in this payoff racket that mulcted millions of dollars from the retail liquor licensees, was an appointee of his, Martin Epstein, a lawyer stricken with cancer, who refused to

waive immunity when summoned before the Grand Jury. He was relievedly dismissed by Rockefeller. Undoubtedly there was some element of regret in this dismissal. For Epstein had been recommended for the post by the Republican boss of Brooklyn, John Crews, who had "delivered the vote".

The trail of the liquor dealers' shakedown racket led directly to Rockefeller's office and inner circle. After the dismissal of Epstein, the Playboy Club found it necessary to employ Rockefeller's campaign manager and political mentor, Judson Morhouse, at the cost of ten thousand dollars, before it could get its liquor license. When Morhouse was called before the Grand Jury to explain the deal, he resigned from the two State jobs that Rockefeller had given him in payment for services rendered to him personally as his campaign manager and his "intimate political adviser" at the expense of the taxpayers. He refused to waive immunity (the equivalent to pleading the Fifth Amendment) as required of officeholders; and retained a criminal lawyer, Sol Gelb, to represent him in the matter.

Gov. Rockefeller expressed his approval of the activities of Judson Morhouse and his law firm by turning over the post of chairman of his campaign committee to an accomplice, Morhouse's law partner, thus making sure that his plan and program would continue under the same "high calibre" auspices. The situation has, as commented by TIME (82, p. 30), "certain fascinating overtones". These include the following items:

1. Would it be incredible, in view of Nelson Rockefeller's practises in "making money" and his affirmed views on government and levying on the taxpayer and the community, his family's practises and traditions, his intimate association with the culprits and his continuation thereof, to suspect that he or his campaign shared in the shakedown loot? The answer is plainly: "No. There is every reason to believe that he did".

- a. Nelson Rockefeller's first highly lucrative "business" experience, as a "ten-percenter", under the trade name of Turck & Co., was a sort of shakedown racket set up by him in connection with Rockefeller Center. Rockefeller found it so profitable that he ousted his partners, changed its name, as has been related, to Special Work Inc. and incorporated it into the Rock Mob's joint enterprise, Rockefeller Bros. Inc.

- b. Gov. Rockefeller has openly avowed his adherence to the spoils system even in face of the exposure of the cor-

ruption of his Administration. He is quoted by TIME as averring: "I believe in the patronage system." (82 p. 110) This Rock Mob belief is borne out by the entire history of their villainies as well as by Rockefeller's own record. They echo the cry: "To the victor goes the spoils".

The "vanquished," meaning the duped voters and the public at large and special groups, are the victor's to loot, according to Rockefeller who invariably meets protests directed against each new phase of the looting with the remark: "THEY WANT THE SERVICE. AND THEY MUST PAY FOR IT".

The so-called "service" as often as not is a new looting device that the public abhors and detests. The billions of dollars of tax funds that have flowed into the coffers of the Rockefeller industries of all varieties represent but a small fraction of the patronage and spoils. Legitimacy has never been a Rockefeller forte. And the only difference in looting nations, as in the case of gold, and individual interests and groups, is that the latter are more dangerous than the public "mass men" and "peasants". In this case, the desperation and courage of a few liquor dealers have proved it once again.

c. John D. Rockefeller made the Dynasty's first "big" money, as has been related, by bootlegging unstamped Harkness liquor to Civil War soldiers. And despite the pose of temperance, the Rockefellers have always had an intense interest in the profits available from liquor. During the Prohibition era, in the initiation of which, for their own ulterior purposes, they played a key role, "pious" hypocrite John D. Rockefeller Jr. continued, as has been related, to derive rich profits from the bootlegging and sale of liquor as speakeasy landlord and protector and in other directions. Illicit "profits" from the liquor industry are Rockefeller "tradition".

d. Involvement of the Mafia in the shakedown, as indicated by the arrest, in Chicago, of one of the "collectors" for the liquor racketeers points to the involvement of Rockefeller, patron of the Crime Syndicate. Their association was described by Lait and Mortimer. (32, pp. 183; 312)

e. The "proud" Rockefeller tradition that nothing is too low to stoop to in order to make money, whether it be polishing shoes or weeding a lawn, as well as less laudable activities, including horse thievery, swindling, bigamy, theft, forgery, arson and murder, the shakedown racket and numerous others of even more despicable character.

The conspirators almost succeeded in censoring the story of the liquor shakedown racket in the New York

press by means of a strike engineered by one of the unions, their vassals of Hoffa's truckers monopoly, that involved a small fraction of the laborers on the paper. It continued for more than three months. However, an unexplained breach developed between the conspirators and the editor of their Time-Life-Fortune group, Henry Luce. A possible explanation may rest in the fact that Luce had been a close friend of Pres. Kennedy, who wrote the preface for the latter's book **WHY ENGLAND SLEPT** (83, pp. xiii-xxii). LIFE started a New York section during the strike that appeared to have as its prime purpose the exposure of the Rockefeller regime and its liquor dealers shakedown racket. It made futile the censorship by a strike that cost the newspapers and their employees many millions of dollars. The strike was terminated. But relatively little has appeared on the subject of the shakedown racket since then in the New York City newspapers. The N. Y. MIRROR, which had been most active in exposing the criminal activities of the conspirators, was put out of business.

An enforced "tacit understanding" effect by his "omnipartisan" agents has suspended investigation into the liquor racketeering during Republocrat Rockefeller's campaign for the Republican Presidential nomination. A material help in enforcing this silence was the vengeance threatened by Gov. Rockefeller on the retail liquor dealers who had "squealed". His first move was to demand increased fees and taxes for the liquor licensees. Then he appointed one of his usual "committees" (in this case, called Moreland) to echo his rage by forcing reduction of the artificially high liquor prices fixed by the State Liquor Authority, and recommending that the monopoly of the sale of liquor that it had given to a limited number of favored licensees should be terminated. This would mean wiping out the large part of their investment in their businesses that had been spent in fees and graft in obtaining their licenses. The situation serves to highlight the "accepted practise" of governmental profiting from human vices and deriving a sizable part of its income from exploiting them.

After assuring himself that these measures would not adversely affect the earnings of his Rainbow Room restaurant business, but would improve the wholesale liquor business earnings, Rockefeller forced the adoption of most of these measures, after initial rejection by Legislature, in a special session which he ordered for the purpose.

## CHAPTER XVIII

### ROCKEFELLERS DRIVE TO ELIMINATE ALL LEADERS OF THE REPUBLICAN PARTY & TO SEIZE PRESIDENTIAL NOMINATION FOR NELSON

Nelson Rockefeller has only abysmal contempt for us Americans, whom the Dynasty contemptuously label, among themselves, "peasants" and especially for the patriots among us whom he calls "the lunatic right". He places implicit trust, on the basis of past experience, in the success of the Dynasty's bogus "philanthropic" foundations and their pressagents, advertising agencies as exemplified by Interpublic Inc., control of all media of mass communication and prostituted "educators", in duping the public into accepting his dictates and being led like a bunch of sheep.

He and his advisers and "Brain Trust" appear confident that the time is ripe to execute the final stages of the plot drawn up by their associate, Hoffman Nickerson, (39) for an American totalitarian monarchy. So rapidly has the scheme developed and ripened that Nelson Rockefeller envisages it as encompassing not only the U.S.A. and the Western Hemisphere, but also the entire world, with himself installed as Dynastic monarchic dictator. That is the substance of his *THE FUTURE OF FEDERALISM* (42) and the other tracts that have been "ghosted" for him and published in his name.

The first step in carrying out this plot is seizure of the post of President of the U.S.A. This Nelson Rockefeller has undertaken to do with tactics of treachery and deceit that are characteristic of his tribe, especially of the ancestor whom he most intensely admires and seeks to emulate, John D., the skinflint crook. He undertook to attack and discredit the leaders of the Republican Party by open criticism and behind the scenes maneuvers.

The first open and obvious effort to eliminate the most formidable rival for the Presidential nomination, Vice President Richard Nixon, was the humiliating and dangerous mission to Ghana on which he was sent, and narrowly escaped death. He was sent to render homage to the frankly Communist Negro dictator of the largely un-

civilized, absurd parody of a republic, Kwame Nkrumah, the self-styled "saviour" of Ghana. Ghana was the first of the so-called "democracies" set up by the conspirators through the (dis)United Nations. The apparent purpose was to reward Nkrumah and his Ashanti tribesmen for seizing fellow Negroes and selling them to the slave traders to supply the Saudi Arabian slave markets that are being maintained by the conspirators with the full knowledge, support and tacit approval of their UN agency and its Assistant Director, Rockefeller agent and employee of their Foundation, Ralph J. Bunche.

The Negroes seized and enslaved by Nkrumah's Ashantis in one of Ghana's principal "industrial" enterprises supplement those that are supplied the Saudi Arabian slave market by Mohammedan religious practises. (54, p. 167) Wilfrid Thesiger, in his book entitled ARABIAN SANDS, reported that Rockefeller's Aramco and Caltex have greatly stimulated this slave trade. (54, p. 168) Many of the Negro boys captured and sold into slavery, or sold by members of their families to the slave traders, are brutally castrated. And those that survive the mutilation, when grown up, serve as eunuchs in the Saudi Arabian harems. (54, p. 175)

Viscount Maugham, in a speech made on the floor of Parliament, squarely laid the blame for international protection of the Saudi Arabian slave trade on Rockefeller's Arabian American Oil Co. (Aramco) and the tremendous influence that they wield in international affairs. (54, p. 173)

In the process of demeaning the national dignity of our country and aligning it behind this sordid slave trade, in order to serve the interests of the Rockefeller Empire, Vice-President Nixon was sent to Ghana by the conspirators. Perhaps not unintentionally, the plane in which he flew developed engine trouble and almost crashed. He had a narrow escape from death that would have eliminated him as a Presidential rival.

At a later date, Nixon and his wife were sent by the conspirators to Nelson Rockefeller's grand duchy, South America, for the pretended purpose of "winning the good will" of his subjects. It was represented to American "peasants", by the conspirators' pressagents, that it was essential that the man whom we choose as our President must be acceptable to other lands that are "being supported by us" through so-called "foreign (Rockefeller) aid" as well as to the "internationalists" and other breeds of Communists. Nixon's South American "mission" gave the conspirators an opportunity to stage a dramatic demonstration that was

designed to prove that Nixon was not a satisfactory President in the eyes of the South Americans. They had their Communist agents, more particularly those in the sheltered hotbeds of Communism in those lands, the universities where it was arranged that Nixon should convey the tribute on behalf of our country, prepare violently abusive demonstrations against the Nixons.

In Venezuela, the land dominated by Nelson Rockefeller and his Creole and Standard Oil Companies, the demonstrations against our "good will" ambassadors, the Nixons, that were staged by the conspirators, assumed especially great violence and abusiveness. These might well be regarded as reflecting the attitude of Rockefeller. Nixon and his wife were spat on, abused and subjected to physical violence that was reported to have endangered their lives. The conspirators' prostituted press did not fail to stress the contrast between the reception given the Nixons in Rockefellerland, and that accorded to Nelson Rockefeller by his Venezuelan Reds and other subjects.

Not content with the demonstrations intended to eliminate Nixon as a potential nominee in the pending nomination campaign, the conspirators undertook to accord the same treatment to his sponsor, Pres. Eisenhower, in another of their duchies, Japan. The conspirators treacherously arranged a State visit by Pres. Eisenhower. Violent demonstrations were staged protesting Eisenhower's visit, with much the same purpose as those arranged in South America for Nixons. Student riots and demonstrations were of such magnitude and intensity, as to create concern for his safety and security if he should visit Japan.

Rockefeller responsibility for the riots, and sympathy with them, was clearly indicated by a letter written by the Dynasty's "Crown Prince", John D. Rockefeller the Fourth, in a letter to a Kyoto newspapers (later reprinted in LIFE magazine) in which he praised the students for staging the riots so well. John D. the Fourth had been sent to Japan for the purpose of learning the language and customs of the land, and to establish social business and political contacts. The objective: to prepare him to take over from his father the control of Japan's industrial monopolies, the Zaibatsu, and the domination of Japan.

John D. the Third and his wife have spent a large part of each year in Japan looking after the Dynasty's interests that had been grabbed as their war loot that had been gained at the expense of the blood and lives of our GI's and the moneys of our taxpayers, in World War II which they engineered for that purpose. They are reported to have learned to read, write and speak Japanese, to tolerate

Japanese society and make themselves "at home" in it. No doubt they are tiring of this distasteful but highly profitable chore, and plan to retire to pleasanter fields when their son and heir has learned enough to take over as "behind-the-scene" master of the "barbarians". For this chore, it was reported John D. the Fourth was allowed the maximum that the Dynasty could afford in the way of expenses, until he had learned to "shift" (loot?) for himself, twenty-seven dollars a month.

In his letter to the Kyoto press, John D. the Fourth sang the praise of the Japanese students for their role in staging the demonstrations that affronted Pres. Eisenhower and our country, and forced abandonment of the State visit to Japan. In this treachery, he demonstrated himself to be true to the tradition of the Rockefeller Dynasty, a thoroughbred "internationalist". For this he was rewarded with a swivel-chair post in Washington in the Kennedy Administration.
